Edward Feustel <efeustel@hughes.net> typed, for some strange, unexplained
reason:

[snip]

: I faced the same problem. In my Subaru Forester there
: seemed to be no good place to put it in mounted fashion.
:
: I solved the problem in an unusual way. I only have "passengers" in
: about 10% of my driving and typically don't use the radio when I
: have a passenger.
:
: I made a "mounting platform" that would sit on the passenger seat
: and that would allow me to see the front of the unit from the
: seat of an old wood chair. It was heavy enough to prevent it
: from sliding on an unexpected stop. Further, it with radio and
: all cables can easily be put in the back seat without being
: disconnected (and restored to its rightful place when no
: passengers are present). Should I have passengers in
: both front and back, I have only to disconnect antenna and power
: cables and put it in the "way-back". Total cost: $0 for the
: "platform".
: Ed, N5EI

My problem isn't so much mounting the radio as where the hell to get a 12V
supply from. There is no way through the bulkhead to wire it directly back
to the battery as I'm used to doing, nor is there any way I can see to get
at the back of the cigarette lighter socket, which is the only power
source inside the car capable of powering a 50W 2m/70cm radio.

I'm in the UK so not sure how many readers will be able to help, but it's
a 2007 Peugeot 307 if anyone has any ideas..!

73 Ivor G6URP

PS Happy New Year to all :-)

Ivor,
I had the same problem.
I went to the car dealer's service shop.
I gave them my power cable.
They put it through the firewall, connected it properly to
the battery and sealed the hole.
Then they threaded it through the dash into the
passenger compartment.
They have a labor rate of around $70 per hour.
The total charge was $105.

Of course you can do it yourself, but this was much
simpler. This also has the advantage that the
power is on even when the car is off. Don't
forget to have it fused on both sides of the car firewall.
Best luck in 2009
Ed, N5ei

Worth a try, thanks. I know a guy who works for a company that installs
radios in taxis etc. so I might ask him if any of his guys know this car.

I hope you have better luck over there than over here Ivor.
Typically, all the taxi companies around here are run by 3rd
world people who would rather see their drivers burst into
flames than pay to have anything installed correctly.

From someone who spent several years dealing with the mess
the installers left behind.

Amateur Radio Newsline(tm) Report 1638 - January 2 2009

Amateur Radio Newsline report number 1638 with a release date of Friday, January 2nd 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams in Hawaii step in as the lights go out. ARES members in Oregon aid in ice storm relief as a 911 system begins to fail. Hong King is set to fine and jail illegal CB operators and the story of an ancient goddess and her relation to ham radio. All this and more on the New Years 2009 edition of the Amateur Radio Newsline(tm) and report number 1638 coming your way right now.

RESCUE RADIO: HAMS ACTIVATE AS OAHU GOES DARK

Hams on the Hawaiian island of Oahu, went on emergency power alert the evening of December 26th. That's when a power outage hit most of the big island. The failure of electrical service struck at about 7p.m. local Hawaiian time and affected over 150,000 residents. Bill Orenstein, KH6QX, is Newsline's former Production Coordinator. He lives in a high rise building that looks down on the busiest part of town and describes the way hams activated:

--

KH6QX: "The civil defense radio amateurs have all been alerted. The net has been activated and will stay active until everything is pow."

--

Pow is a Hawaiian tern for OK or back to normal, but nothing was very normal overnight. This meant hams involved in emergency communications had their work cut out for them. Again Bill Orenstein, KH6QX:

--

KH6QX: "Phone lines have been gridlocked and a lot of cellphone sites are down and AH6RH, Ron, has activated the state civil defense." (Fade to actual off-air net audio)

--

Hawaiian Electric officials said a lightning strike sent a power surge through its network, shutting down generators and causing the outage. Full power was not restored until about 6 a.m. on Saturday, December

27th. Ironically president-elect Barack Obama and his family wee spending a 12- day vacation on the island when the power outage took place. News reports say that Hawaiian Electric set up an emergency generator for Obama's Kailua beachfront rental retreat.

Meantime, for hams on Oahu the blackout proved once again that their ongoing nets and training sessions really paid off for the community. (KH6QX, KSSK radio, others)

**

RESCUE RADIO: OREGON HAMS ASSIST AS 911 SYSTEM FAILS

The ARRL reports that ham radio stepped in when a 911 emergency call in system failed in Oregon just prior to Christmas. This as a massive freezing weather front hit the region.

The National Weather Service said that the winter storm hit the North and Central Oregon coast, as it made its way East to the Cascades mountain range. According to District Emergency Coordinator David Kidd, KA7OZO, amateurs in Clatsop County, were called on to provide direct emergency communications in for the 911 system that was in need of support. Two ARES members along with the resident deputy manned the sheriff's sub-station in Jewell. They provided 24 hour radio communication services to the county Emergency Operations Center.

Other hams provided 911 services for four villages and hamlets in the southern part of the county. There, residents in the area were told to go to ham radio operators and have them relay their needed service requests to the county EOC.

The complete story of what the hams of Oregon did as the winter storm struck is on the news pages at the ARRL's website. Its in cyberspace at www.arrl.org. (ARRL, others)

ENFORCEMENT: HONG KONG TO FINE AND JAIL ILLEGAL CB OPERATORS

Operate a CB radio in Hong Kong without a license or run to much power and you may go to jail. That's the essence of the warning from the Hong Kong's
Office of the Telecommunications Authority which has mounted an enforcement operation against the citizens radio operators which suspected of using illegal transmitters.

The telecommunications regulator has already raided the home of an operator identified as Chai Wan. There it seized one transmitter and detained three people for questioning.

Under Hong King law it is unlawful for any person to establish or maintain any means of telecommunications without an appropriate license. If convicted of this kind of an offense he or she is liable to a maximum penalty of a 100,000 Hong Kong Dollar fine and five years in jail.

Hong Kong's Office of the Telecommunications Authority that it intends to enforce the law to ensure proper management of radio spectrum which calls a valuable public resource. (Media Network, China Tech News)

ON THE AIR: TONGA TO VK - ON 6 METERS

Some 6 meter history was made on December 26th. This, when Paul Kidd, A35RK, on Lifuka Island, Tonga, twice contacted Colin Clark, VK4CC in Slacks Creek, Queensland, Australia on the 50 MHz band. The first QSO took place at 01:27 UTC with both stations running in the PK 31 digital mod. They then switched to RTTY at 01:29 and completed a contact using that mode as well. According to the Ohio Penn DX News, this is the first time it has ever been done on 6 meters between the two locations. (OPDX)

**

PUBLIC SERVICE: HAM RADIO AND THE EAGLE CAP EXTREME SLED DOG RACE

Ham radio will be used for the first time to help coordinate the Eagle Cap Extreme Sled Dog Race. The race takes place from January 14th to the 17th. According to Scott Hampton, KB7DZR, in Joseph, Oregon, many of the remote check points will have hams camping out in the cold at up to 7000 feet elevation for the entire race.

Short range communications will be linked using KB7DZR's Echolink node along with an Echolink connected repeater in Idaho. This to provide communications back from the most distant checkpoints. And while waiting for teams to pass, some may be active on the high frequency bands from 160 through 10 meters.

The Eagle Cap Extreme Sled Dog Race is Oregon's only Iditarod and Yukon Quest qualifier event. More information on the race is on-line at www.eaglecapextreme.com. (KB7DZR)

HAM RADIO AND SCOUTING: VENTURE ESCAPE 2009 DOWN UNDER

The 14th Australian Venture, 'Escape', will take place in January and Amateur Radio will be a part of it.

The first part of the Venture 2009 will see scouts performing expeditions around the South West of Western Australia from Friday January 9th to Wednesday the 14th. A scout communications team will set up an Internet

Cafe and a ham radio station The amateur station will use the call VK6SAA with operation on or near 3.650, 3.790, 7.090, 14.190 or 14.290, 21.190, 28.590, and 52.160. While SSB is the primary mode theres a good chance of some Slow Scan TV and PSK operations on the regular calling frequencies for those modes. The Internet Cafe will enable the Venturers to catch up with e-mail and chat online.

'Escape' is a major National youth event of the Venturer section of Scouts Australia. Scheduled contacts can be arranged by dropping an e-mail to vk6scouts at westnet.com.au (WIA News, Southgate)

HAM RADIO HISTORY: HAM RADIO CELEBRATES JACK BINNS - RADIO HERE

And going back in time . on January 23rd, 1909 the American luxury liner, "Republic," collided with the Italian cargo ship, the "Florida," in the icy waters off Nantucket. That's when a young radio operator named Jack Binns became a hero.

The collision killed two of the "Republic's" passengers and damaged Binns' radio gear. But the 25 year old Binns quickly made repairs and began to transmit the distress signal CQD. Although his signal was weak he was able to reach the wireless station on Nantucket. He stayed at his wireless for the next 36 hours, sending message after message from his frigid, water-swamped cabin. Eventually, the liner "Baltic," came to the rescue.

When Binns arrived back in New York, he was surprised to find himself the focus of attention. A ticker tape parade was held in his honor. He was offered contracts to perform on the vaudeville circuit. A song and a short film were made about him. No longer was he simply Jack the radio operator. He had become "CQD Binns" and a certified hero in the public eye.

To honor Binns on the 100th anniversary of the Republic and Florida collision, amateur radio operators around the are holding an on the air celebration. You can take part. Full details of the commemorative event are on-line at www.jackbinns.org/commemoration_news (Southgate, others)

RADIO IN SPACE: 3D MOON IMAGING BEGINS

3-D imaging of the Moon has begun using NASA supplied instrumentation on board India's Chandrayaan-1 spacecraft. The Moon Mineralogy Mapper is the first instrument to provide highly uniform imaging of the lunar surface. Along with the length and width dimensions across a typical image, the instrument analyzes the third dimension of color. The data collected is then radioed back to receiving stations on Earth. The Moon Mineralogy Mapper provides scientists their first opportunity to examine lunar mineralogy at high spatial and spectral resolution. (Technology Today)

RADIO LAW: CABLEVISION AWAITS SUPREME COURT RULING ON REMOTE DVR SYSTEM

Cable T-V giant Cablevision Systems says it will move ahead with plans to roll out a controversial remote digital video recorder system in 2009. This, if the system is not barred by the U.S. Supreme Court.

The Cablevision remote D-V-R permits Cablevision subscribers to remotely record and store programs for delayed viewing on the company's servers. The system is being challenged by several large media companies. They argue that it would infringe on their copyright agreements because it does allow just that instead of on a consumers home Digital Video Recorder.

Cablevision first tried to launch the system in 2006, but it was immediately successfully challenged in courts by media companies including Time Warner Inc, News Corp , CBS Corp and Walt Disney Co. The cable company won an appeal in a New York Federal Court of Appeals last August but the media companies filed a Supreme Court challenge in October. The United States highest court is expected that a decision to hear the case by mid-month. (RW)

NAMES IN THE NEWS: 2001 YHOTY WINNER KC8BFD ENGAGED

Some names in then news. First up our congratulations to Newsline's 2001 Amateur Radio Newsline Young Ham of the Year Patrick Clark, KC8BFD, of Charleston, West Virginia. This, on his Christmas Day engagement to Katie Thaxton.

Patrick Clark comes from an all-ham family. His father is Jeff Clark K8JAC whom you often hear reporting these newscasts. His mother Tina, is N8TSY and his sister Erin is KC8PZZ. Patrick has been involved in emergency service work from the day his ham radio ticket arrived in the mail. He was among amateurs who responded in the wake of the West Virginia Field Day floods of 1998. This, when the annual emergency preparedness drill turned

into the real thing as the skies unexpectedly opened up.

Patrick has since grown up and become a professional first responder. Katie Thaxton is a school teacher. The pair plan to wed within the next two years. (K8JAC)

**

THE SOCIAL SCENE: HUNTING LIONS ON THE AIR - 2009

The annual Hunting Lions in the Air contest will take place on the weekend of January 10 and 11th. Sponsored by Lions Clubs world-wide, this annual event is designed to foster a spirit of international understanding and cooperation' among radio amateurs and Lions through worldwide radio communication.

The contest was started 38 years ago to commemorate the birthday of the Lions founder Melvin Jones who was born on January 13th, 1879. More information is on line at lions@vsnl.net (Lion Ajoy)

**

THE SOCIAL SCENE: THE BLAC SEA CUP INTERNATIONAL

The members of the Ukrainian Black Sea Contest Club are inviting all amateurs world-wide to participate in the 2009 Black Sea Cup International. This event will be held the weekend of February 7th and beginning 12:00 UTC on Saturday and ending 00:00 UTC on Sunday. The object is to contact as many Black Sea Contest Club members, amateurs of Black Sea countries and especially IARU member society headquarters stations around the world as possible. Bands used are 160 through 10 meters but not including the WARC bands using. Only contacts made using CW and SSB are counted. For complete details visit www.bscc.ucoz.ru on the World-Wide-Web. (OPDX)

**

THE SOCIAL SCENE: QCWA MEETING AT HAMVENTION 2009

If all goes according to plan, there will be a first ever General Membership Meeting of the Quarter Century Wireless Association held at the 2009 Dayton Hamvention. Negotiations are underway to hold a two hour session at Hamvention with an exact date and time to be announced by mid-March. This should make it easier for more members to get a chance for the members to interact with the groups leadership. Its also a way for non-members to find out more about QCWA and to join if they like what they hear and see. This gathering is in addition to the QCWA's own convention that in 2009 will be a Caribbean cruise from October 24th to the 31st. (QCWA)

**

BREAK 2

Wishing everyone a happy and prosperous new year, from the United States of America, we are the Amateur Radio Newsline with links to the world from our

only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

SCIENCE AND TECHNOLOGY: A LEAP SECOND FOR 2008

If 2008 seemed like it lasted a bit longer than most years, well you are right. It was actually a full second longer 2007 than and Jim Linton, VK3PC. Is here to tell us why:

--

Time-keepers extended slightly the year 2008. This, by the insertion of a leap second just before Midnight on the 31st of December.

The International Earth Rotation and Reference Systems Service is responsible for monitoring the relationship between the atomic clock-based UTC and the rate of Earth's rotation. It had declared that the last minute of 2008 would have 61 seconds.

Leap seconds are added either at the end of a June or December and this one the 24th since they began in 1972. They are necessary because time is measured using stable atomic clocks whereas the rotation of Earth continually slows at a slightly variable rate. Negative leap seconds are also possible should the Earth's rotation become slightly faster.

Its easy to monitor the insertion of the leap second. All you need to do is to tune into the time and frequency broadcast of WWV. Or, if you have a Global Positioning System clock, watch it just prior and during zero hours UTC on the 1st the month into which it is inserted.

But don't blink your eyes while watching a GPS clock. If you do, you just might miss a Leap Second event and then have to wait several years for the next one to come about.

For the amateur Radio Newsline, I'm Jim Linton VK3PC.

--

And now we all know what a Leap Second is all about. (VK3PC)

**

HAM FUN: THE RADIO SHACK OF THE PAST

In 2006 Radio Shack announced that the company would no longer sell amateur radio gear. But back in 1930's the "shack" was one of the prime mail order suppliers of ham gear and accessories.

And now an animated 1939 Radio Shack catalog I on line for you to browse. You can find it at www.radioshackcatalogs.com/catalogs/1939 You turn pages by the use of the cursor. Just click on the lower right corner of the page, move it to the left. (QCWA)

**

ON THE AIR: RCA CE:EBRATES 100 YEARS WITH QSO PARTY

On the air, listen out for the 100th Birthday QSO Party of the Club of America signing W2RCA that runs January 2nd through the 4th U-T-C on 75 though 10 meters. Modes are SSB and AM phone only. More information including a complete operating schedule and logging sheets are on-line at www.radioclubofamerica.org. (RCA)

**

DX

In DX, HA9RE, and a team of operators will be active from Wallis Island as FW5RE. The group is expected to arrive on Wallis during the afternoon of January 26th and due to begin the operation on January 28th or the 29th. They are expected to be there for about a month. Activity will be on 160 through 10 meters, including 30, 17 and 12 meters, using CW, SSB and RTTY. Two stations will be on the air. The QSL Manager will be HA8IB.

CO8LY says that if somebody needs a confirmed QSL from Cuba, that he is active on 160 meters or PKS31, RTTY, CW and SSB. You can make a sked with him via e-mail co8ly@frcscu.ciges.inf.cu

PA4JJ, will be active portable PJ2 from Curacao from April 1st to the 11th. This will be a holiday style operation with Jan on the air as time permits. Look for him on all the H-F bands except 160 meters and QSL direct to his home callsign.

Lastly, CU8AS, HB9CQL and HB9CRV will be active as CU8W from the Albarnaz Lighthouse on Flores Island between January 19-23rd. The operation will be mainly on the lower H-F bands using CW and RTTY. QSL via CT1GFK.

(Above from various DX news sources)

**

THAT FINAL ITEM: AN ODE TO THE GODDES ISIS AND HAM RADIO

An episode of a kids TV show that used ham radio to move along the plot is now available on DVD, but you need to buy the entire set to see it. One ham already has. Hes our producer Bill Pasternak WA6ITF, and he tells us why:

--

The show was the Secrets of Isis. It was a live action CBS television series produced by Filmation in the mid-1970s that appeared during the networks Saturday morning children's lineup.

The Secrets of Isis starred actress JoAnna Cameron as Andrea Thomas. Her character was of a high school science teacher who found an ancient mystical amulet on an archeological dig. It seems that this particular amulet had belonged to an ancient Egyptian Queen and it gave the wearer the powers of the goddess Isis. Finding it made the is bearer an heir to Isis's secrets which the school teacher turned super hero used to right

wrongs.

The episode featuring ham radio was titled "No Drums No Trumpets." It told the story of how our hobby saves the day when the lead characters are held captive in a ghost town by some thieves. One of the prisoners is a ham who just happens to have his portable transceiver with him. Not an HT -- but a 1970's era Drake TR-22 "luggie talkie" that somehow the bad guys do not see.

"No Drums No Trumpets" was written by Arthur Nadel, W6TZY, who was also a producer of the series. While written for young kids, it was pretty accurate depicting the hobby, right down to the ham radio operators character insisting that the hobby be called "Amateur Radio." He even explained that one had to have passed a test and get a license in order to transmit on the air.

So why talk about a 37 year old kids TV show now? Well the radios used as props are part of it. One belonged to W6TZY. Another was loaned to Filmation by the late Lenore Jensen, W6NAZ while the third with its missing pull out antenna belonged to yours truly WA6ITF.

As far as I have been able to determine the episode aired only twice during the shows year and a half run and then kind of disappeared. Unfortunately, I never got to see it because my job kept me busy at the time it was on the air. I had been offered the loan of a 16 mm film print to watch on my own projector, but I simply never got around to doing it. So whether or not my radio got into the show remained a mystery until now.

Recently when a company known as Entertainment Rights bought the series and brought it out as a two DVD set that includes all 22 episodes, along with a bunch of extras that include interviews with most of the cast members, promotional material and even a great still photo of actress Joanna Pang who played Cindy Lee standing with Art Nadel, W6TZY, who is holding his TR-22 under his arm. Quite a tribute to our hobby.

Anyhow, as soon as I heard about it I got on-line to Amazon dot com and placed my order. A few days later I was watching for my long gone TR-22 in "No Drums No Trumpets." and there it was. The one missing its pull up antenna. My TR-22. It was good to see that it had attained its 15 seconds of even if I had to wait some three and a half decades to confirm it.

Before I go, some other quick notes about the Secrets of Isis. In addition to one episode that had half hour heaping praise on ham radio it also went out of its way to teach its young viewers the value of living to a personal high morel code. This, with the lead character Isis explaining at the end of each show the ethical lesson taught that week. Imagine trying to get the producers of a children's television show to do something like that today.

The Secrets of Isis was also the first weekly live-action American television series to feature a female super-hero in a recurring role. It pre-dated the debuts of both Wonder Woman and The Bionic Woman by several months. So did at least three Drake TR-22's playing the part of one.

From the studio in Los Angeles, I'm Bill Pasternak, WA6ITF, with no TR-22, reporting for the Amateur Radio Newsline.

--

Even if you don't have kids living at home, the one ham radio episode included is truly a trip back in time to a much kinder and gentler ham radio, and a great present for you to give to you. (ARNewsline(tm))

Fellow amateur was having a house built so he setup the tower while it
was still under construction. He got a complaint from Industry Canada
and arranged to meet the inspecters there. He showed them the tower
without any antennas or coax and the empty not quite completed
interior of the house.

The inspector smiled and stated they will be disregarding all
complaints from that person.

Folks

A local amateur, who knows a lot more about PSK31 than I do, is interested in participating in a PSK31 contest. I know how to use the Internet more than he does. <smile>

Which are the more popular contests preferably world wide?

What is proper operating technique with respect to power levels during a PSK31 contest?

Any other PSK31 contest tips or URL?

Tony (participates at VE5RI contest station)

Operation is like RTTY. Power levels? I don't know but most would be barefoot. Radio is adjusted for full power output in CW or SSB with NO processor, then mic level is adjusted with the PSK 31 idle tone for no more than 10 watts on an average reading wattmeter. If you have a peak reading wattmeter, you would keep it below 35 WPEP on a 100wPEP radio. There will be no ALC reading. Running higher than this without a proper station monitor scope will usually result in intermodulation distortion and make it more difficult (or impossible) for other stations to decode, and make your signal more broad. This is easy to see on other stations and you would cuss them out, but you can't very well see it on your own signal. If you want to fine tune this, you could get someone to talk you up or down while the other station looks at your signal. The signal should look like a railroad track, NOT like a switching yard with multiple tracks.

I have only participated in a few contests with PSK 31 and it was much like RTTY contests where you Roger the contact and exchange, then send the exchange and TU (Thank You for the call) and move on.

So you're saying running the full legal power amp is frowned upon?

Gotcha. You've just explained in greater detail what another amateur
was explaining last night on the repeater.

Yup, that sounds about right. I've quite enjoyed the two RTTY
contests I've partcipated in.

Well, it might be, but if one was following the rules and not using more power than required for the desired communications, I don't see where anybody could complain. How many of us would turn down the power though? If you have an amp that can run 1.5KW at 100% duty cycle, "more power to ya" I say. Assuming you have the antenna to match then you are going to have a huge signal on PSK31, just PLEASE turn down the power when you don't need it for the QSO at hand.

In general, it's simply not necessary to run the legal limt. Running PSK31 takes up very little bandwidth and most of us guys are going to be running less than 100W (more like 40W for me) because that's what your avarage rig does. Stuffing all that power in such a small bandwidth makes your signal much stronger than if you spread it all out over 3Khz used for SSB. An amp might be nice from time to time, but I wonder how often you would really need it.

It's more important to keep the signal clean. NEVER get into ALC on your rig. Don't even get close to having the rig start using ALC or you will splatter your signal all over the passband of your transmitter (usually 3Khz wide). You WILL get told about it if you do because it makes a mess for everybody, so be very careful. I won't care if you run the legal limit, as long as your signal is clean, be my guest.

Amateur Radio Newsline(tm) Report 1639 - January 9 2009

Amateur Radio Newsline report number 1639 with a release date of Friday, January 9th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. A 93 year old ham radio operator is murdered in Florida and his son is accused of the crime. Also, the Japan Amateur Radio League and Japan AMSAT say that ham radio may soon be in orbit around the planet Venus, a Transatlantic propagation test in the southern hemisphere and the recession causes postponement of a long awaited D-X operation. The details on Amateur Radio Newsline(tm) report number 1639 coming your way right now.

RADIO CRIME: 93 YEAR OLD FLORIDA HAM ALLEGEDLY MURDERED BY HIS SON

The son of a 93 year old Lakeland, Florida ham has been arrested for the murder of his father in a crime that was made to look like a botched home invasion robbery. The body of Walter Farley, K4QE, was found at around 9:15 a.m. at his residence on New Year's day. Amateur Radio Newsline's Mark Abramowicz, NT3V, has been following this fast breaking case and has the details:

--

When Walter Farley's bullet-riddled body was found by his 63-year-old son, Robert, inside the home they shared, authorities called it a heinous crime and pledged to pursue any and all leads in a hunt for suspects.

A cash reward was posted and a tip-line publicized for the public to call in any information about the crime anonymously to the Polk County Sheriff's office.

Investigators pursued several avenues, including information that magazine solicitors had been in the neighborhood the night before Walter Farley's body was discovered.

But police were also pursuing another possibility - the possibility that Walter Farley was killed by his own son during some kind of domestic dispute. Inconsistencies in the story Robert initially told detectives on the day his father's body was discovered, coupled with other evidence led to his confession that his father's death was not a random crime.

Detectives say Robert Farley told them he and his wife, Mary, went to a motel in a nearby city to celebrate New Year's Eve. Authorities got video from the hotel security cameras showing that Farley had left the hotel after his wife took a nap earlier in the evening.

Investigators say Robert Farley went home and got into an argument with his father after discussing his intent to divorce his wife. Robert Farley told investigators there was a physical struggle and he shot his father at least four times with a .38-caliber handgun.

Robert Farley admitted he had changed his clothes, took several items from the home to simulate a robbery and drove to a nearby lake to dispose of the murder weapon.

A Polk County dive team recovered it from that lake.

Authorities say Robert Farley had been planning his father's murder for two months.

Local media accounts of the murder quoted neighbors as saying there was nothing to indicate any problems between father and son.

According to published reports, Walter Farley had a career as a telephone and radio repairman and was an Army veteran who served during World War II.

Friends were quoted as saying he had worked for AT&T for about 30 years and bragged about meeting three different presidents while traveling as a repairman aboard Air Force One.

Walter Farley, who was described as an active radio amateur, retired in the early 1980s and he and his wife, Loretta, bought a travel trailer to go on a cross-country road trip.

The couple settled in Dade County, Florida, and in 1992, the published report says, they lost everything when Hurricane Andrew hit.

Loretta died a short time later, but Walter remained active in the community, according to the reports, and continuing his travels to exotic destinations in Europe and South America.

Polk County Sheriff Grady Judd thanked the community and the hotel where Robert Farley had stayed on New Year's Eve for helping to solve the case.

He declared, "Walter Farley did not deserve to die this way."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Robert Farley, the elder Farley's son, is now charged with first-degree murder. If tried and convicted he faces a minimum of life in prison without parole. Prosecutors have not yet said if they will seek the death penalty in the case. Walter Farley, K4QE, was a respected member of the Lakeland Amateur Radio Club and was active on several local nets. (ARNewsline(tm) and other sources)

**

HAM RADIO IN SPACE: HAM RADIO TO HEAD TO VENUS

Amateur radio may well be headed to the planet Venus in about 18 months. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

The Japan Amateur Radio League and Japan AMSAT say that they are collaborating with the Japanese University Space Engineering Consortium. This, to send an amateur radio payload into a Venus transfer orbit next year along with the primary JAXA Planet-C Venus Orbiter mission planned for launch in May of 2010.

The satellite will be called UNITEC-1. It will be developed by the same teams who have already launched cubesats such as the highly successful Tokyo Institute of Technology's CUTE-1.

But the Venus orbital mission will be a bigger challenge because of the special experiments to be included in the mission. First, onboard computers developed by several universities will be tested in the harsh environment of space. This, in the form of a competition to see which of the computers can survive the longest in this radiation-rich area of our solar system.

The bird will also carry and test technologies to receive and decode very weak and low bit rate signal coming from deep space. Lastly will be a system to estimate orbit and signal Doppler shift of the satellite based on received RF signals. This is essential for tracking and receiving communications from such a Venus orbiting satellite..

Now, here's the best part. You too can be a part of this first ever ham radio in space mission to another world. The UNITEC-1 team is inviting radio amateurs all around the world to participate in the receiving and data capture of the latter two experiments.. They note that amateur radio operators working as individuals or in groups can develop stations and techniques to relay their received signal reports and data to the UNITEC-1 control center. They also view this is also a unique opportunity to propose amateur experiments or competitions to the satellite team. One experiment requiring the participation of several amateur radio earth stations will include the development of techniques to combine the received signals from several antennas to improve the received signal to noise ratio from the spacecraft as its outbound from earth.

An exciting ham radio mission to another world, to say the least.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The UNITEC-1 website will provide the latest mission information. Its in cyberspace at http://unitec-1.cc.u-tokai.ac.jp/en/news_en) (ANS, G3VZV)

**

LACK OF PROPAGATION: 2008 AN ALMOST SUN SPOTLESS YEAR.

2008 was a truly low sunspot year. This, according to propagation expert Lee Wical, KH6BZF. Wical told the Ohio Penn DX Newsletter that there were 272 spotless days out of the leap year's 366.

August and December were the worst months with 31 and 28 spotless days, respectively. June and November were the best months with 19 and 15 spotless days. The rest of the months of 2008 were all in the twenties.

And oh yes. For a great profile of Lee Wical, look up KH6BZF on QRZ .com (OPDX)

**

HAM RADIO TECHNOLOGY: TRANSATLANTIC TESTS FROM AFRICA TO SOUTH AMERICA

An interesting propagation is about to take place in the southern hemisphere. Flavio Archangel, PY2ZX, reports over the VHF Reflector that there is a portable station being assembled near Rio de Janeiro, Brazil. This, for dedicated VHF and UHF Transatlantic tests between Africa and South America on the 6 meter, 2 meter and 70 centimeter bands.

Operating as PY2ENO portable PY6, its exact location is Maidenhead grid square GG87xc. It will be operational Monday, January 12th to Saturday the 17th. More information in Spanish is on-line at http://transatlantic.japydx.org (PY2ZX, VHF Reflector)

**

HAM RADIO ECONOMY: RECESSION LEADS TO SABLE ISLAND DXPEDITION POSTPONEMENT

The economic meltdown has caused a postponement in the long awaited Sable Island Dxpedition. According to Team Leader Duane Traver, WV2B, due to the current United States economic situation, the DXpedition team has decided to postpone the C-Y-Zero DXpedition planned for 2009.

WV2B says that the group is hopeful to reorganize the DXpedition possibly as early as 2010. In the meantime they have decided to return donations received to date. This, so that the funds can be made available for possible sponsorship of other DX operations this year.

Traver says that any sponsoring organization should feel free to contact him with any questions regarding the matter. He also says that the group is hopeful that their supporters will be willing to renew their sponsorship when the DXpedition can be reorganized. He adds that the sabledx.com website will remain functional for the time being. (WV2B)

(5 sec pause here)

**

RESCUE RADIO: COUNTY OF LOS ANGELES TO USE TV CHANNEL 15 FOR PUBLIC SAFETY

The FCC says that it has granted the County of Los Angeles a conditional waiver. One that permits the use of TV Channel 15 for Public Safety communications. Don Carlson, KQ6FM, reports:

--

According to an FCC release, Los Angeles county had filed 57 applications and requests to use 476 to 482 MHz, by waiver, this spectrum for emergency communications. Most stated that the county needed such a grant to allow for a desperately needed expansion of public safety communications in the Los Angeles area. This, in a manner that would promote efficient interoperability among the plethora of public safety agencies serving the region.

In approving the waiver the FCC says that it must consider the Commission's statutory purpose of promoting safety of life and property. Also, that in view of the record, it found persuasive those comments stating that a consolidated UHF system in Los Angeles County would provide a valuable communications resource for the County and local public safety agencies to handle everyday operations, homeland security prevention, protection and response.

The FCC also noted that this enhanced system would also be available to handle natural and man-made disasters effectively and efficiently. This would mean the least amount of lives lost and a minimum amount of property damaged.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM.

--

The complete text of the FCC's approval of the STA is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-2823A1.doc (CGC, FCC)

**

CHANGING TECHNOLOGY: DTV CONVERSION COUPON PROGRAM OUT OF MONEY

The government's funding program to help people prepare for the transition to digital television has run out of money. This potentially leaves up to 8 million viewers without discount coupons to buy converter boxes they need to keep their analog TV sets working after the switch to digital.

As of this Sunday, January 4th, consumers who request a $40 coupon to help offset the cost of a converter box are being placed on a waiting list. They may not receive the coupons before February 17th unless they are willing to pay full price for a converter that costs between $80 to $250 depending on a given box's features and what a retailer has priced them at.

Members of Congress are now scrambling to find ways to allocate more money to the program. The big problem is that the nation is facing a monumental deficit, so there may be political opposition to expanding the converter box subsidy program. (TV)

**

RADIO LAW: SOME INTERNET MUSIC MAY GO AWAY

The increase in royalties to air music over the Web may force Yahoo and AOL to shutter their Web radio sites. Bloomberg news recently reported that no accord seems to be on the horizon between SoundExchange, which represents major record labels and sought the increase, and other groups. This includes many radio Internet broadcasters. (RW)

**

HAM RADIO AND SCOUTING: DARA FORMS SCOUT VENTURING CREW

The Dayton Amateur Radio Association and the Miami Valley Council Boy Scouts of America have teamed up to form a new Scouting Venturing crew. This, to serve the needs of high school age youngsters in the Dayton, Ohio area.

Venturing is a youth development program of the Boy Scouts of America for those who are at least age 14, and have completed the eighth grade. This new Dayton Amateur Radio Association sponsored Venturing crew is the only Amateur Radio specialty Scouting group in the Boy Scouts of America Miami Valley Ohio Council. (DARA)

**

RADIO EDUCATION: UK CLUB WINS GRANT TO FURTHER HAM RADIO EDUCATION

A United Kingdom radio club is the big winner in a national lottery. The Chelmsford Amateur Radio Society has been awarded a ï¿½10,000 endowment from the 'Awards for All' program that gives grants to local groups.

The grant to the Chelmsford Amateur Radio Society will be used by the club to further develop amateur radio training in the Chelmsford area as well as radio sports and for the establishment of a demonstration station in the Sandford Mill Science and Industry Museum. Among the equipment the club is buying with the grant are transceivers, a linear amplifier and some antennas. Also being purchased are some laptop computers and a video projector to be used in training programs and other projects. (Southgate)

**

RADIO EDUCATION: FAR ANNOUNCES 2009 - 20010 SCHOLARSHIP APPLICATION PERIOD

FAR, the Foundation for Amateur Radio has announced that it is now accepting applications for the 48 scholarships it administers for the 2009 through 2010 academic year. This, to aid licensed radio amateurs who are pursuing a higher education.

The foundation funds two of the scholarships and administers 46 others. Hams pursuing a full-time course of study beyond high school and accepted by or enrolled in an accredited university, college or technical school are eligible to apply. Scholarship grants range from $500 to $5000, and preference in some cases goes to applicants living in particular geographical areas or pursuing certain studies. Non-US residents are eligible to apply for some of the scholarships.

The application deadline is May 1, 2009. More information and an application form may be requested by letter via e-mail to scholarships@farweb.org. It can also be obtained by sending a card or note postmarked prior to March 30th to FAR Scholarships, PO Box 831, Riverdale, Maryland, 20738. (FAR)

**

SPECIAL EVENT: USS MIDWAY CELEBRATES TWO MILITARY EVENTS

Keep an ear open for special event Station NI6IW that will be operational from the USS Midway radio room on January 10th. The station will take to the ham radio airwaves from 1700 to 0059 UTC. This, to commemorate the commissioning of the world's first nuclear powered ship, the USS Nautilus, and Operation Desert Storm liberating Kuwait .

NI6IW will operate CW, SSB, PSK 31 and RTTY on the H-F bands as well as D-Star via the 145.615 KI6MGN Palomar Mountain repeater. QSL with a self addressed, stamped envelope to the USS Midway Museum Radio Room, 910 North Harbor Drive, San Diego, California, 92101. (W9EN)

**

NAMES IN THE NEWS: THREE INDUCTED INTO THE NEW ZEALAND DX HALL OF FAME

Kiwi DX'ers have announced the formation of a new New Zealand DX Hall of Fame. This, to honor those outstanding Zed-L DX'ers who have excelled in our radio sport hobby over many years.

The first inductees include Roy Jackson, ZL4BO and Ron Wright, ZL1AMO. Also inducted posthumously was Jock White, ZL2GX. All were honored for their extraordinary and unselfish contribution to the sport of Amateur Radio DXing in New Zealand. (ZL News)

**

D-STAR NEWS: AUSTRALIAN DSTAR LIST NOW HAS 233 MEMBERS AND GROWING

There are now 233 radio amateurs world-wide posting to the Australian D-Star list and the number seems to increase every day. Since the introduction of the list earlier this year, membership and site usage has grown drastically. D-Star usage has also shown a marked increase since the introduction of the DV Dongle, giving hams a relatively inexpensive and easy way to gain the benefits of D-Star from home. (D-Star Remailer)

**

THE SOCIAL SCENE: ORLANDO HAMCATION FEBRUARY 13 - 14

The 2009 ham radio social scene really begins the weekend of February 13th to the 15th. That's when the Orlando Amateur Radio Club holds the 63rd Orlando HamCation Amateur Radio and Computer Show at the Central Florida Fairgrounds in Orlando, Florida.

Over 150 commercial vendors are expected top be there. Also, 400 swap table vendors will be a part of the largest tailgate sales operation in Florida during the show. This year's HamCation theme will be "Amateur Radio Always a Challenge." And, special event station K4H will be on the air from the site to help commemorate this year's outing.

More information is on-line at www.hamcation.com, or by e-mail to hamcation (at) oarc (dot)org.

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, we are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

EMERGING HAM TECHNOLOGY: A TRANSMITTER FROM A CFL

How would you like to build a transmitter from the remains of one of those compact fluorescent light bulbs? Well one ham has and his work is fast becoming the talk of the Internet. Graham Kemp VK4BB, is here with the details:

--

Turn a 'low energy' light bulb into an 80m transmitter!

'Low energy' light bulbs are renowned for causing radio interference but they can be put to good use. A website describes how to turn one into a transmitter for the Amateur Radio 80m band.

Michael Rainey, AA1TJA's website describes how to convert a compact fluorescent lamp -- in this case a TriMax Electronic Fluorescent Lamp -- into a 1.5 Watt QRP CW transmitter for 3.5 MHz. Indeed, Michael goes on to say "a perfectly serviceable transmitter may be constructed!

The only additional components required were the quartz crystal, and four of the five components needed for the output low-pass filter. The resulting transmitter produces up to 1.5 Watts on 80m.

More information is on Michael's Website.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, reporting from Brisbane, Australia.

--

A few words of caution regarding the handling those compact fluorescent lamps or any fluorescent lamps for that matter. The glass section of these lamps contain some pretty toxic chemicals that you will really not want to come in contact with. Also, be very careful to avoid shattering the glass as its very easy to suffer a deep gash from the shards and find yourself in a hospital emergency room as a result. That said, a link to the website that Graham refers to can be
at http://mjrainey.googlepages.com/dasderelicht (Southgate, WIA News)

**

RADIO IN SPACE: NEW LUNAR PHOTOS FROM THE 1960'S

Efforts are being made to retrieve pictures made by the Lunar Orbiter spacecraft in 1966 and 1967. For those of us old enough to remember, back in the late 1960's NASA sent five Lunar Orbiter missions to photograph the surface of the moon. The purpose of these probes was to gain a better understanding of the lunar environment in advance of the Apollo program. Back then, data was radioed back to Earth where it was first recorded on large magnetic tape reels. It was then decoded and transferred to photographic film for scientific analysis. When these images were first retrieved from lunar orbit, only a portion of their true resolution was available because of the limited technology available at the time.

NASA has now released a newly restored 42-year-old image of Earth. The Lunar Orbiter 1 spacecraft took the iconic photograph of Earth rising above the lunar surface in 1966. Using modern digital technology, NASA has now produced the image at a much higher resolution than was possible when it was originally taken. To view the image and for more information about the Lunar Orbiter Image Recovery Project,
visit http://www.nasa.gov/topics/moonmars/features/LOIRP) (NASA)

**

WORLDBEAT: IRELAND TESTS ITS EAS SYSTEM

Turning to news from around the world, word that Ireland has tested its version of the Emergency Activation System. On the 16th of December at 4:45AM local time, the Irish Department of Communications carried out a structured exercise to test the nation's broadcast emergency services alert system.

Early that morning, all television and radio channels carried a 30 second engineering test simultaneously across Ireland. The four terrestrial broadcasters, regional broadcasters, all national radio channels and the 25 local radio stations carried an announcement indicating that the test was being conducted and that normal programming would resume as soon as it was concluded.

The drill was designed to simulate an urgent requirement of the government or an emergency service provider to have access to radio and TV broadcast platforms as fast as possible in order to broadcast information to the public. This is the first time such an exercise has ever been carried out in Ireland. (IRTS)

**

ON THE AIR: THE SOUND OF HEAVY IRON ON 75

If you are interested in hearing some good heavy metal AM signals the way that they used to sound on the ham bands, then this is for you. Hams nationwide are invited to tune in to the mid-West based 3.868 MHz Noontime AM Forum. The net meets Monday through Friday at 12 noon Central US time. Net control is K9ACT in Marengo, Illinois, and the net gives anyone with A-M gear a chance to test that equipment under real life operating conditions. (KB9YGD)

**

ON THE AIR: CANADIAN HAMS CELEBRATE GALILEO

Canadian hams will be permitted to use a special sequence old prefixes through February 28th. This to commemorate Galileo's first use of an optical telescope and the subsequent discoveries he made in his lifetime. For Canadian hams wanting to take part, the special prefixes work this way: VE changes to CG: VA changes to CF; VO changes to CH and VY changes to CI. Event planners say that they hope the calls will also promote the International Year of Astronomy. (Southgate)

**

DX

In DX, word that The ARRL DXCC Desk has approved credit for the T61AA operation from Afghanistan. This, after the license for the operation was updated. If you had cards that were recently rejected for this operation, please send an e-mail to the ARRL DXCC Desk and you will be placed on the list for credit update.

G7COD will be operational January 11th to the 27th from the Island of Embudu in the Kaafu Atoll. This, using the callsign 8Q7AK. Activity will be CW and SSB on 40-10 meters including 30, 17 and 12 meters. For comprehensive details on QSL information please check 8Q7AK on QRZ dot com.

OZ8KR will be active as C56KR from Bakuto, Gambia through January 14th. Listen for him on 40 though 10 meters on SSB only. QSL via his home callsign.

G3ZVW will be operational as ZD8N from Ascension Island from January 12th to the 27th. He will be using CW, RTTY and SSB mainly on 30 through 10 meters. QSL direct or via the bureau.

EA5GVH will be on the air from Aruba as P40PZ from January 12th to the 28th. He will operate 80 through 6 meters using SSB and the digital modes only. QSL via EA5GVH.

HB9CRV has announced that as of December 31st, 2008, he is no longer the QSL manager of CT3BX. No new QSL Manager has been found and the logs are closed.

Lastly, G3NKC, G4XUM and MD0CCE will be active as MD4K from the Isle of Mann during the CQ 160-Meter CW Contest. That's January 24th to the

25th. The trio will operate as a Multi-Op entry. QSL via G3NKC and be sure to include sufficient return postage with your QSL request.

(Above from various DX news sources)

THAT FINAL ITEM: THE MOUSE AT 40

And finally this week, it's the 40th birthday of a neat little device that makes it easy to work and play at your computer. Here's Jim Linton, VK3PC:

--

Just imagine a personal computer without a mouse? That may very well happen in a few years time but more about that later.

The first public demonstration of a mouse was by the Stanford Research Institute in San Francisco California on 9 December 1968.

At an event attended by 1,000 computer professionals the mouse made its debut, shown off by Douglas Engelbart and his team of fellow researchers. It looked like a real mouse in shape and its attached cord resembling a tail led to it gaining its name.

Four years later, Bill English developed the 'ball mouse,' replacing the external wheels on the original mouse with a single ball that could rotate in any direction. It was first sold with the Zerox Alto computer in 1981.

In more recent years, wireless technology enabled the ubiquitous mouse to lose its tail. There are now predictions that within five years the mouse will be obsolete, being replaced by touch screen and facial recognition technology.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

The mouse has taken on many roles over the years and its been seen in many situations. Perhaps the funniest was in the Star Trek movie "The Voyage Home." That's where the cast goes back in time to San Francisco in the 1990's to find a pair of hump back whales key to saving the future Earth. Scotty has need of a computer and all that's available is a neat little Mac. Well, Scotty is used to giving verbal commands to his computer and is not sure what to do with the mouse. So, he picks it up, looks at it and then uses it as a microphone to try to talk to the little Mac. And, as those who saw the movie know, the Mac never responds. (WIA News)

EARTHQUAKES STRIKES COSTA RICA, EMERGENCY HAM FREQUENCY DECLARED: Due to
strong seismic activity in Costa Rica, the Radio Club de Costa Rica
(RCCR) -- that country's IARU Member-Society -- is monitoring local
repeaters and 7090 kHz. IARU Region 2 Emergency Communications
Coordinator Cesar Pio Santos, HR2P, requests that 7090 kHz be kept clear
of non-essential traffic due to possible emergency communications
dealing with the earthquake. The ARRL encourages all amateurs to be
aware of the emergency operations on this frequency. US amateurs should
avoid interfering with Spanish language SSB while using digital modes.

==> ARRL BOARD OF DIRECTORS, STANDING COMMITTEES TO MEET IN CONNECTICUT NEXT WEEK

The ARRL Board of Directors holds their 2009 annual meeting January 16-17 in Windsor, Connecticut, with Directors, Vice Directors and ARRL Board officers in attendance. The meeting will be preceded on Thursday, January 15, with meetings of the Administration and Finance Committee and the Programs and Services Committee.

The Administration and Finance Committee, chaired by Northwestern Division Director Jim Fenstermaker, K9JF, studies, advises and makes recommendations for all administration and financial matters of the League, including recommending the annual budget to the Board, making recommendations in regard to staff management and monitoring investment of ARRL funds. Fenstermaker said he can report that "2008 was a relatively good year with growth in membership and meeting the needs of our members. The 2009 plan calls for continuing to provide existing programs and to develop new programs, as well as provide better communication tools. Our belief is that in difficult economic times, members will focus even more on activities they are familiar with and have investments in, such as Amateur Radio. We see our opportunities and ability to serve members' needs increasing under this scenario."

The Programs and Services Committee, headed by Midwest Division Director Bruce Frahm, K0BJ, studies, advises and makes recommendations for all programs and services provided by the League, including Logbook of the World, W1AW and the incoming and outgoing QSL services. "The Programs and Services committee is pleased with ongoing work to strengthen ARRL's Internet presence through the Web site redesign and the expansion of the IT department. A good example is the new Triple Play Worked All States award that is generating a lot of interest. On the Field Organization side, we are monitoring implementation of changes brought on by the Section Governance survey that was reported in July, as well as those brought about by the NERPC report following Hurricane Katrina and other large-scale disasters. Membership Services projects include receiving studies from our Contest and VHF/UHF Advisory Committees and ongoing consideration of awards-related matters. We're also interested in development of the new 'PR-101' course for Public Information Officers and our other educational offerings," Frahm said.

Per the Articles of Association <http://www.arrl.org/aabl.html>, the ARRL Board of Directors meets twice a year, in January and July.

==> ONE MODE DOWN, TWO TO GO!

With the advent of the ARRL's Triple Play Award <http://www.arrl.org/news/stories/2008/12/05/10490/>, on-air participation has reached a level of excitement not seen in recent years. This new, exciting award is available to all amateurs who confirm contacts with each of the 50 states using three modes for each state: CW, phone and RTTY/digital. All 150 contacts must be made on or after the January 1, 2009 and must be confirmed via Logbook of The World (LoTW) <http://www.arrl.org/lotw/>. All bands -- with the exception of

60 meters -- may be used in pursuit of the Triple Play Award.

The ARRL RTTY Round Up, held January 3-4, was one of the first organized events eligible for the award. "If the amount of activity in the 2009 ARRL RTTY Round Up is any indicator, the Triple Play is off to a fantastic start," said ARRL Contest Branch Manager Sean Kutzko, KX9X. "The RTTY Roundup was the first contest to take place since the award's inception. It ended only a few days ago, and we already have received almost 1100 logs. There's been a lot of chatter on the RTTY e-mail reflectors about getting the Triple Play completed, and I personally have seen numerous stations calling 'CQ Triple Play' on PSK31 since the first of the year. People already have their 'needed list' programmed into their PSK31 macros. There is no question that the new Triple Play award is causing a lot of buzz in the digital community. I'm happy that we have been able to come up with a new award that so many people are interested in right off the bat."

According to Norm Fusaro, W3IZ, Assistant Manager for the Membership and Volunteer Programs Department, hundreds of new LoTW certificates have been processed each day since the first of the year. "We are excited to see such an upswing in LoTW participation," he said. "I know what a thrill it can be to upload my logs to LoTW right after a contest and see the QSOs appear almost instantaneously. That's the magic of Logbook of The World."

Those who participated in the RTTY Round Up were ecstatic over how easy it was to use LoTW. Jose Castillo, N1BAA, of Amherst, Massachusetts, said, "Just amazing! Just under 24 hours since I uploaded my ARRL RTTY Round Up log and now I have Worked All States confirmed via LoTW [from just the RTTY Round Up]. Gotta love LoTW!" Bob Garceau, W1EQ, of Putnam, Connecticut agreed: "I'm impressed with the response to my uploaded log to LoTW. I uploaded 728 QSOs and 50 hours after the contest closed, I have 336 QSLs. That's a 46 percent response. Impressive! I think that someone will get #1 Triple Play by the end of January."

Don't be too upset if you wanted to work one of the digital modes and didn't participate in the RTTY Round Up -- other digital modes, such as PSK31 and Hellschreiber are also eligible for the digital portion of the award. The first ever 24 hour Hellschreiber sprint takes place January 17. According to the Feld Hell Club's Web site, all modes of Hell on any band (with the exception of 17, 30 and 60 meters) are allowed in the sprint <http://sites.google.com/site/feldhellclub/Home/contests>. If you like operating digital modes and you missed the RTTY Round Up, why not give the Feld Hell sprint a try? According to QST Editor and digital guru Steve Ford, WB8IMY, free sound card software for Hellschreiber, such as Fldigi <http://www.w1hkj.com/Fldigi.html>, MultiPSK (for PCs)< http://f6cte.free.fr/index_anglais.htm> and cocoaModem (for Macintosh) <http://homepage.mac.com/chen/w7ay/cocoaModem/> can be found online.

For SSB and CW aficionados, the North American QSO Parties (NAQP) start January 10: The CW portion is 1800 UTC January 10-0600 UTC January 11, and the phone portion is 1800 UTC January 17-0600 UTC January 18 (the

NAQP RTTY Contest is 1800 UTC February 28-0600 UTC March 1). Of course, you don't have to participate in a contest to chase the Triple Play Award. As long as you submit your logs to Logbook of The World, you're good! LoTW is set up to calculate your Triple Play QSOs separately from your other QSOs.

ARRL Chief Executive Officer David Sumner, K1ZZ, warned that it can be "addictive" once you begin making your contacts for the Triple Play Award, and that "there are many possible variations on the theme. You can try to be the first (or at least the first on your block) or you can set your own pace. Think it's too easy? Limit yourself to QRP while operating your favorite mode (or all three). Maybe you prefer to be the quarry; it will quickly emerge which states are the most difficult to find, offering opportunities to earn the gratitude of your mates by activating the ones you can get to with your portable or mobile rig."

So get on the air, make contacts and submit them via Logbook of The World. Before you know it, you'll have something new to hang up on your shack wall.

==> FCC COMMISSIONERS: NOW THERE ARE FOUR

The term of FCC Commissioner Deborah Taylor Tate, a Republican from Tennessee, came to an end on January 3 as the 111th Congress convened for the first time. Originally selected by President Bush to fill the unexpired term of then-Chairman Michael Powell, Tate joined the Commission in 2005 <http://www.arrl.org/news/stories/2005/11/10/100/>. In June 2007, Bush announced his intention to nominate Tate to a full five year term <http://www.arrl.org/?artid=7534>, but when the Senate failed to confirm her nomination by the close of the 110th Congress, Tate's tenure as a Commissioner came to a close.

"My term as a commissioner is at an end," Tate said, "and I would like to express what a great privilege and honor it has been to serve our country and the Federal Communications Commission over the past three years. I am grateful to President Bush for his appointment and for his confidence in my ability to make important decisions on behalf of the American people."

Tate said that she plans on advocating for children and families both in this country and abroad. She said she will also dedicate herself "to protecting our stories and storytellers, and to opposing the economic and moral harm of piracy." She also plans on launching a formal mediation practice "that will utilize the skills I have practiced daily at the Commission to develop resolution, consensus and collaboration in the communications sector and beyond."

Chairman Kevin Martin thanked Tate for her service to the Commission, saying her "good nature and distinct personality" will be missed. "Based on her experience as an effective state commissioner," Martin said, "Commissioner Tate demonstrated strong leadership during her tenure as Chair of the Federal-State Joint Board on Universal Service, and the

Federal-State Joint Board on Jurisdictional Separations. As Chair, she led the effort to address [these two] critical components of the telecommunications framework set forth by Congress. Commissioner Tate embraced the difficult task of trying to reach consensus between federal and state members on these very technical and complex issues."

Tate thanked the Commission's professional staff, calling them "the finest, most honorable group of civil servants in our government. They are viewed as the 'gold standard' by our international colleagues and I appreciate their dedication, integrity and commitment. All Americans should be proud of their work."

==> DXPEDITION TO DESECHEO GETS READY TO ROLL

Six members of the February 2009 KP5 Desecheo DXpedition team <http://www.kp5.us/> met in Puerto Rico the week of December 17-21. According to team co-leader Bob Allphin, K4UEE, the team visited US Fish and Wildlife Headquarters in Boqueron and met with the Chief Refuge Manager and law enforcement personnel in preparation for the DXpedition, set to start February 12.

Desecheo currently sits at number 7 on DX Magazine's Most Wanted list; the island is the second most-wanted DXCC entity in Asia and third most-wanted in Europe. Desecheo is a small uninhabited island in the Mona Passage, 14 miles off the western coast of Puerto Rico. It is part of the USFWS's national wildlife refuge system administered by the Caribbean National Wildlife Refuge Complex (CNWR) <http://www.fws.gov/caribbean/>.

"After an evening with local DXers and members of the Puerto Rico Amateur Radio League for dinner and a night of fellowship, DXpedition team members underwent UXO (unexploded ordnance) training," Allphin said. "On December 19, we accompanied US Fish and Wildlife law enforcement and UXO personnel to Desecheo Island. In the three hours we were there, the campsite and antenna fields were thoroughly swept for UXO and several areas were found suspicious. These areas were clearly marked, mapped by GPS and declared off limits for the DXpedition."

Allphin said that the USFWS will allow antennas on the ridge above the helicopter pad, providing a clear shot to Europe, North America and Japan. Other antennas will be located on the beach below the helicopter pad. While on Desecheo, the team conducted a test for the 2 meter link to Puerto Rico.

"Logistics and staging of equipment is ongoing and will be complete before the team arrives in Puerto Rico on February 7." Allphin said. "The team will transit to Desecheo on February 12 to begin the two week operation. Eight HF stations, plus 6 meters, will be operational. We have planned an incredible array of antennas. Transportation and logistics have been arranged for a fast deployment and quick appearance on the air. As soon as we land on Desecheo, two stations will be immediately activated. Stations will continue to operate until the final

moments of departure on February 26."

Per USFWS rules, only 15 operators will be allowed on the island at one time. "We have arranged with USFWS to allow a shift change about half way through the DXpedition," Allphin told the ARRL. "This has allowed a number of hams on our waiting list an opportunity to participate in this DXpedition."

DXpedition co-leader Glenn Johnson, W0GJ, said the team will be running CW, SSB and RTTY on 160-6 meters. "We've had tremendous support from DX organizations all over the world and from numerous equipment and antenna manufacturers," he told the ARRL. "We are diligently working on the propagation studies to reach our hard-to-work areas of Asia and Europe. This plus our planned antennas, we should knock Desecheo off of the Most Wanted List for a long time to come."

==> NOMINATIONS SOUGHT FOR 2009 DAYTON HAMVENTION AWARDS

The Dayton Hamvention <http://www.hamvention.org/> is accepting nominations for its 2009 awards <http://hamvention.org/awards.php>. Do you know an outstanding amateur in your club, community or from on-the-air contacts? Does this person excel in some phase of Amateur Radio? Do you feel this person deserves worldwide recognition? All radio amateurs are eligible. The deadline for nominations is February 18, 2009. The winners will be recognized at the 2009 Hamvention, May 15-17.

The three awards are:
* The Amateur of the Year Award -- This award will be given to the special person who has made a long term commitment to the advancement of Amateur Radio. The Hamvention Awards Committee is looking for a well-rounded individual who has contributed to Amateur Radio in some outstanding way.
* The Technical Excellence Award -- This award will be given to the person who has made an outstanding technical advancement in the field of Amateur Radio.
* The Special Achievement Award -- This award honors someone who has made an outstanding contribution to the advancement of Amateur Radio, usually someone who has spearheaded a significant project.

Awards are decided by the Awards Committee, based partially upon the information received, not the number of nominations submitted.

Documentation is beneficial. Magazine articles, newsletters, newspaper clippings, videos and such will better inform the Awards Committee of your candidate's accomplishments. These materials become the property of Hamvention and cannot be returned. Nominations may be sent via e-mail <awards@hamvention.org> (please scan all supporting documents and send them as attachments, via fax at 937-276-6934, or US Mail to Hamvention Awards, PO Box 964, Dayton, OH 45401-0964. Nomination forms are available in either PDF format <http://hamvention.org/files/nominations09.pdf> or Microsoft Word format <http://hamvention.org/files/nominations09.doc>. If you send your

nomination via e-mail, the Awards Committee requests that you place your name in the subject line of the e-mail. -- Dayton Hamvention Awards Committee

==> FOUNDATION FOR AMATEUR RADIO INVITES SCHOLARSHIP APPLICATIONS

The non-profit Foundation for Amateur Radio (FAR) <http://www.amateurradio-far.org/> is now accepting applications for 48 scholarships for the academic year 2009-2010 to assist radio amateurs pursuing higher education.

FAR fully funds two of scholarships and administers 46 others without cost on behalf of various club and individual donors. Amateur Radio licensees pursuing a full-time course of study beyond high school and accepted by or enrolled in an accredited university, college or technical school are eligible to apply. Scholarship grants range from $500 to $5000, and preference in some cases goes to applicants living in particular geographical areas or pursuing certain studies. Non-US residents are eligible to apply for some of the scholarships. FAR encourages clubs -- especially those in California, Delaware, Maryland, Ohio, Pennsylvania, Texas, Virginia and Wisconsin -- to announce these scholarship opportunities at meetings, in newsletters, during training classes, on nets and on their Web sites.

More information and an application form may be requested by letter via e-mail or by sending a QSL card postmarked prior to March 30, 2009, to FAR Scholarships, PO Box 831, Riverdale, MD 20738. The application deadline is May 1, 2009. Headquartered in Washington, DC, FAR consists of more than 75 area Amateur Radio Clubs. FAR is devoted to promoting the interests of Amateur Radio and those scientific, literary and educational pursuits that advance the purposes of the Amateur Radio Service.

==>SOLAR UPDATE

Tad "The spruces rough in the distant glitter of the January sun" Cook, K7RA, this week reports: On Wednesday, January 7, a sunspot appeared very briefly in the lower right portion of the Sun's image. It was so brief that NOAA did not record it on the Space Weather Prediction Center's daily solar data chart for that day. Spaceweather.com reported a sunspot number of 11 for the day, and the magnetic polarity was consistent with a new Solar Cycle 24 spot. Today, January 9, there is another Solar Cycle 24 appearance, this time on the upper left of the image. Sunspot numbers for January 1-7 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68.9, 69.9, 69.5, 68.8, 69.2, 68.7 and 69 with a mean of 69.1. The estimated planetary A indices were 6, 3, 9, 4, 4, 3 and 3 with a mean of 4.6. The estimated mid-latitude A indices were 5, 3, 8, 5, 3, 2 and 1 with a mean of 3.9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin

page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Wallace Stevens' "The Snow Man" <http://www.npr.org/templates/story/story.php?storyId=5031535>.

==>IN BRIEF:

* This Week on the Radio: This week, the Midwinter Contest (CW) is January 10, while the North American QSO Party (CW), the Hunting Lions in the Air Contest and the MI QRP January CW Contest are all January 10-11. Look for the SKCC Weekend Sprintathon, the NRAU-Baltic Contest (CW and SSB), the Midwinter Contest (phone) and the DARC 10 Meter Contest on January 11. Next week is the ARRL January VHF Sweepstakes is January 17-19. The LZ Open Contest is January 17. The North American QSO Party (SSB), the Hungarian DX Contest and the UK DX Contest (RTTY) are all January 17-18. The Run for the Bacon QRP Contest is January 19 and the NAQCC Straight Key/Bug Sprint is January 22. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration remains open through Sunday, January 25, 2009, for these online course sessions beginning on Friday, February 6, 2009: Amateur Radio Emergency Communications Level 1; Radio Frequency Interference; Antenna Design and Construction; Technician License Course; Analog Electronics, and Digital Electronics.. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* ARES E-Letter Gets New Look: The ARRL ARES E-Letter <http://www.arrl.org/FandES/field/ares-el/about.html>, published on the third Wednesday of each month, makes the move from a plain text formatted newsletter to an HTML format this month. The second of the ARRL e-letters to update its look (the ARRL Contest Update switched over to an HTML format in May 2008), the ARES E-Letter has a circulation of 33,000 ARRL members. The ARES E-Letter is a digest available via e-mail

full of news and information of interest to active members of the ARRL Amateur Radio Emergency Service (ARES) and to hams concerned with public service and emergency communications. E-mail newsletters, such as the ARES E-Letter, the Contest Update and The ARRL Letter, are just some of the many benefits available at no charge to ARRL members. To sign up for any of the League's newsletters, go to the Member Data page on the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

* Gary L. Robinson, WB8ROL, Wins December QST Cover Plaque Award: The winner of the QST Cover Plaque Award for December is Gary L. Robinson, WB8ROL, for his article "Ghost QSOs -- Olivia Returns from the Noise." Congratulations, Gary! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the January issue by Saturday, January 31.

* The 2008 ARRL Periodicals on CD-ROM Now Shipping: The 2008 ARRL Periodicals on CD-ROM <http://www.arrl.org/catalog/?item=9406#top> is now available and includes the complete 2008 fully searchable collection of three ARRL journals -- QST, QEX, and National Contest Journal (NCJ). In addition, the CD-ROM includes source code for software projects and PC board patterns, Section News, as well as the ever-popular Contest Soapbox and Contest Results. Search the full text of every article by entering titles, call signs or names. See every word, photo -- most in color -- drawing and table in technical and general-interest features, columns and product reviews, plus all advertisements. Print what you see, or copy it into other applications. System requirements: Microsoft Windows and Macintosh systems, using the industry standard Adobe Acrobat Reader software. CD-ROMs for other years are also available <http://www.arrl.org/catalog/?item=NO-PER#top>.

* New QSL Tracking Service in Chile: Have you sent a QSL to Chile but had no reply? Perhaps you had a contact with XQ, CE, CA, CD, XR, 3G or CC that has not been confirmed. According to David Calderwood, CE2WZ/GW4VHO, a group of Chilean amateurs has offered to try and help obtain missing cards by carrying out searches and making enquiries in Chile. To use this free service, please contact Jose Luis Jimenez, CE1KR, via e-mail <ce1kr.joseluis@gmail.com>. You can write to him in Spanish or English. Full details on this service are available on the Hunting QSL Cards Web site <http://hunting-qsl.blogspot.com/>.

* Son Charged with Murder of Florida Ham: Robert Farley, of Lakeland Florida, has been charged with first degree murder in the death of his father Walter Farley, K4QE, also of Lakeland. "The Ledger," a newspaper in Farley's hometown, reported that authorities allege that Robert killed his father New Year's Eve during an argument over family matters. Walter Farley was 93. Authorities said that on Saturday, January 3, Robert Farley confessed to the killing and led detectives to a lake where he had discarded the murder weapon; the weapon was recovered by dive team members later that afternoon. Walter Farley served in the US

Army during World War II as a telephone and radio repairman. He fixed tape recorders for the blind and was involved with the local historical society. A member of the Lakeland Amateur Radio Club, Walter was active on local Nets.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I think the problem you'd have running more than 50 watts peak is that
you'd "get out" a lot better than you could hear -- there would be people

calling you who would be too weak to copy. Only once do I recall ever
seeing anyone running more than 50 watts on PSK.

(he was running 400 watts - and was in fact quite clean..)

Attention all hams in the SouthEast USA:

Reserve the date: SATURDAY, JANUARY 17, 2009 8 AM TO 3 PM

For the Ft. Myers ARC hamfest and ARRL South Florida Section Convention.

Araba Shrine Auditorium

2010 Hanson Street, Fort Myers, FL 33901

Talk-In Repeater: 146.880 (136.5 Tone)

Huge flea market in the Auditorium and parking lot.

See: http://fmarc.net/hamfest_2009.htm for more details and directions.

You point out a very good point that some don't seem to get. It's the antenna that really makes the differance. Power is nice, but if your antenna is garbage, who cares? Usually any $$ spent on antennas will produce more signal at the receiver than the same $$ spent on amps.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations | campaigns will not be permitted. Relatively unbiased announcements or | reviews of new amateur radio-related products or services may be | permitted at the discretion of the moderators. Such posters are asked | to disclose their financial or professional interest, if any, in such | products or services. |

Mentions of small amounts of free items for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. | However, a pointer to a website or other external source of information | is permitted and encouraged in cases where it is relevant to an existing | thread, with appropriate context being given in the post. A URL with no | information about what a user should expect to find there will be | rejected. A pointer to information that is off-charter for | rec.radio.amateur.moderated will be rejected, as will a pointer which | itself does not meet the rec.radio.amateur.moderated guidelines (such as | a URL containing embedded name-calling). |

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar

government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

Totally agree with that comment. Our local contest site is an
amateur on a farm with his nearest neighbour about a mile away. 14
towers last I heard including a 40 M and 80 M four square.

We're planning on operating there.

BTW I asked a nearby world class contester as to which the most
popular PSK31 contests. He stated the main one was the TARA Rumble
http://www.n2ty.org/seasons/tara_rumble_rules.html. Any comments?

But that's a single op contest. We prefer the socializing and low key
beer drinking nature of multi op contests. <smile>

Tony

18. Amateur Radio Newsline(tm) Report 1640 - January 16 2009

Newsgroup: rec.radio.amateur.moderated

Amateur Radio Newsline(tm) Report 1640 - January 16 2009

The following is a closed circuit advisory. Ladies and gentlemen, Amateur Radio Newsline's support Fund Administrator Andy Jarema, N6TCQ:

--

Yep its me -- A.J. And if Im here its because Amateur Radio Newsline is in desparate need of your support.

Amateur Radio Newsline has only received enough financial support of late to keep the service going for another month or so. In other words, most of the bills from last year have been paid , but now money has to be raised to keep from loosing the phones and e-mail service from bills accrued in December.

Right now Newsline continues to exist on a week to week basis. He says that It is up to you and the listeners to see that it can continue to provide this vital service. Otherwise he may soon be forced to pull the plug.

Please help us to keep The Amateur Radio Newsline on the air. Our address is the Amateur Radio Newsline Support Fund, Post Office Box 660937 in Arcadia California. The zipcode is 91066. Again and as always, we thank you.

For the support fund, I'm Andy Jarema N6TCQ

--

Thank you Andy. Now, Amateur Radio Newsline report number 1640 with a release date of Friday, January 16th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. The National Safety Council says its time to ban all mobile cellphone operations. Would such a measure impact on mobile ham radio operations? Also, a study by the National Academy of Sciences says that the coming solar cycle maximum could cause havoc to communications, President-elect Barack Obama makes his choice for the next FCC Chairman and an earthquake in Costa Rica leads to a communications emergency declaration on a 40 meter frequency. Find out the details on Amateur Radio Newsline(tm) report number 1640 coming your way right now.

(Billboard Cart Here)

**

RADIO SAFETY: NSC WANTS TOTAL BAN ON MOBILE CELLPHONE USE

The National Safety Council is calling for a total nationwide driver ban on the use of cell phones including hands-free devices. Don Carlson, KQ6FM, reports:

--

In an announcement on Monday, January 12th, the National Safety Council not only issued a plea directly to motorists to stop using the devices, but also urged businesses to enact policies limiting the use of cell phones by their employees. The Congressionally-chartered agency also called on states to pass more laws banning the use of wireless communications devices while driving.

California, Washington state, Alaska, the District of Columbia, Louisiana, Minnesota, and New Jersey all have laws on the books that ban the use of a mobile phone without a hands-free device. But the Councils proposal wants to eliminate even these hands-free exemptions.

The National Safety Council news release does not mention Ham radio, C-B radio or any other two-way radio based application other than cellphones and text messaging. However in mustering support for its campaign, the organization cites numerous studies including one by the Harvard Center of Risk Analysis. That one found that driver use of cell phones contributes to 636,000 crashes each year. This it says leads to 12,000 serious injuries and 2,600 annual deaths.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

Needless to say, all two way mobile radio users, including hams, will have to watch carefully for any state or federal laws that might develop out of the National Safety Council total cellphone ban request. (Published news reports)

**

RECUE RADIO: COSTA RICA QUAKE LEADS TO EMERGENCY COMMUNICATIONS DECLARATION

A magnitude 6 point 2 earthquake that hit the Central American country of Costa Rica on Thursday, January 8, has brought a declaration of a communications emergency for a ham radio frequency. The Radio Club de Costa Rica, which is that country's IARU member society, says that it is monitoring local repeaters and 7 dot 090 MHz on 40 meters. Because of this, IARU Region 2 Emergency Communications Coordinator Cesar Pio Santos, HR2P, requested that 7 point 090 MHz be kept clear of non-essential traffic due to possible emergency communications dealing with the earthquake.

The temblor, with an epicenter located about 22 miles northeast of the city of San Jose hit after a series of seismic events rocked the country in recent days. Until an all clear is issued, hams not involved in the current emergency should avoid interfering with Spanish language SSB operations while they are using digital modes. (ARRL, others)

**

RESCUE RADIO: NEW STUDY SAYS SOLAR STORMS COULD BRING DISASTER

A new study from the National Academy of Sciences outlines dire consequences on Earth for a worst-case scenario giant solar storm. Scientists involved in the study say that damage to power grids and other communications systems could be catastrophic. Even ham radio would be affected. Burt Hicks, WB6MQV, has the rest of the story:

--

While the sun is in now in a lull period, solar activity is expected to rise sharply in coming years and what is known as severe space weather will ramp up a year or two before the peak in 2012. At its worst, severe space weather in the form of solar flares and other phenomena can produce a storm electromagnetic energy. Once it hits Earth it can disrupt power distribution grids and cause blackouts and also downgrade both terrestrial wire-line and satellite to ground communications.

Severe solar storms can even damage satellites if they are not fully hardened against radiation. Ground based communications, especially on the High Frequency bands used by most radio amateurs would also be adversely impacted during such a solar event.

Daniel Baker, the director of the Laboratory for Atmospheric and Space Physics at the University of Colorado in Boulder was the lead researcher in this study. He says that in the event of a high magnitude solar storm that the social impact could be enormous. This is because emergency services could wind up being strained, and command and control might be lost.

The National Academy of Sciences says that its prediction is based in part on a major solar assault back in 1859. That storm is believed to be the reason that telegraph systems short circuited in both the United States and Europe. According to the new study with the advent of modern computer controlled power grids and relay satellites on-orbit, much more is at risk.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles.

--

The report was commissioned and funded by NASA. Experts from around the world in industry, government and academia participated. More is on line at

**

RESTRUCTURING: MODIFIED REGION 1 BANDPLANS NOW ON LINE

A revised IARU region one bandplan is now available on the Radio Society of Great Britain's website. The new plans are based on the outcome of the 2008 IARU Region 1 General Conference. That gathering lead to changes to some of the plans that are now available to all in both PDF and HTML

formats from www.rsgb.org/spectrumforum/bandplans/ (Southgate)

**

HAM HAPPENINGS: HAM RADIO AND THE INAUGURATION OF PRESIDENT BARACK OBAMA

Amateur Radio will be a part of the inauguration of the 44th President of the United States. At least it will be vicariously. This, with word that the District of Columbia Amateur Radio Society will be on the air with special event station W3A in honor of the inauguration of Barack Obama as the nationï¿½s new leader.

W3A will be on the air during the week of January 17th to the 24th on all bands, but likely concentrating on 80, 40 and 20 meters. And, if you make contact with W3A you should send your QSL to either W3DQ with a Self Addressed Stamped Envelope, via the bureau or electronically, using Logbook of the World. (N0DRC)

**

RADIO POLITICS: PRESIDENT-ELECT OBAMA TO NAME GENACHOWSKI TO CHAIR FCC

Several news reports say that President-elect Barack Obama plans to nominate a key technology advisor to be the next chairman of the Federal Communications Commission. The person expected to get the top FCC post is Julius Genachowski, who held several positions at the FCC during the administration of President Bill Clinton.

Genachowski served as an executive at I-A-C InterActive Corp. from 1997 to 2005 and as a law clerk at the Supreme Court from 1992 to 1994. He and the President-elect were friends at Harvard Law School.

The Obama team would not confirm earlier reports of the planned appointment. The person knowledgeable about the plans to nominate Genachowski spoke on condition of anonymity because the decision has not been formally announced. (Various)

COMMUNICATIONS LAW: FTC SHUTS DOWN SCAREWARE SELLERS

The US government has moved to shut down sellers of fake security software. This, as the Federal Trade Commission announces that it has won a restraining order that stops several sellers of scareware from continuing to market their wares. Rebecca Bruce is here with the details:

--

Scareware is software that misleads a computer user into believing that his system may be infected with viruses, spyware or other malicious programs that could harm or destroy data. Now, a U S District court has granted an injunction which stops Innovative Marketing and Byte Hosting Internet Services from continuing to advertise their products, and from making what the Federal Trade Commission says are false claims about their efficacy.

Court papers submitted by the FTC assert that the peddlers of the fake security software first trick legitimate websites into advertising their products. Then, anyone clicking on a scareware advertisement is then taken to the webpages run by the fake security firms. There a so-called scan of the consumers hard drive takes place looking for security problems. The FTC claims that every scan finds a host of security problems like viruses and spyware and urges visitors to buy their brand of software to fix them.

The Federal Trade Commission says that it is pursuing further legal action to win a permanent ban on those peddling the scareware. It has also asked firms hosting the websites owned by these firms to block customers from accessing them while at the same time freezing the assets of the two companies. This, so that it can reclaim cash and refund those were caught in the alleged scam. The government says that the possibility exists that millions of people may have been caught by the many scareware schemes that are roaming the Internet these days.

For the Amateur Radio Newsline, I'm Rebecca Bruce, in Los Angeles.

--

While the Federal Trade Commission can shut down scareware sellers here in the United States, it will have a lot harder time with those who operate overseas, especially in countries that spend little time in oversight of Internet based business. (BBC, others)

**

RADIO LAW: FCC SAYS NO TO CITIZENS CHALLENGE OF RADIO STATION LICENSE

A citizens request that the FCC deny the renewal of the license of a non-commercial radio station has been turned down by the agency. This, as the FCC tells William Crozier of Union City, Oklahoma, that his challenge amounts to little more than a difference of opinion with Creative Educational Media Corporation, Inc., over what types of programming best serve the needs of the community of Moore, Oklahoma.

Way back on January 24, 2005, Creative Educational Media filed for renewal of the license of its non-commercial educational station KMSI-FM. On April 29, 2005, William Crozier filed an informal objection alleging that Creative lacked local programming and challenging its non-profit status. Creative filed its opposition on May 12, 2005. The FCC agreed with Creative, and on July 13, 2007, it released a Staff Decision which both denied Crozier's objection and granted the KMSI renewal application. At that time the FCC said that there was no substantial and material

question of fact that grant of the renewal application would be inconsistent with the Communications Act.

On August 21, 2007 Crozier filed a Petition for Reconsideration still claiming that Creative still lacked local programming. Now, in its January 9, 2009 announcement, the FCC notes that Crozier's Petition was late-filed and was being dismissed on that basis. The FCC adds that this action is consistent with the D.C. Circuit's decisions on whether the Commission has failed to adhere to its procedural rules for providing notice of its decisions. It notes that no such circumstances are present here. (FCC)

THE DTV TRANSITION: THE FEBRUARY 17 DTV SWITCH DATE MAY SLIP

President-elect Barack Obama is urging Congress to postpone the February 17 Digital Television switch date. This, for fear that too many people aren't ready. Obama has been joined by a small chorus of U-S Senators and Representatives, including Representative Ed Markey of Massachusetts. Markey is Chair of the House Subcommittee on Telecommunications and the Internet. Each has his or her own reason to hold off on fully implementing the new technology until various real or perceived hurdles can be overcome.

Also joining the call to delay the February 17th date is Detroit Mayor Ken Cockrel Jr. In a letter to FCC Commissioner Michael Copps, a Federal Communications Commissioner, Cockrel said despite a massive outreach effort to get converter boxes in the hands of those who still use a television antenna to receive a signal, too many would be left with no television service when the changeover occurs. Cockrel claims that seniors, the poor and first-generation immigrants especially would be hit hard.

The politically powerful Consumers Union also wants the transition put on hold. In a letter sent to a number of key government officials, the Consumers Union suggested the government's inability to issue new coupons, on top of concerns about the number of call centers and the amount of assistance to viewers, should prompt a re-examination of the switchover date.

However, a delay is not a certainty at this time, so the only conservative course of action is to stick with the current February 17th DTV switch plans unless and until an official postponement is announced. (CGC, others)

**

THE DTV TRANSITION: DTV HELP GROUPS CHOSEN BY FCC

Delay or no delay, the FCC has identified a dozen grassroots groups that will get $8.4 million in Digital TV education money from the regulatory agency. The groups will be using the funds to conduct seminars, help viewers buy and install Digital -to-analog converter boxes, provide call centers, and more. Jeff Clark, K8JAC, has the details:

--

According to the Waveform broadcast industry newsletter, the largest grant of $2,719,947 is going to the American Association of Retied People. AARP will use it to create call centers targeted at senior citizens.

In addition to AARP, others getting funds include Communications Services for the Deaf, the Hispanic Information and Telecommunication Network, The Mayor's Commission on Technology, noncommercial station WXXI, Iowa Public Broadcasting Board, Idaho Public Television, and several others. The FCC says it looked for groups who would target key populations such as minorities, senior citizens and the disabled who are most at risk of losing over-the-air TV service or most in need of help to continue to receive a TV signal. It also looked for organizations that could focus on the 82 markets with the greatest number of over-the-air analog viewers.

The money for this project comes from $20 million Congress appropriated last year for Digital TV outreach. President Elect Barack Obama's transition team has been pushing the FCC and broadcasters to make sure there are enough people answering the millions of phone calls expected from viewers in the days surrounding the February 17th transition from analog to planned Digital-only broadcasting of TV.

For the Amateur Radio Newsline, I'm Jeff Clartl, K8JAC

--

You may recall that last December the ARRL announced that amateur radio clubs across the country were being asked to voluntarily develop and implement plans to provide information throughout January and February regarding assistance in the Digital Television conversion in their geographic areas. At that time the FCC said that it was leaving it up to the clubs to decide how to do this. This because it felt that local groups can understand the communities in ways that the FCC does not. As of airtime, several ham radio groups have offered their services and according to news stories, all are getting very high marks from their local communities for their work (Waveform, FCC)

**

THE DTV TRANSITION: FIRST RESPONDERS WANT EXEMPTION FROM ANY DTV DELAY

Meantime, public-safety organizations asked President-elect Barack Obama to exclude spectrum designated for first responders in any plan to delay the transition to digital television next month. The Association of Public-Safety Communications Officials-International, the International Association of Chiefs of Police, the International Association of Fire Chiefs and the National Public Safety Telecommunications Council have communicated their view to the President-elect. They say that an important benefit of the Digital Television transition is that it clears spectrum in the 700 MHz band for new interoperable radio communications systems for law enforcement, fire, emergency medical and other public-safety agencies.

The groups also note that all fifty states have already received licenses to operate in portions of the reallocated analog television spectrum. They say that many agencies across the nation have already acquired radios

capable of operating in the 700 MHz band. They also note that there is also at least one and perhaps a couple other instances in which a public-safety agency has received or is currently seeking special FCC authority to utilize spectrum on a television channel being relinquished as a result of the Digital TV transition. (RCR, DTV News, others)

RADIO BUSINESS: OVER 1 MILLION HD RADIO MODULES MANUFACTURED

Ibiquity Digital says that, as of early October, 2008, more than 1 million H D Radio modules have been manufactured for retail radio receivers. This, using the Texas Instruments D-R-I Series chipsets.

Original equipment module manufacturers using the chipsets include Kwang Sung Electronics, LG Innotek, Powertech, Samsung EM, TOKO and Wistron NeWeb. These modules are used in products from Audiovox, Alpine, Coby, CSW, Denon, Dual, Harman/JBL, Insignia, Jensen, JVC, jWIN, Marantz, Onkyo, Pioneer, Polk, Radio Shack, Sangean and Yamaha.

An Ibiquity company spokesman says that this reflects a steady increase in product development that will translate into retail sales during 2009 and beyond. (RW)

HAM RAFDIO ON THE NET: CQ ANNOUNCES NEW WORLRADIO ON-LINE SIGN-UP LIST

CQ Magazine announced a new e-mail list has been established to notify readers of the availability of each new issue of its latest acquisition, WorldRadio magazine. CQ bought WorldRadio last month and is in the process of converting it to a free online-only publication. You may sign up for the list at several websites all of which can be found at http://mailman.sunserver.com/mailman/listinfo/WorldRadio-L . Direct links to this signup page will be posted on both the CQ magazine website at http://www.cq-amateur-radio.com and the old WorldRadio website at http://www.wr6wr.com . (CQ)

HAM IN SPACE HISTORY: REWIND TO 1985 AND STS51F

Word that some long-lost 1985 news footage showing kids in New York City trying to contact Astronaut Tony England, W0ORE, during the STS 51 F

shuttle flight has surfaced. You guessed it -- its surfaced on YouTube.com.

The clips are from New York City's Channel 4 WNBC, and Channel 7 WABC. They contains shots of the station set-up at the Rocco Laurie Intermediate School on Staten Island, along with conversations with some of the youngsters waiting for the pass to start and for W-Zero-O-R-E's signal from space to come booming in. Also interviewed is educator Carole Perry, WB2MGP, who for years taught a ham radio class at the school.

From a historical perspective these news clips are a lot of fun to watch. This is especially true if you were a ham back then and tried to contact W0ORE during the STS 51F mission. But you had better act fast to take a look. With media companies becoming activists in protecting their intellectual copyrights, news clips like these seem to disappear from YouTube almost as fast as they are posted.

And one final thought. Those news stories were taped some 23 years ago. The kids you see are now adults who are likely married with families of their own. We can only imagine the pride some of them might feel sitting in front of their computer with their own kids and telling them that was the day when mommy or daddy spoke to a man in space.

We have one direct link to these news clips at
http://www.youtube.com/watch?v=Hf839lfdO90,
http://www.youtube.com/watch?v=rHvRDLq-swk
and http://www.youtube.com/watch?v=xeU13Iv4nYM (ARNewsline(tm))

HAM RADIO IN SPACE: JAPAN TO LAUNCH 7 HAM RADIO MICROSATS

Japan is about to orbit a constellation of small ham radio satellites. JE9PEL has sent out a launch alert for seven tiny Cubesat amateur radio satellites planned as secondary payloads. This, when Japan launches its GOSAT IBUKI satellite on January 21st.

GOSAT stands for Greenhouse gases Observing Satellite, and is an environmental monitoring satellite. It, along with the ham radio payloads, will be launched from Japan's Tanegashima Space Center aboard the H-IIA F15 booster slated for liftoff at 03:54 UTC. .

More news about the 7 Cubesats is expected shortly. Information about the primary GOSAT mission and the launch vehicle carrying all the birds into space can be found on-line at
http://www.jaxa.jp/countdown/f15/overview/ibuki_e.html
http://www.jaxa.jp/projects/sat/gosat/index_e.html Information about the launch vehicle can be found on-line at:
http://www.jaxa.jp/countdown/f15/overview/h2a_e.html) (ANS)

WORLDBEAT: CHILIAN HAMS TO ASSIST IN MISSING QSL PROCESS

Turning to news from around the world, a group of Chilean radio amateurs is offering to try to help obtain a missing card or cards by carrying out searches and making inquires in Chile. This service is offered as a goodwill gesture by some Chilean hams and is completely free. To use the service you need to contact Josï¿½ Luis Jimï¿½nez. His email address is ce1kr
(dot) joseluis (at) gmail (dot) com. You can write to him in Spanish or English. Full details are available on the website http://hunting-qsl (dot) blogspot (dot) com (Southgate)

**

WORLDBEAT: REPORT ON BROADCASTS TO CUBA ISSUED BY STATE DEPARTMENT

The United States funded broadcasts to Cuba as Radio and Television Marti have improved significantly in recent years. This, according to a draft State Department review of the Office of Cuba Broadcasting. But it is unclear as to how many people are watching and listening to the stations that are designed to offer an alternative to the tightly controlled Cuban media.

The report was made public late month on the eve of a congressional debate over future Cuba-related funding. It cites a boost in the ability of TV Marti's signals to reach Cuba, but it bases those conclusions on anecdotal evidence not included in the report.

The review lauded the broadcasting office's use of a Gulfstream jet to beam signals into Cuba. It stated that this system held the potential of being replicated in other parts of the world where governments attempt to block U.S. broadcasts.

Radio and TV Marti are requesting $33 million in this fiscal year's budge. Thats, down from $38 million they received in 2007. (RW)

**

RADIO AWARDS: CQ TO ACCEPT EQSL FOR AWARDS PROGRAMS

CQ magazine says that effective immediately it will begin accepting contact confirmations made on the eQSL electronic Q-S-O validation system for its operating awards. According to CQ editor Rich Moseson, W2VU, there will be certain limitations and procedural differences for different awards, at least to start. Only confirmations from "Authenticity Guaranteed" members of eQSL will be accepted. This means that in accordance with existing eQSL policy, a membership level of bronze or higher is required in order to participate in award programs via eQSL.

According to Moseson, this is the first time that CQ has formally accepted anything other than traditional paper QSL cards for its awards. He says that CQ has been working with eQSL's Dave Morris, N5UP, and his team for several months to assure that the integrity of the awards programs will be protected. They also had to create mechanisms to make it easy for both award applicants and managers to use eQSL credits toward CQ-sponsored awards.

More information about how the CQ eQSL-based system will work is on line on the awards page at www.cq-amateur-radio.com. Information on eQSL is on the world-wide-web at www.eqsl.cc. (CQ)

DX

In DX, word that Vietnam is back on the air. This as OM2DX reports that he is now in Hanoi and is working for the Embassy of the Slovak Republic. Mike has obtained a license with the callsigns XV9DX and 3W1M. He is expected to be there for the next 3 years and be active on all bands using CW, SSB and the Digital modes. QSL via OM3JW.

KK9A says that he will be active from Aruba as P40A during the ARRL DX SSB Contest. That's March 7th and 8th. John says that he will operate as a Single-Operator All-Band entry. QSL him via WD9DZV.

And F5LGQ will be active from Reunion Island as TO4IPA through January 31st. If you make contact please QSL as directed on the air.

An international group of YLs will activate the Falkland Islands (SA-002) between January 17th and the 31st. Each operator will be signing with the callsign VP8YL, plus a third letter of the suffix that will be assigned at beginning of the operation. QSL via the operator's home callsign as directed on the air.

8Q7AK will be operational through January 27th from Embudu Island in the Maldives. He will use SSB and CW on 40 through to 10 meters including WARC frequencies. For comprehensive details of operating times, suggested frequencies and QSL information, please check 8Q7AK on QRZ.COM

A group of Chilean operators from the Atacama region will activate special event station XR27RAID through January 24th. This outing is in celebration of the 27th Raid Atacama Desert Trophy which takes place from January 20th to the 25th. Operations will be on all bands using CW, SSB and PSK. QSL via HA1AG, either direct or via the Bureau.

And the E44M operation from Palestine is now QRT. If you made contact with E44M you can either QSL direct, by the Bureau or electronically using Logbook to the World. An online log search is available at www.hamradioweb.org/e44mlogsearch.html

Above from various DX news sources.

THAT FINAL ITEM: RADIO FROM SPACE: NASA BALLOON FINDS NEW SPACE QRN

And finally this week, listening to the early universe has become a lot harder. This, as a team led by researcher Alan Kogut of NASA's Goddard Space Flight Center in Greenbelt, Maryland, announces the discovery of cosmic radio noise that is at least six times louder than expected. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

The finding comes from a balloon carried instrument named ARCADE. ARCADE stands for the Absolute Radiometer for Cosmology, Astrophysics, and Diffuse Emission. In July 2006, the instrument flew to an altitude of 120,000 feet, where its mission was to search the sky for heat from the first generation of stars. Instead, it found a cosmic puzzle.

Instead of the faint signal researchers hoped to find, it heard what Kogut called a booming noise six times louder than anyone had predicted. Detailed analysis ruled out an origin from primordial stars or from any known radio sources, including gas in the outermost halo of our own galaxy. As of now. Kogut says that the source of this cosmic radio background remains a mystery.

For the amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles

--

Many objects in the universe emit radio waves. In 1931, American physicist Karl Jansky first detected radio static from our own Milky Way galaxy. Similar emissions from other galaxies creates a background hiss type QRN, as its radio noise. (Goddard Space Flight Center News Release)

==> FCC CHAIRMAN KEVIN MARTIN ANNOUNCES RESIGNATION

The Aspen Institute, a non-partisan think-tank, announced on Thursday,
January 15 that FCC Chairman Kevin Martin will join their group as a
Senior Fellow in the Communications and Society Program on Tuesday,
January 20, immediately upon his departure from the FCC. According to
the Institute, Martin will be the fourth consecutive FCC Chairman to
make the move to the group: Democrats Reed Hundt (1993-97) and William
Kennard (1997-2001), as well as Republican Michael Powell (2001-05) have
accepted fellowships with the Institute upon leaving the FCC. Julius
```

Genachowski is expected to succeed Martin at the FCC <http://www.aspeninstitute.org/site/apps/nlnet/content2.aspx?c=huLWJeMRKpH&b=4863373&ct=6603329> (see following story).

ARRL Chief Executive Officer David Sumner, K1ZZ, said that Martin's resignation is part of the "usual stuff we see when a new administration comes to office. We look forward to a positive relationship with the new Chairman and his administration."

In his letter of resignation to President Bush, Martin wrote, "I have had the privilege of serving at the Federal Communications Commission for almost eight years, including four years as the agency's Chairman. During this period, we have seen a telecommunications industry undergoing rapid and unprecedented change. As a result of the market-oriented and consumer focused policies we have pursued the American people are now reaping the rewards of convergence and the broadband revolution including new and more innovative technologies and services at ever-declining prices."

Chairman Martin stated that his philosophy during his tenure at the FCC "has been to pursue deregulation while paying close attention to its impact on consumers and the particulars of a given market, to balance deregulation with consumer protection" <http://www.arrl.org/news/files/FCC_MartinResigns.DOC >. He said that he "approached his decisions with a fundamental belief that a robust, competitive marketplace, not regulation, is ultimately the best protector of the public interest and the best method of delivering the benefits of choice, innovation, and affordability to American consumers."

Martin said that during his tenure at the FCC, "the Commission has focused on establishing the appropriate regulatory environment that achieves the right balance between two competing interests: To encourage investment in communications infrastructure, and to make sure consumers and innovation are not unintentionally or intentionally disadvantaged by the owners of that infrastructure."

Martin was a strong advocate of BPL technology, as was his predecessor, Michael Powell, but the limited number of BPL deployments show that BPL is not the success story it was hoped to be. "The technical problems of trying to get BPL to run reliably on wires that were never intended to carry high-speed digital signals make BPL less reliable than other technologies," said ARRL Laboratory Manager and BPL expert Ed Hare, W1RFI. "When coupled with poor rules that encouraged interference problems, BPL was given a poor start that it has never completely overcome." The ARRL has never been opposed to BPL per se, except when the technology causes harmful interference to the Amateur Radio Service.

Under his chairmanship, Martin said the Commission "acted to level the playing field so that all entrants could fairly compete, facilitating increased investment in the next generation of communications infrastructure, [while at the same time, I] was able to push for more

open platforms to spur innovation on the edges of these networks and deliver lower prices, improved services and greater choice to consumers."

Executive Director of the Aspen Institute's Communications and Society Program Charles Firestone said that "Chairman Martin has been a longtime participant in Aspen Institute forums. We look forward to working with him and to the advice he will give us." Martin said he, too, looks forward to his time with the Institute: "I have long enjoyed and respected the Communications and Society Program, and I will relish the opportunity to reflect on the nature of leadership that I exercised in this field for the past several years." According to their Web site, The Aspen Institute is based in Washington, DC, Colorado and Maryland.

==> JULIUS GENACHOWSKI REPORTEDLY PICKED AS NEW FCC CHAIRMAN

Democratic sources are reporting that President-elect Barack Obama has selected Julius Genachowski, 45, a technology executive and former classmate from Harvard Law School, to lead the Federal Communications Commission. If confirmed by the Senate, Genachowski would replace current Chairman Kevin Martin (see above story).

After graduating from law school, Genachowski clerked for federal judge Abner Mikva; he also clerked for Supreme Court Justice David Souter. Genachowski later served as chief counsel to Reed Hundt, chairman of the FCC from 1993-1997. After leaving the FCC, Genachowski was a senior executive at IAC/InterActiveCorp, Barry Diller's e-commerce and media company. He went on to found an investment and advisory firm for digital media companies and co-founded the country's first commercial "green" bank. According to Obama's Web site, Genachowski raised at least $500,000 for Obama during the presidential election campaign.

Referring to the management practices of current FCC Chairman Martin, ARRL Chief Executive Officer David Sumner, K1ZZ, said, "We can only hope that under the new chairman, the FCC bureaus and offices that deal with Amateur Radio issues will be empowered to do their jobs without clearing every detail through the Chairman's office."

Early in the Obama presidential campaign, Genachowski urged the candidate to capitalize on the organizing power of the Internet. The New York Times <http://topics.nytimes.com/top/reference/timestopics/people/g/julius_genachowski/index.html?inline=nyt-per> called Genachowski "a prolific fund-raiser and chairman of the campaign's group of technology-policy advisers, who produced a report advocating an open Internet, diversity in media ownership and a nationwide wireless system for emergency personnel." The Washington Post, which described Genachowski a "local venture capitalist," credits him with "spearheading Obama's online campaign strategy, which used social networking and other tools to spread Obama's campaign message and raise record campaign contributions" <http://www.washingtonpost.com/wp-dyn/content/article/2009/01/12/AR2009011203417.html>.

The Post credited sources close to Obama's transition team who said that "Genachowski had been recently meeting with key Democratic lawmakers to see if the role of Chief Technology Officer would have policy-making authority and decided against taking the job when he realized the definition of CTO would not include a strong regulatory role. Instead, Genachowski expressed interest in the FCC [Chairmanship]" <http://voices.washingtonpost.com/the-trail/2008/12/18/_speculation_is_rife_in.html>.

Genachowski explained in his Obama campaign blog that he "was fortunate to chair the group that advised Senator Obama and the [presidential] campaign on the tech & innovation plan, a large and hardworking group that generated terrific ideas, rooted in the great work that the Senator and his strong Senate staff have been doing in this area for quite some time" <http://my.barackobama.com/page/community/blog/juliusgenachowski>.

According to Bloomberg.com, the FCC may turn to expanding Americans' access to high-speed Internet service once the pressure from the digital television transition eases: "Obama has made universal broadband a cornerstone of his plan to boost US competitiveness. It is 'unacceptable' that the nation ranks 15th worldwide in high-speed Internet adoption rates, he said in a December 6 speech. House Speaker Nancy Pelosi, a California Democrat, has said broadband funds will be part of the economic stimulus package Congress intends to take up this month."

==> DELTA DIVISION LEADERSHIP ATTENDS ORIENTATION WORKSHOP AT ARRL HQ

Just prior to the ARRL Board of Directors 2009 Annual Meeting, the newly elected leadership team in the ARRL's Delta Division -- Director Mickey Cox, K5MC, and Vice Director David Norris, K5UZ -- made their way to Newington for a day of orientation to learn the "ins and outs" of the ARRL Board and ARRL Headquarters operation. The Annual Meeting is scheduled for January 16-17 in Windsor, Connecticut. Cox was previously Section Manager of the Louisiana Section; Norris was Section Manager of the Arkansas Section when he was elected to his new position.

According to ARRL Chief Operating Officer Harold Kramer, WJ1B, "The new Board members came to Newington to learn not only how the Board functions, but to see what each department does and how it interacts with and serves both Amateur Radio and ARRL members, through our five pillars: Public Service, Advocacy, Education, Technology and Membership. I am pleased they came to see how we support Amateur Radio each and every day here at ARRL HQ."

One of the highlights of the group's visit to Headquarters was a tour of the ARRL Lab. Ed Hare, W1RFI, ARRL Laboratory Manager, explained the function of the Lab and its staff: "We showed them how we support Amateur Radio through the Technical Information Service, product review testing, RFI issues such as power line noise, and support for spectrum defense, including BPL issues."

Cox said, "This is my third trip to ARRL Headquarters -- I came first as a new Section Manager in 2001, and again in 2005 to discuss lessons learned from Hurricane Katrina. I've always loved coming to Headquarters. I am learning a lot today about how to be a Division Director. So far, there have been no big surprises, as it is pretty much what I thought it would be. I'm looking forward to the meetings this weekend and serving the amateurs in the Delta Division as their Director for the next few years."

Norris concurred: "I first came to ARRL Headquarters in September 2005. Like Mickey, I came to the orientation that HQ staff holds for new Section Managers. This visit has been a little more in-depth; I've seen more of the operational side of Headquarters this time around. From my first visit, I had a pretty good idea of what the staff does, but now I really get what they do for the members and the amateur community as a whole. I think every member needs to come up here and see what exactly goes on at Headquarters. I think they will gain a new appreciation for the League."

==> FCC LICENSE ACTIVITY ON THE RISE

According to ARRL VEC Manager Maria Somma, AB1FM, there continues to be a heightened interest in Amateur Radio following the FCC's elimination of the Morse code exam requirement in February 2007: "The number of new license applicants remains strong under the new Amateur Radio Service rules. The following table chronicles all 14 FCC authorized VEC organizations' new license activity over the last few years." In 2008, the total number of US amateurs rose 1.2 percent, from 655,800 in 2007, to 663,500 in 2008:

New Amateur Totals 2006 through November 2008		
Month	2006	2007	2008
Jan	1274	1647	1755
Feb	1605	2435	2998
Mar	2531	3478	2816
Apr	1728	2673	3090
May	2283	2607	2562
Jun	1967	2281	2402
Jul	1401	1786	2077
Aug	1623	2183	2084
Sep	1357	1462	1763
Oct	1781	2109	2303
Nov	1993	2132	2197
Dec	1569	1935	2019
Totals:	21,112	26,728	28,066

Somma said that the number of General and Extra class upgrades is also on the rise. "When looking at 2006 totals," she said, "we see that upgrade applications for 2007 were up 286 percent; in 2008, they were up 146 percent over 2006. Requests for new club licenses also remain strong. In 2008, we had 671 applications for club licenses come in, while in 2007, there were 506 applications. That's an increase of 133 percent."

Calling it a "ripple effect," Somma said that the number of amateurs who want to be volunteer examiners and who want to teach Amateur Radio classes is also going up. "Here at the ARRL VEC, we've seen a spike in the number of applications from General and Extra class radio amateurs who want to give back to their community by serving as examiners and instructors," she said.

Somma further broke down the numbers to show the approximate number of licensees per FCC license class:

Novice: 18,500
Technician: 322,500
General: 145,000
Advanced: 62,000
Extra: 115,500
Total US Amateurs: 663,500

"I can think back to the mid 1980s when there were approximately 450,000 US Amateurs," Somma recalled. "These are the highest numbers of General and Extra class licensees I have ever seen." As of April 15, 2000, the FCC no longer issues Novice or Advanced class licenses. "As expected, the number of Novice and Advanced class licensees has decreased," she said. "As I look toward 2009, I see Amateur Radio growing in a positive direction." -- Some information provided by Joe Speroni, AH0A

==> LOOK FOR THE FEBRUARY ISSUE OF QST IN YOUR MAILBOX

The February issue of QST is jam-packed with all sorts of things that today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Rick Campbell, KK7B, presents a homebrew project in the first of his two-part article "Designing and Building Transistor Linear Power Amplifiers." Juan Antonio Fernandez Montana, EA4CYQ, and Pedro Perez Alvarez-Cienfuegos, EB4DKA, look at "A Better Way to Work Low Earth Orbit FM Satellites." If you are concerned about how to get the best bang for your buck when it comes to your antenna system, be sure to check out "Keeping Current with Antenna Performance" by Eric P. Nichols, KL7J.

Speaking of antenna systems, you won't want to miss the helpful pointers provided by Ray Fallen, ND8L, in his article, "Homeowners Insurance and Your Antenna System." Robert Gulley, AK3Q, shows how a group of Kentucky hams brought Amateur Radio to a young audience in his article "Amateur Radio and Public Education Make a Bright Future." And just as hams light

the way for young people to get involved in ham radio, each year, the ARRL offers teachers a chance to get in on the fun, too! Find out more in "The ARRL Teachers Institute 2009," by ARRL Education and Technology Program Coordinator Mark Spencer, WA8SME.

ARRL Technical Editor Joel Hallas, W1ZR, reviews Tele-Post's LP-PAN Software Defined IQ Panadapter. According to Hallas, "The LP-PAN and associated software add a high performance panadpter and interactive computer control to the Elecraft K3 [reviewed in the January 2009 issue of QST] at a reasonable cost for those with a radio connected PC and quality sound interface." Be sure to check out the product reviews for the DV Dongle D-STAR Adapter and a variety of battery operated soldering tools, also in the February issue of QST.

If it's February, it must be time for the ARRL International DX Contest (CW) <http://www.arrl.org/contests/rules/2009/intldx.html>. This is a great opportunity to contact many stations all over the world. ARRL Contest Branch Manager Sean Kutzko, KX9X, explains in "This Month in Contesting" that you really don't need to win a contest to have fun. The results of the 2008 ARRL UHF Contest are in. Find out about upcoming contests in Contest Corral and mark your contest calendar for 2009.

Of course, there are the usual columns you expect in the February issue of QST: Hints & Kinks, The Doctor Is IN, How's DX, Vintage Radio, Hamspeak and more. Look for your February issue in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> AS STORMS PUMMELED NORTHWESTERN STATES, HAMS RESPONDED TO LOCAL NEEDS

After another week of wild weather in Oregon and Washington (January 7-9), residents in those states are just beginning to see the Sun. With an onslaught of wind, snow and rain this winter season, hams in the affected areas have been called upon by local served agencies to lend a hand. From providing 911 support to helping out with communications in area shelters, Amateur Radio operators have assisted since the beginning of the storm events <http://www.arrl.org/news/stories/2008/12/24/10525/>.

According to David Kidd, KA7OZO, District Emergency Coordinator for Oregon's District One <http://www.oregonaresd1.org/main.html>, the storms moved into his area on Wednesday, January 7 and continued throughout the rest of the week. ARES units in Clatsop, Columbia and Tillamook Counties were activated in advance of the storms that brought flooding, mud slides, blocked roadways from downed trees, as well power outages.

In Clatsop County, Kidd said that amateurs assisted in the county's Emergency Operations Center, while in Columbia and Tillamook Counties,

the County Emergency Coordinator activated their local ARES units for the duration of the storms. "Columbia County deployed radio teams to four areas where they anticipated getting severe floods," Kidd told the ARRL. "These places can flood at the blink of an eyelash, so they pre-deployed hams to these areas."

Luckily for Oregonians, the storm tracked through Washington. "We were spared somewhat when the storm stalled over Washington," Kidd said. "Granted, we got a lot of wind and rain, but not like they did north of us. All the counties here are watching their rivers go down and are in some level of recovery mode."

In Lewis County, Washington, hams were prepared for the storms. On Wednesday, January 7, the Lewis County Board of County Commissioners declared the county a disaster area "due to exhausted resources and flood level predictions at or exceeding 1996, 2006, and 2007 flood levels." The Lewis County EOC placed Amateur Radio operators affiliated with local ARES units on standby.

According to Lewis County Emergency Management Deputy Director Ross McDowell, the unincorporated areas of Packwood and Randle had been without land-line telephone service since January 7. "Repairs cannot take place until the flood waters recede. This area is without 911 service due to all alternate facilities being under water. Ham operators/radios will be used in emergencies [to facilitate 911 services]."

On January 10, the Lewis County Department of Emergency Management expanded its use of RACES ham radio operators to stay in contact with the City of Centralia EOC and to continue communication with Morton, Randle and Packwood ham radio operators. RACES continued to provide support throughout the storm event.

The storm brought rain and high winds to Washington, causing widespread avalanches, mudslides, flooding and road closures, as the heavy snowfall that buried parts of the state began to melt rapidly. More than 30,000 people were told to leave their homes in flood-endangered areas across western Washington as authorities warned of heavy flooding.

Warmer temperatures and heavy rains were melting snow dumped on the mountains during the weekend storm, with 10 inches of snow melting in a 12 hour period at Snoqualmie Pass, about 50 miles east of Seattle. Throughout the state, about 60 highways were closed.

ARRL Eastern Washington Section Manager Mark Tharp, KB7HDX, reported that hams in Kittitas and Yakima Counties were on standby during the storms, but "Spokane is holding their own." ARRL Northwestern Division Director Jim Fenstermaker, K9JF, said, "So far, most of the problems are in Western Washington. We here in Seattle are cut off from the rest of the USA by landslides and avalanches to the east, and flooding to the south and north. All major highways are affected, as is all rail transportation. The only way out or in is via air. We had more

unexpected rain on Thursday, but it should clear up by the weekend."

==>SOLAR UPDATE

Tad "Suns to light me rise" Cook, K7RA, this week reports: A nice sunspot group -- number 1010 -- appeared for five days from January 9-13. Daily sunspot numbers ranged from 11 to 20, and this one was another Solar Cycle 24 appearance. The Cycle 23 sunspots seem to be gone, while the new Solar Cycle 24 isn't picking up very quickly. 1010 was here for five days, following a whole solar rotation -- 27 days of no sunspots since 1009 was visible for just three days, December 10-12. Prior to that, there were 23 spotless days since seeing sunspot 1008, visible for eight days from November 10-17. Sunspot numbers for January 8-14 were 0, 14, 17, 20, 12, 11 and 0 with a mean of 10.6. The 10.7 cm flux was 68.7, 69.7, 70.9, 70, 69.3, 70.5 and 71.2 with a mean of 70. The estimated planetary A indices were 3, 4, 4, 2, 0, 3 and 5 with a mean of 3. The estimated mid-latitude A indices were 2, 4, 2, 1, 0, 2 and 6 with a mean of 2.4. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Alexander Pope's "An Essay on Man" <http://www.gutenberg.org/etext/2428>.

==>IN BRIEF:

* This Week on the Radio: This week, the ARRL January VHF Sweepstakes is January 17-19. The LZ Open Contest is January 17. The North American QSO Party (SSB), the Hungarian DX Contest and the UK DX Contest (RTTY) are all January 17-18. The Run for the Bacon QRP Contest is January 19 and the NAQCC Straight Key/Bug Sprint is January 22. Next week, the NAQCC Straight Key/Bug Sprint is January 22 and the CQ 160 Meter Contest (CW) is January 23-25. The REF Contest (CW), BARTG RTTY Sprint, the UBA DX Contest (SSB) and the SPAR Winter Field Day are January 24-25. The SKCC Sprint is January 28. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration remains open through Sunday, January 25, 2009, for these online course sessions beginning on Friday, February 6, 2009: Amateur Radio Emergency Communications Level 1; Radio Frequency Interference; Antenna Design and Construction; Technician License Course; Analog Electronics, and Digital Electronics.. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses

are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* David J. Strout Sr, W2YC, #1 Triple Play: On Thursday, January 15, ARRL officials confirmed that David J. Strout Sr, W2YC, of Williamstown, New Jersey, is the recipient of the very first Triple Play Award <http://www.arrl.org/news/stories/2008/12/05/10490/>. "Strout received the final needed confirmation -- Hawaii on phone -- just at 2004 UTC on January 15," said ARRL Information Technology Manager Jon Bloom, KE3Z. "He applied for the award at 2007 UTC, and it was issued by the Awards Branch at about 2130 UTC." The Triple Play Award is available to all amateurs who confirm contacts with each of the 50 states using three modes for each state: CW, phone and RTTY/digital. All 150 contacts must be made on or after January 1, 2009 and must be confirmed via Logbook of the World (LoTW) <http://www.arrl.org/lotw/>. All bands -- with the exception of 60 meters -- may be used in pursuit of the Triple Play Award.

* ARES E-Letter Gets New Look: The ARRL ARES E-Letter <http://www.arrl.org/FandES/field/ares-el/about.html>, published on the third Wednesday of each month, makes the move from a plain text formatted newsletter to an HTML format this month. The second of the ARRL e-letters to update its look (the ARRL Contest Update switched over to an HTML format in May 2008), the ARES E-Letter is distributed to 33,000 ARRL members. According to ARES E-Letter Editor Rick Palm, K1CE, "It's always scary messing with a good thing. I hope readers will like the look -- with photos, graphics and better readability. They can always opt for the old text version, too." The ARES E-Letter is a digest available via e-mail full of news and information of interest to active members of the ARRL Amateur Radio Emergency Service (ARES) and to hams concerned with public service and emergency communications. E-mail newsletters, such as the ARES E-Letter, the Contest Update and The ARRL Letter, are just some of the many benefits available at no charge to ARRL members. To sign up for any of the League's newsletters, go to the Member Data page on the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

* W1AW Adds Yaesu's "Top-of-the-Line" Rig to Station: Thanks to the generosity of Yaesu, W1AW, the Hiram Percy Maxim Memorial Station, now boasts the Yaesu's premier transceiver -- an FTDX9000D <http://www.yaesu.com/indexVS.cfm?cmd=DisplayProducts&ProdCatID=102&encP

rodID=28E11B5914B50E393EBF2BCAB2A6314C&DivisionID=65&isArchived=0>.
Dennis Motschenbacher, K7BV, Executive Vice President for Yaesu's
Amateur Radio Sales Division, visited ARRL Headquarters on January 13 to
present the radio. "Yaesu is very happy to present ARRL and the world
famous W1AW station with our top-of-the-line FTDX9000D transceiver,"
Motschenbacher said. "The transceiver comes loaded complete with
recently released PEP9000 performance enhancements designed to affirm
our commitment to Amateur Radio. We are very excited to know that the
ARRL will place this elite class transceiver in one of their visitor
operating studios, allowing many to have their first experience
operating one of our three models of FTDX9000 radios." W1AW Station
Manager Joe Carcia, NJ1Q, thanked Yaesu for their donation of the
FTDX9000D transceiver to W1AW: "This radio is installed in Studio One
and is available for use to Amateur Radio operators visiting W1AW. In
addition, the FTDX9000 will be used as part of the contesting station
located in Studio One. With all its additional functions and features,
the FTDX9000 will certainly improve upon an operator's ability to
participate and be a worthy contestant!" Motschenbacher, who worked at
ARRL HQ before moving to Yaesu, remarked that returning to Newington to
make the presentation "was a wonderful personal experience for me. I was
so happy to see many old friends inside HQ, friendships made during the
four and half years I spent with ARRL before joining Yaesu. It didn't
take me long to see that the staff is very busy supporting its
membership and Amateur Radio as a whole!"

* New Section Manager Appointed in Wyoming: Garth Crowe Sr, N7XKT, of
Gillette, will assume the position of Section Manager in Wyoming as he
takes over the reins from LeeAnne Sachau, WY7DTW, of Devils Tower;
Sachau, who has served as Wyoming Section Manager since August 2008, has
decided to step down. She was appointed last summer after Chris
Pritchard, WY7UPR, moved out of the Section to start a new job. Crowe
has served as Assistant Section Manager; he is currently holds positions
as Emergency Coordinator and Official Observer. According to the Rules
and Regulations of the ARRL Field Organization, Dave Patton, NN1N,
Manager of the ARRL Membership and Volunteer Programs Department, made
the appointment after consulting with Rocky Mountain Division Director
Brian Mileshosky, N5ZGT, and receiving a recommendation from Sachau.
Crowe's term of office will continue through March 31, 2011. The
nomination announcement for the next term of office for Wyoming Section
Manager is scheduled to appear in the October 2010 issue of QST.

* Everett "Curly" Silva, K7HRW (SK): Former ARRL Nevada Section Manager
Everett "Curly" Silva, K7HRW, passed away December 29, 2008 of cancer.
He was 81. A retired captain with the Nevada Highway Patrol, Silva
served as Section Manager from January 1994-June 1995. He was affiliated
with Air Force MARS and was a Net Control Station. According to current
Nevada Section Manager Joe Giraudo, N7JEH, a memorial service for Silva
will be held at a later date.

==========
The ARRL Letter is published Fridays, 50 times each year, by the

American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this

listserver.)

20. Digital voice

Newsgroup: rec.radio.amateur.moderated
Date: 2009-01-16 21:51:59 UTC

Message-ID: <ti7cl.15490$g23.11680@newsfe01.iad>
Source record: 2230

Hello gang,

I am curious as to what radios provide digital voice. I have a feeling that there is one, but am unsure.

As we proceed into the 21st century, I would suspect that we are going to have to - eventually - embrace digital modes. I am still in awe over the radios that I troubleshoot and repair - I heard the result of one digital voice transmission that was 8 dB *below* the noise. The resulting voice was not only 100% intelligible, it was *flawless*! This was on HF.

Has anyone experimented with digital voice modes?

Hello Dee,

Not entirely true. I am amazed by the products that use one particular size of those quarter-sized batteries. My bathroom scales and the One-Touch Ultra diabetes test machine use the same batteries. A friend came over to the house with a non-working computer. Very quickly I determined that the problem was the battery back-up for the BIOS. Upon examination, I removed the battery and replaced it with a battery from one of the bathroom scales. Rebooted, set to default and set the time and date and the computer worked just fine.

She asked what I did to repair the computer. I replied "I fixed it with the bathroom scale". LOL. True story.

That said, I am buying rechargeable AA batteries and plan to add AAA batteries that are rechargeable. I have the charger for those devices and, hopefully, plan to save money in the long run.

They might cost a few bucks, but they are cheaper than car batteries LOL.

"everyone is different" is hyperbole. However, right now I have the
following batteries on hand to handle the different gadgets in my home:

AAA
AA
C
D
D size rechargeables
9 volt
2032

386
377

Eight different types of batteries for now.

Dee, N8UZE

Icom Dstar is on a number of ICOM rdio

if memeroy serves their is also flex radio that has some usch
provision

AOR make a "modem" that can be attached to radio I ahve those in use
and played with a few dstar units at ham fest

being that I live wehre I live I have not aquired anything since my
would be the only one arround

All the contacts were made in 15 days, but my bet is that he started planning for it in July when the award was announced. This is certainly quite an achievement. Congratulations, indeed.

> 73, de Hans, K0HB

And congratulations to Hans, also. From http://www.arrl.org/news/stories/2008/12/05/10490/: "Based on a suggestion by former ARRL Dakota Division Vice Director Hans Brakob, K0HB, the League's Programs and Services Committee referred the award's parameters to the Board where it received enthusiastic approval."

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

27. rec.radio.info Posting Guidelines

Newsgroup: rec.radio.amateur.moderated
Date: 2009-01-22 07:05:01 UTC
From: rram@panix.com
Message-ID: <radio/rec-radio-info/guidelines-1-1232607900@panix.com>
Source record: 2237
Cross-posted to: rec.radio.info,rec.radio.amateur.moderated,rec.answers,news.answers

```
Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/rec-radio-info/guidelines
Revision: 1.5 2007/03/22 16:30:49
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rri/index.html

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

Amateur Radio Newsline(tm) Report 1641 - January 23 2009

The following is a closed circuit advisory. With word on Amateur Radio Newsline's finances, here's our Support Fund Administrator Andy Jarema N6TCQ:

--

The great thing about Amateur Radio is that your level of involvement can be anything you choose- you can be an avid DX'er or just a casual repeater user. Run your fingers to the bone on packet or RTTY, be heavily involved with emergency work, or not even get on the air for a while. The hobby will still be there.

That's why we, the volunteer staff at Amateur Radio Newsline, love what we do- it's ever changing, ever evolving. Unfortunately, the realities of bringing you these weekly newscasts don't change that much.

We've done our best to try to shave down the fixed expenses- what it costs for internet service, how we can best use a combination of land- and wireless-based phone services, to hold these to a minimum. We've even done away with tape in our newsgathering and editing- everything's software and solid-state.

My backup solution to try would be to instruct our Producer, Bill Pasternak, WA6ITF, to only report on the news that automatically comes into our news bureau, as other news services do. But that defeats why it is that so many of you tell us that you love our service- that we bring you the voices of the newsmakers, and those special stories that just don't get reported. That's what makes us unique in Amateur Radio reporting.

Please help us keep these newscasts on the air, doing what we do best. You can contribute via PayPal on our website, arnewsline.org, or at our Arcadia California address given at the end of the newscast. We thank you for your support.

I'm Andy Jarema, N6TCQ, and now on to the news.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1641 with a release date of Friday, January 23rd, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Turkey prepares to launch its first ham-sat, a threat to 24 Gigahertz ham radio operations across Europe, ZS8T calls in from isolated Marion Island to say he's on the air as often as time permits, and there won't be any cellphone jamming behind Washington D.C prison bars. Find out the details on Amateur Radio Newsline(tm) report number

1641 coming your way right now.

HAM RADIO IN SPACE: TURKEY TO LAUNCH MICROSAT

Turkey is joining the microsat revolution. This, with word that the nations first tiny bird named ITUpSAT1 will go into orbit shortly. Burt Hicks, WB6MQV, has the details:

--

ITUpSAT1 is described as a micro sized university sponsored satellite designed and manufactured as a part of the ongoing CubeSat project. Its being constructed as a joint project between Turkish universities in collaboration of Stanford Research Institute and California Polytechnic University in the United States.

Mission payloads include a low resolution camera along with a series of scientific sensors including an accelerometer and magnetometer that will radio data back to Earth. The primary objective of this project is to train an experienced staff on satellite systems in Turkey.

At airtime no frequencies or modes of operation for ITUpSAT1have been announced.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles

--

More information on the project is at http://usl.itu.edu.tr/index.html (Southgate, ITUpSAT1)

**

RADIO RULES: A NEW THREAT TO 24 GHZ IN EUROPE

A potentially a new threat to amateur and amateur satellite operations in the 24 Gigahertz band in Europe. The European Commission has put out a call for public input and comment to prepare for a fundamental review of a decision made in 2005. This, for harmonization of the 24 Gigahertz radio spectrum for the time-limited use by automotive short-range radar equipment. In other words, unlicensed devices such as Short Range Radar and the like. Hams in Europe see this as an opportunity for commercial interests to extend, possibly indefinitely, what they see as the inappropriate use of 24 Gigahertz for these applications and are organizing their opposition to this use of the band. (EU Radio Spectrum Policy, Southgate)

**

BREAKING DX NEWS: ZS8T SAYS OPERATIONS WILL BE LIMITED

ZS8T is on the air from Marion Island, but only as times allows. In an interview with the SARL's Amateur Radio Mirror International, station operator, Petrus Kritzinger, said that his work schedule has not permitted him much time to operate.

--

ZS8T: "A lot of the radio things will be dependent on my working schedule and (so far) this year it has been quite hectic."

--

Were sorry about the poor audio quality but the satellite telephone connection to Marion Island was not the greatest. None the less, Kritzinger was able to tell Amateur Radio Mirror International that he also experienced antenna problems due to high winds and generally poor weather conditions.

--

ZS8T: "In December I put up the Spider-Beam. I actually put it up three times and within two days the wind folds it like a an upside-down umbrella."

--

He has managed to erect the Stepp-IR vertical antenna and has made some test contacts with stations in South Africa and Russia.

Kritzinger hopes to be active as work schedules allow. He will be mainly on 20 meters. The complete interview with ZS8T can be found at the URL in this week's printed Newsline report. And we will have more DX-related stories later on in this week's newscast.

(Amateur Radio Mirror International)

**

RESCUE RADIO: EMCOMM EVENT CANCELED DUE TO WORLD ECONOMY

A joint ham radio emergency communications expo, co-sponsored by American and Canadian groups, has been canceled due to lack of money. This, with word that Canada has pulled most of its funding out of a joint Radio Amateurs of Canada and ARRL sponsored event slated for Myrtle Beach, South Carolina in mid-March.

Preparations for the event were halted when Canadian government monetary support was suddenly reduced in early January. The withdrawal of funds was blamed on the current world economic climate. This would have been only the second cross-border event of its type ever held. (VE3BDB)

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the KB9VSE repeater system serving the great dairyland state of Wisconsin.

(5 sec pause here)

**

ENFORCEMENT: FCC TO FINE CABLECASTERS FOR FAILURE TO PROVIDE DIGITAL TIER TRANSFERS

The Federal Communications Commission has issued Notices of Apparent Liability for Monetary Forfeiture to nine cable TV operators. This, for what the FCC says was their effort to thwart its investigation of a practice in which analog channels were transferred to a more costly digital tier and thereby leaving some customers without access.

The proposed fines range from $7,500 to $25,000. Also, some companies were told to issue refunds within 90 days for failing to give a 30-day notice about changes that were not related to the national switch to digital format broadcasting.

In a letter to Congressional leaders on January 19th, outgoing FCC Chairman Kevin Martin said operators had shown contempt for the commission. This, by not providing full information about their practices as ordered last October.

All of the cited cable television suppliers are expected to appeal the FCC's forfeiture orders through the FCC Administrative Procedures process and possibly into the Federal courts. (FCC)

**

ENFORCEMENT : EUROPEAN UNION MAY BAN PLASMA TV'S DUE TO QRM

If you are suffering interference from a neighbor's plasma television receiver and live in Europe, then a solution may soon be at hand. The United Kingdom press reports that plasma screen TV's could be banned under new European Union rules now making their way through the legislative system.

The Daily Telegraph recently carried a story that plasma screen TVs have had a bad reputation among users of the Short Wave radio spectrum. This, because of the high level of RF interference they can generate and many radio users will be pleased to see them go. And as a result of mounting complaints, the European Union is now considering the anti-plasma screen regulations. (WIA News)

**

RADIO BUSINESS: INAUGURAL ISSUE OF WORLDRADIO ONLINE IS ON LINE

The inaugural issue of WorldRadio Online was posted on the World Wide Web on Inauguration Day, Tuesday, October 20th. The February issue features articles on a ham station aboard a still-sailing Victory Ship, as well as a very handy primer on basic knots. Also, most familiar columnists are there as well, including "Krusty" Aerials columnist Kurt N. Sterba.

The issue is in a downloadable PDF file. It may be accessed without charge by going to the CQ magazine home page at www.cq-amateur-radio.com and

clicking on the "WorldRadio Online" link. WorldRadio Online is published monthly by CQ Communications, Inc. which purchased the magazine late last year. (CQ)

**

RADIO BUSINESS: NEW SUPPLIER OF HEATHKIT MANUALS AND EVEN SOME PARTS

A new source for high quality reprints of Heathkit manuals along with some upgrades and service parts has come to the World-Wide-Web. This, with word that Data Professionals of Pleasanton, California, has purchased the copyrights and existing inventory of all legacy Heathkit product documentation from Heath Company of Benton Harbor Michigan. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has more:

--

If you are old enough to remember when Heathkits reigned supreme among electronic builders then you will be happy to know that there is a new source of manuals and even some parts to keep them alive and well today. And we are not just talking ham radio gear either.

Data Professionals is a new company headed up by Don Peterson. He tells Newsline that last year Heathkit contacted him and indicated that it wanted to stop supporting the manual requests that they were still receiving. Its preference was for him to take it over since he had already shown an interest in supporting Heathkit products.

After agreeing on a price Peterson says that he paid the cost to have 2.5 tons of documents shipped from Michigan to his office in California. He says that the new company will make high quality copies of the original legacy manuals available to the marketplace via its web site and through eBay and PayPal.

As to Internet rumors that he forced websites that have supplied manuals to stop doing that, Peterson says that in part, that is the case. He says that during the time he was negotiating the purchase, Heathkit had again taken an interest in trying to suppress various unauthorized manual suppliers. Once he made the purchase he realized that if he was now the copyright holder, that it fell to him to protect the copyrights of the manuals. So he contacted the various manual suppliers and requested that they stop.

Peterson says that he also realized that Boat Anchor Manual Archive, known better as BAMA was one of the most used sources of free manuals on the web. He says that it was his intent to continue to support BAMA, but with some compromises. His offer was for BAMA to be able to offer electronic copies of the schematics while just removing the other pages of the manuals from their website. He even offered to provide good quality .PDF files for the schematics but he believes that was simply too much of a bother for the BAMA webmaster who has removed the Heath manuals completely.

So what will Peterson be doing with the manuals? Obviously selling copies, but at prices below that of others on the web. As Don Peterson says, what he will charge will cover the cost of duplication plus a little margin to keep the doors open. He also says that he and W7FG have agreed to a royalty deal so he can continue to sell the Heathkit manuals as well. He does, however, say that he will continue to try and shut down any site that is providing free copies of entire manuals or is selling electronic copies on eBay on CD ROM's.

As to any profits from the sale of manuals? Peterson says that will be used to continue development of new upgrades and after-market modules so as to continue to support the entire Heathkit product line. His company has already designed some replacement temperature sensor modules for the weather stations and a replacement board for the old Mostek CPU for the ID-4001 Weather Station. He is currently in development of a replacement CPU board in the GC-1000 'Most Accurate Clock' that is still very popular and in service a lot of places these days. He tells Newsline that this module will be a 'plug-in' replacement board that will plug into the socket of the Mostek CPU. Peterson says that without the cash flow from the manuals, this would not be possible.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

Complete information on obtaining manuals for Heath gear along with the updated modules and other parts is on line at Don Peterson's website. It's in cyberspace at www.d8apro.com. (ARNewsline(tm))

**

HELP WANTED: THE FCC MAY HAVE A JOB FOR YOU

Meantime, if you are looking for a job, how about working for the FCC? If you do then we have word that the regulatory agency is looking for a Chief for its Spectrum Coordination Branch, as well as a few other good engineers. All positions are based in Washington. Job descriptions and how to apply are at https://jobs1.quickhire.com/scripts/fcc.exe/runuserinfo?Haveusedbefore=5 (CGC, RW)

THE SOCIAL SCENE: ROCHESTER HAMFEST TURF WAR

A turf war has developed over who will be sponsoring this year's Rochester Hamfest in upstate New York and the venue where it will be held. This, after the Rochester Amateur Radio Club breaks ranks with the longtime host.

According to Lee Badman, KI2K, who is a columnist for the Syracuse Post Standard, the Web site www. Rochesthamfest.org claims that the fest will be at the traditional site, and that any rumors to the contrary should be disregarded. Telephone and e-mail contact information is provided for more information, and a read-over of the site makes you inclined to believe

you've found all you need to know about the event.

But that's just a part of the story. Here's the other: The Rochester Amateur Radio Association also claims that it will host the official event. Also, that it will move it to a new venue at the Barnard Carnival Grounds. RARA's information is at www.rochesterham.org. (Syracuse Post Standard, eHam.net)

NAMES IN THE NEWS: CHAIRMAN KEVIN MARTIN RESIGNS

Some names in the news. First is now former Federal Communications Commission Chairman, Kevin Martin, who resigned from the agency effective this past Tuesday, January 20th. Martin will joined the Aspen Institute in Washington as a senior fellow for the institute's Communications and Society Program.

Martin, the FCC chairman since 2005, was a repeated critic of high cable rates and advocated more stringent decency standards on cable and broadcast television. He also supported a wireless technology that would make the Internet more widely available to Americans.

As reported last week, President Barack Obama has nominated Julius Genachowski, a former FCC official during the Clinton administration, as the new head of the regulatory agency. (Published reports)

**

NAMES IN THE NEWS: COY DAY, N5OK, RESIGNS FROM THE ARRL BOD

And after more than 12 years as a member of the ARRL Board of Directors with 10 of them as West Gulf Division Director, Coy Day, N5OK, announced that he is resigning from ARRL elected office, effective January 20th..

Day was Chairman of the League's Ethics and Elections Committee when he tendered his resignation. Per the ARRL Articles of Association, Vice Director David Woolweaver, K5RAV, will take over as Director. In the near future ARRL President Joel Harrison, W5ZN, will appoint a new Vice Director.

The next election for West Gulf Division Director and Vice Director will be in 2010. (ARRL)

**

NAMES IN THE NEWS: W9XA NAMED NEW CHAIR OF ARRL VHF - UHF ADVISORY COMMITTEE

Meantime, the ARRL has announced that Kermit Carlson, W9XA has been named the new Chairman of the League's VHF/UHF Advisory Committee. In addition to his being the Central Division's representative on the committee, he is also a long time member of the Illinois Fox River Radio League and has held many of the leadership positions in that organization.

Carlson replaces Lauren Libby, W0LD, of Colorado Springs, Colorado as the committee chair. The League's Central Division Director, Dick Isely, W9GIG, made the announcement during a break in the ARRL Board of Directors meeting in Newington, CT.

The VHF/UHF Advisory Committee is not a traditional advisory committee. It is mandated to consider only contest issues, and its term is limited to five years duration. (N9CHA)

RADIO COMPETITION: US HAMS WANTED FOR QRQ CW CHAMPIONSHIP TEAM

Contestants from the United States are being sought to take part in the 8th annual IARU World High Speed Telegraphy Championship. The event is slated for September 11th to the 15th in Obzor, Bulgaria. And Barry Kutner, W2UP, says via eHam dot net that he is putting together a US team to compete.

According to Kutner, the classes of competitors are broken down by age and gender. Currently, he is looking for both males and females under the age of 40 to fill up several empty slots.

The rules for the competition can be found at www.hst2009.eu. If you are interested in joining his team, please contact Barry Kutner, W2UP, at 207 Winding Lane, Newtown, Pennsylvania 18940 or by e-mail to W2UP at ARRL dot net. (eHam.net)

EMERGING TECHNOLOGY: NEW EFFICIENT LEDS

Researchers at Rensselaer Polytechnic Institute have developed and demonstrated a new type of light emitting diode (LED) with significantly improved lighting performance and energy efficiency. The new polarization-matched LEDs, developed in collaboration with Samsung Electro-Mechanics, exhibits an 18 percent increase in light output and a 22 percent increase in wall-plug efficiency. This is essentially measures the amount of electricity the LED converts into light. (ScienceDaily)

**

EMERGING TECHNOLOGY: NEW FUEL CELL FOR PORTABLE DEVICES IN DEVELOPMENT

Scientists in the UK are attempting to master new technology to power cars, portable computers, mobile phones and numerous other battery-dependent

devices. One that could also be of benefit to numerous mobile and portable ham radio field operations.

Researchers at the University of Aberdeen have been given almost ï¿½300,000 to create a cheaper and lower temperature fuel cell. To make this happen, the university's chemistry department is trying to develop what it calls carbon-tolerant fuel cell devices. Like their larger brethren, these cells convert fuel to electric power without the need for combustion. Unlike older fuel cells, these will be better able to cope with the carbon monoxide found in the fuel that it is converting into power.

The project leader is Dr Angela Kruth. She hopes that this new type fuel cell can be introduced to the market in the near future. (Science Today)

WORLDBEAT: BERMUDA AT AGE 400

With 2009 being the 400th anniversary of the settlement of Bermuda by Sir George Somers, the Radio Society of Bermuda has been issued a special call sign by the telecommunications authority that can be used all year. It is VP9400, plus a two-letter suffix of the operator's call sign. Special pictorial cards will be used to QSL all contacts made using the VP9400 prefix.
(VP9LP, Secretary, Radio Society of Bermuda).

**

WORLDBEAT: T-HUNT FOR A LOST FALCON IN THE UK

T-Hunters in the UK have been asked to help find a lost falcon. The owner of the bird says that he was flying her in the area of Swansea, on Tuesday, January 13th, when she flew out of sight while chasing a crow.

While the falcon was wearing a radio tag transmitter operating on 216.005 Mhz, unfortunately the bird's owner's receiver chose that precise moment to die. As the falcon could by now be anywhere in the United Kingdom, the falconer is asking U-K hams with the ability to listen on 216.005 MHz. Listen out for her either single or double-beep signal every 4 seconds. If you hear it, please contact MW0MXT at his Callbook address.

SPECIAL EVENT: VI2BV90 CELEBRATES WAVERLEY ARC

A special call for a very special radio club. This, as the Australian Communications and Media Authority assigns the special callsign VI2BV90 to the Waverley Amateur Radio Society which at 90 years is the oldest amateur

radio club in that nation down-under.

The Waverley Amateur Radio Society was founded on January 27th, 1919. Its first callsign N249 that was assigned to it on August 18, 1920. This was later changed to 2BV; and then, VK2BV. So, in reality, the combination of the two earlier calls as VI2BV90 will be the one used until February 1st, to celebrate the 90th birthday of this club. More details about the station can be found on the web at www.vk2bv.org (WIA)

**

DX

In DX, keep an ear open for DL2GAC, active as H44MS from Honiara, in the Solomon Islands. He will be there until April 28th. His primary focus will be on 80 and 40 meters. QSL as directed on the air.

OM2DX is in Hanoi, Vietnam and assigned the calls XV9DX and 3W1M. He will be there through 2012 and active on all bands. QSL via OM3JW.

DL2EBR says that he will be in Thailand a bit longer than originally anticipated. He is licensed as HS0ZEU and enjoys digital modes like PSK and SSTV. QSL's go via the RAST QSL bureau.

P40PZ will be on the air from Aruba until the 28th of January. He's operating 80 through to 6 meters using SSB and the digital modes only. QSL via EA5GVH.

F8EN will be operational from Gabon until January 26th. He is reportedly using the callsign TR8CR. QSL via F6AJA.

CT1BWW will use the call CS6BWW from Portugal in all major contests in January, February and March. QSLs direct or via the bureau .

Lastly, F4EGS operating portable TU, is reportedly on from the Ivory Coast city of Abidjan. He reportedly plans to concentrate on 40 through to 10 meters. Again QSL this operation as directed on the air.

(Above from various DX news sources)

THAT FINAL ITEM: NO CELL JAMMING DEMO AT DC PRISON

And finally this week, a rather strange story out of the nation's capitol. This, with word that a company that wanted to show how its cellular telephone jammers could be an effective crime fighting tool had its demonstration canceled by a Washington DC area prison.

The company is called CellAntenna Corporation. It announced last week that the FCC-authorized presentation has been called off at the last moment by the District of Columbia Department of Corrections. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the rest of the details:

--

CellAntenna Corporation was supposed to demonstrate its cellular telephone jamming technology on Thursday, January 8. While setting up its equipment, a representative from District of Columbia Prisons notified the company that the presentation was being canceled.

The Federal Communications Commission had earlier provided the District of Columbia Prisons written authorization for the test, allowing CellAntenna to perform the demonstration of jamming of cell phones. But at the last minute the Cellular Telephone Industry Association filed a lengthy 85-page challenge to the test. that was supposed to be heard in Federal Court at 4 PM on January 7th. Most believe that the CTIA court filing may have swayed the prison authority into its decision to call off the demonstration.

CellAntenna says that it was disappointed that the prison authority had, in the company's view, obviously buckled under the pressure of the Cellular Telephone Industry Association demand that the test be canceled. It also claims that cellular service providers are still selling services to inmates despite the fact that it is illegal for them to use a cellular telephone behind prison bars.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC had prepared a brief in favor of the testing but the whole matter became moot when the District of Columbia Prisons canceled the test. (E-Tech)

==> ARRL BOARD OF DIRECTORS CONSIDERS INTERNAL AND EXTERNAL GOALS FOR
2009

The ARRL Board of Directors held its 2009 Annual Meeting on January
16-17 in Windsor, Connecticut, under the chairmanship of President Joel
Harrison, W5ZN. Radio Amateurs of Canada President David Goodwin,
VO1AU/VE3AAQ, and IARU President Larry Price, W4RA, were guests of the
Board.

The Board considered and acted on a number of organizational and
regulatory issues. Election of the Executive Committee, committee
appointments and awards were also on the agenda for the Annual Meeting.

Organizational Issues
```

ARRL Strategic Plan: At its July 2008 meeting, the Board voted to develop a timeline to review and revise the ARRL Strategic Plan. The Board directed Chief Executive Officer David Sumner, K1ZZ, to release the Plan's long-range goals to the membership and to solicit comments from members "on the future direction and priorities of their national organization." At this meeting, Sumner led an in depth led an in depth discussion of the membership input. The Executive Committee is tasked with developing materials for use in completing the Plan revision at the July 2009 Board meeting.

ARRL Membership and Deployed Active Duty Military: The Board voted unanimously to amend Bylaw 5 <http://www.arrl.org/aabl.html>, stating that the Executive Vice President is authorized to maintain ARRL membership privileges without charge for the duration of a member's active military deployment outside the ARRL operating territory as described in Bylaw 30, with or without the delivery of QST at the member's option. Bylaw 30 delineates which states (or portions of states) belong to the 15 ARRL Divisions. This action brings in to the Bylaws a policy adopted earlier by the Board.

Budget: The Board voted to adopt the 2009-2010 Plan (as amended), as presented by the Administration and Finance Committee.

Scouting: The Board voted to offer assistance to the Boy Scouts of America and their 2010 National Scout Jamboree. By representing Amateur Radio and participating with K2BSA at the Jamboree in conjunction with the Boy Scouts, the ARRL plans to build on the success of past National Jamborees where thousands of youth learned about the value and enjoyment of Amateur Radio. Teaching the Radio merit badge program, license classes and VE exam sessions have been parts of the quadrennial event that attracts more than 40,000 Scouts and leaders.

Technology Task Force: This group, created in 1999, was formed to develop a strategy and plan of work for exploring new technologies, assessing their applicability to Amateur Radio and also developing a plan as to how to incorporate such new technology in the Amateur Radio Service. Since its inception, the Technology Task Force has carried out studies and offered recommendations -- particularly with regard to digital voice, high-speed multimedia, and software-defined radio. The Board resolved that the exploration and promotion of new Amateur Radio communications technologies shall continue to be an essential element of the ARRL's mission and that the original mission of the Technology Task Force may now be carried out more effectively by other means. With sincere thanks and gratitude, the Board voted to dissolve the group.

IARU Member-Society Admissions: The Board voted unanimously to instruct the Secretary to cast ballots in favor of admitting the Emirates Amateur Radio Society and the Kazakhstan Federation of Radiosports and Radioamateur to the IARU

ARRLWeb Redesign: A group from Fathom, a contractor based in Hartford, presented the company's progress on a new design for the ARRL Web site. As recommended by the Administration and Finance Committee, the Board

voted to approve a capital expenditure to move into the third phase of the design development.

Legislative Regulatory Matters

Legislative Objectives: The Board voted to approve five legislative objectives for the 111th Congress:
* Objective #1: The ARRL seeks legislation to extend the requirement for "reasonable accommodation" of Amateur Radio station antennas (a requirement that now applies to state and local regulations) to all forms of land use regulation.
* Objective #2: The ARRL opposes legislation that encourages the deployment of RF technologies such as broadband over power line (BPL) systems unless adequate safeguards against interference to licensed radiocommunication services are included in the legislation.
* Objective #3: The ARRL opposes legislation that would diminish the rights of federal licensees in favor of unlicensed emitters, especially unintentional emitters.
* Objective #4: The ARRL seeks recognition of the unique resources, capabilities and expertise of the Amateur Radio Service in any legislation addressing communications issues related to emergencies, disasters, or homeland security.
* Objective #5: The ARRL supports the complementary legislative objectives of other radiocommunication services, particularly the public safety and scientific services that require spectrum access and protection from interference for noncommercial purposes that benefit the public.

Call Sign Allocation Study: The Board voted to instruct the Executive Committee, with advice and input from the Programs and Services Committee, to study the FCC sequential, vanity and special call sign programs.

Amateur Radio and Driving: The Board noted that local municipalities, as well as state legislatures, have made laws or are considering laws that apply to drivers who use cellular telephones while driving. Recognizing that this sort of legislation often inadvertently prohibits -- or can be construed to prohibit -- Amateur Radio mobile communications, the Board instructed the Executive Committee to develop a policy statement and recommend language that protects the ability of licensed radio amateurs to prudently conduct mobile amateur communications.

Other Items

Committee Elections and Appointments

Executive Committee: The Board elected the following Directors to the ARRL Executive Committee: Bill Edgar, N3LLR, Atlantic Division; Dick Isely, W9GIG, Central Division; Jay Bellows, K0QB, Dakota Division; Tom Frenaye, K1KI, New England Division, and Bob Vallio, W6RGG, Pacific Division. Members of this committee serve one year terms.

President Harrison appointed the following Board members to committees:

Administration and Finance Committee: Jim Fenstermaker, K9JF, Chairman, Northwestern; Jim Weaver, K8JE, Great Lakes; Dennis Bodson, W4PWF, Roanoke; Brian Mileshosky, N5ZGT, Rocky Mountain; Dick Norton, N6AA, Southwestern; Vice Director Cliff Ahrens, K0CA, Midwest, and Treasurer Jim McCobb, K1LU.

Programs and Services Committee: Bruce Frahm, K0BJ, Chairman, Midwest; Greg Sarratt, W4OZK, Southeastern; Coy Day, N5OK, West Gulf; Mickey Cox, K5MC, Delta; Frank Fallon, N2FF, and Vice Director Greg Widin, K0GW, Dakota.

Ethics and Elections Committee: Greg Sarratt, W4OZK, Chairman, Southwestern; Brian Mileshosky, N5ZGT, Rocky Mountain, and Jay Bellows, K0QB, Dakota Division.

Ad Hoc Scouting: Brian Mileshosky, N5ZGT, Chairman, Rocky Mountain; Bill Edgar, N3LLR, Atlantic Division; Jim Fenstermaker, K9JF, Northwestern, and Staff Liaison Larry Wolfgang, WR1B.

Ad Hoc Committee on the ARRL Foundation: Vice President Rick Roderick, K5UR, Chairman; Tom Frenaye, K1KI, New England; Jim Fenstermaker, K9JF, Northwestern, Chief Executive Officer David Sumner, K1ZZ, and Chief Development Officer Mary Hobart, K1MMH.

Chairman and Liaison Appointments

Public Relations Committee: Bill Morine, N2COP, Chairman; Mike Raisbeck, K1TWF, Liaison, New England.

Historical Committee: Vice Director Gary Johnston, KI4LA, Chairman, Great Lakes.

Legal Defense and Action Committee: Jay Bellows, K0QB, Chairman, Dakota Division.

Electromagnetic Compatibility Committee: Dennis Bodson, W4PWF, Chairman, Roanoke.

Band Planning Committee: Vice President Rick Roderick, K5UR, Chairman.

Microwave Band Planning Committee: Tom Clark, K3IO, Chairman

RF Safety Committee: Greg Lapin, N9GL, Chairman.

VHF/UHF Advisory Committee: Kermit Carlson, W9XA, Chairman.

DX Advisory Committee: To be announced

Contest Advisory Committee: Dick Green, WC1M, Chairman.

Amateur Radio Direction Finding Coordinator: Joe Moell, K0OV.

Awards

2008 International Humanitarian Award: The Board selected the Amateur Radio operators of the Sichuan Radio Sports Association, the Chinese Radio Sports Association and the many operators from around China who

supported communications efforts in the aftermath of the May 2008 earthquake, as the recipient of the 2008 International Humanitarian Award.

2008 Bill Leonard, W2SKE Professional Media Award: The Board selected Ted Randall, WB8PUM, of Lebanon, Tennessee, as the recipient of the 2008 Bill Leonard, W2SKE Professional Media Award; Randall is host of the QSO Radio Show. He was cited for his ongoing coverage of Amateur Radio through his profiling of key figures and personalities. Randall's reporting of their contributions "best reflects the enjoyment, importance and public service value of Amateur Radio."

The complete Minutes of the 2009 Annual Meeting of the ARRL Board of Directors will soon be available on the ARRLWeb <http://www.arrl.org/announce/board.html>.

The next meeting of the ARRL Board of Directors is scheduled for July 17-18, 2009.

==> COY DAY, N5OK, RESIGNS FROM ARRL BOARD OF DIRECTORS

After more than 12 years as a member of the ARRL Board family -- 10 of them as West Gulf Division Director -- Coy Day, N5OK, announced that he is resigning from ARRL elected office, effective January 20. Per the ARRL Articles of Association <http://www.arrl.org/aabl.html>, Vice Director Dr David Woolweaver, K5RAV, has taken over as Director, and ARRL President Joel Harrison, W5ZN, will appoint a new Vice Director. The next election for West Gulf Division Director and Vice Director will be in 2010.

Day, who was Chairman of the League's Ethics and Elections Committee, and served on the Executive Committee for the past year, said, "I have really enjoyed interfacing with and serving the membership in my term as West Gulf Division Director. Traveling around, going to club meetings, going to hamfests -- I've just enjoyed being with other amateurs the most. I've also enjoyed representing the membership at the Board of Directors meetings, talking, finding out what they need and what they are feeling and bringing that back to the Board." Before being elected to the Board of Directors, Day served as West Gulf Vice Director and Oklahoma Section Manager.

"It has been a pleasure to work with Coy Day on the ARRL Board," said ARRL President Joel Harrison, W5ZN. "Coy's integrity is admirable and something that everyone should model. We will miss his wisdom and smooth manner on the Board, and wish the best for Coy and his wife Judy."

ARRL Chief Executive Officer David Sumner, K1ZZ, concurred: "In addition to the gentlemanly demeanor that most people who know him associate with Coy, what I will always remember about his service on the Board are the high standards that he set -- for himself, as well as for the ARRL staff. This was especially evident while he was Chairman of the Administration and Finance Committee. Coy challenged and supported the staff in equal and abundant measure."

"I could not step down if I was not confident that David would do a great job as Director," Day said. "He's been such a great Vice Director. He's already served on committees and done so many things within the West Gulf Division. David's doing a great job and I know he will continue to do great things as Director of the West Gulf Division." Dr Woolweaver will take Day's place on the Programs and Services Committee for 2009.

Woolweaver called Day a "tireless contributor to Amateur Radio for two decades," and said Day's long service "has been marked by honor and integrity. It has been my privilege to serve with Coy for the past seven years as his Vice Director. I know that everyone in the West Gulf Division will join me in wishing Coy well in his retirement."

While serving on the Board of Directors, Day served on numerous committees. "I think I served on all of them," he joked. "I was Chairman of the Membership Services Committee -- that was before the name was changed to the Programs and Services Committee. I was also Chairman of the Administration and Finance Committee. My first committee was the ad hoc Committee for Long Range Planning, back in 2001."

"I would like thank the members and the staff -- the support here at HQ," Day said. "I also want to thank my fellow Board members -- it takes all 15 of us working together to make things happen. It's been fun."

==> HAMS HELP OUT WITH HISTORIC DAY

On Tuesday, January 20, Barack Obama was inaugurated as the 44th President of the United States. Numerous organizations -- federal, state and local agencies, the staff of Presidents Bush and Obama, as well as private agencies -- were involved in the months of planning required to make the event go smoothly. From the very beginning, Amateur Radio operators were involved, making sure that communications support was available by providing backup communications in the event that primary communications were disrupted.

According to ARRL Virginia Section Public Information Coordinator Joe Safranek, K4JJS, the Virginia and Maryland Offices of Emergency Management -- as well as various local jurisdictions in and around the Washington, DC metro area -- requested the assistance of Amateur Radio operators to provide local and short distance communications for the inauguration and the events leading up to it.

Safranek said that ARRL Virginia Section Manager Carl Clements, W4CAC, and ARES-RACES of Virginia Section Emergency Coordinator Ron Sokol, K4KHZ, selected Assistant Section Emergency Coordinator Bruce Freund, K7BC, to be the project officer for this event.

"Freund's area of responsibility covered two Virginia ARES districts that are comprised of 14 cities and counties along the western border of the District of Columbia," Safranek said. "These districts are managed by Howard Cunningham, WD5DBC, and Tom Lauzon, KI4AFE. They had to ensure that their jurisdictional Emergency Coordinators and members accomplished the mission objectives received from event officials.

Numerous Amateur Radio operators involved with the various organizations serving the jurisdictions in Virginia, DC and Maryland all worked together."

Across the Potomac River, ARRL Maryland/DC Section Manager James Cross, WI3N, and Section Emergency Coordinator Steve Beckman, N3SB, were actively involved from the beginning with planning and preparation efforts. If needed, Section leadership was prepared to assist within the District. In DC, members of Radio Emergency Associated Communications Teams (REACT) <http://www.reactintl.org/> were also part of the planning; the organization had a representative at the very first regional planning meeting.

Planning for communications support during the inauguration drew upon the expertise and relationships developed through the years of planning the annual Marine Corps Marathon (MCM) in DC <http://www.marinemarathon.com>, Safranek said. "The marathon is our major regional Amateur Radio event in the Metropolitan DC area," he said. "When planning our communications support for the marathon, we use the Incident Command Structure (ICS). We decided to use ICS with the inauguration, too. By using a system we were all familiar with, we had a head start."

Safranek listed some of the many ways amateurs helped out with communications support: Nick Meacher, N3WWE, built on a template the group used for the marathon for the compilation of the Incident Communications Plan. Weeks in advance of the inauguration, Fairfax County Emergency Coordinator Jeff Wilson, AI4IO, led a field test of the repeaters planned for use for the primary Regional Coordination Net to ensure that participating Emergency Operations Centers would be able operate cleanly through the selected repeaters. Field tests are a key lesson learned from MCM and identified necessary changes to the Communication Plan. District Emergency Coordinator Howard Cunningham, WB5DBC, serves the marathon as Special Project Officer. He prepared a staffing approach for mutual assistance that, if needed, would rely on the on-call ARES/RACES organizations in Loudoun, Prince William and Fauquier counties to supplement the activated groups in Arlington, Alexandria, Falls Church and Fairfax.

Safranek said that the area's communications equipment was well suited to the task: "Using a combination of many systems, hams were able to move information quickly and efficiently. The Network Engineers Repeater Association (NERA) UHF linked repeater system <http://www.qsl.net/nera/> supported the primary Regional Coordination Net. Local group operations used other analog VHF and UHF systems for phone, Winlink, packet and other modes of operation, as well as the use of a D-STAR VHF/UHF voice and data system. Some operators monitored the Old Dominion Emergency Net/Alfa on 3947 kHz."

On the Maryland/DC side of the Potomac River, hams were active in other areas, including several stationed at RFK Stadium to assist with the visitors from the more than 1200 buses that were parked there. District

EOCs in Prince Georges and Montgomery Counties also had hams providing communications support.

ASEC Bruce Freund singled out the achievements of the Fairfax ARES-RACES Unit, specifically the actions of Fairfax Assistant Emergency Coordinator Tom Azlin, N4ZPT. "Tom was deeply involved in the local and regional planning activities before the event; he serves a similar key role in the Marine Corps Marathon leadership. But in my opinion, it was his performance in the execution of the plan that is particularly noteworthy. During the field testing for the Regional Coordination Net, several jurisdictions could not reliably hit the planned repeaters, so we made the decision to shift to the NERA linked UHF system. Unfortunately, the Fairfax EOC VHF/UHF antenna only provides marginal coverage into NERA. Due to the difficulties the EOC experienced when the Regional Coordination Net opened at 4 AM, Tom put a separate liaison channel in place to supplement the EOC's NERA link and manned it himself while developing a watch bill to ensure coverage on this unanticipated circuit. That liaison channel was covered solidly throughout the day and was the last ARES-RACES circuit secured at the end of operations on Tuesday evening. Tom made sure that the EOC was staffed beginning at 3 AM, until it was secured a little after 8 PM. While his leadership in the planning activities is noteworthy, Tom's stepping forward to provide leadership ensuring successful execution merits special recognition."

Fairfax Assistant Emergency Coordinator for Operations, Art Pond, KD4FBT, worked very long days during the planning phase. Due to his job on Capitol Hill, he was busy getting the new members' IT infrastructure set up. "He pulled one of the six hour rotations in the EOC during what might have been the highest activity time if there had been transport problems inbound," Freund said. "This shows the dedication of the volunteers in working very long days on their regular job, pulling activation duty for the event, and then going back to their regular jobs the very next day."

In Fairfax, one operator was on duty at the local Emergency Operations Center at the beginning and end of the activation, while two were on duty during the main portion of the event. EOCs in Alexandria, Arlington and Falls Church City also had ARES/RACES operators on duty. The Virginia State EOC was manned with a full Amateur Radio crew utilizing HF, VHF and UHF links via voice, packet and Winlink to the inauguration Nets. Besides providing support at EOCs, amateurs were also on duty at Alexandria Hospital, while others were on standby to support communications at two other hospitals in Prince William County, as well as EOCs in Loudoun, Fauquier and Prince William Counties.

Freund is also a member of Army MARS. He served as Net Control Station on the MARS frequencies during the event. According to Safranek, Army MARS HQ at Ft Huachuca, Arizona, put out a directive stating an Actual Incident Net would be established, directing the type of MARS coverage that would be required and how Region 3 (in the DC area) would have liaisons from other regions available to pass any necessary traffic.

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, monitored both ham radio frequencies and the ARRL HQ MARS station, AAN1ARL. At the Virginia Commonwealth level, the Virginia Department of Emergency Management opened their EOC where Terry Hebert, KG4GLS, coordinated Amateur Radio activities. State EOCs in Maryland and Virginia had Army MARS operators on premises participating in their regional nets.

Sokol said he was pleased at the outcome of this historical event: "When I was appointed SEC in April 2008, I told the ASECs that they are the managers over their areas and they will be given the opportunity to do just that -- manage operations in their designated areas. Section Manager Carl Clements, W4CAC, totally agreed with this comment and has been extremely supportive of efforts to delegate authority to the intermediary managers, the ASECs and the District Emergency Coordinators, since they are the local area experts. I am really proud of the way in which ARES-RACES of Virginia participated in this event."

"As Virginia Section Manager, I am responsible for a myriad of items -- the emergency communications aspect of the hobby being one of prime importance," Clements said. "With a senior leader like Ron Sokol, a staff of ASECs like Bruce, our DECs, and our local ECs performing their managerial and supervisory duties in an outstanding manner, there is no wonder why our numbers are constantly growing. The Section has accomplished a lot in less than a year, including a Memorandum of Understanding with the Virginia Department of Emergency Management. We have been instrumental in working with a group of dedicated hams in the western areas of the Commonwealth in building an RF link to the eastern areas of Virginia and now we are participating in the inauguration of the President of the United States of America. I could not be more proud of these fine men and women as I am now."

==> LOTW REACHES NEW MILESTONE: 200 MILLION QSOS

On January 16, Vic Kean Jr, K1LT, of Carroll, Ohio, uploaded four years' worth of logs -- about 25,000 QSOs -- to ARRL's Logbook of The World (LoTW) <http://www.arrl.org/lotw>. Somewhere in that batch, the LoTW counter crossed the 2 million mark. To celebrate Kean's submission of the 200 millionth QSO, the ARRL has awarded him lifetime free LoTW credits and free ARRL Awards as he qualifies for them.

"When I uploaded all of my contest logs since moving to my current location," Kean said, "I was really surprised at the number of the contacts that were immediately confirmed -- about 30 percent -- especially DXpeditions. I've been very laggard about responding to QSLs that I get. The last batch I did was by printing some card stock on a laser printer."

Kean, who mainly enjoys operating CW on 160 meters, said that he enjoys what he calls "success at contesting through technological superiority," as opposed to superior operating ability. "In other words," he said, "I work at improving my station with technology, and then test those

improvements in a contest. I attempt to achieve awards by trying to get into one of the 'Top 10 boxes' in the contest results. Somewhere I have a Worked All States certificate from my youthful days. I worked about 160 countries but never got around to submitting any cards for DXCC." Kean said that he still intends to try and get at least one QSL card from every country.

"Even though we knew that Logbook of The World would explode in its popularity, 201 million QSOs in roughly the first five years of its existence show that LoTW's concept and ideas have worked beyond our expectations," said ARRL Membership and Volunteer Programs Department Manager Dave Patton, NN1N. "Vic's log contributes not only to the bottom line, but to the overall embrace of the technology and further bolsters our commitment to continue to improve and expand the system."

Kean said that he believes Amateur Radio will certainly continue to change as time goes on, "but I don't expect the hobby to ever completely go away. With cognitive radio coming, there is plenty of opportunity to experiment, even by just writing software. In the long run, I think the rules of spectrum allocation will change, but hopefully the change will benefit people in general, rather than corporations. If so, there will still be a role for communications experimenters. Man versus the ionosphere will still be interesting, no matter what the spectrum rules are."

When asked if he would encourage other hams to try Logbook of The World, Kean was enthusiastic: "If someone asked me about Logbook, I would tell them, 'Don't worry about it. Logbook of The World works, and it seems to be enjoying much greater popularity than you know.' At least, that's what I just found out!"

==> ARRL TO UNVEIL NEW COURSE FOR PUBLIC INFORMATION OFFICERS

With the many weather events and other newsworthy items of note in 2008, ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said that it was evident around the US "that the expertise, motivational level and activities of individual Public Information Officers (PIOs) are highly variable <http://www.arrl.org/pio/>. Some PIOs are excellent. Some retain the PIO title but are inactive, while others are motivated, but apparently not aware of the basic expectations of their role or the skills involved."

Pitts equated the PIO situation to the situation that ARES faced several years ago: "The corrective action for ARES -- that resulted in major success -- began with the design and implementation of the ARRL EmComm Level 1 classes (first tested in Connecticut and then expanded and deployed nationally). They produced significant positive results in the quality, scope and skill of ARES activities."

A similar course, "PR-101," is now being developed by the ARRL. "This course is geared toward PIOs and others interested in Public Relations," Pitts said. "While voluntary, the course will be 'strongly encouraged'

for all ARRL PIOs and available for others."

Overall goals for the course are:

* To clarify the role of the PIO in the Field Organization.
* To establish a base set of expectations (job description) for a PIO to fulfill, and peer pressure to do the job well.
* To establish, teach and verify that course graduates have the common basic skill set needed to accomplish expectations set forth in the PIO job description.
* To create a pool of trained PIOs who can be confidently called upon to represent Amateur Radio in their region during breaking news events.
* To create a spirit of pride in being a trained and active PIO.
* To increase the productivity of PIOs and resultant positive media coverage.

"There is a critical need to offer public relations training that addresses the 21st century media landscape," said ARRL Public Relations Committee Chairman Bill Morine, N2COP. "Since the last revision of the ARRL PIO Handbook in the mid 1990s, domination of coverage has shifted from newspapers, magazines and broadcast stations to cable, satellite and Internet media outlets. The decentralization of media means there are many more ways and formats from which the public can access information. The PR-101 course will point ARRL PIOs in the direction where they can best take advantage of opportunities in both traditional and emerging media."

Saying that the League is fortunate to have a dedicated corps of more than 450 appointed PIOs in the field, Morine pointed out the results of a survey sent to all PIOs: "The December 2008 survey of this group showed that the majority of PIOs are either self-appointed or were appointed by their local club. This confirms that many PIOs are highly motivated and eagerly want to tell the public about Amateur Radio. At the same time, the survey revealed that most PIOs have little or no formal training or experience in public relations, journalism or the media in general. The overwhelming number of respondents told the survey they would gladly participate in public relations and media training from ARRL."

Morine said he is glad to see that more and more Section Managers are already endorsing PR-101 for their PICs and PIOs. "The goal of the Public Relations Committee is to raise the professionalism of our field PIOs, just as the ARECC courses <http://www.arrl.org/cce/activity-list.php3> have elevated the training of ARES operators," he said.

PR-101 is expected to be first shown to the public in May at the ARRL EXPO at the Dayton Hamvention.

==> FCC REPORTS DECLINE IN BPL CUSTOMERS

On January 16, 2009, the Federal Communications Commission released data, as of December 31, 2007, on the services used for high-speed

Internet access in the United States. According to the data collected by the FCC, as of that date there were 121.2 million high-speed lines (including wireless), a 20 percent increase in just six months.

In sharp contrast to the rapid growth in mobile wireless, cable modem, ADSL and fiber as delivery mechanisms to subscribers, Broadband over Power Line (BPL) utilization apparently declined during the period. According to the FCC figures, the category "Power Line and Other" dropped from 5420 lines in June 2007 to just 5274 six months later. It is not known how many of these are "Power Line" and how many are "Other."

"Despite the enormous and unwarranted hype given to BPL by the FCC under Chairmen Powell and Martin, the message from the marketplace is clear: BPL is going nowhere as a means of delivering broadband connectivity to consumers," observed ARRL Chief Executive Officer David Sumner, K1ZZ. "Still, the FCC has unfinished business with respect to BPL. It has been nine months since the federal Court of Appeals ordered the Commission to correct the errors it committed in adopting rules that inadequately protect licensed radio services from BPL interference <http://www.arrl.org/news/stories/2008/04/25/10064/>, yet the FCC has made no effort to comply. With the change at the FCC helm that is about to take place, we hope the foot-dragging will come to an end and the Commission will fulfill its obligations to the Court as well as to its licensees."

The 27-page FCC report may be found at on the FCC's Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-287962A1.pdf>.

==>SOLAR UPDATE

Tad "Sometimes a piece of Sun burned like a coin in my hand" Cook, K7RA, this week reports: Monday revealed another shy sunspot. Sunspot 1011 appeared suddenly, and then it was gone. Its configuration and location did not identify it as belonging to either Solar Cycle 23 or 24. On Monday, January 19 the sunspot number was 13. Sunspot numbers for January 15-21 were 0, 0, 0, 0, 13, 0 and 0 with a mean of 1.9. The 10.7 cm flux was 71, 71, 72, 71, 71, 70 and 69 with a mean of 70.7. The estimated planetary A indices were 4, 2, 2, 2, 9, 3 and 2 with a mean of 3.4. The estimated mid-latitude A indices were 4, 2, 2, 2, 7, 1 and 2 with a mean of 2.9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Pablo Neruda's "Clenched Soul" <http://www.cs.rice.edu/~ssiyer/minstrels/txt/941.txt>.

==>IN BRIEF:

* This Week on the Radio: This week, the NAQCC Straight Key/Bug Sprint is January 22 and the CQ 160 Meter Contest (CW) is January 23-25. The REF Contest (CW), BARTG RTTY Sprint, the UBA DX Contest (SSB) and the SPAR Winter Field Day are January 24-25. The SKCC Sprint is January 28. Next week, look for the SARL Youth Day Sprint on January 31. The QRP Winter Fireside SSB Sprint is February 1. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, February 8, 2009, for these online course sessions beginning on Friday, February 20, 2009: Amateur Radio Emergency Communications Level 2; Antenna Modeling, and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* Officers for ARRL Foundation Elected: During its annual meeting on January 22 the ARRL Foundation <http://www.arrlf.org/> elected officers for 2009: Tom Frenaye, K1KI, President; Dick Isely, W9GIG, Vice President; Mary Hobart, K1MMH, Secretary, and Jim McCobb, K1LU, Treasurer. Each of the officers served in 2008 "These officers have demonstrated the leadership and commitment to the goals of the ARRL Foundation and received a vote of confidence from the Board for another term," Frenaye said. "In re-electing the slate of officers for another year, the Foundation recognizes the importance of leadership continuity in the organization's commitment to Amateur Radio."

* Amateur Radio Groups Help with Digital TV Transition: ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said he has been getting e-mails and phone calls from Amateur Radio operators concerning the Digital TV conversion, currently set for February 17. "People are asking what's happening with the DTV conversion and wondering what can we do to help," he said. "While there is considerable confusion on a possible extension of the date, things continue as there will be a conversion and the technical information hams provide to their communities will be

needed -- even if the scheduled date for the conversion changes. The role of Amateur Radio is simply to be helpful to the people in our communities." The FCC's Sue McNeil told Pitts that she sent out a request "for all of the [FCC] HQ and Field folks to contact the ARRL Section Managers went out in late December; I understand that contacts have been or are being made. In addition to Philadelphia and Hawaii, I understand that there have been some fruitful discussions with folks in North Carolina and California (Silicon Valley area). We have received good feedback about contacts made in Montana and Portland, as well." If your group or club is interested in participating, please be sure to let your Section Manager <http://www.arrl.org/sections> know of your plans and actions.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change

your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

ENFORCEMENT: FCC NAMES LAURA L. SMITH TO ENFORCE THE HAM RADIO RULES

Laura L. Smith has been named as the new Special Counsel for the Spectrum Enforcement Division of the FCC's Enforcement Bureau. She replaces Riley Hollingsworth, K4ZDH, who retired last July 3rd. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

Attorney Laura L. Smith is a 1990 graduate of the Pepperdine University School of Law. She began her legal career with the FCC, working in the Mass Media Bureau and Wireless Telecommunications Bureau. She also served as Deputy Division Chief of the Public Safety and Private Wireless Division.

In 1998, Smith departed FCC service to become Executive Director of Governmental Affairs for the Industrial Telecommunications Association. In 2001, she was named as the organization's President and Chief Executive Officer. She has also served of counsel with the Maryland law firm of Shulman Rogers, where she dealt primarily with telecommunications issues.

Smith has served as an industry consultant and written columns for a variety of trade publications including Mobile Radio Technology Magazine and The Private Wireless Magazine. She is currently licensed to practice law in the Commonwealth of Virginia.

Her appointment has been very welcome news to the nation's ham radio community, which in recent months has seen a noticeable increase in overt rules violations. Smith's appointment will make it clear to those who break the rules that the FCC intends to continue to work with the ham radio community to get regulatory violators to reform or, if necessary, take them

off the air.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the studio in Los Angeles.

--

The ARRL seems very pleased with Smith's appointment. In a statement on Monday, January 26th, League President Joel Harrison, W5ZN, said that he was very pleased to see the Commission move forward with the hiring of a new Special Counsel responsible for enforcement of the Amateur Radio Service rules. (QRZ.com, ARRL, others)

BREAKING DX NEWS: K5D WILL BE ON THE AIR FEBRUARY 5TH

Some breaking news from the world of DX. This with word from Bob Allphin, K4UEE and Glenn Johnson, W0GJ, that the long awaited Desecheo Island K5D operation will begin late in the day on February 12th.

In a widely distributed press statement the planners say that because Desecheo is so very rare that there are many, many hams worldwide that need KP5 for an all-time new one. Therefore, K4UEE and W0GJ are asking that you not contact the DXpedition on any band or using any mode that you have confirmed from a previous DXpedition. This will allow the people who really need a new DXCC entity a better opportunity to get through the pileups.

Allphin and Johnson also say that theirs is not to establish a world record for contacts. Because of this, there will not be any competitions for most band or mode QSOs, no certificate or awards for contacting the DXpedition more times than anyone else, and the like. In fact, they ask that those who already have Desecheo confirmed on a particular band or mode to, in their words, exercise restraint.

For those not aware, Desecheo Island is ranked the No.6 most-wanted contact worldwide. It's No.3 in Europe and No.2 in Asia. We will have more DX news later on in this week's newscast. (K5D Release)

**

RESCUE RADIO: US AND SOUTH AFRICA COOPERATE IN SEARCH FOR VESSEL IN DISTRESS

South Africa's Hamnet amateur radio distress agency was called out on Thursday, January 22nd. This, when the United States Coast Guard contacted the South African Radio League regarding a distress signal received from a yacht at the time believed to be some 200 miles off the coast of Madagascar. Amateur Radio Newsline's Bruce Tennant, K6PZW, picks up the story from here:

News reports say that the Queequeg II was on an around the world sailing adventure when it was lost at sea. The reports note that the crew fought very rough seas for a day and a half before it capsized at about 16:30 UTC.

Amateur radio was brought into the search and rescue operation when South Africa's Hamnet was mobilized to assist in the search for the missing yacht following a request passed-on by the South African Radio League. It had been contacted by the United States Coast Guard.

Hamnet, in turn, contacted Alistair Campbell, ZS6MU. Campbell runs the daily South Africa-based Maritime Mobile Net. He was asked whether the net members had received any information regarding the missing vessel. When the operators of the network responded that they did not know of the yacht ZS6MU, he contacted the Reunion Island Coastguard. It then initiated a search and rescue operation. The net then remained in operation in case a radio distress message might be heard.

The yacht was eventually found floating upside down in the water. Lone survivor Leo Sherman was picked up by a merchant vessel. It was Sherman who told rescuers that two other men apparently went overboard without life jackets. They were identified as famed global sailor Quen Cultra of Onagra, Illinois and a maritime naturalist, Joe Strykowski, of Crystal River, Florida.

A several day search for Cultra and Strykowski was conducted by the international Rescue Coordination Center at Reunion Island. It was called off after searchers reasoned that their survival in the rough waters without life jackets meant that their possibility of survival was minimal.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, monitoring this story from Los Angeles.

--

According to news reports, a memorial is planned for Quen Cultra in 2010 on what would have been his 75th birthday. More about the around the world journey that he and his crewmates were on is on-line at www.queequegtwo.com (SARL, Kankakee Journal, ARNewsline,)

**

HAM RADIO IN SPACE: NO MORE SPACE TOURISTS AFTER 2009

Russia says that the International Space Station will be off limits to space tourists after 2009. This, as its crew grows from three to six. Roscosmos is Russia's space agency. In an interview with a Russian daily newspaper its director Anatoly Perminov said that the last commercial flights would be made this year. This will include the second flight by American millionaire Charles Simoni, KE7KDP, and another by ayet-to-be-named Kazakh national.
The Kazakh National Space Agency previously said that one of its cosmonauts would fly to the ISS in October, 2009. Roscosmos earlier announced that a Russian space tourist hopeful would miss out on a trip to the ISS and that a Kazakh cosmonaut would likely take his place. (G0SFJ, Southgate)

**

HAM RADIO IN SPACE: NASA SEEKS HAM HELP WITH STEREO SUN MISSION STUDY

NASA says it needs ham radio help to keep track of signals from the STEREO mission.

STEREO is an acronym for the twin Solar Terrestrial Relations Observatory. It employs two nearly identical space-based observatories to provide the first-ever stereoscopic measurements to study the Sun. One leads the Earth in orbit and the other trails our planet by the same distance.

Chris St. Cyr of the Goddard Space Flight Center says that NASA's Deep Space Network downloads data from STEREO only three hours a day. He says that's plenty of time to capture all of the previous day's data, but the space agency would like to monitor the transmissions around the clock. To accomplish this St. Cyr says that hams experienced with receiving weak signals in the microwave region can participate in the historic mission by helping NASA capture the spacecraft's images.

Bill Thompson is the director of the STEREO Science Center at Goddard. He explains that hams would be a part of an amateur radio-based mini-Deep Space Network. One that that would monitor STEREO around the clock.

Thompson notes that the two spacecraft beam their data back to Earth via an X-band beacon. He says that anyone with a 10-meter dish antenna and a suitable receiver can pick up the spacecraft signals. He notes that the data rate is a slow 500 bits per second, and it takes 3 to 5 minutes to download a complete image.

So far, the mini-Network includes stations in the United Kingdom, France and Japan but Thompson is looking for more volunteers. Information on contacting Bill Thompson to become a part of this mission is on-line at http://stereo-ssc.nascom.nasa.gov/contact/contact.shtml (NASA)

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9ELK repeater serving Elkhorn, Wisconsin.

**

ENFORCEMENT: PENNSYLVANIA EXTRA CLASS HAM ISSUED $4000 NAL

An Extra class ham in Pennsylvania has been issued a Notice of Apparent Liability in the amount of four thousand dollars. This, on allegations that Jose Torres, N3TX, of Philadelphia, apparently willfully and repeatedly operated his amateur station on an unauthorized frequency just below the 11 meter Citizens Band. Amateur Radio Newsline's Mark Abramowicz, NT3V, has more:

--

According to federal documents filed in the case, the Federal Communications Commission investigation of Torres began in December 2007.

Agents responded to a complaint of over-the-air television interference from one of his neighbors and found transmissions going on below the CB Band at 26.71 Mhz.

Using direction-finding equipment, agents traced the source of the transmissions to Torres' home. When they were admitted to the home, the agents found Torres' transmitter turned off. They asked him to turn it on and found it had been set to 26.71 Mhz.

The documents say Torres denied making the transmissions and he claimed to be listening to Spanish transmissions from another station.

Torres voluntarily told the agents he holds an Extra Class Ham License with the call sign of N3TX. He was told by them he had no privileges to transmit on that band.

The case documents say Torres received a Notice of Violation in January 2008 and agreed he would cease illegal transmissions.

But, the documents say by February, the FCC received an email from the neighbor saying the interference had returned.

FCC agents returned to the area with monitoring and recording equipment in April 2008 and June 2008 and found transmissions again coming from Torres' residence.

They also noted in the complaint that in addition to being well out of band for his privileges, he failed to identify himself.

As a result of what the FCC called willful violations, it imposed the 4-thousand-dollar penalty in a filing dated January 6 of this year.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Torres was given the usual 30 days to pay, request a reduction in the amount, or to file an appeal. (FCC)

JUSTICE: ANOTHER ACCUSED IN THE MURDERS OF KD7VWJ AND KD7VWK ON TRIAL

The capital murder trial of a third defendant in the murder at sea of Thomas and Jackie Hawkes, KD7VWJ and KD7VWK, has begun in Southern California. 43-year-old John Fitzgerald Kennedy is accused of being the muscle man in the killings of a couple tied to an anchor and thrown off their boat off the coast of Southern California's Newport Beach.

Senior Deputy District Attorney Matt Murphy said the mastermind of the plan to steal the yacht was convicted killer Skylar Deleon. Deleon wanted to steal both the Hawke's yacht and their identity so he could rifle their life savings.

Like Deleon, Kennedy was charged with two counts of murder with the special circumstances of murder for financial gain and multiple

murder. Prosecutors are seeking the death sentence in the case.

Deleon has already been convicted of the murders and several other counts. He faces the death penalty when he is sentenced on March 20. (ARNewsline(tm) from news reports)

**

COMMUNICATIONS LAW: DTV DATE-CHANGE FAILS

In a surprising turn of events, the United States House of Representatives on Wednesday, January 28th failed to pass the Digital TV transition date change bill. This putting the move of the DTV transition date in doubt after all of the momentum seemed to be moving toward a four-month delay to June 12th.

As of this writing, February 17th remains the official transition date. The move to change the date went down to defeat when only 61% of the House members voted in favor. A 2/3 majority or a vote of 66.66% was required for passage. (CGC Communicator)

**

RADIO BUSINESS: MORE LAYOFFS AT MOTOROLA

In business news, word that mobile radio and handset maker Motorola Inc. says that it will cut 4,000 more jobs in 2009. This, in addition to 3,000 it announced last year.

Some 3000 of those lost in the new round of layoffs will be in the mobile devices business. About 1,000 jobs are tied to corporate functions and other business units.

The company said the move will save about $700 million a year starting in 2009, and totaling $1.5 billion in annual savings when combined with the previous cut. The move is the latest in cost-cutting measures by Motorola, which has been struggling to revive its business in recent years. (Published reports)

HAM RADIO OPS: CERTIFICATES WITH NO EVENT

From the ham radio ops department comes some good and some bad news from ARRL Contest Branch Manager Sean Kutzko, KX9X. He says that certificates for the 2008 January VHF Sweepstakes were mailed out on time.

The bad news is that unfortunately, they went out the door without the name of the event listed on the certificate.

Not to worry. The good news is that replacement certificates have already been printed. They were to be mailed out on Monday, January 26th. (VHF Reflector)

NEWSLINE FOLOW-UP: ROCHESTER - NOW THERE IS ONLY ONE

A follow-up to last weeks story on the 2009 Rochester New York Hamfest. As of Tuesday, January 27th, it appears that there is now only one organization now planning to hold the event. That's the Rochester Amateur Radio Association which says that it is a 75-year sponsor of the Rochester Hamfest and now appears to have possession of the www.rochesterhamfest.org website.

As late as Sunday, January 24th, typing in that URL would have taken you to the website operated by a ham named Harold Smith, K2HC, who was a longtime organizer of the Rochester event. As pointed out in the Syracuse Post Standard by columnist Lee Badman, KI2K, that web site, www. Rochesthamfest.org was claiming that the hamfest would be at the traditional site.

But, the Rochester Amateur Radio Association via its www.rochesterham.org also claimed that it would host the official event. It said that it was moving the hamfest to a new location at Rochester's Barnard Carnival Grounds and shortening the hamfest down to one day.

By Tuesday, some sort of accommodation seemingly had been reached. Now, typing in either URL's taking a net surfer to the Rochester Amateur Radio Association's website. Hopefully, that will put the matter permanently to rest. (ARNewsline(tm))

ARRL HAPPENINGS: WB5SYT APPOINTED AS WEST GULF VICE DIRECTOR

ARRL President Joel Harrison, W5ZN, has appointed Oklahoma Section Manager J. John Thomason, WB5SYT, as the new Vice Director in the West Gulf Division. An Extra class licensee, Thomason has been an ARRL member for more than 20 years and has served as Oklahoma Section Manager since 2003.

Among his achievements while Section Manager, Thompson supported and promoted passage of Oklahoma Senate Bill 426. This measure permits the installation of an Amateur Radio antenna or an Amateur Radio antenna support structure at a height deemed sufficient to accommodate the communications needs of radio amateurs in the state.

Thomason replaces David Woolweaver, K5RAV, who moved up to Director with the recent retirement of former Division Director Coy Day, N5OK. (ARRL)

HAM HEROES: NATIONAL SECURITY MEDAL AWARDED TO FORMER NCTC DIRECTOR K0DQ

In one of his last official duties as President of the United States, George W. Bush presented the National Security Medal to retired Vice Admiral John "Scott" Redd, K0DQ. This, at a White House Ceremony on January
16th.

Redd was recognized by the President for his more than 40 years of exceptional service to the Nation strengthening its intelligence capabilities and improving national security. The National Security Medal is America's highest intelligence award reserved for those with distinguished achievements or outstanding contributions in the field.

Redd became the first Senate confirmed director of the National Counter-Terrorism Center in August 2005 and served in that position until November 2007. The National Counter-Terrorism Center leads the United States Government's efforts in combating terrorism by analyzing and sharing
threat information and integrating all elements of national power to defeat terrorist threats at home and abroad.

An avid amateur radio operator, Redd has won numerous amateur radio operator awards including seven world championships. In May of 2008 he was inducted into the CQ Amateur Radio Hall of Fame.

Redd is a native of Sidney, Iowa. He graduated second in his class from the United States Naval Academy in 1966. He and his wife Donna currently reside in the suburbs of Washington, D.C. (ARRL, eHam, others)

NAMES IN THE NEWS: NYC LEARNING COMPLEX NAMED FOR LATE HUSBAND OF WB2MGP

Though a bit late in being reported, word that a new school in the Big Apple has been named in honor of the late husband of New York City educator Carole Perry-Parker, WB2MGP. Amateur Radio Newsline's Rebecca Bruce has the details:

--

The opening of the Jerome Parker Educational Complex was celebrated at the New Springville, Staten Island school campus late last October. The center is named in memory of Jerome Parker, the late husband of New York City educator Carole Perry-Parker, WB2MGP.

The new complex houses students from four schools. These are the Marsh Avenue Expeditionary Learning School for middle school students, the Gaynor McCown Expeditionary Learning School for high school students, the College of Staten Island High School for International Studies, and Hungerford School for students with autism.

Several hundred people attended the event. Dignitaries attending included Staten Island New York Borough President James P. Molinaro, Assemblyman Michael Cusick and Councilman Vincent Ignizio.

Jerome Parker was a former New York City Board of Education official who founded Talent Unlimited High School in Manhattan. He was best known for his outreach efforts for children with special needs. In keeping with that outreach theme, the learning center will eventually have an operational ham radio station for all of the schools to use. WB2MGP tells Newsline that she plans to teach ham radio as an after-school program while training science teachers to get their own ham radio licenses and eventually take

over the program.

For the Amateur Radio Newsline, I'm Rebecca Bruce, In Los Angeles.

--

In accepting the honor for her late husband, WB2MGP said that while for her it was a bitter-sweet moment, that all gathered for the dedication were present to concentrate on the sweet part. (ARNewsline(tm))

YHOTY: NOMINATIONS SOUGHT FOR THE 2009 YOUNG HAM OF THE YEAR AWARD

Nominations are now open for the 2009 Newsline Young Ham of the Year Award. The "Young Ham of the Year Award" or YHOTY is presented annually to a licensed amateur radio operator who is 18 years of age or younger. He or she must be a resident of the United States, its territories including Puerto Rico, or any Canada province, who has provided outstanding service to his or her nation or community, or improved the state of the art in communications through the amateur radio hobby service.

A nominee should be someone who has done something outstanding as an amateur radio operator. Perhaps it was something special he or she did for his or her community through the Amateur service. Maybe it was some outstanding achievement that led to an improvement in amateur radio in his or her area. Or perhaps he or she was successful in recruiting a lot of new hams, as was the case with 2008's honoree, Emily Stewart, KC0PTL.

All nominations must be received by May 30, 2009 on an official application and be accompanied by verification materials. Applications forms are available for a self-addressed, stamped envelope mailed to the Young Ham of the Year Award, c/o Newsline, 28197 Robin Avenue, Santa Clarita, California 91350. These nominating applications are also available for electronic download from www.arnewsline.org. Just scroll to the bottom of the page and click on the words "2009 YHOTY Nominations Now Open."

The Young Ham of the Year Award is sponsored by the Amateur Radio Newsline, with corporate support from Vertex-Standard and CQ Communications, Inc.. (ARNewsline(tm))

HAM RADIO IN SPACE: K6DUE CALL NOW PART OF ISS AMATEUR RADIO CLUB

The K6DUE callsign of the late NBC Newsman Roy Neal is now the call of the International Space Station Amateur Radio Club. According to ARISS International Chairman Frank Bauer, KA3HDO, the call letters will initially

be used for ground station operations but may be used for other activities in the future.

For those not aware, Roy Neal., K6DUE, spent more than five decades as a broadcaster specializing in science and aerospace reporting for the National Broadcasting Company. He is generally credited with convincing then NASA chief Jess Moore to permit ham gear to be flown on board the early space shuttle missions. The first of these was STS-9 that carried Spacelab One and Mission Specialist Owen Garriott, W5LFL, who made the first-ever ham radio contacts from a spacecraft on-orbit.

After Garriott's successful flight, Neal and several others formed the group known as SAREX -- the Shuttle Amateur Radio Experiment. Later called the Space Amateur Radio Experiment, it was a program that promoted and supported the use of amateur radio by astronauts in low earth orbit aboard the United States Space Shuttle. This, to communicate with other amateur radio stations around the world especially those in classrooms as a scientific demonstration. It was superseded by the Amateur Radio on the International Space Station or ARISS program that we hear so much about today.

Roy Neal, K6DUE, passed away at age 82 on August 15, 2003, following open heart surgery. On November 11th 2003 the Amateur Radio on the International Space Station organization announced an on-the-air event to commemorate Roy Neal's lifetime of achievements in ham radio. Now, with the acquisition of his K6DUE call letters by the International Space Station Amateur Radio Club, Roy Neal's contributions to manned ham radio operations from space will live on in perpetuity. (ARNewsline(tm), KA3HDO)

HAM RADIO IN SPACE: JAPAN LAUNCHES SIX HAM RADIO MICROSATS

Japan has launched six microsat ham radio satellites. The tiny birds were carried aloft on January 23rd at 03:54 UTC from the Yoshinubo Launch Complex on Tanegashima Island.

The small satellites with Amateur Radio capabilities launched with this satellite are SDS-1, SOHLA-1, SPRITESAT, PRISM, KKS-1, STARS-1, and the KAGAYAKI. They were a combined secondary payload to the GOSAT Ibuki Greenhouse Gases Observing Satellite. Further information on the six new ham radio birds including frequencies and orbital data can be found on the AMSAT website. (JN1GKZ, AMSAT)

EMERGING TECHNOLOGY: CALIFORNIA MAY PERMIT ONLY ECO-FRIENDLY TV'S

Legislators in California are drawing up the first rules in the US requiring retailers to sell only the most energy-efficient television models being manufactured beginning in 2011.

Flat-screen televisions use far more energy than conventional models and some plasma screen televisions demand up to four times as much. Energy regulators say curbing the number of power-hungry television sets in the state could save as much energy as used by over 86,000 homes in a given year.

The move is opposed by some television manufacturers. They claim that regulations such as this could bump-up the average price of televisions by a significant amount, limit consumer choice and encourage shoppers to buy online or outside the state for models not covered by the rules.

California, the nation's most populous state, requires huge amounts of power for its industries and energy-hungry population. Similar rules requiring refrigerators and other domestic appliances to be energy efficient have been in place for decades. (London Daily Telegraph)

**

WORLDBEAT: GIANT 16 METER BEAM ERECTED IN FINLAND

A full size, 160 meter beam has been erected for use in a recent radiosports event. This, as the group at Radio Arcala in Finland put up the 39-ton, 3-element full-size monster in mid-January so as to have had it ready for the 2009 C Q World Wide 160 meter contest from the 23rd to the 25th of January.

But, the large low frequency array was put up for more than just contesting at the OH8X. station. Contest. Radio Arcala is also cooperating with the University of Oulu in several areas of High Frequency propagation study that require an antenna of this size and directivity. They also welcome and acknowledge field reports to oh1wz (at) sral (dot) fi.

**

DX

In DX, G3TBK will shortly resume operations from the Caribbean Island of Saint Vincent, using the callsign J88DR. Operation will continue until mid-March using CW, SSB, RTTY and SSTV, using all HF bands. QSL via G3TBK, either using the bureau or direct. Please note that no further cards will be answered until mid-March. All cards received for previous operations by J88DR have now been mailed out.

And word that HS0ZGQ will be on the air from Koh Samui Island until February 12th. QSL to DL1MJF.

J79XBI will be on the air until April 1st while on holiday in Dominica. Activity will be on the HF bands using SSB. QSL via SM0XBI.

Lastly, to mark the Millennium of Lithuania, a number of radio club members are on the air with the prefix LY1000 until the 1st of March. Activity is on all bands and modes. QSL as directed on the air

(Above from various DX news sources)

THAT FINAL ITEM: RECYCLING ALKALINE BATTERIES

And finally this week a word about recycling spent batteries. Burt Hicks, WB6MQV, has the details:

--

Its widely known that the U.S. government classifies alkaline batteries as non-hazardous waste. That means that in most places they can be disposed of in normal household trash.

But not all states agree. California for example has laws that require you to properly recycle them. And even some cities and counties are getting into the forced alkaline battery recycling act. The February edition of Popular Photography magazine notes that Hennepin County, Minnesota also requires that you dispose of them through proper recycling.

And, depending where you live, Nickel-Cadmium, Nickel Metal Hydride, Lithium-Ion and even old fashioned Carbon based cells can be considered as hazardous waste. This means that you cannot just toss them into the garbage can. Rather you must dispose of these cells according to federal, state and local laws for your area. In most cases this means dropping them off at a recycling center.

So what do you do to find a used battery recycling center? Take to the World-Wide-Web and go to www.rbrc.org to locate one close to you.

And I'm Burt Hicks, WB6MQV, in Los Angeles.

--

As local, laws are constantly changing, you might want to check your city and state websites to find out what restrictions on battery disposal are in your geographic locale. (ARNewsline(tm) adapted from PopPhoto and other sourcs.)

==> LAURA L. SMITH NAMED TO AMATEUR RADIO ENFORCEMENT ROLE

Laura L. Smith of Pennsylvania has been named by the FCC to fill the
vacancy created when Riley Hollingsworth, K4ZDH, retired in 2008 as
Special Counsel for the Spectrum Enforcement Division of the FCC's
Enforcement Bureau. Hollingsworth served in that position for more than
10 years as the FCC's enforcement watchdog over the Amateur Radio
```

Service <http://www.arrl.org/news/stories/2008/07/03/10198>.

A 1990 graduate of the Pepperdine University School of Law, Smith began her legal career with the FCC, working in the Mass Media Bureau and Wireless Telecommunications Bureau. She also served as Deputy Division Chief of the Public Safety and Private Wireless Division. Smith is currently licensed to practice in the Commonwealth of Virginia.

In 1998, Smith left the FCC to become Executive Director of Governmental Affairs for the Industrial Telecommunications Association (ITA) <http://www.ita-relay.com/default.htm>, now Enterprise Wireless Alliance. In that role, she monitored FCC and legislative proceedings and participated in all regulatory proceedings relevant to the private wireless industry. In 2001, Smith became ITA's President and Chief Executive Officer. While in that position, she was instrumental in the formation of the Consensus Group, a group of public safety and private wireless entities responsible for drafting the "Consensus Plan," a proposed resolution for interference in the 800 MHz band; this was adopted by the FCC in 2004.

Smith returns to the FCC after serving Of Counsel with the Maryland law firm of Shulman Rogers. While there, she dealt with telecommunications matters and provided counsel to numerous entities in the private radio and public safety communities. Smith has served as an industry consultant and written columns for a variety of trade publications including "Mobile Radio Technology Magazine" and "The Private Wireless Magazine."

In an October 2008 letter to then-FCC Chairman Kevin Martin, ARRL President Joel Harrison, W5ZN, urged Martin to name a successor to Hollingsworth: "The appointment of a replacement Special Counsel in this position is of critical importance to the Amateur Radio Service, as the delay in finalizing the appointment stands to undermine in very short order an exceptionally successful and low-cost program of enforcement in the Amateur Service."

Calling the FCC's Amateur Radio enforcement program "spectacularly successful," Harrison reminded Martin of the "long period in the late 1980s and 1990s during which the Commission was essentially uninvolved in enforcement in the Amateur Service. The Amateur Service, consisting of some 680,000 licensees of the Commission, is in essence a self-regulating service; however, due to the shared frequency allocations in the Service and the long distance propagation of amateur communications, a very few rule violators can cause severe disruption in the Service. On the other hand, even a minimal Commission presence has a very strong deterrent value."

When Hollingsworth was appointed as Special Counsel for Amateur Radio Enforcement, Harrison said that Hollingsworth "established a visible presence in the Service and very quickly, and with very little investment of Commission resources, using little more than the awareness of an enforcement presence, created strong deterrence against rule

violations."

Upon learning of Smith's move to the Amateur Radio enforcement role, Harrison remarked that he was "very pleased to see the Commission move forward with the hiring of a new Special Counsel responsible for enforcement of the Amateur Radio Service rules. Ever since Riley Hollingsworth announced his retirement, we have met with the Enforcement Chief numerous times and corresponded with FCC Chairman Martin to ensure this position remains intact at FCC. The Commission acknowledges the self-regulating environment we maintain, but also understands that we need their assistance occasionally to resolve a few situations. They have continually reassured us that this is an important matter for them, and Ms Smith's hiring confirms that."

==> MICHAEL J. COPPS NAMED ACTING FCC CHAIRMAN

On Thursday, January 22, President Barack Obama named current FCC Commissioner Michael Copps as Acting Chairman of the Commission. Rumors circulated in mid-January that technology executive Julius Genachowski would be nominated as Chairman. Copps will serve as Acting Chairman until a new Commissioner/Chairman is confirmed.

"I am honored to be designated as Acting Chairman of the FCC," Copps said in a statement released by the FCC. "I thank President Obama for his confidence in me and for this opportunity to serve. I know that I have a truly gifted and terrific team to work with. I pledge every effort I am capable of to help steer the Commission through its current transition to new leadership."

ARRL Chief Executive Officer David Sumner, K1ZZ, congratulated Copps on his appointment. "Whenever we have sought a meeting with him or his staff, his door has always been open to us," he said.

Currently serving a second term as FCC Commissioner, Copps began his first term with the Commission in 2001. Before his appointment to the FCC, he served as Assistant Secretary of Commerce for Trade Development at the US Department of Commerce, where he was previously Deputy Assistant Secretary of Commerce for Basic Industries. Copps came to Washington in 1970, joining the staff of Senator Ernest Hollings (D-SC) and served for more than a decade as his Chief of Staff. He has also held positions at a Fortune 500 company and at a major trade association. Before coming to Washington, Copps was a professor of American history at Loyola University of the South. He received a BA from Wofford College and earned a PhD from the University of North Carolina at Chapel Hill.

Upon being sworn in for his second term as FCC Commissioner in 2006, Copps said that "The last four and a half years have been tremendously transformative for the world of telecommunications and the media. The future holds even greater challenge. I look forward to continuing to work with my colleagues on the Commission, with the Congress and with all the other stakeholders to help bring the most advanced, accessible

and cost-effective communications system in the world to all American consumers."

==> J. JOHN THOMASON, WB5SYT, APPOINTED WEST GULF DIVISION VICE DIRECTOR

With the approval of the ARRL Ethics and Elections Committee, ARRL President Joel Harrison, W5ZN, has appointed Oklahoma Section Manager J. John Thomason, WB5SYT, as Vice Director in the West Gulf Division. Thomason replaces Dr David Woolweaver, K5RAV, who moved up to Director with the retirement of Division Director Coy Day, N5OK, earlier this month.

An Extra class licensee, Thomason has been an ARRL member for more than 20 years and has served as Oklahoma Section Manager since 2003. While Section Manager, he supported and prompted passage of Oklahoma Senate Bill 426. This bill allows "for the erection of an Amateur Radio antenna or an Amateur Radio antenna support structure at a height and dimension sufficient to accommodate Amateur Radio Service communications." Thomason also represented the League in 2004 at the Voluntary Organizations Active in Disaster's (VOAD) national conference. Based on an article in the November 2007 issue of QST, Thomason, with assistance from University of Oklahoma personnel, developed a frequency coordination protocol that is now used at that school's home football games.

"The opportunity and honor to serve the West Gulf Division as Vice Director is exciting," Thomason said. "It is my desire to diligently work with Director Woolweaver to ensure Division members are informed, to provide input and feedback on policies and procedures pertinent to the League's missions and to accomplish what is necessary to have the interest and the availability to inform through developed relationships with Division members and League headquarters staff."

"I have known John for several years," Woolweaver said. "He has been very successful as a Section Manager, especially in the areas of Emergency Preparedness and legislative action. His unmistakable talents in those areas will be very useful in his new role as Vice Director."

Thomason said continuing "the excellent League service provided by my predecessor Dr David Woolweaver, K5RAV, is humbling and enabling. His skill set and presence at so many League functions in the Oklahoma Section and beyond is truly a high standard to obtain. He has shown a highly informed outreach and capacity to listen and communicate while making the Amateur Radio Service visible through the League. He will grow in these efforts as Director while following in the richness of professionalism of Director Coy Day, N5OK.

"It is my hope to sustain and flourish the wonderful relationship developed via my role as Oklahoma Section Manager. The relationships and fondness for our fellow Amateur Radio operators and capacity therein to enhance our public service with League strength is very important to me in my role as Vice Director. This has developed by being active at

League events, club meetings, Nets and served agency functions. We make a difference in Amateur Radio operators' lives by listening, caring and expressing this passion to them. A birthday card or a handwritten note of encouragement during family challenges clearly communicates that the League cares for and about them as people and their contributions to Amateur Radio. It has been stated that we meet people based on what in common, but grow on the basis of how we are different. I feel this is our opportunity to strengthen our collective League mission during difficult times, be they economic or frequency threats."

Thomason is a member of the Edmond Amateur Radio Society (EARS). He has earned DXCC and Worked All States (WAS) on CW, PSK and SSB. Thomason is a vocational evaluator with the State of Oklahoma's Department of Rehabilitation Services. He holds a BA in psychology and an MS in rehabilitation counseling.

When Thomason moved up to Vice Director, Dean Feken, KL7MA, of Perry, was appointed as the new ARRL Oklahoma Section Manager. The Rules and Regulations of the ARRL Field Organization state that when a vacancy in the office of Section Manager occurs between elections, the position is filled by appointment by the Membership and Volunteer Programs Manager, in consultation with the Director. MVP Manager Dave Patton, NN1N, consulted with Woolweaver and Thomason in filling the Section Manager position. Feken, an Extra class licensee, has been the Oklahoma Official Observer Coordinator since the spring 2004 and an Official Observer since fall 2003. Feken's term as Section Manager continues through September 30, 2010. The nomination announcement for the next term of office for Oklahoma Section Manager is scheduled to appear in the April 2010 issue of QST.

==> LOGBOOK OF THE WORLD NOW EASIER THAN EVER

In order to better accommodate new users as well as existing account holders, ARRL's Logbook of The World (LoTW) has been updated <http://www.arrl.org/lotw/>. According to ARRL Membership and Volunteer Programs Assistant Manager Norm Fusaro, W3IZ, these improvements were made based LoTW help questions and listening to users.

"Through the efforts of Membership and Volunteer Services Manager Dave Patton, NN1N, and Information Technology Manager Jon Bloom, KE3Z, we have also added an automated results table on the LoTW Users Home Page that lists members in numeric order who have achieved the Triple Play Award," said ARRL Chief Operating Officer Harold Kramer, WJ1B. "IT personnel have also fixed a number of longstanding issues with Logbook in recent weeks, and some additional enhancements are underway."

Added enhancements include:
* An LoTW User's Corner that includes quick links to log onto your account, save or renew a certificate and ways to address PC failure.
* The GET STARTED section <http://www.arrl.org/lotw/start.html> has been simplified with links for each of the four steps in the certificate process.

* LoTW instructions are now available in nine languages: English, Dutch, French, German, Italian, Russian, Slovenian and Spanish. Options to select a language have always been available, but they have now been moved up front to the GET STARTED page. The languages are identified with icons of flags to represent each language.
* The GET STARTED pdf file has been updated to include new screenshots and refinement of some of the processes.
* The software download section now consists of only three icons representing the three operating systems for which software is available: Windows, Mac and Linux. The user simply selects their operating system and they are redirected to the download specific to their system.
* A new link has been added for QSL Manager, Club Calls and DXpeditions. This link gives details on establishing an account for these special operations and includes a section for 1x1 call signs.
* A new PowerPoint overview is available from the LoTW site. This presentation has also been added to our multimedia library <http://www.arrl.org/multimedia>. The program is an overview of LoTW and what users can expect from the service. There are screenshots of LoTW pages, as well as a condensed version of the certificate and award application process.

With more than 200 million QSOs submitted, ARRL's Logbook of The World system is a repository of log records submitted by users from around the world <http://www.arrl.org/news/stories/2009/01/22/10576/?nc=1>. When both participants in a QSO submit matching QSO records to LoTW, the result is a QSL that can be used for ARRL award credit. Yaesu is the principal sponsor of the LoTW Web site <http://www.arrl.org/news/stories/2008/06/02/10138/>.

==> JOHN SCOTT REDD, K0DQ, AWARDED NATION'S TOP INTELLIGENCE AWARD

Vice Admiral John Scott Redd, USN (ret), K0DQ, received the National Security Medal in a White House ceremony earlier this month. In one of his last official duties as President of the United States, George W. Bush recognized Redd for "his more than 40 years of exceptional service to the Nation, strengthening its intelligence capabilities and improving national security," and called Redd "an innovator, a strategic thinker, an inspirational leader and a dedicated servant to the Nation, respected for his vision, courage and integrity." During his remarks, the President also thanked Redd's wife Donna for her service over many years. The Redds' daughter and sons also attended the White House ceremony.

The National Security Medal is America's highest intelligence award. It is awarded to any citizen of the United States with distinguished achievements or outstanding contributions, on or after 26 July 1947, in the field of intelligence relating to the national security of the United States of America. Previous recipients of the National Security Medal include Bill Donovan, founder of the Office of Strategic Services (OSS); J. Edgar Hoover, former FBI Director; Robert Gates, US Secretary

of Defense, and Brent Scowcroft, National Security Advisor to Presidents Gerald Ford and George H. W. Bush.

In 1995, Redd founded and was named commander of the Navy's Fifth Fleet <http://www.cusnc.navy.mil/>. The fleet operates in waters surrounding the Middle East and is the only new fleet since World War II. He served as director of strategic plans and policy on the Joint Chiefs of Staff <http://www.jcs.mil/> from 1996 until he retired from the Navy two years later. Redd was named Chief Operating Officer of the Coalition Provisional Authority <http://www.cpa-iraq.org/> in March 2004, but the White House recalled him a month later to lead the commission that examined the intelligence failures that led up to the Iraq war. He earlier served as Deputy Administrator and Chief Operating Officer of the Coalition Provisional Authority in Baghdad, for which he received the Secretary of Defense Medal for Exceptional Public Service.

In August 2005, Congress confirmed Redd -- a 1966 graduate of the US Naval Academy and a Fulbright Scholar -- as Director of the National Counterterrorism Center (NCTC) <http://www.nctc.gov/>; he retired in November 2007. The NCTC is the nation's repository for counterterrorism intelligence and sets the nation's war plan for fighting terrorists. The center has few employees of its own and, instead, brings together approximately 400 analysts and other employees from agencies such as the CIA, the Homeland Security Department and the FBI to pore over data collected by other agencies. The NCTC houses the nation's terrorist watch list and distributes it throughout the government nightly. It holds video teleconferences three times a day to keep the White House and the intelligence community informed about terrorist activity and counter-terror operations. "We say, 'Mr. President, here's what the intelligence community believes, and here's where agencies disagree,'" Redd said in describing how the NCTC operates. "So now he can see what the disagreement is and why. Because intelligence is not an arithmetic thing, there's a lot of judgment that goes into it."

An active ham, contester and DXer for more almost 50 years, Redd -- a native of Sydney, Iowa -- enjoys both CW and phone. In 1971, Redd, then K0DQI, won the CQ World Wide DX Contest (phone) from Mexico as 6D1AA. He also won the ARRL International DX Contest, both phone and CW, in 1972 from Mexico as XE1IIJ; this was the first time a single operator surpassed 10,000 contacts in a contest. In 1973, Redd won the ARRL Phone DX Contest from the DX side (Mexico) as 6J9AA, and in 1986, he won the ARRL CW from the US as W3GRF. All of these wins were as Single Operator, High Power. Redd went on to place third in his first CQ Worked All Prefix (WPX) (CW) contest in 1995 as A92Q from Bahrain. Throughout his ham radio career, Redd has held many DX call signs: P40Q, 3V8DQ, A92Q, XE1IIJ, 4A4AA/1, 6J9AA, 6D1AA, 6G1AA, 6J9AA, 4C5AA and 4C9AA, just to name a few.

In 2008, Redd was inducted into the CQ Amateur Radio Hall of Fame <http://www.arrl.org/news/stories/2008/05/16/10100/>. The CQ Amateur Radio Hall of Fame honors those individuals, whether licensed hams or

not, who have made significant contributions to Amateur Radio, and those amateurs who have made significant contributions either to Amateur Radio, to their professional careers or to some other aspect of life on our planet.

==> ARRL EXECUTIVE COMMITTEE APPROVES 21 EDUCATION & TECHNOLOGY PROGRAM GRANTS

In December, the ARRL Executive Committee reviewed grant applications for the ARRL's Education & Technology Program (ETP) <http://www.arrl.org/FandES/tbp/>, awarding nearly $22,000 to 21 schools. More than 350 schools across the country have received support from the ETP in the form of grants for equipment, curriculum and resources, as well as teacher in-service training through the Teachers Institute on Wireless Technology <http://www.arrl.org/FandES/tbp/ti.html>. The Executive Committee reviews applications for equipment and resource grants twice each year, in December and May.

ETP Grants

ETP grants consist of Amateur Radio equipment, enabling the school to set up a station. Schools may receive activity kits in addition to station equipment. The following schools recently received ETP grants:

Phillip Magruder Middle School, Torrance, California: This grant application proposed an after school program based on three pillars: To instruct students on the basics of radio technology and allow them to practice using the technology to communicate effectively; to allow students to construct a radio station and take licensing classes to be able to use their station, and to use the context of the club (ham radio) to explore careers through related field trips and interaction with hams in the community. The proposal is well thought out and presented and it represents a program that has good potential for success.

Bradshaw Mountain Middle School, Dewey, Arizona: The teacher proposes to integrate Amateur Radio and shortwave radio into the school culture and classroom curriculum to provide opportunities for students of all levels during a combined in-school and after school program. Their goals are to establish a shortwave station allowing students and teachers to listen to transmissions from other areas, including support for Spanish language instruction, expose students to world cultures through radio and news broadcasts from and for other countries; students will put together a ham radio station that will be used to support other content areas of instruction, such as science, and to develop a portable station capable to allow for off school site participation in local ham activities to provide for school outreach. This is another well thought out and presented grant application with broad goals and objectives. This program has a good potential for success.

McDermitt Combined School, McDermitt, Nevada: This program is being sponsored by the local County Emergency Coordinator. The school is in a remote area and serves an at-risk population. The main theme of this program is EmComm and it creates exposure to public service-related career fields that are normally not considered by the students. The program is well supported by the local ham community.

Worthington Public School, Worthington, Minnesota: The lead teacher for this program is a Teachers Institute graduate and is a school resource officer (a police officer assigned to the school district to facilitate law enforcement-school connections). The teacher has developed a program proposal based on a portable ham radio station that he can take with him from school-to-school to support his outreach efforts.

West Elementary School, Zion, Illinois: The lead teacher (administrator) for this program is Nathan McCray, one of the Teachers Institute instructors. Nathan had a well established ETP program at his former school; when he transferred to another school, he left the program in the capable hands of his wife. Nathan is now vice-principal and is starting up an ETP program at his new school. He is requesting only the basic station components to get the program going at the new school.

Bayside High School, Palm Bay, Florida: The lead teacher for this program is a Teachers Institute graduate. He articulates a program proposal that uses ham radio in the engineering curriculum of this magnet school. This will be a good fit and the teacher is well prepared to execute the plan.

Malcolm Bridge Middle School, Bogart, Georgia: The lead teacher for this program is a Teachers Institute graduate. The program presented has a good potential of success.

Samsula Academy, New Smyrna Beach, Florida: This applicant is requesting a basic ham radio station for the school and some curriculum materials to support an after school ham radio class. The local ham radio club is supporting this program in the hopes of repeating the apparent success they have had at another local school.

Horizon Elementary School, Homestead, Florida: This school is running a parallel program with Samsula Academy; they are requesting the same basic ham radio station to support their ongoing program.

Progress Grants

In order for a school to be considered for a Progress Grant, it must already be an ETP School. If a teacher attends a session of the Teachers Institute, that school is automatically considered an ETP School. The following schools received Progress Grants:

University of Arkansas, Fort Smith, Arkansas: The lead professor is a graduate of the Teachers Institute and a long time ETP school. The professor wants to begin integrating the weather satellite system that was demonstrated during the Teachers Institute and to expand his program to include space in the classroom content.

Westside Elementary School, Searcy, Arkansas: The lead teacher for this program is a recent Teachers Institute graduate. She wants to include the space exploration through robotics unit that was presented during the Teachers Institute into her elementary school curriculum. She has adapted the content to the grade level of her students and has an interesting approach. The approach will use the activity to provide basic instruction of electronics.

Olde Towne Middle School, Ridgeland, Mississippi: The lead teacher is a graduate of the Teachers Institute. The teacher wants to begin integrating the ham radio satellite system that was demonstrated during the Teachers Institute and to expand his program to include space in the classroom content. He is requesting the basic components to make up the satellite ground station.

Ocean Lakes High School, Virginia Beach, Virginia: The lead teacher for this program is a recent Teachers Institute graduate. He wants to include the space exploration unit that was presented during the Teachers Institute into his high school curriculum and is requesting the ancillary parts of the Mars Lander activity. These parts are added to the Boe-Bot robotics instructor's board that he received during the Teachers Institute, including sensors, RF data link and ATV components.

Livingston High School, Livingston, New Jersey: The lead teacher for this program is a recent Teachers Institute graduate. He wants to expand the use of the activity board resources he learned about during the Institute into his regular curriculum.

Petrova Elementary School, Saranac Lake, New York: This applicant is requesting assistance in obtaining licensing resource materials for the school radio club. The resources obtained through this grant will be housed in a club library for multiple users. This request is in support of an existing program that includes a radio station at the school.

East Elementary, Zion, Illinois: The lead teacher is a graduate of the Teachers Institute. The teacher wants to begin integrating the weather satellite system that was demonstrated during the Teachers Institute and to expand her program to include space in the classroom content. Additionally, she is requesting a dual-band handheld radio for use with the FM satellites.

Great Lakes Adventist Academy, Cedar Lake, Michigan: The lead teacher is a graduate of the Teachers Institute. The teacher wants to begin integrating the weather satellite system that was demonstrated during the Teachers Institute and to expand his program to include space in the classroom content.

Sister Lakes Elementary School, Dowagiac, Michigan: The lead teacher is a graduate of the Teachers Institute. The teacher wants to begin integrating the weather satellite system that was demonstrated during the Teachers Institute and to expand his program to include space in the classroom content.

Granite Bay Montessori School, Roseville, California: The lead teacher is a graduate of the Teachers Institute and probably the most proactive of all the graduates to date. He is requesting support to make the school radio station solar powered and expand the content of this program to include alternative energy sources.

Marist School, Atlanta, Georgia: The lead teacher is a graduate of the Teachers Institute. The teacher wants to begin integrating the weather satellite system that was demonstrated during the Teachers Institute and to expand his program to include space in the classroom content.

Nichols Junior High School, Arlington, Texas: The lead teacher is a graduate of the Teachers Institute and a long time ETP school. The teacher wants to begin integrating the use of ham radio satellites into his curriculum as demonstrated during the Institute. He is requesting a basic satellite ground station for working the FM satellites.

A goal of the ARRL Education & Technology Program is to improve the quality of education by providing an educationally sound curriculum that employs Amateur Radio to integrate technology, math, science, geography and language arts with core curricula. Amateur Radio and an understanding of radio science are keys to building Wireless Technology Literacy, another important objective.

==>SOLAR UPDATE

Tad "Sitting around a secret sea, worship a secret Sun" Cook, K7RA, this week reports: On Tuesday, January 27, we saw another one of those "almost-a-sunspot" emerge in the Sun's low latitude, so it was probably an old Solar Cycle 23 spot; it was gone the next day. Sunspot numbers for January 22-28 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 69, 70, 68.8, 69.8, 69.9, 69.7 and 69.5 with a mean of 69.5. The estimated planetary A indices were 1, 1, 1, 1, 10, 4 and 2 with a mean of 2.9. The estimated mid-latitude A indices were 0, 1, 1, 1, 9, 2 and 1 with a mean of 2.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by G. K. Chesterton's "The Ballad of the White Horse" <http://en.wikiquote.org/wiki/The_Ballad_of_the_White_Horse>.

==>IN BRIEF:

* This Week on the Radio: This week, look for the SARL Youth Day Sprint on January 31. The QRP Winter Fireside SSB Sprint is February 1. Next week is the School Club Roundup on February 9-13. The Minnesota QSO Party and the FYBO Winter QRP Field Day are on February 7. On February 7-8, look for the Vermont QSO Party, the 10-10 Winter Phone QSO Party, the Worldwide Peace Messenger Cities, the British Columbia QSO Challenge, the New Mexico QSO Party and the FMRE International RTTY Contest. The Delaware QSO Party is February 7-9, and the North American

Sprint (CW) and the FM Simplex Contest are February 8. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, February 8, 2009, for these online course sessions beginning on Friday, February 20, 2009: Amateur Radio Emergency Communications Level 2; Antenna Modeling, and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Field Day Packets Available February 2: Get ready for ARRL Field Day, June 27-28, 2009. Packets will be available February 2 on the ARRL Field Day Web site <www.arrl.org/fieldday>. Packets include the complete rules (including changes for 2009). Other reference items that will be available include forms, Section abbreviations, a kit to publicize your event with the local press and more.

* ARRL Expands Member Access to QST Archive: ARRL is pleased to announce that online access to the QST archive <http://www.arrl.org/members-only/qqnsearch.html> will be expanded. Beginning February 1, 2009, ARRL members will be able to search and view QST -- from December 1915 through December 2005 right from their computer. With an additional year -- 2005 -- added to the viewable archive, this valuable benefit is available to all ARRL members. As an added benefit, ARRL Diamond Club members at the Brass level and above -- as well as ARRL Maxim Society members -- will be able to get images from the entire QST archive, right up through December 2008, an additional three years <http://www.arrl.org/diamondclub>. According to ARRL Chief Development Officer Mary Hobart, K1MMH, this is the first new benefit that has been added to the Diamond Club since the Diamond Terrace opened in 2007. "Given the popularity of the QST online archive," Hobart said, "I hope that Diamond Club members and the Maxim Society members will enjoy exclusive access to the most recent four years of QST with our appreciation for their generosity. Perhaps the expanded QST viewable

archive will inspire other ARRL members to participate in the Diamond Club and enjoy the other benefits available to Diamond Club members, as well." The online archive was first introduced to members in fall 2008, providing PDF copies of articles from the huge QST archive, from December 1915 through December 2004. Since then, thousands of members have enjoyed searching, viewing and printing their favorite articles, projects and more. The membership benefit is a service of the ARRL Technical Information Service (TIS) <http://www.arrl.org/tis/>. Access to the archive is free for ARRL members. QST is the official journal of ARRL, the national association for Amateur Radio. An interest in Amateur Radio is the only essential qualification of membership. ARRL membership is $39 per year in the US. For a complete list of membership benefits and dues, please visit the ARRL Membership Web page <http://www.arrl.org/join>.

* Deadline to Order 75th Sweepstakes Mugs and Pins Fast Approaching: Time is running out to order your 2008 ARRL November Sweepstakes mugs and pins. If you submitted a log with more than 100 QSOs, you qualify for a Sweepstakes Participation pin. If you submitted a log with a Clean Sweep -- working all 80 ARRL/RAC sections -- you qualify for a Clean Sweep coffee mug. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, all orders need to be postmarked by January 31. If you would like to order a Sweepstakes pin or mug, you can either send a copy of your Sweepstakes summary sheet (if you filed a paper log) or a copy of the first page of your Cabrillo file (if you submitted an electronic log via e-mail) with your check for the correct amount; orders need to be postmarked by January 31 in order to qualify. Sweepstakes Participation pins are $6; Clean Sweep mugs are $16 this year. All costs include shipping charges. Kutzko advises that these items are not in stock. "We will make our order to our supplier once we know how many requests we have," he explained. "Mugs and pins will likely be shipped in late March. The 75th running of the November Sweepstakes was a great event, with lots of participation and fun! Be sure to commemorate your effort with a pin or mug this year."

* ARRL Scholarship Applications Due February 1: The deadline for ARRL Foundation scholarship applications is February 1, 2009. Applications must be postmarked on or before February 1 and must include the student's most recent transcript. This year, the Foundation expects to award up to 60 general scholarships ranging in amounts from $500 to $2500. The most prestigious Foundation scholarship is the William R. Goldfarb Memorial Scholarship, awarded to one high school senior each year. After the student has received all financial aid he or she is qualified for, other scholarships and awards and family contributions, the Goldfarb Scholarship will cover any remaining expenses (room and board, tuition, fees and books) for a four-year undergraduate curriculum at an accredited university in one of the following courses of study: business-related computers, medical or nursing fields, engineering or sciences. This award to an active radio amateur is based on outstanding qualifications, need and other funding sources. ARRL Chief Development Officer and Foundation Secretary Mary Hobart, K1MMH, said, "Providing

scholarships to young hams who pursue higher education is one of the most rewarding activities of the ARRL Foundation. The expressions of gratitude from scholarship winners and their families make it clear that the awards are contributing directly their success and to the future of Amateur Radio." All the information about the ARRL Scholarships for FCC licensed radio amateurs, including descriptions, application forms and instructions can be found on the ARRL Foundation Web site <http://www.arrlf.org>.

* Desecheo Island DXpedition Granted Call Sign: The DXpedition to Desecheo Island -- February 12-26 -- will use call sign K5D. "As soon as we land on Desecheo, two stations will be immediately activated," said DXpedition co-leader Bob Allphin, K4UEE. Stations will continue to operate until the final moments of departure on February 26." Because Desecheo is very rare, Allphin said that "there are many, many hams worldwide that need KP5 for an all-time new one. Therefore, we are asking that you not contact the DXpedition on any band/mode that you have confirmed from a previous DXpedition. This will allow the people who really need a new DXCC entity a better opportunity to get through the pileups. Our objective is not to establish a world record for contacts. There will be no 'greenies,' no boxes to check, no competitions for most band/mode QSOs, no certificate or awards for contacting the DXpedition more times than anyone else. So if you have KP5 already confirmed on a particular band/mode, we respectfully ask that you exercise restraint. If, late in the DXpedition, we are calling CQ for contacts, we will welcome your call." Desecheo currently sits at number 7 on DX Magazine's Most Wanted list; the island is the second most-wanted DXCC entity in Asia and third most-wanted in Europe. Desecheo is a small uninhabited island in the Mona Passage, 14 miles off the west coast of Puerto Rico. It is part of the US Fish and Wildlife Service's national wildlife refuge system administered by the Caribbean National Wildlife Refuge Complex (CNWR).

* Amateur Radio Operations to Begin Again on Midway Atoll: The US Fish and Wildlife Service (USFWS) announced on Monday, January 26 that they would once again allow Amateur Radio operators the opportunity to operate from Midway Atoll. This the first time that USFWS has allowed amateurs to operate from the wildlife refuge since 2002. The USFWS started a program earlier this month to encourage visitors to experience Midway's wildlife, history and culture, as well as non-wildlife-dependent activities -- including Amateur Radio To ensure the safety of the wildlife on the Refuge, the USFWS said that Amateur Radio operations will be permitted for two weeks only, from October 5-19, 2009. "Radio operation will be allowed only within a designated area on the north side of Sand Island and the use of portable generators will not be permitted," said Midway Atoll Refuge Manager Matt D. Brown. "There is 120 V power available at the operation site. Any modifications to the island power grid/infrastructure must be approved in advance and be paid for entirely by the radio operators. Although determined to be a wildlife-compatible activity," Brown said, "this [Amateur Radio] opportunity is being conducted on a trial basis." Brown has the

authority to discontinue the activity at any time, based on wildlife protection and conservation goals. For more information, please contact Brown via e-mail <Matt_D_Brown@fws.gov> or by phone at 808-954-4818. Lodging arrangements can be made with Darlene Holst via e-mail <dholst@chugach-ak.com> or by phone at 808-954-4801. Midway Atoll is located in the North Pacific Ocean, approximately 1250 miles northwest of Honolulu.

* Korea Unveils Stamp Celebrating ARDF: Korea has issued a postage stamp commemorating the 2008 Amateur Radio Direction Finding (ARDF) World Championships. The ARDF World Championships, held in Korea and hosted by the Korean Amateur Radio League, were September 2-7, 2008. More than 450 participants from 28 countries came to Korea to compete. Upon issuance of the stamp, Korea said it hoped that the "World Championships will provide a momentum to stimulate public interest and participation in Amateur Radio." ARRL ARDF Coordinator Joe Moell, K0OV, said that Team USA had their best showing ever at the 2008 World Championships: "We had four Top 10 finishes in the two days of fox-finding competition, first with 2 meter AM signals, and then with 80 meter CW signals. ARRL's team faced more than 300 of the planet's best foxtailers that represented 24 other national Amateur Radio societies." ARDF combines Amateur Radio skills with the map and compass skills of orienteering in a timed race where individual competitors navigate through diverse wooded terrain while searching for radio transmitters. The rules of the sport and international competitions are organized by the International Amateur Radio Union (IARU). See the stamp here: <http://www.koreastamp.go.kr/sp/eg/speg0101.jsp?page_num=2>.

Correction: In last week's ARRL Letter, we inadvertently used an outdated URL in referring to the Network Engineers Repeater Association. You can find NERA on the Web at <http://www.neradc.org>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

AMATEUR RADIO
NEWS RELEASE

For Immediate Release

THE FOUNDATION FOR AMATEUR RADIO, INC., a non-profit organization with headquarters in Washington, D.C., plans to administer forty eight (48) scholarships for the academic year 2009 - 2010 to assist licensed Radio Amateurs. The Foundation, composed of over seventy-five local area Amateur Radio Clubs, fully funds two of these scholarships. The remaining forty-eight (48) are administered by the Foundation without cost to the various donors.

Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $5,000 to $500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Non-USA residents are eligible to apply for some of the scholarships. Clubs, especially those in California, Delaware, Maryland, Ohio, Pennsylvania, Texas, Virginia and Wisconsin (areas of preferred residence for some of the scholarships), are encouraged to announce these opportunities at their meetings, in their club newsletters, during training classes, on their nets and on their world wide web home pages.

Additional information and an application form may be requested by letter or QSL card, postmarked prior to March 30, 2009 from:
FAR Scholarships
Post Office Box 831
Riverdale, MD 20738

Applications are also available for download from the Foundation's web site http://www.farweb.org/.

Amateur Radio Newsline(tm) Report 1643 - February 6 2009

Amateur Radio Newsline report number 1643 with a release date of Friday, February 6th, 2009 to follow in 5-4-3-2-1.

The following is a QST. The International Telecommunications Union takes another look at BPL, amateurs in Sweden get 6 meters while hams in the United States and Australia gear up as mother nature takes her toll. Find out the details on Amateur Radio Newsline(tm) report number 1643 coming your way right now.

**

THE BPL WAR: ITU AGAIN LOOKS AT BROADBAND OVER POWERLINE INTERNET ACCESS

The International Telecommunications Union is once again taking a close look at protecting radio communications from interference caused by Broadband over Powerline or BPL. Jeremy Boot, G4NJH, is in Nottingham, in the UK, with more:

--

Working Party 1A of the ITU-R is preparing a report on Power Line Telecommunications, examining the protection levels required by various radio services.

The US and Japan, in particular, seem to want very little protection for radio services, although Japanese radio astronomers and US broadcasters have opposing views.

The section of the report dealing with the Amateur Service has been updated by the International Amateur Radio Union, and the next meeting is in Seoul, South Korea between February 24th and March 4th.

I'm Jeremy Boot, G4NJH, and you are listening to the Amateur Radio Newsline.

--

The IARU will be represented at the Seoul meeting by one of their Technical Consultants. He is the Radio Society of Great Britain's Past President, Peter Chadwick, G3RZP. (GB2RS)

**

RESTRUCTURING: HAMS IN SWEDEN GET 6 METERS

6 meters now available in Sweden. This, with word that Swedish Radio Amateurs have been granted access to the 50 to 52 MHz band with a power

output of 200 Watts.

Previously access to 50 MHz in Sweden had been by special permit only. Although the power limit is currently lower on 6 meters than other bands the Swedish National Society website says that work is ongoing between the society and the nation's telecommunications regulators to get this upgraded to a full kilowatt out at a later date.

And some other good news for hams in Sweden. Effective April 1st they will gain access to 7.1 to 7.2 MHz with 1 kW out. (Southgate)

**

RESTRUCTURING: NEW ALLOCATIONS COMING TO NORWAY

Some new amateur radio allocations may soon be available in Norway. A report of the Norwegian amateur radio society the Norwegian Radio Relay League says that it was successful in persuading the nation's licensing authority to add new bands to the amateur radio band plan.

Included in the new offerings is a CW-only allocation of 490 to 510 kHz on a secondary basis with a maximum power of 100 Watts PEP. On the 160 meter band from 1.850 to 2.0 MHz, regulators indicate they intend to allow 10 Watts average power of instead of the current 10 Watts PEP.

The frequency segment from 5.260 to 5.410 MHz will be opened to all Norwegian radio amateurs on a secondary basis, with a maximum power of 100 Watts PEP.

The 12m band will be extended by 150 kHz and allocated from 24.740 to 24.990 MHz with a maximum power of 1000 watts.

Lastly, part of the European 70 MHz band will also be added to spectrum available to Norwegian hams. The Norwegian Radio Relay League says that the new amateur radio rules permitting access to these frequencies are expected to take effect sometime this spring. (DXNL)

**

RESTRUCTURING: WIA TAKES OVER VK HAM TESTING

The Wireless Institute of Australia has taken over ham radio testing and the issuing of licenses from that nation's telecommunications regulatory agency. Rebecca Bruce has the details:

--

On January 28th the Australian Communications and Media Authority, or ACMA, signed an agreement with the Wireless Institute of Australia. It sets out the conditions under which the national ham radio society will manage amateur examinations, issue of certificates of proficiency and provide callsign recommendations for the next 5 years. It also has an option for the possibility of extending the arrangement to a full 10 years if both parties agree.

The agreement came into force on Monday, February 2nd. Among other things, it dictates that the ACMA will continue to issue callsigns until close of business on Friday, February 27th. After that date the Wireless Institute of Australia will become responsible for the management of all levels of amateur callsigns. This includes special event, repeater and beacon callsigns, as well as those issued to individuals.

If it all works as planned, this compact between the Australian Communications and Media Authority and the Wireless Institute of Australia should streamline the handling of all matters in that nations amateur radio licensing system.

For the Amateur Radio Newsline, I'm Rebecca Bruce, in Los Angeles.

--

The Wireless Institute of Australia anticipates having a list of all callsigns available for selection on its website before March 2nd. This list will be accompanied by a news release setting out full details of the new callsign management and recommendation process. (WIA News)

RADIO LAW: ONTARIO CANADA PULLS CELL LAWS ON HOLD

The Government of Ontario, Canada has tabled legislation intended to improve road safety by banning the use of some kinds of electronic devices by drivers. While the target of Bill 118 was intended to be cellular communication devices, the draft bill was written so broadly that many Amateurs were concerned that their operation could be banned by the bill's provisions.

In preparation for a new draft of the measure, Radio Amateurs of Canada representatives will soon meet with Ontario transportation officials to make the case for protecting mobile Amateur Radio operation. This will be done in conjunction with the Canadian Association for Rallysport and its Executive Director, Alastair Robertson, VE3RAA.

Meantime, Radio Amateurs of Canada President Dave Goodwin, VO1AU, has written to the Ontario Transportation Minister specifically requesting that Amateur Radio be excluded from the scope of the Bill. This letter reminded the minister that similar legislation in Newfoundland, Labrador, Nova Scotia and Quebec explicitly or implicitly protects mobile Amateur Radio operation. (RAC)

**

RADIO LAW: HAWAII HAMS USE THE WWW TO ALERT ON PROPOSED MOBILE CELL BAN

Hams on Hawaii are using modern technology to speed the call to action. This, over a number of proposed measures to ban the use of hand-held cellular phones while driving in the island state.

As elsewhere, the concerns raised by the Hawaii ham radio community is that these proposed measures are overly broad and could be interpreted as also

banning ham radio mobile operations. To help spread word of these measures to Hawaii's radio amateurs, Ron Hashiro, AH6RH, has put together a special web page. It provides information about legislation in progress affecting mobile two-way radio operations in the City and County of Honolulu and the State of Hawaii.

Those in need of the information that AH6RH is providing can find his website at
http://ronhashiro.htohananet.com/am-radio/cellular-phone-ordinance.html
(KH6QX)

**

RADIO LAW: ARRL ISSUES MOBILE AMATEUR RADIO POLICY STATEMENT

Meantime, the American Radio Relay League has issued a policy statement regarding the rights of hams to operate mobile in the face of mounting anti-cellphone and anti-texting while mobile state laws. Mark Abramowicz, NT3V, is in the East Coast bureau and has the details:

--

It's something we've been hearing more and more about in the past several months.

Nearly a dozen state legislatures are considering such measures.

And, the idea of banning cell phone use or texting while driving is gaining lots of support from police agencies, insurance companies and even auto clubs.

To ensure, Amateur Radio's voice is heard on the issue, the ARRL board adopted a policy encouraging those backing these bans to exclude mobile amateur radio operations. The message is clearly aimed at state legislators and community leaders.

The ARRL's policy statement focuses on the concept that cell phones are full duplex devices - meaning the user is focusing on listening and conversing directly.

Amateur radio communications, on the other hand, the policy statement notes, require more listening and less transmitting and each cannot occur simultaneously.

The ARRL is worried that regulating cell phones and text messaging while driving casts such a broad net that amateurs who provide public service could be blocked from lending a hand to their communities in times of need.

The ARRL is hoping hams will take a look at the policy. You can read more at the league's website:
www.arrl.org.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The ARRL Policy Statement does recognize the responsibility of the amateur community to conduct its activities in a manner that does not create unsafe operation of their motor vehicle. It says that safety has to be a top concern at all times. (ARRL)

RESCUE RADIO: VK HAMS PROVIDE EMCOMM FOR FIRES DOWN-UNDER

Ham radio is responding to wildfires down-under. Jim Linton, VK3PC, reports:

--

The Red Cross communications arm RECOM, run by radio amateurs, provided vital support as bushfires raged in the Gippsland region of eastern Victoria.

Two RECOM units were activated on Thursday 29 January to provide communications at the Mirboo North and Churchill relief centers as hundreds of people were forced by the fires to leave their homes or unable to reach them.

The Gippsland fires destroyed 30 homes plus numerous sheds and vehicles.

Almost 700 evacuees or displaced persons were registered by the RECOM units with that information being transmitted by digitally-encrypted HF radio back to the Red Cross State Inquiry Center in Melbourne.

The National Registration and Inquiry System operated by the Red Cross provides the relatives and friends of the evacuees a single contact point for information on their whereabouts.

The hams involved were Bruce, VK3BMK; Graeme, VK3BXG; Peter, VK3AUO; Donald, VK3BPD; John, VK3BQS; Warren, VK3XSW; Graham, VK3GBJ; and John, VK3ATQ.

This latest deployment came during a once-in-a-century record three day heat-wave with temperatures topping 43 degrees Celsius. 109 on the Fahrenheit sale.

RECOM was established around 1999 and provides communications support for the Victorian Red Cross emergency service but can be deployed to anywhere in Australia.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC

--

It's currently mid-Summer in the Southern Hemisphere and the middle of Australia's wildfire season. Some 30 homes have so far been destroyed by the blaze. (VK3PC)

**

RESCUE RADIO: HAMS ASSIST IN SEVERE WEATHER IN KENTUCKY

Meantime back in the United States, its ice and snow. That's what hams in Western Kentucky had to face as the phone lines sagged and cellphones stopped working. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

According to the Lexington Herald Leader, ham radio operators volunteered to aid Red Cross shelters, emergency operations centers, and to just keep communications up and running. Some also drove the icy roads to connect family members with one another replacing cell phones and traditional land-line phones that went dead due to the foul weather.

In Henderson County, a ham radio operator reportedly spent four days at the local emergency operations center. He provided supplemental communication for police, fire and emergency medical personnel.

Elsewhere, sixteen members from the Kentucky Colonels Amateur Radio Club brought their equipment and relayed messages from the main shelter in Bowling Green. Club member Henry Cantrell, W4HTB, told the newspaper that others in the group fanned out to nearby cities including Brownsville, Smiths Grove and others.

Cantrell said that the amateur radio operators helped shelter occupants find and locate family members at other shelters as far west as Paducah. They also connected with state Homeland Security officials in Frankfort to relay the number and status of the various area shelters. But W4HTB said that the main priority was directing cots, generators and other supplies to where they were needed the most.

In central Kentucky, the Bluegrass Amateur Radio Society was on alert. Society member Wilson Wells, N4ZQT, traveled to Versailles to help at a Red Cross shelter that had been set up in a seniors center.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

The bottom line is that the hams of Kentucky were ready to roll when the weather took the phone lines down and knocked cellular service out. (Lexingtom Herald On Line)

HAM RADIO TESTING: NCVEC QPC SEEKS INPUT ON REVISED TECH EXAM

The Question Pool Committee of the National Conference of Volunteer Examiner Coordinators is now reviewing the Element 2 Technician Class

question pool. This, as part of a regular process in which each question pool is reviewed on a four-year rotation.

The next Technician Class pool will become effective on July 1, 2010. In preparation, the Question Pool Committee is seeking input from the amateur community concerning this revision. It is also accepting input in the form of new question topics, new questions and suggestions for changes or deletions.

If you have any comments or suggestions on the current Element 2 question pool, please contact the Question Pool Committee Chairman, Rol Anders, K3RA, via email to qpcinput (at) ncvec (dot) org; or on line at www.ncvec.org/feedback.php Guidelines for question formats are provided at that web address. The current Technician Examination Syllabus and Question Pool can be found elsewhere at the at www.ncvec.org website. (NCVEC)

NAMES IN THE NEWS: GB50BH COMMEMORATES THE 50TH ANNIVERSARY OF THE DEATH OF BUDDY HOLLY

The 50th anniversary of the death of Rock and Roll legend Buddy Holly is being memorialized on the ham radio bands. This, with a commemorative operation by G4STH and G4YLO using the special commemorative call GB50BH.

The operation pays homage to the passing of Charles Hardin Holley. He was better known professionally as Buddy Holly and was an American singer-songwriter and a pioneer of rock and roll music.

Holly, along with fellow rock icons Ritchie Valens, and J.P. "The Big Bopper" Richardson were killed in the crash of a chartered plane jut after takeoff from Clear Lake, Iowa on February 2nd, 1959. In Rock and Roll music circles, that became known as "the day the music died."

Now, five decades later, GB50BH is on the air from on February 3rd from Sommerset, in the United Kingdom, and will remain in operation through March 3rd. QSL to G4STH either direct or via the bureau. (Southgate)

**

HAM HAPPENINGS: HEIL SOUND TOP HOST NAB 2009 HAM RADIO RECEPTION IN LAS VEGAS

Bob Heil, K9EID, has asked that we pass along word that his company, Heil Sound Limited, will again be hosting the annual National Association of Broadcasters Amateur Radio Reception. Bob says that the gathering will take place at the Hilton Hotel and Conference Center after closing of the exhibit hall on Wednesday, April 22nd. More information will be posted on Bob's company website at www.heilsound.com in the near future. The National Association of Broadcasters Show and Conference takes place April 18th to the 23rd at the Las Vegas Convention Center in Las Vegas, Nevada. (K9EID)

BREAKING NEWS: US DTV TRANSITION WILL BE DELAYED TO JUNE

I'm Bill Pasternak,WA6ITF, back with some late breaking news.

The transition from analog to all-digital telecasting in the United States will most likely be delayed some four months. In a heated debate by legislators Wednesday, February 4th, the House of Representatives voted to push the cut-off date for analog TV from February 17th to June 12th.

The vote was 264 to 158, with more Republicans voting for the delay than there were Democrats opposing the Democratic party leadership to vote against it. The vote was a victory for the new Obama administration, which pushed for the date change. The bill allows households with expired coupons to reapply for them. The measure now goes to President Obama who has promised to sign it.

As previously reported, ham radio operators were among groups targeted by the FCC to assist in making the public aware of the digital conversion and providing assistance to those who needed help. Hams nationwide have responded. Now they will have four more months to assist in the digital outreach campaign. (Published news reports)

HAM RADIO IN SPACE: BELLVILLE ISS CONTACT NOW ON YOUTUBE

Not very long ago we reported on an ARISS contact between the Ellis Elementary School in Belleville, Illinois, and Astronaut Sandra Magnus, KE5FYE, who was on board the International Space Station. Now, thanks to the KETC program Living St. Louis, you can get a chance to see this event for yourself on the World-Wide-Web.

The program segment is hosted by producer Ruth Ezell. She and her camera crew were there to watch and record as students in educator Jennifer May's third grade class had a chance to have their questions answered from on-orbit by KE5FYE, who happens to be a Belleville native.

With the technical support of members from the local amateur radio community, the session allowed the students to see how math and science have real-world applications. Now you can share the experience as well by taking your web browser to http://www.youtube.com/watch?v=P2TuJyNXx0c&eurl=http://livingstlouis.wordpress.com/2009/01/22/living-st-louis-video-ham-radio/&feature=player_embedded

(K7JA)

RADIO IN SPACE: NASA'S LRO MADE READY FOR LAUNCH

NASA's Lunar Reconnaissance Orbiter, or LRO, has successfully completed thermal vacuum testing, which simulates the extreme hot, cold and airless conditions of space that the vehicle will experience after launch.

The orbiter was built at NASA's Goddard Space Flight Center in Greenbelt, Maryland. The now-completed thermal vacuum testing subjected it to the extreme temperature cycles of the lunar environment as engineers conducted simulated flight operations. Previously, the LRO had been put though spin and vibration tests. The orbiter was also subjected to acoustics testing where the bagged spacecraft was placed near wall-sized speakers that simulate the noise-induced vibrations of a launch.

The Lunar Reconnaissance Orbiter will now be shipped to NASA's Kennedy Space Center in Florida to be prepared for its April 24th scheduled launch aboard an Atlas V rocket. Accompanying the spacecraft will be the Lunar Crater Observation and Sensing Satellite. The latter will impact the moon's surface in a search for water-based ice. Both vehicles will radio their findings back to Earth. (NASA Goddard Release)

**

RADIOSPORTS: ARRL APPROVES LIMITED USE OF CW SKIMMER

A big change in the world of contesting. Following months of review, the ARRL has decided to allow the use of the controversial CW Skimmer program, but only for multi-ops and single operators using assistance in ARRL contests.

The rules change on multi-channel decoders like CW Skimmer was approved by the ARRL Program and Services Committee, which met just before the mid-January 2009 meeting of the ARRL Board of Directors. In an interview with Radio-Sport dot net, ARRL Contest Advisory Committee Chairman Dick Green, WC1M, said that this emerging technology will be permitted in ARRL contests, but not in the Single Operator category.

This decision mirrors a similar one made last year by the CQ WW DX Contest. The ARRL decision means that all major contests have now dealt with the CW Skimmer issue. (W0WI via VHF Reflector)

**

WORLDBEAT: KOREA UNVEILS ARDF COMMEMORATIVE STAMP

Turning to news from around the world, word that Korea has issued a postage stamp commemorating the 2008 Amateur Radio Direction Finding World Championships. The championship competition was held in that nation last September and hosted by the Korean Amateur Radio League. More than 450 participants from 28 countries came to Korea to compete. In issuing the

new stamp a spokesman for the Korean postal service said that it is hoped that the World Direction Finding Championships held in his nation will provide momentum to stimulate more public interest and participation in amateur radio. (Korean Stamp Portal)

**

DX OPPORTUNITY: MIDWAY ISLAND TO BE AVAILABLE TO HAMS IN OCTOBER

The U.S. Fish and Wildlife Service is offering amateur radio operators a limited opportunity to operate from Midway Atoll. To avoid any conflicts with atoll wildlife, amateur radio operations will be permitted for two weeks only, from October 5th to the 19th of 2009.

Radio operation will be allowed only within a designated area on the north side of Sand Island and the use of portable generators will not be permitted. 120 volt mains power is available at the operation site.

Any modifications to the island power grid or infrastructure must be approved in advance by the Refuge Manager and be paid for entirely by the radio operators. All participants will be required to attend a Refuge orientation shortly after arrival, which is designed to enhance visitor safety, wildlife protection, and overall enjoyment while visiting the Refuge and Monument.

This event will mark the first opportunity for amateur radio operators to broadcast from the atoll since 2002. More information is available by sending an e-mail to Matt_D_Brown (at) fws (dot) gov.

**

DX

In other DX news, word that 3B8FQ has his license in-hand and will be active from St. Brandon Island through Thursday, February 12th. His callsign is 3B7FQ and while this is primarily to maintain the meteorological station, he will be on to make contacts as time allows. Listen out for 3B7FQ on all bands from 80 through 10 meters on CW and SSB. QSL 3B7FQ and 3B8FQ via K5XK per instructions found on QRZ.com.

And M0VKY will be active portable EA8 from Lanzarote Island in the Canary Islands between March 31st and April 5th. His activity will be on 40, 20 and 15 meters using an FT-857D and some half wave dipoles. QSL M0VKY, direct or by the bureau.

OH2BAD has announced that he's spending his winter vacation on the warm Caribbean island of Aruba and plans to hit the airwaves as P40MH through February 17th. If you work him, QSLs also via bureau to his home call.

Also, F4DYW has been operating from Crozet Island, signing FT5WO. He was last heard on 14.222 MHz between 14:45 and 1640 U-T-C. Word is that he will be on Crozet until the end of November. QSL's go to F4DYW, direct or by the bureau, but don't expect a return card until after he gets back home.

Lastly, HA9RE, and a team of operators are now active from Wallis Island as FW5RE. They will be there through the end of February using CW, SSB and RTTY on 160 through 10 meters including 12, 17 and 30 meters. Their QSL manager is HA8IB.

(Above from various DX news sources)

**

THAT FINAL ITEM: RCA BEGINS SCHOOL OUTREACH PROGRAM

And finally this week, word that the Radio Club of America has begun a new multi-faceted outreach program to reach youngsters and late teens to interest them in technology careers and in some cases also in amateur radio. Retired New York City educator Carole Perry, WB2MGP, is in charge of the program and tells us a bit what's being planned

--

Perry: "A dear friend of mine who is a fellow RCA member named Richard Sommers, on the West coast is going to mostly in the inner-city schools of Los Angeles searching for at risk students who have some technical inclination but cannot afford after high school to pursue a trade or a vocation in anything technical as far as schooling goes.

"We are proposing giving these students -- once they are identified -- scholarship money which they will receive once they are enrolled or engaged in a technical or vocational trade school"

--

As to recruiting new hams, that will first be explored in the North-East. There, WB2MGP will fall back on something she knows quite well. Teaching ham radio and putting ham gear in the classroom:

--

Perry: "The other move is to encourage amateur radio in as many schools as I can get it into in my immediate area in the New York, New Jersey, Pennsylvania and Connecticut area by going in and actually showing the track record of the successfully run ham radio programs that I already have lined up and in place. Also, by offering them equipment that is going to be donated by fellow RCA members."

--

Perry says that this equipment will be checked out and put into first rate shape before its delivered to the schools to create ham radio stations where now there are none. The program will also train the classroom educators on how to use ham radio as a classroom teaching tool

You can hear more about this very interesting project being headed up by Carole Perry, WB2MGP, on this week's Rain Report. You can find it on-line at www.therainreport.com or by phone at area code 773-358-7845. The complete interview with Carole Perry is there right now.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline (at) arnewsline (dot) org. More information is available at Amateur Radio Newsline's(tm) only
official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editor's desk, I'm David Black, KB4KCH, at the South East Bureau in Birmingham, alabama saying 73 and we thank you for listening.

==> ARRL EXECUTIVE COMMITTEE ISSUES MOBILE AMATEUR RADIO OPERATION
POLICY STATEMENT

On January 30, at the instruction of the Board of Directors at its
January 2009 meeting, the ARRL Executive Committee adopted a policy
statement on mobile Amateur Radio operations. The statement addresses
the growing number of proposed state and local laws and ordinances
regulating the use of cellular telephone and text messaging,
inadvertently affecting Amateur Radio mobile communications
<http://www.arrl.org/govrelations/MobileAmateurRadioPolicyStatement.pdf>
.
```

In its statement, the Executive Committee urges state and municipal legislators to limit the scope of their proposals, limiting them to devices such as full duplex wireless telephones and related handheld or portable equipment. Alternately, it suggests that licensed Amateur Radio operation be listed specifically as an exclusion to the proposed regulations.

"At the start of each new session, you see a flurry of this type of proposal in state legislatures across the country," said ARRL Regulatory Information Manager Dan Henderson, N1ND. As of February 1, 2009, Henderson said that the ARRL is aware of proposals in 11 states: Georgia, Hawaii, Idaho, Illinois, Iowa, Maine, Montana, Texas, Utah, Virginia and Wyoming, as well as several local city or town proposals.

"These proposals are usually intended to regulate cellular telephone and text messaging by drivers as a matter of safety but, when they are written in very broad terms, can include Amateur Radio mobile operations in the 'net' they cast," Henderson continued. "The Executive Committee's policy statement gives a good, concise background of the role the Amateur Service plays in public safety and service communications. It also highlights the differences between communications conducted by cellular telephone and those using Amateur Radio. Finally, the statement offers some suggested statutory language for state motor vehicle codes which would protect Amateur Radio mobile operation."

The ARRL recognizes that driver inattention is a leading cause of automobile accidents. The policy statement raises the fact that cell phones utilize full duplex communications -- where the user is talking and listening simultaneously. The Executive Committee statement says "Two-way radio use is dissimilar from full-duplex cellular telephone communications because the operator spends little time actually transmitting; the time spent listening is more similar to, and arguably less distracting than listening to a broadcast radio, CD or MP3 player. There are no distinctions to be made between or among Amateur Radio, public safety land mobile, private land mobile or citizen's radio in terms of driver distraction. All are distinguishable from mobile cellular telephone communications in this respect."

The ARRL Policy Statement also recognizes the responsibility of the amateur community to conduct its activities in a manner that does not create unsafe operation of their motor vehicle. "Safety has to be a top concern at all times," Henderson concluded.

==> ARRL ANNOUNCES SECOND HOMEBREW CHALLENGE

The first ARRL Homebrew Challenge, announced in the August 2006 issue of QST, offered a prize for the best 5 W, 40 meter CW and voice transceiver our readers could build. The only requirement was that the rig had to be built for less than $50 of new, readily available parts. In 2009, ARRL ups the ante in the Second Homebrew Challenge by upping the power limit to 50 W. All entries are due no later than February 28, 2010 <http://www.arrl.org/qst/hbc/>.

"Low power (QRP) operation is fun, but often a little more power is even more fun," said ARRL Technical Editor Joel Hallas, W1ZR. "For our new challenge, we are asking readers to design, or adapt a published design (with appropriate credit), and build a 50 W amplifier to follow a 5 W/40 meter transceiver. This could be used behind one of the radios from the original challenge, or from other QRP radios at similar power level." There will be two cash prizes for this challenge. In addition to the prizes, the winners will receive the usual QST page rate for published articles.

The amplifier must operate on 40 meters. It must operate as a linear amplifier capable of accepting a QRP input signal and putting out a minimum of 50 W PEP into a 50 ohm load. It must meet all FCC requirements for spurious emissions. The amplifier must include control circuitry to switch from transmit to receive through a single contact closure and provide a path from antenna to receiver during receive mode. Hallas suggested taking a look at the two part series by Rick Campbell, KK7B, "Designing and Building Transistor Linear Power Amplifiers," in the February and March 2009 issues of QST.

Hallas listed some basic requirements for the Homebrew Challenge:
* It must meet all requirements while operating from a 13.8 V dc power supply.
* It must put out 50 W PEP on 40 meters with a 5 W PEP input.
* It must be a linear amplifier with third order and higher intermodulation products must be below -28 dBc (28 dB below the carrier) as measured using the procedures described in the ARRL Lab product review Test Procedures Manual <http://www.arrl.org/members-only/prodrev/testproc.pdf>.
* It must be capable of key down operation at 40 W CW output for 5 minutes without more than a 5 percent reduction in output level.
* Single contact transmit/receive switching is required.
* Parts must be readily available either from identified national retailers or by mail order. No "flea market specials" allowed.
* The total cost of all mechanical and electrical parts required for duplication of the amplifier cannot exceed $125.
* All entries must be received at ARRL Headquarters no later than February 28, 2010.
* The amplifier that meets all the basic requirements at the lowest cost will receive a prize of $200.
* An additional prize of $300 will be awarded for an amplifier that meets all the basic requirements and, in the sole judgment of the reviewers, provides the most useful mix of the following additional attributes within the $125 cost limitation:
* * Full output with an input lower than 5 W, perhaps as low as 2 W, to allow operation with other popular radios.
* * Use of aluminum oxide or other types of power transistors rather than beryllium oxide.
* * Operation on additional bands besides 40 meters.
* * Operation in support of full break-in (QSK) mode.

Hallas noted that some RF power transistors, and even some conduction cooled vacuum tubes, are built on a beryllium oxide substrate or heat conduction base. "Beryllium oxide is inert and safe if properly handled," he said. "If crushed, drilled or filed, however, the resulting dust can be harmful if breathed. Many new power transistors use an aluminum oxide substrate that avoids this problem. It is recommended that aluminum oxide be used if possible. If you do choose to use beryllium based transistors for your amplifier, please treat them with the respect that they deserve, and dispose of them as hazardous material outside of normal household waste disposal channels if they fail or are no longer needed."

Each entrant must submit the fully operational amplifier, as well as a documentation package. This package should include a draft QST article with a discussion of the design considerations and tradeoffs and a description of the construction techniques. The article will also include test and alignment steps, operating instructions, along with a readable schematic with a list of all parts used, their source and price.

Those who do not have the capability to measure the desired and undesired output products accurately may submit amplifiers early for an unofficial pre-test in the ARRL Lab. Hallas advised entrants allow two weeks (from ARRL's receipt of the package) to be notified of the results.

The station will first be evaluated in comparison to the basic requirements by the ARRL Laboratory. Entries determined by the Lab to be acceptable on the basis of FCC spectral purity and output requirements will be further evaluated by the QST Technical Editorial Staff.

While the basic rules and evaluation criteria were provided in the original announcement, Hallas said that there are always questions on interpretation. "We have thus again provided a Web resource <http://www.arrl.org/qst/hbc/> to provide the questions and answers (FAQs) to all interested participants. Answers provided should be considered a part of the rules and are binding on all entrants."

==> LOOK FOR THE MARCH ISSUE OF QST IN YOUR MAILBOX

The March issue of QST, our annual antenna issue, is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Jim Steible, K4DLI, and Pete Gaddle, W6XX, designers of the 160 meter beam used on the 3Y0X DXpedition to Peter I, relate how the extreme polar environment provided extreme antenna performance. If you have a small area -- and a small budget -- be sure to check out the article by Leo Shoemaker, K4KIO, detailing his five band G3TXQ broadband hexagonal beam antenna. David Hannon, KE7TTT, recommends a vertical antenna that requires no permanent mounting that is both easy and efficient.

If you've never participated in a contest but wondered what all the fuss was about, or if you are the type to plan family vacations around the contest calendar, you won't want to miss "This Month in Contesting" by ARRL Contest Branch Manager Sean Kutzko, KX9X. This month, Sean features a primer on the ARRL International DX Phone Contest; this contest runs from 0000 UTC March 7-2400 UTC March 8. The results of the 2008 ARRL September VHF QSO Party, the 2008 ARRL 10 GHz and Up Contest and the 2008 IARU HF World Championship are in. Did you top your score from last year? How did your closest rival do? Also, find out about upcoming contests in the Contest Corral.

ARRL Test Engineer Bob Allison, WB1GCM, compares five analog HF/VHF wattmeters in the March issue. According to the ARRL Lab test results, "These reasonably priced HF/VHF wattmeters offer power and SWR measurements at several power levels. Each model offers something different, but one is sure to be a match for your station requirements." Also in the March issue, ARRL Technical Advisor Bruce Prior, N7RR, takes a look at six high end dual-lever keyer paddles: "Finely crafted from top quality materials, these high end-dual-lever keyer paddles are designed for the discerning CW operator. Some are better suited to heavy fisted operators, while others reward a light touch."

Of course, there are the usual columns you know and expect in the March QST: Hints & Kinks, The Doctor Is IN, How's DX, Vintage Radio, Hamspeak and more. This month also features Technical Correspondence, the Emergency Communications Course Honor Roll and the ARRL VEC Volunteer Examiner Honor Roll. Look for your March issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> SAVE THE DATE: ARRL NATIONAL CONVENTION TO BE HELD AT 2009 DAYTON HAMVENTION

The ARRL National Convention will be held at the Dayton Hamvention May 15-17 at Hara Arena <http://www.hamvention.org/>. According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, the ARRL National Convention will be filled with activities and exhibits. "Our host organization, the Dayton Amateur Radio Association, has three big days planned, chock-full of every bit of Amateur Radio you can think of," Inderbitzen said. "ARRL volunteers from across its 15 National Divisions will be present, alongside thousands of out-of-towners who will make Dayton their home-away-from-home during the event. The centerpiece of ARRL's convention planning is ARRL EXPO -- a huge showcase of ARRL program representatives and activities. Many new exhibits are being planned, with special focus on operating and project-building." A preview of what is planned for ARRL EXPO can be found at the ARRL EXPO Web site <http://www.arrl.org/expo>.

The ARRL EXPO, located in the large exhibit area in the Ballarena Hall (near the 400-numbered booths), will showcase exhibits and activities to enhance the ham radio experience. Open to both ARRL members and

nonmembers, ARRL EXPO is packed with official ARRL program representatives, activities and forums. Visit the ARRL bookstore for popular publications and products, join the ARRL or renew your membership, and pick up official ARRL merchandise. All who join the ARRL or renew their membership at the Dayton Hamvention will receive a free gift.

Personnel from the ARRL DXCC Branch will be on hand to check DX cards and applications. All cards will be eligible for checking -- including old cards, cards for deleted countries and cards for 160 meters. Applications will be limited to 120 cards (more cards will be checked as time and volunteer Card Checkers are available). Check out the ARRL Awards Web site for the latest program information and current forms <http://www.arrl.org/awards/dxcc>.

Inderbitzen said that a special event operating station is planned, so be sure to have a copy of your license on hand -- get in the hot seat of W1AW/8 and get on the air! You can also meet W1AW Station Manager Joe Carcia, NJ1Q, part of the team that supports the Hiram Percy Maxim Memorial Station at ARRL Headquarters.

The ARRL Youth Lounge in the ARRL EXPO is the place to meet and socialize with other young hams. Whether you're 1 or 21, the Youth Lounge is sure to offer something that young hams will enjoy. Come to chat with other hams, listen to music, grab a snack or participate in one of the many activities, such as fox-hunts, scavenger hunts, Morse code fun, a QSL card designing contest, crafts, prizes and more. Whether or not you're licensed, you are welcome to come by and join the fun! If you are looking for other young people at Hamvention, check out the youth calling frequencies at 145.540 MHz (107.2 Hz CTCSS) primary and 146.430 (233.6 Hz CTCSS) secondary.

If you enjoy waxing-nostalgic over the gear of yesteryear, then drop by the exhibit area to meet vintage equipment photographer Joe Veras, K9OCO. He will be autographing of his new book, "50 Years of Amateur Radio Innovation" <http://www.arrl.org/catalog/?item=0228>, recently published by ARRL. There are some other "vintage" surprises planned, as well, Inderbitzen said.

"If you can't make it to Dayton," Inderbitzen said, "you can still catch all the latest news on the Convention's Weblog <http://www.arrl.org/blog>. QST Editor Steve Ford, WB8IMY, will once again be blogging about Hamvention. Proving you can indeed go home again, Steve will regale readers with the adventures of staying with his mother at his childhood home in Dayton." For the past few years, thousands of readers have been entertained as Steve has related stories about new gear making its debut at Hamvention, the weather in Dayton and the overall feel of the event -- as well as the ever-popular antics at "Casa de Mi Madre."

The ARRL will introduce a new blog at this year's National Convention: ARRL Youth Editor Duncan MacLachlan, KU0DM, will blog from a young ham's

perspective. MacLachlan, who will be assisting former Youth Editor Andrea Hartlage, KG4IUM, and her father Scott, KF4PWI, in the ARRL Youth Lounge, will explore the Hamvention exhibits, forums and events, giving his first-time take on the Hamvention experience. "Duncan's youth perspective is a welcome addition to the ARRL National Convention team," Inderbitzen said. "We hope you'll explore all of Dayton's nooks and crannies through his reporting."

ARRL staff are getting ready for all the excitement that a National Convention brings. Teaming up with the Dayton Hamvention is sure to bring everything to a fever pitch, so why not make plans to join in on the fun? Travel and lodging information is available on the Hamvention Web site <http://www.hamvention.org/travel.php>.

==> NORTH DAKOTA TO OFFER STATE QSO PARTY IN MARCH

Stations working on their Triple Play Award <http://www.arrl.org/awards/> or Year of the State QSO Party Award <http://www.arrl.org/awards/ysqso/> will want to be on the air on Saturday, March 21 as North Dakota -- always a rare state -- will hold their first QSO Party in 14 years.

"The North Dakota QSO Party (NDQP) is certain to put North Dakota on the map -- and hopefully off the Needed List of many a deserving amateur," said ARRL Contest Branch Manager Sean Kutzko, KX9X. The contest is sponsored by the North Dakota Radio Association (NDRA) with help from several other North Dakota clubs.

Newly appointed North Dakota Section Manager Lynn Nelson, W0CQ, told Kutzko that interest has been high for starting the event up again. "I had many hams asking me to kick off a State QSO Party," Nelson said. "We are encouraging North Dakota stations to work 20 meters in the afternoon hours. This will help to tackle the demand of the state -- and its many rare counties -- for several Amateur Radio awards, including the ARRL's Triple Play and Year of the State QSO Party."

The North Dakota QSO Party runs from 1700 UTC Saturday, March 21-0100 UTC Sunday, March 22. All bands from 160-2 meters (except 60, 30, 17 and 12 meters) are acceptable. Complete rules and forms can be found on the NDRA Web site <http://k0ln.com/>. Don't miss your chance to work one of the rarest states in the country -- get in on the fun of the North Dakota QSO Party!

==> AWARDS CONFERRED AT 2009 ARRL BOARD OF DIRECTORS ANNUAL MEETING

At the 2009 Annual Meeting, the ARRL Board of Directors voted to convey two awards for 2008: The Bill Leonard, W2SKE, Professional Media Award and the ARRL Humanitarian Award.

* The Bill Leonard, W2SKE, Professional Media Award

Ted Randall, WB8PUM, was named the recipient of the Bill Leonard, W2SKE, Professional Media Award. Every week, Randall hosts the QSO Radio Show, featuring guests who have ties to the amateur community, such as country

music artist Ronnie Milsap, WB4KCG, Amateur Radio licensing instructor Gordon West, WB6NOA, and Monitoring Times publisher Bob Grove <http://www.tedrandall.com/>.

This annual award honors a professional journalist whose outstanding coverage in TV, radio, print or multimedia best reflects the enjoyment, importance and public service value of Amateur Radio. The award was created as a tribute to the late CBS News President Bill Leonard, W2SKE. Leonard was an avid Amateur Radio operator, most active on the air during the 1960s and 1970s. As the recipient of the Bill Leonard Award, Randall will receive a plaque and a cash prize of $500.

"I want to thank you all for this award, on behalf of the radio show, more than for myself," Randall said. "I believe the award will add credibility to the show and will help us continue to get to our goals. This is just one of the many reasons why doing the QSO Radio Show is so important to me. The folks who 'are' Amateur Radio and the ARRL have stories to tell that the rest of the world needs to hear. Little on radio today is authentic and compelling. The QSO Radio Show brings all these special people into the homes and listening posts of people in every continent. We are taking a story of goodwill and friendship, the story of Amateur Radio, 'up close and personal' to millions of listeners around the world. We are also collecting a fraternity of folks together, around what comes natural to us, the radio. We saw this magic take place in 2008 on Field Day, with Field Day locations calling in from everywhere, including Iraq. Magicians appear to perform magic on stage, but what these folks did is real magic!"

ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said Randall was cited for his ongoing coverage of Amateur Radio through his profiling of key figures and personalities as host of the QSO Radio Show: "Each week, Ted broadcasts interesting information, interviews and news about the Amateur Radio world to the world. The power of his shortwave broadcast medium was pleasantly made very real to me when, following an interview, I was flooded with e-mails asking for more information. Not only were they coming from the USA, but just as many came from foreign countries such as China, Canada and Japan. Ted is a tireless promoter of the Amateur Radio Service -- not just on the air, but to every broadcast engineer and celebrity he meets."

* The ARRL Humanitarian Award

The Board voted to confer the 2008 ARRL Humanitarian Award to the amateurs of the Sichuan Radio Sports Association, the Chinese Radio Sports Association (CRSA)<http://www.crsa.org.cn/english.php> and the many Amateur Radio operators in China who assisted with communications support during the aftermath of the May 2008 earthquake in that country.

In the wake of the earthquake, the CRSA called on its members to "take actions to ensure their Amateur Radio stations to operate properly, and to the extent possible stand by on often used short-wave frequencies. If any radio signal is heard from the disaster area, please do your best to

understand what is most needed by people in that area and report it to the local government authority. If people in the surrounding areas need to pass messages to their loved ones over the radio, please help them to get in touch and get the messages across as soon as possible. Amateur Radio stations in the disaster area and surrounding areas if in working condition should be used unconditionally to assist the local earthquake disaster relief authorities, and subject to permission by the said authorities, to provide communications services to them. For emergency communications purposes, Amateur Radio stations may also be used to pass messages for local residents on a temporary basis until local telecommunications services resume. Amateur Radio stations of all regions should give way to and stand by for emergency communications."

According to the CRSA -- the Chinese IARU Member-Society -- Chinese government officials and the news media recognized that when normal communications failed after the earthquake, Amateur Radio operators stepped in to provide vital links. CRSA acknowledged that the main organizer of local Amateur Radio traffic, Luo Minglin, BY8AA, "continuously coordinated VHF/UHF communications for a 100 km radius from Chengdu, the capital of southwest China's province of Sichuan. More repeaters were set up in both Beichuan and Mianyang -- among the worst hit areas outside the epicenter -- to form an effective Amateur Radio communication network."

Zhang Zhen, BG8DOU, said that right after the earthquake, "Two ham radio operators drove to the center of the earthquake area and had a repeater set up by the morning of May 13. This repeater enabled the transmission of rescue instructions and status reports, and was a main communication channel for public use. The repeater carried communications for the Mayor of Mianzhu City who gave orders to those on the front line rescue and recovery activity."

On May 12 at 1858 UTC, Liu Hu, BG8AAS, of Chengdu, reported that the local UHF repeater in that town "keeps busy running after the quake. It helps to direct social vehicles to transport the wounded from Dujiangyan, Beichuan and other regions. Another UHF repeater also started working in Mianyan, supported by generators, but they are going to face a shortage of gas."

According to ARRL Programs and Services Committee Chairman Bruce Frahm, K0BJ, the PSC Committee itself put forward the nomination. "We received three nominations from the public for other groups or individuals," Frahm said, "but we as a committee felt the Chinese amateurs and their organizations exemplified the highest level of dedication to public service."

==>SOLAR UPDATE

Tad "The slant Sun of February" Cook, K7RA, this week reports: We still have had no hint of sunspots or sunspots to come, though there was some geomagnetic activity on February 4 from a possible coronal mass ejection, raising the planetary A index to 16 that day. Sunspot numbers

for January 29-February 4 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 69.3, 69.1, 69.4, 69.5, 69.1, 69.3 and 69.5 with a mean of 69.3. The estimated planetary A indices were 4, 4, 7, 3, 2, 4 and 16 with a mean of 5.7. The estimated mid-latitude A indices were 3, 3, 4, 1, 0, 2 and 10 with a mean of 3.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Cullen Bryant's "A Winter Piece" <http://poetry.poetryx.com/poems/11716/>.

==>IN BRIEF:

* This Week on the Radio: This week, the School Club Roundup is February 9-13. The Minnesota QSO Party and the FYBO Winter QRP Field Day are on February 7. On February 7-8, look for the Vermont QSO Party, the 10-10 Winter Phone QSO Party, the Worldwide Peace Messenger Cities, the British Columbia QSO Challenge, the New Mexico QSO Party and the FMRE International RTTY Contest. The Delaware QSO Party is February 7-9, and the North American Sprint (CW) and the FM Simplex Contest are February 8. Next week, the Valentine's Day Sprint and the YL-OM Contest are February 13-14. The Asia Pacific Sprint and the FISTS CW Winter Sprint are both February 14. On February 14-15, look for the CQWW WPX Contest, (RTTY), the Northern New York QSO Party, the EU EME Contest, the New Hampshire QSO Party, the Dutch PACC Contest, the Louisiana QSO Party, the OMISS QSO Party and the RSGB 160 Meter Contest. The North American Sprint is February 15 and the Classic Exchange is February 15-16. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, February 22, 2009 for these online course sessions beginning on Friday, March 6, 2009: Amateur Radio Emergency Communications Level 1; Radio Frequency Interference; Antenna Design and Construction; Technician License Course; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback.

Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* William E. Packard, NN9U, Wins January QST Cover Plaque Award: The winner of the QST Cover Plaque Award for January is William E. Packard, NN9U, for his article "Morse Code: Efficient or Over the Hill?" Congratulations, William! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the February issue by Saturday, February 28.

* Antarctic Station QRV Until February 18: KC4USV, the Amateur Radio station at McMurdo Station <http://en.wikipedia.org/wiki/McMurdo_Station> on Ross Island in Antarctica is now on the air. According to Bill Erhardt, K7MT, who is stationed at McMurdo, the station boasts a new transceiver, amplifier and antenna. "We set up the equipment on January 19, tested it and went on the air," Erhardt said. "The station will be in operation on Sundays on 14.243 MHz, starting at 0001 UTC. We had a nice pile up Sunday, February 1 with US hams on the East Coast and in the Midwest." Erhardt leaves McMurdo on February 18 and is unsure if the station will be on the air over the Antarctic winter.

* Swedish Amateurs Granted New Privileges: On January 29, the Swedish Post and Telecom Agency (PTS) announced that Amateur Radio operators in that country will now have access to 50-52 MHz (6 meters) with a power output limit of 200 W <http://www.pts.se/sv/Radio/Amatorradio/>. Before the change, Swedish amateurs were allowed on the band only with a special license at an additional cost. The Foreningen Sveriges Sandareamatorer (SSA), Sweden's IARU Member-Society, also announced that as of April 1, Swedish amateurs will gain access to 7.0-7.2 MHz (40 meters), bringing Sweden into line with the WRC-03 decision to shift broadcasting stations in Regions 1 and 3 out of the 7100-7200 kHz band and to reallocate the band exclusively to the Amateur Service in those two regions as of March 29 <http://www.iaru.org/rel030703.html>. Each country in Regions 1 and 3 is permitted to determine their own timeline for the amateur allocation. While the band has been vacated by commercial broadcasters, no country is required to give amateurs privileges on those frequencies.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

==> OKLAHOMA HAMS WARN OF ONCOMING TORNADOES

A rare winter tornado struck Oklahoma around dinner time on Tuesday,
February 10. According to various news reports, Oklahoma officials
credited Amateur Radio operators with spotting the tornadoes and
relaying the information to the National Weather Service.

ARRL Oklahoma Section Emergency Coordinator Charles Goodson, KC5UEG,
told the ARRL that the Southern Oklahoma ARES group (SOARES)
```

<http://www.soaresss.org/> and other Amateur Radio operators from the Ardmore area served as SKYWARN storm spotters. "After the tornado passed Lone Grove and Ardmore, several hams went back to the Lone Grove area," Goodson said. "One ham went to the Red Cross building and set up a communication command post from the Red Cross radio room. It was amateur operators who had the first visual contact with the tornadoes. They started reporting the tornado to Neil Mayo, KC5AMX, the Emergency Coordinator for Murray County and our Net control for severe weather events; he in turn reports to the National Weather Service in Norman via Amateur Radio."

The town of Lone Grove, population 4600 and located about 100 miles south of Oklahoma City, bore the brunt of the storm, with the Oklahoma Department of Emergency Management (ODEM) reporting eight deaths and more than 100 homes destroyed. Two other tornadoes hit the Oklahoma City metro area and the north-central Oklahoma region late Tuesday. No serious injuries were reported in the Oklahoma City storm, but at least six homes were destroyed and businesses were damaged there, ODEM officials said.

ARRL Oklahoma Section Public Information Coordinator Kevin O'Dell, N0IRW, told the ARRL that his Ardmore home survived the tornado, but they are without power, water and other services. Other homes in his neighborhood were completely destroyed. Oklahoma Gas and Electric reported about 6000 customers are currently without power, with 3461 in Lone Grove.

Well-known contester Tim Duffy, K3LR, told the ARRL that he lost 40 percent of his home as a tornado blew through his town of Edmond, a suburb of Oklahoma City: "We lost all the doors and windows in the house, all the power, just everything. The damage is amazing. The cell phone system is still 'on tilt' with emergency services taking most of the channels. We're making big progress on getting things sorted out here. We will rebuild and make it better than it was before. With the house in complete disrepair, we'll be staying in a hotel for a while."

Duffy said that National Weather Service officials told him that the wind speed at his home was more than 150 MPH. While the family dog, a golden retriever, made it through the storm okay, Duffy said their pet cat is still missing. According to emergency management officials in Edmond, six homes were destroyed in the storm.

This storm took many by surprise because even in tornado-prone Oklahoma, February twisters are rare. According to the NWS, since 1950, only 44 twisters have touched down in the state during the month of February. The Lone Grove tornado was the third to cause multiple fatalities in the state since March 2007, when a Panhandle couple became the state's first tornado deaths in almost six years.

==> NCVEC QUESTION POOL COMMITTEE BEGINS WORK ON 2010 TECHNICIAN POOL REVISIONS

The National Conference of Volunteer Examiner Coordinators' (NCVEC) <http://www.ncvec.org> Question Pool Committee (QPC) <http://www.ncvec.org/page.php?id=333> is currently reviewing the Technician class (Element 2) question pool. According to QPC Chairman Rol Anders, K3RA, the review is part of a regular process: "Each question pool is reviewed on a four year rotation. The next Technician class pool will become effective on July 1, 2010."

According to QPC Member and ARRL Assistant VEC Manager Perry Green, WY1O, the reason the QPC reviews the three question pools every four years is to ensure that the questions are asking for information relevant to that particular license class. "In the case of the Technician pool, the question set should provide for the new Technician licensee to be able to establish his or her station and operate it legally, courteously and safely. The Technician question pool and exam are intended to be the beginning of the journey into the Amateur Radio Service. It prepares the person for the enjoyment of operating, and that of preparing to learn electronics, the cornerstone of the education needed to obtain the further enjoyment that can come with the higher license classes."

Green said that the QPC must rely on members of the Amateur Radio community to suggest questions and answers in a responsible manner to preserve a high level of legitimacy for our radio service, so the NCVEC QPC is seeking input from the amateur community concerning the revision. They are accepting input for new question topics and new questions, as well as suggestions for changes or deletions.

Anders said that amateurs may submit questions for the QPC via the NCVEC Web site <http://www.ncvec.org/feedback.php>. If you choose to submit a question for the QPC's consideration, please be sure to observe the following procedure:

* Questions must have no more than 210 characters, including spaces, or a maximum of three 70 character lines.
* Answers must be no more than 140 characters, including spaces, or two 70 character lines in length.
* Each question must be accompanied by four possible answers. The answers may be in any order, but the correct answer must be indicated.
* Each question must be accompanied by a resource or Part 97 rule to support the correct answer or explanation of the correct answer.

Green said that the most difficult part of writing the questions and answers is creating the incorrect answers. "We try to stay away from 'All of these answers are correct' and 'None of these answers are correct' for some obvious reasons," he said. "It is a more difficult task to find three incorrect answers that are plausible, but are absolutely incorrect!"

The current Technician question pool <http://www.ncvec.org/page.php?id=349>, effective July 1, 2006, will expire on June 30, 2010. The General class question pool <http://www.ncvec.org/page.php?id=350> is effective July 1, 2007 and is

valid through June 30, 2011. The Amateur Extra class pool <http://www.ncvec.org/page.php?id=351> became effective July 1, 2008 and is valid until June 30, 2012. If you have any comments or suggestions on the current Element 2 question pool, please contact Anders via e-mail <mailto:qpcinput@ncvec.org>.

==> GET READY FOR THE 2009 ARRL INTERNATIONAL CW DX CONTEST

The weekend of February 21-22 will be a busy one for CW operators as the 2009 ARRL International CW DX Contest takes center stage <http://www.arrl.org/contests/rules/2009/intldx.html>. First started in 1929 as the ARRL International Relay Party, the ARRL DX CW Contest is the longest running contest in Amateur Radio. Stations from all around the world -- from Australia to Zimbabwe -- should be active for this great event that takes place on 160-10 meters (no contest QSOs are permitted on 12, 17, 30 or 60 meters).

Stations in the US and Canada work only DX stations (Alaska and Hawaii are considered DX for this contest), and DX stations only work the US and Canada. DX stations will be trying to make as many QSOs with all US states and Canadian provinces as they can. The contest exchange is simple -- US and Canadian stations send a signal report and their state or province, while DX stations send a signal report and the amount of power with which they are transmitting.

"If you've never operated a CW contest, now is the time to start," said ARRL Contest Branch Manager Sean Kutzko, KX9X. "You can work a lot of DX with just 100 W and a simple dipole or vertical antenna. If your CW is a little rusty, this event is a great way to get your CW skills back up to snuff and get some new DX countries into your bag. If you live in one of the rarer states, such as Delaware, North Dakota, West Virginia or Wyoming, DX stations from all around the world will be looking for you. This is your opportunity to 'be the rare one!'"

After the contest is over and you've had your fill of DX, Kutzko advises that you make sure to submit your QSOs to Logbook of The World (LoTW) <http://www.arrl.org/lotw/>: "You can get a lot of your DX QSOs confirmed with little effort, and the instant gratification of having those QSOs count toward your DXCC totals just can't be beat."

The ARRL International CW DX Contest runs from 0000 UTC Saturday, February 21 through 2359 UTC Sunday, February 22, 2009. Complete rules and forms can be found on the ARRL Contest Web site <http://www.arrl.org/contests/forms>. Electronic logs should be e-mailed <mailto:DXCW@arrl.org>; paper logs can be sent to ARRL DX CW Contest, 225 Main St, Newington, CT 06111. Logs sent via postal mail must be postmarked no later than 2359 UTC Monday, March 23, 2009.

==> IARU MEMBER-SOCIETIES RATIFY NEW OFFICERS, VOTE TO ADMIT NEW MEMBERS

On February 10, International Amateur Radio Union (IARU) Secretary David Sumner, K1ZZ, counted ballots submitted by IARU Member-Societies. Proposals submitted to the Member-Societies in September 2008 (IARU

Calendar 187) <http://www.iaru.org/cal187.pdf> included the election of a new IARU President and Vice President, and admission of two new Amateur Radio societies to the IARU. Per the IARU Constitution <http://www.iaru.org/iarucnst.html>, each Member-Society must submit its vote in writing; late votes will not be counted. According to Sumner, 73 Member-Societies cast votes or abstentions on the proposals; of these votes, 57 affirmative votes are required for the proposal to pass.

Proposal Number 241

Proposal Number 241 concerned the ratification of the nomination of Timothy S. Ellam, VE6SH/G4HUA, to serve as President of the IARU for a 5 year term to begin May 9, 2009: Ellam was declared elected, with 72 votes in favor and 1 abstention.

Upon his election as the next IARU President, Ellam said he was "very honoured to have been elected as President of IARU and [I] look forward to working with all three Regions and the Member-Societies during my term in office. We no doubt will face many issues in the run up to the 2011 World Radiocommunication Conference (WRC-11), but I look forward to working as a team to meet the challenges ahead. I would like to thank Larry Price, W4RA, for his sterling work with IARU during his term as President. IARU is in a very strong position today as a result of Larry's leadership. His support and friendship to me has also been very helpful in fulfilling my former duties as Vice President."

Ellam was a delegate to the 1998 IARU Region 2 Conference and was elected to the Region 2 Executive Committee in 2001, stepping down upon his election to IARU Vice President in 2004. He also served as an IARU Expert Consultant from 2000 until his election as Vice President. First licensed in 1977 as VE6CJR at the age of 16, Ellam credits a visit to the ITU in 1979 and the opportunity to operate 4U1ITU during his student years with contributing to his interest in the organizational side of Amateur Radio. He held executive positions in the Radio Amateurs of Canada (RAC) and one of its predecessor organizations, the Canadian Radio Relay League (CRRL), starting in 1990. Ellam's extensive travel as IARU Vice President has included a particular emphasis on the ITU Development Sector. He is active on the air from his home in Calgary.

Professionally, Ellam is a Barrister and Solicitor with the law firm of McCarthy Tetrault LLP. He is a partner in the firm's Calgary, Alberta, and London, UK, offices. Born in England, Ellam emigrated to Canada in 1972 and holds both Canadian and British/EU citizenship. He holds a BA in political science and economics from the University of Calgary and an LLB from the University of Alberta. He is a member of the Law Societies of Alberta and England & Wales, as well as of the International Bar Association. In 2005, Ellam was made a Fellow in International Legal Practice - College of Law of England and Wales, the first Canadian lawyer to be awarded the designation. He is also qualified in the UK as a solicitor/advocate and was recently awarded higher rights qualifications (the right to appear in all courts) in that jurisdiction. His extensive legal experience includes intellectual property and

corporate litigation, arbitrations involving communications, technology and energy matters, and utility regulations.

Proposal Number 242

Proposal Number 242 concerned the ratification of the nomination of Ole Garpestad, LA2RR, to serve as Vice President of the IARU for a 5 year term beginning on May 9, 2009. Garpestad was declared elected, receiving 73 votes.

"Congratulations to Ole Garpestad for his election as Vice President," Ellam said. "I am very pleased to have Ole as part of the officer team and know he will do an excellent job in his new position."

Garpestad joined the Norsk Radio Relae Liga (NRRL) -- Norway's IARU Member-Society -- in 1972, one year before he was licensed as LA2RR. His service as an NRRL volunteer includes service as a member of the NRRL Board of Directors from 1981-1992. While on the NRRL Board, Garpestad served as Secretary, ARDF Manager, IARU Liaison Officer. He also served as Chairman of the Second ARDF World Championship's Organizing Committee and as a member of the IARU Region 1 Conference's Organizing Committee for that meeting in Lillehammer in 1999. Garpestad topped off his service to the NRRL Board of Directors when he served as NRRL President from 2000-2002.

In 1999, Garpestad was elected to the IARU Region 1 Executive Committee, and was elected Chairman in 2002. He has represented Region 1 on the IARU's Administrative Council since 2001 and has attended IARU conferences in Regions 2 and 3. He has participated in CEPT preparations for WRC-03 and WRC-07, attending both conferences as a Norwegian delegate representing Amateur Radio interests.

Garpestad is a telecom and radio engineer working with development, system design and program management of tactical communications systems for Thales Norway AS (formerly Alcatel). He holds an MSc in electronic engineering and radio technology from the Technical University of Norway in Trondheim.

Proposal Number 243

Proposal Number 243 concerned the admission of Emirates Amateur Radio Society (EARS)<http://www.a62er.com/> as an IARU Member-Society. The proposal received 72 votes in favor and 1 abstention. Based in Sharjah, EARS was formally authorized by the Ministry of Social Affairs of the United Arab Emirates on February 5, 2008. There are 72 licensed Amateur Radio operators in the UAE; 28 are members of EARS. His Highness Abdulla Faisal Al Qassimi, A61AQ, is EARS President. Yousuf Ahmed Rafee, A61Y, is Vice President. Mohammad Hamza Darwish, A61M, serves as EARS General Secretary and IARU Liaison, and Qabila Shatter Al Bedawi, A61YL, is Treasurer.

Proposal Number 244

Proposal Number 244 concerned the admission of Kazakhstan Federation of Radiosports and Radioamateur (KFRR) <http://www.cqun.kz/?lang=en>. The proposal received 73 votes in favor. According to the IARU, KFRR registered with the Ministry of Justice of the Republic of Kazakhstan and holds a general license from that country's Sports Committee, Ministry of Tourism and Sport. On May 17, 2008, KFFR held its first conference. The Chairman of the KFFR is Seitkul Assaubay, UN7BM; KFFR Vice Chairman is Igor Marchenko, UN7BF. Of the 617 licensed amateurs in Kazakhstan, 452 are KFFR members.

With the addition of the Emirates Amateur Radio Society and the Kazakhstan Federation of Radiosports and Radioamateur, there are now 162 IARU Member-Societies.

==> JUDGE RULES IN FAVOR OF AMATEUR IN PALMDALE ANTENNA SUPPORT STRUCTURE CASE

On Friday, February 6, Los Angeles Superior Court Judge David Yaffe issued a ruling in favor of Alec Zubarau, WB6X, of Palmdale, California, in Zubarau's case against the City of Palmdale <http://www.arrl.org/news/stories/2008/12/19/10512/?nc=1>. Last year, after Zubarau received a valid building permit from the City to erect an antenna support structure, the City of Palmdale revoked Zubarau's building permit after he had erected the tower. According to Zubarau's attorney, Len Shaffer, WA6QHD, the Court's ruling invalidates the actions of the City in revoking Zubarau's permit and requires the City to allow him to replace the tower.

"Zubarau's case has drawn nationwide attention and financial support from the ARRL, Amateur Radio clubs and individual Amateur Radio operators from around the country," said ARRL Southwestern Division Vice Director Marty Woll, N6VI. "Although this ruling does not directly address the City's proposed zoning ordinance amendment, based on the Court's language, it should provide considerable support for those hams attempting to negotiate a more reasonable provision allowing antenna support structures in the Palmdale City Code."

According to Woll, the Court also found that "unsubstantiated complaints by neighbors and anecdotal reports of transmissions interfering with other electrical equipment or posing health and safety concerns" did not constitute substantial evidence. Yaffe's ruling stated that Palmdale's ordinance requiring that amateur antennas be compatible with the surrounding neighborhood with respect to visual and other impacts is void, since it may not constitute the minimum practicable regulation as required under the California state statute <http://www.leginfo.ca.gov/pub/03-04/bill/asm/ab_1201-1250/ab_1228_bill_20030714_chaptered.html>. The judge further found that the City's decision to eliminate the tower violates the express requirements of California's PRB-1 equivalent statute that was enacted in 2003, but had yet to be used in a court case.

"While falling just short of invalidating Palmdale's current antenna ordinance," Woll said, "this language ought to put a damper on the

City's Draconian proposed zoning ordinance amendment and its extreme limitations on Amateur Radio antennas. One hopes that the City of Palmdale will think twice in the future about using tactics -- such as the threat of large fines -- to force compliance with an order based on unsubstantiated findings."

Shaffer told ARRL that the text of the Yaffe's ruling will be released after the service of notice on the City and expiration of the appeal period. He, Zubarau and Woll thanked the ARRL and the Amateur Radio community for what he called "the tremendous showing of support during this lengthy battle."

==> IEEE TO FORM BALLOTING GROUP ON BPL EMC STANDARD

The Institute of Electrical and Electronics Engineers (IEEE) <http://www.ieee.org/> has been developing standards <http://www.ieee.org/organizations/pubs/newsletters/emcs/spring08/standards.pdf> for Broadband over Power Line (BPL) use and deployment. According to ARRL Lab Manager and IEEE member, there are three IEEE standards in progress at this time. The first, P1675 <http://standards.ieee.org/board/nes/projects/1675.pdf>, covers installation and safety practices and should be published soon. The second, P1901 <http://standards.ieee.org/board/nes/projects/1901.pdf>, is focused mostly on BPL protocols and interoperability between various BPL systems. ARRL has no direct interest in either of these standards. The third standard -- P1775 <http://standards.ieee.org/board/nes/projects/1775.pdf> -- covers the electromagnetic compatibility (EMC) aspects of BPL emissions testing and the immunity of BPL systems. ARRL Lab Manager Ed Hare, W1RFI, as a member of the IEEE's P1775 BPL EMC Standards Working Group, has participated in the development of this standard from the very first meeting held in Denver, Colorado in 2004.

"The IEEE Working Group developing the standard is heavily dominated by the BPL industry and its electric-utility and EMC testing partners," Hare noted. "The ARRL was the only radiocommunications stakeholder that regularly attended meetings. Although I did make a number of contributions to the standard that were included, most of the major points I made about what was needed in an EMC standard to achieve compatibility with licensed radio services were voted down by the Working Group. The end result does not offer any real protection to Amateur Radio, despite progress made in the industry in that direction elsewhere."

Hare said that the major problem with the emissions testing part of this standard is that it offers little more than a parroting of the FCC rules on how to make measurements: "The test methods in this standard are overly complex and incomplete at the same time. By strongly parroting the FCC rules, the standard is promoting regulations that do not serve well to provide good test methods that enable BPL while protecting licensed services." Hare said that the risk to having an international industry standard that relies heavily on FCC regulations will increase

the likelihood that these regulations will be adopted by other countries. Hare has prepared a report <http://p1k.arrl.org/~ehare/bpl/P1775Issues.htm> that outlines other problems he sees in the present draft of the standard.

The IEEE has announced that the P1775 standard is ready for ballot. Hare explained that the balloting process is not only a vote, but it is part of the process to develop standards. "Stakeholders that cannot attend the meetings that develop these standards can join the balloting pool," Hare said. "The IEEE requires that 75 percent of the balloting pool vote to approve the standard. Even if it passes, the IEEE requires that an attempt be made to resolve all negative ballots. The ballot is not as much a vote as it is an important part of ensuring that all interests are represented in an IEEE standard."

ARRL encourages those with a radio interest to join the IEEE balloting pool <http://p1k.arrl.org/~ehare/bpl/balloting_pool.htm> prior to February 22, 2009. Many amateurs are IEEE members; if they are also members of the IEEE Standards Association, they are able to ballot on IEEE standards at no cost. Hare reiterated that ARRL is not opposed to the development of BPL standards, but we realize that the best standards include the interests of all stakeholders. "There are a lot of good parts of this standard," Hare explained, "but it is lacking in areas that would make it a useful tool with good test methods and practices that offer significant protection to licensed radio services. Joining the balloting pool is the best way that amateurs can help develop a more useful and inclusive standard."

==> JIM SMITH, VK9NS (SK)

Jim Smith, VK9NS (ex-P29JS), of Norfolk Island, Australia, passed away Tuesday, February 10, after a short illness. He was 80. A noted DXer and ARRL member, Smith was #81 on the Islands on the Air (IOTA) Honour Roll <http://www.rsgbiota.org/>.

According to Bernie McClenny, W3UR, editor of "The Daily DX", Smith was first licensed in 1947 as VS1BQ in Singapore: "Through the years, Jim operated as CAR (VU4 Nicobar), VS1BQ, DL2TH, HZ1AB, MP4BER, 9V1PR, P29JS, VR4BJ, H44BJ, G3HSR, C21AA, T3KJ, T3AJ, VK9YS, VK9XS, VK9NS, VK0JS/VK9N, 9M8JS, VK0JS, ZL0AAB, ZM7JS, ZL1BUN, T30JS, T1JS, T32JS, T33JS, A35MR, A51JS, S21U, WR1Z, WR1Z/KH9, S21ZA, VK9WW, A35MR/p, A51MOC, VU2JBS, NO1Z/KH1, VK9WW, WR1Z/KH8, H40AB and A52JS, just to name a few." Smith was originally from Leith, Edinburgh, Scotland.

McClenny said that in 1980, Smith founded the Heard Island DX Association (HIDXA) <http://www.hidxa.nlk.nf/>. Three years later, along with wife Kirsti, VK9NL, Smith put the rare VK0/H on the air as VK0NS and VK0NL. "Over the years, Jim put on several all time new countries -- as well as many rare ones -- from the Pacific and Asia," McClenny said. "In fact, he took part in the regulations for Amateur Radio in several DXCC entities. When not out on DXpeditions, Jim could usually be found on 14.222 MHz."

Mike Tessmer, K9NW/VK9NW, who visited Norfolk Island for a week in November 2004, remembered Smith fondly on the Society of Midwest Contesters' e-mail reflector: "I spent three wonderful afternoons at Jim and Kirsti's house having tea -- coffee in my case -- and discussing all things DX. Jim showed me the old Collins gear he was restoring. I even picked up a few QSL cards from some of his past DXpeditions. Great memories!"

In an e-mail to ARRL Membership and Volunteer Services Manager Dave Patton, NN1N, Andy Chesnokov, UA3AB, told how he first met Smith in Bhutan in 2000 while on the A52A DXpedition <http://www.qsl.net/bhutan2000/>. "Boy, Jim was quite upset with us operating from 'his territory,'" Chesnokov said. "But we went along quite nicely after few minutes, and he even allowed us to operate his tiny station there. I met him few times after that and he was a true gentleman."

Calling him "a serious DXer," McClenny said Smith worked all countries on SSB, Mixed and only missing one on CW. In April 1986 Jim was inducted into the CQ DX Hall of Fame. One of Smith's last big projects was writing his autobiography, "The Old Timer" <http://www.jimkirsti.com/books.html>. Smith is survived by his wife Kirsti, VK9NL, and his four children: Bruce, G3HSR, Stuart, Sheena and Fraser. Condolences may be sent to Kirsti via e-mail <mailto:jimkirsti@ni.net.nf>. -- Some information provided by "The Daily DX" <http://www.dailydx.com/>

==>SOLAR UPDATE

Tad "The red Sun flashes on village windows" Cook, K7RA, this week reports: Sunspots returned this week, or rather, one did, but it is an old Solar Cycle 23 spot. Sunspot 1012 has been visible the last couple of days, February 11-12. It is down near the Sun's equator, typical for spots from a previous cycle. It's nice to have a sunspot, but it doesn't indicate activity from the new Solar Cycle 24, which has been so eerily quiet. Sunspot numbers for February 5-11 were 0, 0, 0, 0, 0, 0 and 11 with a mean of 1.6. The 10.7 cm flux was 70.1, 70.1, 71.1, 71.2, 70.7, 67.6 and 70.3 with a mean of 70.2. The estimated planetary A indices were 7, 2, 3, 4, 4, 3 and 5 with a mean of 4. The estimated mid-latitude A indices were 6, 1, 1, 0, 0, 0 and 2 with a mean of 1.4.. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Henry Wadsworth Longfellow's "Afternoon in February" <http://www.poemhunter.com/poem/afternoon-in-february/>.

==>IN BRIEF:

* This Week on the Radio: This week, the Valentine's Day Sprint and the YL-OM Contest are February 13-14. The Asia Pacific Sprint and the FISTS CW Winter Sprint are both February 14. On February 14-15, look for the CQWW WPX Contest, (RTTY), the Northern New York QSO Party, the EU EME Contest, the New Hampshire QSO Party, the Dutch PACC Contest, the Louisiana QSO Party, the OMISS QSO Party and the RSGB 160 Meter Contest. The North American Sprint (SSB) is February 15 and the Classic Exchange is February 15-16. Next week is the ARRL International DX Contest (CW) on February 21-22. The AM QSO Party and the REF Contest are also February 21-22. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, February 22, 2009 for these online course sessions beginning on Friday, March 6, 2009: Amateur Radio Emergency Communications Level 1; Radio Frequency Interference; Antenna Design and Construction; Technician License Course; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* W1AW to QSY on 160 Meters: Starting Monday, March 9, the Hiram Percy Maxim Memorial Station, W1AW, will begin using a new 160 meter frequency for its CW transmissions. According to W1AW Station Manager Joe Carcia, NJ1Q, there has been what he called "increasing activity" near the current bulletin frequency of 1817.5 kHz. "In order to reduce the possibility of interference, W1AW will move to 1802.5 kHz," Carcia said.

* K5D Is On the Air!: Due to some heavy winds that delayed helicopter relays onto Desecheo Island, the K5D DXpedition <http://www.k5d.us/> got off to a late start. But according to reports received by the ARRL, as of around 12 noon (EST) on February 13, operators on the island are QRV on 17 and 20 meters; the team will be running CW, SSB and RTTY on 160-6 meters. The DXpedition, headed by Bob Allphin, K4UEE, and Glenn Johnson, W0GJ, is expected to be on Desecheo until February 26. Desecheo Island

currently sits at #7 on DX Magazine's Most Wanted list; the island is the second most-wanted DXCC entity in Asia and third most-wanted in Europe. Desecheo is a small uninhabited island in the Mona Passage, 14 miles off the west coast of Puerto Rico. It is part of the US Fish and Wildlife Service's national wildlife refuge system administered by the Caribbean National Wildlife Refuge Complex (CNWR).

* Radio Society of Bermuda Celebrates Founding of Island with Special Call Sign: Four hundred years ago, Sir George Somers settled the island of Bermuda. To celebrate, the Radio Society of Bermuda (RSB) <http://www.bermudashorts.bm/rsb/> will use VP9400/xx (xx is the operator's call sign -- VP9LN would use VP9400/LN). Be aware that some Bermudian Novices have three-letter suffixes.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify

membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1644 - February 13, 2009

Amateur Radio Newsline report number 1644 with a release date of Friday, February 13th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio assists a brush fires rage in Australia, New Zealand hams to get more of 40 meters, a big win for mobile operation in Colorado, a new ham radio youth group wants you and the story of an honor recently bestowed on the ham who brought an amateur station to the Queen Mary. All this and more on Amateur Radio Newsline(tm) report number
1644 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO VS, THE VK BRUSHFIRES

Ham radio is on the fire-lines once again. This time its happening down under as we hear from Robert Broomhead, VK3KRB, reports from Melbourne:

--

On line to begin this report I have Mark Dodds, VK3XMU, who is the secretary of WICEN. The WICEN guys that are in the field: What exactly are they doing?

--

VK3XMU: "Our initial activation was to provide services for the councils when they were unable to communicate with the phone system being down. That role has expanded today as we posted some extra people to Alexandra to start operating the Incident Control Center radios for the DSE and CFA. That's the role we have done in the last couple of fires and its one that usually gets handed to us about now when some of the DSE and CFA resources for that sort of task start to run low.

"So far we have been posted to King Lake and Alexandra and we have some men on strand-by to be posted to the towns on the southern end of the Mirinda Highway below Alexandra when those towns are opened up."

--

And I guess for you guys this will be a long term commitment rather thjan a short term one?

--

VK3XMU: "We are expecting that the recovery phase in and around Marysville will be over a period of months, though we might not be posted there quite that long but we do expect to be there for certainly weeks.

"We have had offers of assistance from North Queensland, from Perth, we have had people offer to come across on the ferry from Tasmania and we have even had an offer from Japan for people to do net control for us if we needed it."

--

We are now joined on line by Fred Swenson, VK3DAC. Fred is on his property in Talangie. Talangie has been directly hit by bush fires and is still under ember attack. Fred joins us on his mobile phone:

--

VK3DAC: "We're running off generators up here. We have no telephones or Internet connection. My mobile phone is the only thing that's working as we have some cable problems with the telephone system.

"I have been using amateur radio to talk to the radio group and I have access to the repeater. They have been providing me with updated weather reports and intimate details of the fires like locations. This has proven to be very useful and they have been very supportive.

"Im not the only person in the club that has been impacted by the fires. A couple of our members have. One has lost a home so I believe and another had a major problem with damage to his property.

"So, our network is working extremely well and its provided us with first hand information that's up to date and accurate."

--

For the Amateur Radio Newsline, I'm Robert Broomhead, VK3KRB, of the WIA National News reporting from Australia.

--

For those not aware, Australia's WICIN is the equivalent of ARES and RACES here in the United States. So far more than 200 people have lost their lives in this year's Australian brushfires. And as you heard, hams down under remain on alert. More on this story in future Newsline reports. (WIA News)

**

RESTRUCTURING: NEW ZEALAND HAMS TO GET 7.1 - 7.2 MHZ PRIMARY

Still down-under, the New Zealand telecommunications regulatory authority has announced that nations amateur radio service will be given Primary access to 7.1 to 7.2 MHz after March 29th. The Ministry of Economic Development says that its making the change in accordance with the International Telecommunications Union's latest Radio Regulations. The latest ones published last year state that the use of the band 7.1 to 7.2

MHz for Broadcasting services will cease after March 29th 2009. (Southgate)

**

RADIO POLICY: IARU WELCOMES TWO NEW MEMBERS

The International Amateur Radio Union has voted to admit the Emirates Amateur Radio Society and the Kazakhstan Federation of Radiosports and Radioamateur to the organization. The Emirates Amateur Radio Society was admitted by a vote of 72 in favor with 1 abstention. The Kazakhstan Federation received a unanimous 73 votes in favor. A minimum of 57 affirmative votes was required for adoption of new members into the IARU. (IARU)

**

RADIO LAW: COLORADO HAMS WIN EXEMPTION TO CELLPHONE LAW

Meantime, on this side of the Pacific, Colorado amateur radio operators appear to have won a significant legislative victory before the Transportation and Energy Committee of the Colorado House of Representatives. This in relation to a bill concerning wireless telephone prohibitions on drivers that hams feared might impact on their ability to operate mobile. Don Carlson, KQ6FM, is here with the details:

--

While the Colorado House Bill 09-1094 provided exemptions for public safety personnel within the scope of their duties and for the general public in an emergency, there was worry that enforcement authorities would fail to differentiate between amateur radio transceivers and traditional cellular telephones. Concerned about the possible ambiguity, Colorado Section Manager Jeff Ryan, K0RM, alerted Colorado Section Public Information Coordinator Robert Wareham, N0ESQ, of the situation. Wareham reviewed the proposed bill and together with Section Manager Ryan, devised a plan to address the concerns.

Ryan had a reluctance to add any amendments for what she considered "special interests." After introduction the Bill was referred to the House
Committee on Transportation and Energy. A quick check by Wareham revealed that his local representative and fellow attorney, Frank McNulty was a committee member.

McNulty agreed to introduce an amendment to clearly exempt amateur radio operators. House Bill 09-1094 came before the committee on February 3rd. Testimony in support of the bill was emotional and compelling. Among others there was a mother who had lost her 9-year-old daughter to an inattentive driver fishing for a ringing cell phone.

Wareham testified on behalf of the Colorado ARRL Section. He reminded the lawmakers of the important role amateur radio plays in response to disasters and in support of the National Weather Service. He distinguished the use of mobile and portable radios from that of cellular telephones and

pointed out that using an amateur radio on a routine basis required far less human interaction. Holding up a Yaesu FT-60 dual band portable, he showed the lawmakers how an HT with a tone pad might be mistaken for a wireless telephone device by misinformed law enforcement officials.

Following almost two hours of testimony from numerous witnesses, Representative McNulty introduced his amendment which was seconded by the committee Chair. When the Chair asked if there were any objections to the amendment both Ryan and Wareham were surprised that not a single member of the committee, nor the Bill's author, offered any objection.

The measure was eventually approved by a vote of 9 to 2. It was then forwarded to the House Committee on Appropriations prior to being sent to the full House for a vote. Assuming the Bill passes through the appropriation screening, it will then be brought before the entire House or Representatives for a vote there. It must then be approved in the Colorado State Senate before being sent to the Governor for his signature.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

If the Bill makes it to the governor's desk and he signs it into law, the new law has a proposed effective date of December 1st 2009. (N0DRC, ATNewsline(tm))

RADIO LAW: A BIG TOWER VICTORY FOR A CALIFORNIA HAM

Meantime, a big win in a highly publicized California antenna case. Mark Abromowicz, NT3V, reports:

--

Alex Zubarau WB6X will be allowed to put his tower back up after a Los Angeles County Superior Court judge rules the city of Palmdale was wrong to force him to remove it after granting him a valid permit.

Judge David Yaffe handed down the ruling on Feb. 6.

Zubarau found himself caught up in a neighborhood dispute that spilled over into a petition filed with the City of Palmdale after it had granted him permission to install his tower.

As with most cases, this one goes back a few years to 2005 when Zubarau first applied for a permit. It was approved and Zubarau put hi a 22-foot crank-up tower which had the ability to rise to 55 feet.

But he didn't put a 4-element, 20 meter antenna on the tower until January 2007.

That's when his problems began and the neighbors raised such concerns as the aesthetic impact it was having, potentially suppressing property values and, the big one, causing interference with other electronic devices.

After getting the neighbors petition, the Palmdale council voted to revoke Zubarau's permit and he was directed by the planning commission to take not only the antenna but the tower structure down.

Enter the American Radio Relay League with volunteer counsel Len Shaffer WA6QHD and lots of support from hams in the Palmdale area as well as individuals and organizations from around the region who contributed money to his legal fight.

The ARRL also voted to contribute 5-thousand-dollars to the Zubarau defense fund.

Before going to court, Shaffer - Zubarau's attorney - tried to convince the council and its attorney that the antenna and the tower posed no interference to the neighbors.

As Zubarau's case was heading to court, the Palmdale Planning Commission began drafting an amendment to the community's antenna ordinance that would severely hamper amateur radio operators.

The amateur community quickly got word about it and began efforts to derail it.

Among those writing to the Palmdale authorities to raise concern was the ARRL's General Counsel Chris Imlay W3KD.

Imlay pointed out very succinctly to Palmdale officials that their proposed ordinance is unenforceable because it is pre-empted by federal and state laws.

As to the radio interference issues, Imlay noted those matters are strictly in the hands of the Federal Communications Commission.

In spite of that, it appears Palmdale officials are willing to spend tax dollars to continue their efforts to work on the proposed ordinance. It's unclear, however, whether they'll appeal the judge's ruling in the Zubarau case.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V.

--

Still to be decided is the fate of that Palmdale's proposed anti-ham radio antenna law. A hearing on that was supposed to have taken place but was put on hold when the city realized the level of response that hams in the

area had organized. (K7FE, ARRL, ARNewsline(tm))

**

WITH THE ARRL: LEAGUE CHANGING FREQUENCY ON TOP BAND

The ARRL is changing frequency on Top-Band. Starting Monday, March 9, the League's Maxim Memorial Station W1AW will be using a new 160 meter frequency of 1802.5 kHz for its CW transmissions. The change is being made to accommodate increasing activity near the current bulletin frequency of 1817.5. The move by W1AW to 1802.5 kHz should reduce the possibility of interference. (ARRL)

**

RADIO AND YOUTH: NEW YOUTH GROUP WANTS YOU

A new national youth oriented ham radio group headquartered in Belen, New Mexico is seeking both youngsters and adult members to join and help them get active. Bill Pasternak, WA6ITF, reports:

--

The Amateur Radio Youth Association was founded by three young hams. They are Dustin Cox, N0DRC, Jared Robbins, KE5LZV, and Phil Shaw, KE5LZX.

Originally called the Amateur Radio Cowboy Club, since November of 2007 the group has taken what it calls a new outlook on Amateur Radio. As a result, is now dedicating its self to the education of the general public and of its youth.

The long range mission of the Amateur Radio Youth Association and its KE5RPV station is to further teach the public about the importance of Amateur Radio and to help students in middle school, and high school learn subjects through the use of Amateur Radio.

A very noble task indeed, being taken on by a group of rather dedicated young hams. They deserve our support.

For the Amateur Radio Newsline, I'm the worlds oldest young ham, Bill Pasternak, WA6ITF, age 67, in the Newsroom in Los Angeles.

--

To Join the Amateur Radio Youth Association go the www dot ke5rpv dot org and click on the "Membership Application" tab on the left of the page. N0DRC says that anyone who wants to join will be welcomed whether you already have your ham radio license or not. (ARNewsline(tm))

**

ENFORCEMENT: TWO BROADCASTERS HIT WITH TOWER FINES

Two commercial broadcast tower operators have received significant fines from the FCC. Jason Konarz, licensee of station WQMA-AM, in Marks, Mississippi., was fined $14,000 for not enclosing the base of the tower

with a locked fence. Initially announced in November, the fine was announced as a Forfeiture Order. It's now confirmed because the FCC say that Konarz didn't respond to the initial notice.

Another decision that has escalated to a Forfeiture Order involves Perry Broadcasting Systems, owner of two towers in Lajas, Puerto Rico. The agency said both towers lack red obstruction lighting. Perry also failed to tell the commission immediately that the towers have changed hands. The FCC has now fined Perry $13,000. (FCC)

**

RADIO BUSINESS: TOWERS CONTINUE TO MAKE MONEY

If you own a communications tower anywhere in the world, you will likely be able to weather the current fiscal recession. This, according to a pair of technology research companies that track communications tower usage.

Globally, technology research firm Gartner Incorporated says that consumer broadband connections are estimated to jump to 499 million in 2012. This is up by more than 54 percent from 323 million in 2007.

Here in the United States the Stanford Group estimates that the $7 billion tower market, dominated by American Tower, SBA Communications and Crown Castle International, is expected to grow 8 percent to 9 percent in 2009. This, as phone companies, grappling with weaker demand for land line services, are now striving to retain users by investing in new, high-speed Internet and video services. (RW)

**

ELECTRONIC ANNIVERSARY: THE APPLE MAC HITS 25

And a happy birthday to the Apple Macintosh computer which turned 25 back on January 24th. The Mac, as it became known in computing circles, made its public debut in 1984 and kicked off a product line that were Apple's flagship computers for many years. Rebecca Bruce, has more:

--

The project to create the Macintosh was started by legendary computer maker Jeff Raskin. The original machine had a 9 inch screen in an upright beige case, 128 kilobytes of RAM, internal floppy drive, and came with a keyboard and single-button mouse.

The operating system featured a Graphical User Interface with the mouse used to navigate the computer. This, by clicking on screen icons rather than having to type command line instructions.

The first Macintosh was unveiled in a television advertising campaign directed by film maker Ridley Scott. Those advertisements were originally aired during that year's Superbowl game in late January.

Apple had previously produced computers using a graphical user interface such as the Apple Lisa. Those machines cost far more than the original

Macintosh and never gained much popularity. The Mac, did.

For the Amateur Radio Newsline, I'm Rebecca Bruce, in Los Angeles.

--

Although rival Microsoft had launched its MS DOS operating system in 1981 it was not until 1985, a year after the Macintosh made its debut, that it introduced its own GUI called Microsoft Windows. However, Windows did not enjoy any significant popularity until the advent of version 3.x in 1990. (Science OnLine)

HAM HAPPENINGS" SEVHF CONFERENCE CALLS FOR PAPERS

A call for papers to be presented at the 2009 Southeastern VHF Society Conference is now open. The gathering takes place on April 24th and 25th in Charlotte, North Carolina.

The cutoff date to submit manuscripts for publication in the conference proceedings is March 2nd and should be weak signal VHF, UHF or Microwave related. Papers go by e-mail to Stephen Kostro, N2CEI at svhfs2009 (at) downeastmicrowave (dot) com (SEVHFS Release)

**

HAM HAPPENINGS: OUTPOST PM CREATOR TO SPEAK AT WEST COAST EMMCOM U

The organizers of EMCOMM U have announced that Jim Oberhofer, KN6PE, the author of the Outpost PM emergency packet messaging software, will present two sessions at the event. The first will be the morning keynote, during which KN6PE will introduce Outpost PM to those not already familiar with it.

The second presentation will be a special session talking about how to actually set-up an Outpost PM network for use in your community. There, hardware, software, radios, and other aspects of a successful Outpost PM installation will be discussed.

EMCOMM U, is a one-day training workshop organized by San Joaquin County ARES and sponsored by the Tracy Amateur Radio Club, the Manteca Amateur Radio Club, and the San Joaquin County EMS Agency being held Saturday, March 14th in Stockton, California. For more information, visit www.emcommu.org. (EMCOMM U Press release)

THE SOCIAL SCENE: QCWA DAYTON HAMVENTION BANQUET MAY 16th

The Quarter Century Wireless Association 2009 Hamvention Banquet is now slated for 7:30 PM on Friday, May 16th at the Holiday Inn located on Main Street and I-70 in Dayton, Ohio. The after dinner presentation will include a documentary film titled "On Great White Wings" which tells the story of the famed Wright brothers discovery of flight. The cost of the evening is $20 per person. Prepaid reservations go to Jerry Ragland, WA8BOB, 409 Park Ave, Franklin, Ohio, 45005-3500 (WB8IFM)

**

THE SOCIAL SCENE: DAYTON HAMVENTION TO HOST 2009 ARRL NATIONAL CONVENTION

The Dayton Hamvention will again play host to the 2009 ARRL National Convention at the Hara Arena May 15th to the 17th.

According to a press release, the centerpiece of ARRL's convention planning is its ARRL EXPO. This, the League describes as a huge showcase of ARRL program representatives and activities. In addition, many new exhibits are being planned, with special focus on operating and project-building.

A preview of what is planned for ARRL EXPO can be found at the ARRL EXPO Web site. It's in cyberspace at www.arrl.org/expo (ARRL)

CHANGING OF THE GUARD: FAMED DX'ER JIM SMITH, VK9NS - SK

The changing of the guard in amateur radio continues with word of the passing of Famed DX'er Jim Smith, VK9NS, of Norfolk Island, Australia, who passed away Tuesday, February 10. Better known by his old call P29JS, Smith not only put rare locations on the air but also was the founder of the Heard Island DX Association. He also authored his own autobiography that he simply titled The Old Timer.

Smith was a member of the CQ Magazine DX Hall of Fame. He was age 80 when he died following a short illness and is survived by his wife Kirsti, VK9NL, and his four children. At airtime, funeral arrangements have not

been announced. (K5SW, W0WO)

**

CHANGING OF THE GUARD: DIETER SCHLIEMANN KX4Y _ SK

And, the sad news from AMSAT of the passing of Dieter Schliemann, KX4Y. According to Amateur Radio on the International Space Station International Chairman Frank Bauer, KA3HDO, Schliemann was instrumental in supporting many important activities allied to the ARISS program as well as within AMSAT itself. His greatest accomplishment may have been his organizing the use EchoLink and IRLP to assist with classroom contacts with hams on Earth orbit. Schliemann, of Scottsboro, Alabama, was 68 when he passed away on February 9 following a battle with cancer. (KA3HDO)

**

RADIO IN SPACE: TWO COMMUNICATIONS SATELLITES COLLIDE

Two communications satellites collided in the first-ever crash of two such spacecraft on-orbit. The collision involved a United States Iridium commercial satellite, which was launched in 1997, and a Russian satellite launched in 1993. The Russian satellite was believed to be nonfunctioning and out of control.

The Iridium craft weighed 1,235 pounds, and the Russian craft nearly a ton. Scientists have yet to determine how many fragments were generated or how large they might be. NASA said it will take weeks to determine the full magnitude of the crash which occurred nearly 500 miles over Siberia on Tuesday, February 10th. (NASA)

**

WORLDBEAT: 2 METER AM TAKING OFF IN THE UK

A retro ham radio movement to 2 meter AM is gaining popularity in the United Kingdom. The renewed interest in AM seems to be driven by the availability of cheap ex-land-mobile equipment. Also because VHF AM rigs can be simple to build, making them ideal home construction projects.

As a result, footnote 8 of the UK 2 meter plan now says that the use of Amplitude Modulation is acceptable within the All Modes segment of the band. It also notes that AM usage may often be found on 144.550 MHz although this frequency is not officially recognized within the 2 Meter band plan.

The RSGB does ask AM users to consider adjacent channel activity when selecting operating frequencies. (Southgate)

**

WORLDBEAT: CROATIA, SPECIAL EVENT STATION

The 48th conference of the International Federation of Air Traffic Controllers' Associations will take place in the Croatian city Cavtat, from

April 20th to the 24th. To commemorate the meeting, the special call 9A48IFATCA is active until December 31st. QSLs to 9A4WW either direct or via bureau. (Southgate)

**

WORLDBEAT: HAM RADIO CELEBRATES RAI

It was 55 years ago that Italian broadcaster Radiotelevisione Italiana took to the airwaves. The first TV signals aired in January 1954 which is reason enough to activate the special event station II2RAI until Dec 31st of this year. QSL to IQ2RD via bureau or electronically using Logbook to the World. (Southgate)

**

DX

In DX word from EA4ATI that he and a team of operators are preparing to activate Nauru, in the Pacific, sometime in May. The callsign will be C21TI. Travelling through Australia to get to Nauru, tentative dates will be
either from May 3rd to the 17th or the 16th to the 30th Activity will be on all HF bands including 60 and 6 meters. QSL will be via EA4ATI.

N4BP and K4PG, as C6AKQ and C6APG respectively, will be active from the Bahamas through February 22nd. Look for them to be on 30, 17 and 12 meters between antenna jobs. QSL to their home callsigns, direct or via the Bureau.

Also, K3TEJ, will active from Dominica through February 27th. He is operating CW and RTTY with a focus on 160, 30, 17 and 12 meters. QSL via K3TEJ, direct or via the bureau.

And later this year, keep time open to look for K9OT and KB9LIE who plan on operating portable F P from Miquelon Island from July 10th to the 18th. They will also participate in the IARU HF World Championship Contest on July 12th and 13th. Activity outside of the contest will be on 160 through 6 meters using CW and SSB. QSL direct with return postage or through the bureau. Logbook to the World electronic QSL's are also welcome but they are not accepting verifications from those using eQSL.

(Above from various DX news sources)

**

THAT FINAL ITEM: RADIO ROOM ON QM RENAMED TO HONOR K6OSC

And finally this week, word that the wireless room on board the Queen Mary Ocean Liner attraction in Long Beach California was recently renamed the Nate Brightman Radio Room. This, in honor of Nate Brightman, K6OSC, who helped to make a radio station on board the retired luxury liner a reality many years ago. Amateur Radio Newsline's Bruce Teenent, K6PZW, has the rest of the story:

--

Nate Brightman, K6OSC, lives in Long Beach, California and holds an Advanced Class license. Now in his 90's, he was first licensed in 1957, and is in his 32nd year in service with his local Red Cross Disaster Services group. More important is that Nate Brightman is now in his 30th year as manager of W6RO aboard the Queen Mary. Some say it's a station that would not exist if not for K6OSC.

Nate Brightman first thought up the idea of an amateur radio station aboard the Queen Mary to be on the air during the ocean liner's final voyage from Southampton England to Long Beach. He suggested the concept to his local club, the Associated Radio Amateurs of Long Beach. After getting the green light, Brightman began the very difficult job of trying to get things organized on an international scale. He was successful when fellow club member Al Lee, W6KQI, was issued a United Kingdom amateur radio license and the commemorative call letters of GB5QM. This was the only amateur radio station ever licensed for operation aboard the Queen Mary, and the first time an American was licensed to operate ham radio aboard a British flag-carrying ship.

The voyage lasted six weeks due to the route the Queen had to take around Cape Horn. During the trip, W6KQI made over 3,000 contacts using a donated Swan 500 transceiver. After the ship was in port at Long Beach for restoration, Brightman submitted a 12 page proposal for a permanent amateur radio operation aboard the Queen Mary. It took a number of years, but on April 27th 1979, Queen Mary station W6RO went on the air and has been in continuous use ever since.

For his work in getting a ham station on the Queen Mary for its final voyage and in spearheading the W6RO station in the ship's Radio Room, Nate Bightman, K6OSC, was named as the 1991 recipient of the Dayton Hamvention Special Achievement Award.

Now the ultimate honor for the man that made it happen: The renaming of the radio room in his name as a lasting tribute. One that was announced by the outgoing Director of the Queen Mary Foundation, Joe Prevatil, before his organization turned over management of the ship to Save the Queen, LLP. Ironically, Prevatil made the announcement at K6OSC's 90th birthday party which was held on board the Queen Mary.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, editorializing a bit to say congratulations Nate Brightman, K6OSC. You truly deserve the honor.

--

Hi All,

I know from my "bounced e-mail" that Netcom / Earthlink had problems overnight and that many of you did not receive Newsline 1644. The newscast was prefeed poted at about 2:05 a.m. Pacific, as is normal, but I received 53 bounce backs out of 67 on the prefeed list. As I am on vacatoion I did not open my e-mail till a bit ago and found the problem. I have no resent the prefeed and hope that this time it makes it to all of you. Meantime I am about to get on the phone to Earthlink and have a few words with them. Lastly to thoe of you who received the original feed -- the replacement is the same material

My appologies to all...

Bill Pasternak, WA6ITF
Editor, Etc.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations | campaigns will not be permitted. Relatively unbiased announcements or | reviews of new amateur radio-related products or services may be | permitted at the discretion of the moderators. Such posters are asked | to disclose their financial or professional interest, if any, in such | products or services. |

Mentions of small amounts of free items for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. | However, a pointer to a website or other external source of information | is permitted and encouraged in cases where it is relevant to an existing | thread, with appropriate context being given in the post. A URL with no | information about what a user should expect to find there will be | rejected. A pointer to information that is off-charter for | rec.radio.amateur.moderated will be rejected, as will a pointer which | itself does not meet the rec.radio.amateur.moderated guidelines (such as | a URL containing embedded name-calling). |

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar

government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

Amateur Radio Newsline(tm) Report 1645 - February 20 2009

Amateur Radio Newsline report number 1645 with a release date of Friday, February 20th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams down-under continue their relief work in the wake of this year deadly bush fires, amateurs in Brunei set up a disaster communications network, the K5D operation comes on the air, Newsline looks for speakers for this years Hamvention Ham Radio Town Meeting and a 4 meter E-M-E record is set. Yes, we did say 4 meters and you can find out the details on Amateur Radio Newsline(tm) report number 1645 coming your way right now.

RESCUE RADIO: WICEN CONTINUES TO ASSIST IN VK BUSH FIRES

Ham radio response to Australia's bush fires continues. Bill Pasternak, WA6ITF, is in the newsroom with the latest information from down-under:

--

Australia's Wireless Institute Civil Emergency Network, better known as WICEN, continues to provide communications links in a number of affected bushfire areas.

WICEN in Victoria state and the State Disaster Plan Emergency Communications Organization were both put on standby alert on Saturday February 7th. This shaped up to be the worst day since Australia's Ash Wednesday Bushfire disaster of 1983.

WICEN was fully activated on February 9th. That was two days into the Black Saturday bushfire. This, with an initial request for operators in Kinglake region north-east of Melbourne. This was one of the worst hit areas and had no communications or power. Operators were also needed in Alexandra.

The role of the WICEN hams was to provide links on a 24 hour basis between Kinglake and the Alexandra municipal emergency coordination center for the Shire Council. The operators headed for Alexandra had to reach their assignment via a long route due to road closures. Those with duty at Kinglake needed to be escorted through hazardous road conditions from the staging area at the Whittlesea Showgrounds. WICEN hams also assisted in the restoration of the local municipal two-way radio service in the Kinglake area.

Amateur radio links were made with another the town. That of Narbethong with two operators maintaining them.

The next element of the WICEN deployment was at McAdam's Hill. There, where two operators provided health and welfare communications for a team of firefighters at their base camp.

Two skeds, one at 10:00 and 21:30 hours, are held daily on 3.6 MHz. Those nets help to keep emergency responders up to date and share information. They also enable a check on the welfare of emergency communications operators in the field. A portable repeater is in service.

Clearly this disaster is far from over and we will have more in future Amateur Radio Newsline reports.

In the newsroom in Los Angeles, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

A we go to air, the death toll from these brush fire has already exceeded 180. One man has been arrested and will likely be charged with starting at least one of the blazes. (Amateur Radio Victoria WICEN)

**

RESCUE RADIO: GEORGIA SKYWARN ACTIVATES FOR SEVERE WEATHER OUTBREAK

This just in. The National Weather Service office in Peachtree City, Georgia, was quite busy on Wednesday, February 18th and a Skywarn net was equally active as well.

According to Lloyd Colston, KC5FM, an alert was called at about 3:45 P.M. local time as warnings went out about the possibility of tornadoes and other severe weather moving through the area.

Amateur radio operations were brought on line from the National Weather Service office. These included an Echolink net, a high frequency voice net on 3.975 MHz, and the use of the Automatic Packet Reporting System on 144.39 MHz. Here's a sample of the VHF communications that went on during the storm:

--

Actual ham radio emergency communications audio.

--

KC5FM says that baseball size hail along with damaging winds were reported by hams to the National Weather Service office. More on the hams involved in this severe weather response is on-line at www.georgiakywarn.com. (KC5FM)

**

RESCUE RADIO: BRUNEI HAMS SET UP EMCOMM STATION

The Brunei Darussalam Amateur Radio Association has taken on the role of providing assistance in time of national emergencies. This by establishing an emergency communication network using amateur radio to reach remote areas of that nation that have conventional communication system breakdowns. According to a club release the organization has installed a ham radio station at the Brunei National Disaster Management Center.

This station is manned by members of association. It is designed to receive reports from the remote villages in the and pass them on to first responders and other disaster assistance providers.

It should be noted that the current bad weather and associated disasters have hit numerous Brunei residents depriving some around the country of their minimal life essentials. (Southgate)

**

RESCUE RADIO: VE4DJ NAMED MANATOBA EMERGENFCY MEASURES ORGANIZATIOIN DIRECTOR

Still with rescue radio news, word that Don Mackinnon, VE4DJ, has become the Director of Planning for the Manitoba Canada's Emergency Measures Organization. A lawyer and former police officer, Mackinnon had been the Radio Amateurs of Canada Manitoba Section Emergency Coordinator for some 12 years.

Besides his many other contributions to amateur radio, VE4DJ chaired the Radio Amateurs of Canada National Training Resource Group that was commissioned by the organization's Vice President for Field Services in August, 2006. (RAC)

**

REAKING DX NEWS: DESECHEO ISLAND K5D IS ON THE AIR

The long awaited K5D Desecheo Island DXpedition is now on the air. The QSO count was slightly under 10,000 in the first 24 hours. This, with only two stations in operation most of that time.

Getting to Desecheo took the operators a bit longer than anticipated. This, due to higher-than-expected winds which delayed helicopter trips from the transport boat to the island campsite. This meant that the group was unable to complete their planned for full setup on Thursday, February 12th. That problem is well behind them

Meantime the Caribbean Amateur Radio Group is planing to hold a satellite Q-S-O with the Desecheo Island DXpedition team. The contact had planned for this past Friday, February 20th, using the AO-51 satellite.

So far the K5D has operation has exceeded 40,000 contacts in the short time it has been on the air. We will have more DX related news later on in this weeks Amateur Radio Newsline report. (Press release)

**

RADIO RECORD: THE FIRST 4 METER EME CONTACT CLAIMED

It could be a world record on the 4 meter band. This, as Andy Kissack, GD0TEP, on the Isle on Man reports on a Earth - Moon - Earth or EME contact which that he says could prove to be a first.

Andy says on his website that following tests carried out by himself and GD4GNH back in 2006, he finally found a suitable station to try for an EME contact on the 4 meter band. As a result, Andy and ZS6WAB in South Africa tried an EME sked on Friday evening, February 13th. Unfortunately, his mast mounted transmit and receive relay failed due to water ingress.

Their 2nd try was the morning of February 15th. Visibility of the Moon at Andy's location came at 00:38 UTC and at 01:34 he received his first moon echo. About a minute later, Andy and ZS6WAB completed what both operators believe to be the world's first 4meter EME contact using the low noise JT65a digital mode. Screen shots of the QSO are on line at www dot gd0tep dot com. (VHF Reflector)

**

REGULATORY: INTERIM FCC CHAIRMAN COPPS MAKES FCC INFO MORE ACCESSABLE

Interim Federal Communications Commission Chairman Michael Copps is trying to make communication within the agency and between the FCC and the public more accessible.

Radio World reports that the FCC now holds a weekly meeting of bureau heads and representatives from the commissioner's offices. This to permit an ongoing dialogue between the various bureaus. He is also setting regularly scheduled dates for Commission meetings.

Chairman Copps has also begun a new program of on-passing information from his office to the other commissioners and bureaus at the same time. This he says permits everyone concerned with a given matter a better idea of what's taking place. (RW)

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the KD6LC repeater serving Guerenville, California.

(5 sec pause here)

**

BREAKING NEWS: NC HAMS WIN EXCLUSUION FROM MOBILE CELLPHONE BAN

North Carolina lawmakers are again considering a ban on cell phone use while driving, but Amateur Radio operators in the state would be specifically exempted, thanks to an amendment requested by Bob Conder K4RLC, the ARRL State Government Liaison officer.

The bill was debated on Tuesday by the state Senate Commerce Committee. State Senator William Purcell, a co-sponsor of the bill, told Conder that

Amateur Radio was already exempt because it wasn't covered by the definition of "mobile phone". Conder asked for a specific exemption anyway, fearing that law enforcement officers on the street wouldn't make the distinction between a cell phone and ham radio. The amendment, which reads "This term does not include two-way mobile radio transmitters or receivers used by licensees of the Federal Communications Commission in the Amateur Radio Service" was accepted without discussion.

During committee debate, one Senator did ask if the bill would cover Nextel style "push-to-talk" - operation that is similar to Amateur Radio. After that concept was explained to some senators who didn't understand it, the bill's sponsor said it "probably would" be included in the ban.

Similar bills have been introduced in North Carolina over the past few years, and all have been defeated or died in committee. A similar fate is expected for this bill, but last year the state did enact a ban for drivers under 18.

Reporting for Newsline, I'm Gary Pearce KN4AQ. (KN4AQ)

**

IOWA PROPOSES BANNING ALL MOBILE WIRELESS COMMUNICATION DEVICES

Iowa could become the first state to completely ban all forms of wireless mobile in motion communications that is not operated hands free. A measure being brought before the Iowa legislature will prohibit the driver of a motor vehicle from operating or using a cellular telephone or any other wireless communication device without using a hands free adapter while operating a motor vehicle on a street or highway.

The only exceptions are for emergency situations when the use of a handheld phone or device is to call 911 or contact law enforcement authorities or an emergency response agency. Nor does the bill prohibit a driver from using such devices when the motor vehicle is at a complete stop off the roadway.

No exemptions are included for law enforcement, fire, rescue or any other certified first responders. As written, the measure appears to also ban commercial two-way radio, GMRS, amateur and even 11 meter CB. The proposed legislation establishes a fine of $30 as the penalty for a first offense.

The Iowa measure is designated as House File 9. Hams and other two way radio interests will need to act quickly to secure exemptions before the proposal becomes an Iowa state law. (AC0LM)

**

ENFORCEMENT: WINTER HAVEN FLORIDA PIRATE OPERATOR ARRESTED

Deputies in Polk County Florida along with the FCC and the Winter Haven Police have arrested Anthony Davis for unlicensed broadcasting. This, after searching his Winter Haven home.

Detectives say that they found audio mixers, microphones, and other station equipment at his residence. Also found was a 100 watt transmitter that they say Davis was using to broadcast reggae music station on 87.9 FM.

Davis called his station format "One Love Radio". He has been charged with unlawful transmission on a radio frequency which is a third degree felony under Florida state law. The raid on Davis home was the result of complaints from a local Orlando TV station. (TampaBay News)

**

HAM RADIO AND THE WWW: GOOD CHANGES AT QRZ.COM

Some changes to the look and feel of the giant QRZ.com ham radio website. Effective immediately, the Ham Radio Announcements area has been renamed Contests, DXpeditions and Special Events and is directly clickable from the home page menu bar as the Events button. Also, the Hamfests and Event Calendar has been renamed simply to Hamfest Calendar and now has a direct menu button from the front page. (QRZ.com)

**

THE SOCIAL SCENE: PACIFICON AND EMCOMMWEST MERGE

Some major changes coming to ham radio conventions west of the Continental Divide. This as Pacificon announces it merger with the Reno, Nevada, based Emcommwest. Don Carlson, KQ6FM, is in Reno and has the details:

--

Prior to this year, Emcommwest has been an emergency communications specialty convention, here in Reno, Nevada during may and Pacificon, home to the pacific division convention in San Ramon, California during October. well, this year, they will combine into one giant amateur radio convention as Emcommwest hosts Pacificon, which will be this year's pacific division convention.

According to Director Bob Vallio, W6RGG, this is a merger that will bring the best of amateur radio to one location for the enjoyment of everyone. The dates are May 1st to the 3rd at the Circus-Circus hotel resort and casino in downtown Reno.

We'll have license testing, the Reno spring Ham-Swap on Saturday morning, a Friday night welcome barbecue, and of course, our Saturday night banquet featuring our special guest, former FCC enforcement chief Riley Hollingsworth, K4ZDH. keynote speaker will be Steve Ewald, WV1X, the ARRL's public service manager from Newington, who will join pacific division leadership officials as they take part in the ARRL forum.

There will also be sessions, seminars and forums and an expanded vendor hall, with a little something for everyone!

Online registration begins on Saturday, February 21st, and vendor registration forms are available now.

As the event director, I would like to personally join Director Vallio and everyone in the Pacific division in thanking the members of the Mt. Diablo Amateur Radio Club for their years of service in putting on a top notch convention, and for their help with this transition. We will look forward to seeing everyone this may for what could prove to be the best convention this side of Dayton!

For the Amateur Radio Newsline, this is Don Carlson, KQ6FM in Reno.

--

The Combined Emcommwest 09 and Pacificon 09 will take place on May 1st to the 3rs at the Circus- Circus Hotel and Casino in Reno, Nevada. More information is on-line at www.emcommwest.org. (KQ6FM, ARNewsline(tm))

**

THE SOCIAL SCENE: SPEAKERS NEEDED FOR HAMVENTION TOWN MEETING

If you have ever dreamed of being a speaker at the famed Dayton Hamvention, here's your chance to make that dream come true.

Each year Amateur Radio Newsline produces and hosts the Ham Radio Town Meeting at Hamvention. This year we plan to explore how of becoming a ham as a teen or pre-teen has influenced ones adult career. And while many of the speakers slots have already been filled we are still looking for a few more folks wanting to share the story of how ham radio helped them decide what to do in life. We especially are looking for those who are involved in medicine, education and the performing arts but we will give consideration to anyone who would be interested in speaking.

OK. There are a few caveats. First off, you are own your own as far as travel and accommodations. The Hamvention no longer pays the expenses for speakers. Also, you will only get 10 minutes to tell your story after which you will be expected to answer questions from the audience at the Hara Arena and those on-line in their homes.

This years Ham Radio Town Meeting takes place on Saturday, May 16th at the Dayton Hamvention. If you are interested in being a presenter please e-mail us an outline of your proposed presentation to newsline@arnewsline.org.

Oh yes. Please be sure to include your phone number and other contact information. We will look over all submissions and get back to you if what you have to say fits with the goal of this years Hamvention Ham Radio Town Meeting. We look forward to hearing from you. (ARNewsline(tm))

**

NAMES IN THE NEWS: IARU ELECTS NEW PRESIDENT AND VICE PRESIDENT

Some names in the news. First is Timothy S. Ellam, who holds the calls VE6SH and G4HUA and who is the new President of the International Amateur Radio Union. Ellam replaces former ARRL president Larry Price, W4RA, who has served as IARU President since 1998 and has decided to retire at the end of his current term in May.

Ellam is a long time Canadian radio amateur. He lives in Calgary, Alberta, and until now has served as Vice President of the IARU.

Elected as the new IARU Vice President is Ole Garpestad, LA2RR. Garpestad, a resident of Oslo, Norway. He is presently President of the IARU Region 1. Both men will serve a five year term beginning on May 9th. (RAC)

**

NAMES IN THE NEWS: EI3IO JOINS IARU EXTERNAL RELATIONS COMITTEE

The Irish Radio Transmitters Society or IRTS says that Dave Court, EI3IO, has been invited to join the International Amateur Radio Union's Region 1 External Relations Committee as an expert adviser. The External Relations Committee is the International Amateur Radio Union's Region 1 interface with the CEPT and other radio regulatory bodies on matters of importance to the interests of the amateur service such as spectrum requirements and licensing. The IRTS says that it knows that Court's experience and advice will be of great assistance to furthering the work of the External Relations Committee in Region 1 of the IARU. (IRTS)

**

NAMES IN THE NEWS: AMSAT ANNOUNCES BEST FIST OF SKN ON OSCAR

And some callsigns in the news. These are the two dozen hams that each received at least one Best Fist nomination from someone the stations worked during Straight Key Night on OSCAR 2009.

The list is to long to mention each call here. AMSAT says that thanks in large part to the popularity of the AO-51 ham satellite, that there were a record 24 Best Fist winners this year. Participation outside North America was especially high, especially in Asia. (ANS)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WITH ARNEWSLINE: SOME THANK-YOU'S FOR MAY 2008

Ladies and gentlemen, with some thank you's for our listeners whose donations keep these newscasts coming your way, here's our Support Fund Administrator Andy Jarema, N6TCQ:

--

In the month of May 2008 we heard from the Dayton Amateur Radio Association; William Smith, W7GHT in Boise, ID; Gregory Hayes, Rick Rau,

KO6FR, and the Silverado Amateur Radio Society in Napa, CA; Nate Brightman, K6OSC, in Long Beach; Brad Berryhill, WA6JJB in Anaheim Hills; Scott Dicks, KF6PIH in Los Angeles. Lastly, our incredible friends at the Anchorage ARC, who always seem to time it correctly to pull our hand away from grabbing the anode of the final tube.

Also, regular contributors Benton Bonney, Joseph Bartzi, Jr., William Walters, and Stephen Perluss and the South Orange Amateur Radio Association.

Next time we will acknowledge all of our PayPal contributors from May 2008. Just a reminder to you- if you do use our incredibly easy link to PayPal from our website at arnewsline.org, be sure to include your callsign in the memo field, so that we can include it on the air. Or you can also contribute at our regular support fund address given at the end of this broadcast.

I'm Andy Jarema, N6TCQ, and we thank you for listening, and for your support.
--

More with Andy in future Newsline reports. (Newsline Support Fund)

**

THE CHANGING OF THE GUARD: CANCER REAEARCHER JOHN KANZIUS, K3TUP - SK.

I'm Bill Pasternak, WA6ITF, back with the sad news that a ham who used his knowledge of RF garnered through amateur radio to develop a possible cure for cancer has died due to complications associated with the disease. John Kanzius, K3TUP, passed away on Wednesday morning, February 18th in a Florida hospital from pneumonia while undergoing chemotherapy for b-cell leukemia. While he had no formal medical training K3TUP was described by Discover magazine as one of the world's 50 most promising scientists. His family has been quoted as saying that his research in curing cancer will continue. John Kanzius was only age 64. Amateur Radio Newsline will have a complete profile on his life and his career next week. (ARNewsline(tm), W2VU, others)

**

EMERGING TECHNOLOGY: DIGI COMM ALGORITHM MAY PREVENT DRUG INTERACTIONS

Math used in radio propagation may also help those taking multiple medications to, avoid drug interaction. David Black, KB4KCH, is in our Southeast Bureau with more:

--

Researchers at the Burnham Institute for Medical Research have shown that search algorithms used in digital communications can help scientists identify effective multi-drug combinations.

Using what's known as the stack sequential algorithm that was developed for digital communications, a team of scientists searched for optimal drug

combinations. This algorithm can integrate information from different sources, including biological measurements and model simulations.

This differs from the classic systems biology approach by having search algorithms rather than explicit quantitative models as the central element. The variability of biological systems is the fundamental motivation for this strategy.

The study, led by Giovanni Paternostro and was published in the December 26, 2008, issue of P Computational Biology magazine.

This work was funded by the Ellison Medical Foundation, National Institutes of Health and the National Science Foundation.

--

The number of lives that can be saved by the results of this study could be into the thousands each year. (Science OnLine, Burnham Institute)

**

HAM RADIO IN SPACE: KAGAYUKI HAMSAT LISTENERS NEEDED TO HELP FINFD THE BIRD

Turning to ham radio from space, word that nothing has been heard from Japan's Kagayaki amateur radio satellite since it was launched last month. The bird should be transmitting a beacon on 437.375 MHz and the controllers of Kagayaki are asking anyone with the ability to monitor that frequency to do so and to report back if the satellite is heard. More information on the satellite and how you can help is on the website whose U-R-L can be found at the Kagayaki English web site at www.sorun.co.jp/e_kagayaki/top.html (JN1GKZ)

**

WORLDBEAT: TWO INTERNATIONAL MUSEUMS WEEKENDS IN JUNE

The International Museums Weekend special event will be a double weekend event in 2009. Operations and will take place take place on both the 20th and 21st of June and again on the 27th and 28th . All radio amateurs are encouraged to participate in this event by setting up stations in their local museums. Full details of the event can be found on the International Museums Weekend website. Its in cyberspace at www.ukradioamateur.uk/imw (RSGB)

**

ON THE AIR: EDDYSTONE USERS GROUP TO ACTIVATE GX3EUG and GX7EUG

The Eddystone User Group will take to the air with special event calls GX3EUG and GX7EUG on Sunday March 1st from the site of the former World War 2 Royal Air Force base at Sutton Bridge, Lincolnshire in the United Kingdom. This may be the last time they get to operate from the location as the site is due to be developed shortly into a vast industrial estate. Listen out for the two calls on both 80 and 40 meters and QSL as directed by the operator you make contact with. (Southgate)

**

DX

In D-X, word that SP2JMR and SP2JMB will be on the air portable 3B9 from Rodrigues Island between April 1st and the 8th. They will then be on from Mauritius between April 9th and the 17th. Activity is expected to be on all bands using CW and SSB. QSL as directed by the operators on the air.

A group of German operators will be active as CT9L March 7th and 8th during the ARRL DX SSB Contest. QSL via DJ6QT. Outside the contest period the operators will probably sign their own home callsigns portable CT3. For those contacts QSL as directed on the air.

A team of nine New Zealand operators will be activating Chatham Island in March. The team leaders are ZL2AL and ZL2AAA. ZL3JT in Christchurch is the designated pilot station for the operation. Look for operations on 160 through 10 meters using CW, SSB, RTTY. Although ZL7 is not particularly rare it still is in the top 100 needed for DXCC. As such it still generates quite a bit of activity on the bands.

Lastly, members of the HA5KHC high school radio club in Budapest are active through March 31st as HA130HALLO. The unique callsign is on the air to celebrate the 130th anniversary of first appearance of the telephone in Hungary. Operations are to be on all bands mainly using CW, but theres is said to be some activity on SSB, PSK and RTTY. QSL via HA5KHC via the bureau. No electronic QSL's are being accepted by this operation.

Above from various DX news sources.

THAT FINAL ITEM: EMCOMM HAMSTER POWER

And finally this week, hams involved in future emergency communications set-ups where no form of power is available might want to plan on bringing some hamsters along. Yes, we said hamsters. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the rest of the story:

--

Researchers at the Georgia Institute of Technology are, indeed, looking at hamsters as subjects capable of producing electricity by wearing a power-generating jacket - if you will - that responds to the animal's movements.

Wait! Don't tune us out yet.

This is real.

And, in fact, it's research supported by your tax dollars courtesy of the Defense Advanced Research Projects Agency - also known as DARPA, the Department of Energy, and the Air Force.

According to the online news service, Science Daily, at the heart of the experiment is use of nanotechnology to harness this new source of energy.

The researchers claim that they can convert any mechanical disturbance or even irregular biomechanical energy into electricity.

Let's see, so that means a little hamster, fitted with one of those special jackets (wonder how they keep the darn things on) runs on a wheel in his cage and produces small amounts of electricity. Maybe enough to spark something.. hmm.

Well, that's as far as I'm going to go as far on this science lesson.

Oh, wait, there's more!

The researchers say that even tapping on your Blackberry or cell phone key pad can produce small amounts of electricity.

Does that mean I have to put one of those funny nano jackets on my finger?

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The bottom line: Those furry little creatures that some kids have as pets may one day be the answer to all of our emergency communications power needs. Then again maybe not. (Adapted from Science Daily)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

A reminder that the nominating period for the 2009 Amateur Radio Newsline Young Ham of the Year Award is now open. Complete details are on our website at www.arnewsline.org Just scroll down to the words "2009 YHOTY Nominations Now Open" and click for more information and an official nominating form.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, and I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

==> HAMS IN AUSTRALIA ASSIST WITH MASSIVE BUSHFIRES

In the Australian state of Victoria, Amateur Radio operators have been
activated to provide communications links into towns that have had their
normal communications destroyed by the bushfires that have decimated the
state. Members of the Wireless Institute Civil Emergency Network in
Victoria (WICEN (Vic)) <http://www.vic.wicen.org.au/> -- Australia's
version of ARES -- were activated on February 8, with members being
deployed to areas with loss of power and other facilities.

According to the Wireless Institute of Australia (WIA)
<http://www.wia.org.au/> -- that country's IARU Member-Society --
authorities and resources in Victoria have been "stretched to the
limit." WICEN has been on high alert since the fires started on January
```

28. On February 11, WICEN (Vic) Secretary Mark Dods, VK3XMU, said, "It now appears that WICEN's role in this emergency is going to be a long hard marathon over an extended period."

The fires -- some of which are believed to have been deliberately set, while at least one fire began due to a lightning strike -- have so far claimed 201 lives, including one firefighter; local police say they do not expect the death toll to go much higher. Covering more than 1100 square miles, the fires have destroyed more than 1800 homes; officials estimate at least 7500 people are now homeless due to the fires. Victoria Premier John Brumby, in speaking about the bushfires, said, "Out there, it is hell on earth" <http://www.premier.vic.gov.au/index.php?option=com_mymedia&Itemid=29%C3%83%C2%A2%C3%82%C5%92%C3%82%C2%A9=en&media_id=364&task=text>.

On February 12, Dods said that "WICEN was given the task of establishing a link between Narbethong and the Municipal Emergency Coordination Centre in Alexandra. Initially, the Narbethong-Alexandra link will be on HF. The two WICEN operators that were on standby for deployment to Buxton have been dispatched to Alexandra to join a column that will be moving down the Maroondah Highway to Narbethong this afternoon. An extra WICEN operator is being deployed to the Alexandra MECC to assist the operator already there with expected extra traffic from Narbethong Three WICEN operators are now working 8 hour shifts at the Alexandra Incident Command Centre (ICC), operating CFA/DSE radios. We will be providing operators for this task until further notice."

Dods said hams would make "temporary repairs" to VK3RTN, the 6 meter repeater on Mt Gordon that suffered damage during the fire, making it usable until they can get and install a new repeater. The Mt Gordon repeater is being used as a link between Alexandra and Narbethong. The WICEN station in Narbethong closed Saturday, February 14. "The Alexandra WICEN station will continue to operate after the closure of Narbethong," Dods said. "Their role includes guiding relief operators into the town, maintaining an HF link to Melbourne and a listening watch. Operators in the Alexandra ICC have reported increased radio traffic overnight and emphasised the need for concise, prompt and accurate handling of the traffic despite the sometimes tense environment."

Dods recounted that there was what he called a "flurry of activity" on the evening of February 14: "WICEN received a request from DSE [Department of Sustainability and Environment] to provide operators at Woori Yallock ICC. We were asked to cover the night shift last night and the next four nights. Being a Saturday night, it was difficult to contact operators with many being not at home, and others having their mobile phones diverted to voice mail. Two operators agreed to be deployed at short notice, however. They travelled to Woori Yallock only to find that there had been an administrative foul-up and that they were not required. Those operators have returned home with my thanks and apologies. This false start at Woori Yallock does give us a 'heads up' that DSE and CFA [Country Fire Authority] resources may be beginning to

stretch thin, and lead to more ICC deployments."

On February 17, Dods said that two WICEN operators will be going to "McAdam's Hill, east of Lake Mountain, to provide health and welfare communications for the firefighters at a Base Camp being set up there. Initially, the primary operating frequency will be 3.6 MHz, so there may well be a need for stations monitoring that frequency to relay traffic. Deployment of a portable 2m repeater to support the McAdam's Hill station is under consideration."

The WICEN HF Net continues to operate on 3.6 MHz at 1000 and 2130 hours (UTC + 11) daily. "As well as keeping a check on the welfare of operators in the field, the Net is being used to pass updated activation information, and also for amateurs in remote areas of the state to check their communications," Dods said. "It is reassuring to hear stations from all over the state and interstate on the Net, demonstrating that we can, if necessary, establish communications independent of hilltop infrastructure. It has been very handy to have other amateurs monitoring 3.6 MHz when they can to relay when fading occurs. Many thanks to those operators who have relayed traffic so far."

Dennis Dura, K2DCD, ARRL Emergency Preparedness and Response Manager said: "The work the Australian hams have been doing and the issues WICEN have been facing are not unlike what ARES personnel encounter here. The long hours and duration of the disaster response and the dwindling availability of amateur volunteers take a toll. Yet Amateur Radio still is able to complete the mission. The flexibility we bring is key to meeting the emergency communications needs of those the amateur community serves. Our hearts go out to all those that have lost loved ones and whose lives have been forever changed by these fires. Our colleagues in WICEN make the Amateur Radio community proud in the work they are performing in these very difficult conditions."

==> HAMS CAN STILL HELP WITH DIGITAL TV (DTV) CONVERSION

Even though the mandatory conversion date for television stations to switch from analog signals to digital has been delayed by four months <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-09-9A1.pdf>, hams are still assisting the FCC and their communities by providing technical support to those who need assistance <http://www.arrl.org/news/stories/2008/12/10/10499/>. Although many TV stations won't turn off their analog signals until the new deadline, the law allows stations to apply to switch on the original date -- February 17 -- or any time before June 12.

According to the FCC, there are nearly 1800 full-power televisions stations in the US. Of these, the FCC said that "220 will have terminated their analog signals before Tuesday [February 17] and another 421 will terminate their analog signals on Tuesday [February 17] before 11:59 PM, for a total of 641 stations, or about 36 percent of all full-power stations nationwide." The FCC has posted a list of stations making the conversion on or before February 17 on their Web site

<http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-288530A2.pdf>.

ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said he has been getting e-mails and phone calls from Amateur Radio operators concerning the digital TV conversion, now set to take place on Friday, June 12. "People are asking what's happening with the DTV conversion -- especially now that it's been delayed -- and wondering what we as hams can do to help," he said. "There has been considerable confusion concerning the extension of the date, but the role of Amateur Radio is simply to be helpful to the people in our communities."

Pitts advises those hams that are helping to provide technical educational assistance keep in mind the following troubleshooting pointers, provided by the FCC:

* Check Your Connections
Check that your digital-to-analog converter box (or digital television) is connected properly. Make sure that your antenna is connected to the antenna input of your digital-to-analog converter box (or digital television). If you are using a digital-to-analog converter box, ensure that the antenna output of the converter box is connected to the antenna input of your analog TV. If you are unsure of the proper connections, refer to your owners manual.

Make sure that your components are plugged in and turned on.
If using a digital-to-analog converter box, tune your analog TV to channel 3. You should see a set-up menu or picture on your screen. If you do not see this, re-check your connections.

* Perform a Channel Scan
Digital-to-analog converter boxes (and digital televisions) have a button -- usually on the remote control -- that is labeled "Set-up" or "Menu" or some similar term. Press that button to access the set-up menu. Using the directional arrow buttons on your remote, scroll to the option that allows you to perform a "channel scan." The channel scan will search for digital broadcast channels that are available in your area. If you are unsure how to do a channel scan, please refer to the owners manual for your converter box or digital television (whichever applies).

Once the channel scan is complete, you will be able to tune to the digital channels received by your antenna.

* Adjust Your Antenna
As many hams know, small adjustments to an antenna can make a big difference; digital TV is no exception. If you have an indoor antenna, try elevating it and moving it closer to an exterior wall of your home. After adjusting your antenna, perform another channel scan to see if your reception has improved.

While adjusting your antenna, it may be helpful to access the "Signal strength meter" on your converter box or digital television set to determine whether your adjustments are improving the signals' strength.

You can probably find your signal strength meter via the "Menu" function on your remote control, and your owners manual will provide detailed information on how to perform this function. Remember to do another channel scan after you have adjusted your antenna.

Make sure that you are using an antenna that covers both the UHF and VHF bands and that is connected properly (depending on what channels are in use in your area).

Late last year, the FCC requested assistance from the ARRL in providing educational support to local communities regarding the digital TV conversion.

"I really appreciate the willingness of the ARRL to actively participate in helping Americans with the transition to DTV and your helpful suggestions," said George Dillon, FCC Deputy Bureau Chief for Field Operations (now retired). "The DTV transition will be an historic moment in the evolution of TV. Broadcast television stations can offer viewers improved picture and sound quality and new programming choices. All-digital broadcasting also will allow [the FCC] to significantly improve public safety communications and will usher in a new era of advanced wireless services such as the widespread deployment of wireless broadband. Our goal is to engage the amateur community on a cooperative basis to help with the DTV outreach and to educate consumers."

The FCC said that it is seeking to ensure that even where all or most stations in a market are terminating analog service, consumers who are unprepared for the switch will continue to have access to critical local news and emergency information. In a statement released by the FCC, the Commission "examined each market in which stations planned to end analog service to try to ensure that at least one affiliate of the four major networks -- ABC, CBS, Fox and NBC -- would continue broadcasting in analog after February 17. Many had such a station, but in those instances in which there would be no top-four affiliate remaining in a market, the FCC attempted to ensure that analog local news and emergency information would remain available -- generally through what is being called 'enhanced analog nightlight' service. Under 'enhanced analog nightlight,' the top-four affiliates must keep at least one analog signal on the air to provide programming that includes, at a minimum, local news and emergency information" <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-288530A1.pdf>.

FCC Acting Chairman Michael Copps said that the Commission is "trying to make the best of a difficult situation. While this staggered transition is confusing and disruptive for some consumers, the confusion and disruption would have been far worse had we gone ahead with a nationwide transition on [February 17]."

For more information on the conversion to digital television, please see the DTV Conversion Web site <http://www.dtv.gov/>.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Scott McCann, W3MEO, of Queenstown, Maryland, asks: I am fairly new to SSB and CW on VHF and was surprised during the September ARRL VHF contest to have worked W2SZ, the RPI Amateur Radio Club station on Mt Greylock in Massachusetts. I was running 2 W CW to a homebrew four element beam 20 feet off the ground. The boys on the mountain were running a lot bigger station than I was.

This station was well over the horizon. I wonder what propagation mode supports this beyond line-of-sight (LOS) communication? I worked several other stations that were also well over the horizon.

The Doctor Answers -- The propagation mode is most likely troposcatter, in which VHF signals are scattered by the troposphere, the lowest region of our atmosphere extending about 7 miles to the border with the stratosphere. Troposcatter is in common use by the military and some commercial users for paths up to a few hundred miles -- generally using high power and high gain antennas.

Troposcatter is also the mode that results in a commonly occurring type of long distance TV transmission. W2SZ -- the Amateur Radio club at Rensselaer Polytechnic Institute in New York -- uses big power and antennas from a fantastic location, making this mode a common occurrence. You can find out more about troposcatter and the other propagation modes supported by the troposphere at this Web site <www.oe1cwj.com/literature/troposcatter.htm>.

Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org>; or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST, the official journal of the ARRL.

==> WORLD AMATEUR RADIO DAY TO RECOGNIZE AMATEUR RADIO'S ROLE IN DISASTER COMMUNICATIONS

Each year on April 18, radio amateurs celebrate World Amateur Radio Day. On that day in 1925, 84 years ago, the International Amateur Radio Union (IARU) was founded <http://www.iaru.org/>. In 2009, the theme of the event is Amateur Radio: Your Resource in Disaster and Emergency Communication.

"It is not by coincidence that last year's meeting of the IARU Administrative Council (AC) <http://www.arrl.org/news/stories/2008/06/26/10186/?nc=1> chose this subject at this time," said IARU International Coordinator for Emergency Communication Hans Zimmermann, F5VKP/HB9AQS. "While the Amateur Radio Service has traditionally made its contributions to emergency and disaster response ever since its very beginnings almost 100 years ago, this role has gained a lot of importance just in the recent past."

Citing the fact that natural, as well as manmade disasters are on the rise, Zimmermann pointed out that today's modern communication technologies are "increasingly complex, infrastructure-dependent and therefore also increasingly vulnerable. The Amateur Radio Service puts two equally valuable assets at its disposal for emergency and disaster prevention, preparedness and response: A large number of very flexible and mostly infrastructure-independent, local, national, regional and global networks, and a large number of skilled operators, who know how to communicate with often very limited means and to establish communications even under the most difficult circumstances."

Zimmermann said that the tools available to Amateur Radio operators "range from the most robust means such as battery-operated stations operating in Morse code, to links through Amateur Radio satellites and interconnectivity with the Internet, in voice, text, image and data modes. They range from local VHF networks of fixed, mobile and portable stations to shortwave networks that span the globe. All these networks are operated on a daily basis by men and women who are thoroughly familiar with their technology and their intricacies."

"Telecommunications have become a commodity that society takes for granted," Zimmermann stated, adding that "the sudden loss of that service is often felt in a similar way to the loss of shelter, food and medical support. When disasters occur in regions that do not have good coverage by public networks -- or when existing communications infrastructures have just been disrupted or destroyed by such events -- the Amateur Radio Service comes to the rescue. Amateur Radio operators provide communications for the rescuers and relief workers and their organizations and they help to provide communications for those affected by a disaster."

Zimmermann continued: "In fact, contributions to emergency and disaster relief are a major argument for the preservation and the extension of the privileges the Amateur Radio Service enjoys in international and national regulations. This is one of the reasons why more and more Amateur Radio operators -- through their clubs and their national societies -- prepare very seriously for their role in emergencies; however, their skills can be put to use only if they are known by other first responders. Effective response to emergencies can only occur with the work of volunteers in all the various fields, from search and rescue to medical assistance and those who can provide food and shelter. Communication skills are a new, but equally vital commodity."

==> JOHN KANZIUS, K3TUP (SK)

John Kanzius, K3TUP, of Erie, Pennsylvania, passed away February 18 in Florida from pneumonia. He was 64. Kanzius was best known for his research into finding a cure for cancer using radio waves, specifically 13.56 MHz.

In 1966 at age 22, Kanzius came to Erie, Pennsylvania to work for JET Broadcasting. After 24 years as a broadcast engineer, he was appointed vice president and general manager of the company in 1980. After

retiring, Kanzius was diagnosed with leukemia in 2002. He summarized his chemotherapy in a February 2008 article in QST as "Hoping we kill the cancer before we kill the person"<http://p1k.arrl.org/cgi-bin/topdf.cgi?id=109317&pub=qst>. In October 2003 -- thinking there had to be a better treatment -- Kanzius had the idea to kill the cancer cell with radio waves, not a new idea. But Kanzius went a bit further: Instead of using needles, as was currently used, why not "trick" the cancer cells into absorbing a metal target -- sent by RF -- into the inside of the cancer cells, leaving the healthy cells alone?

In 2005, Kanzius teamed up with cancer researchers at M. D. Anderson (part of the University of Texas health system in Houston) and Rice University (also in Houston). Using nanoparticles -- metallic objects measured in billionths of an inch -- heated by RF using a machine that Kanzius invented, the researchers were impressed: "The research scientists at Rice were stunned to see that my device could heat nanoparticles at the 13.56 MHz frequency," Kanzius said.

Kanzius credited his father for his inspiration: "Trying to build an array that would heat particles one billionth of a meter in length was challenging. But building equipment all of my life was inspired by my dad, W3NRE, who was licensed in 1934."

Kanzius told ARRL Media and Public Relations Manager Allen Pitts, W1AGP, that if it were not for his Amateur Radio background, "and all the days of experimentation to improve my station, this new procedure for treating cancer, which continues to show such promising results, would probably not be on the cutting edge at the largest cancer center in the world [M. D. Anderson]."

But Kanzius did more than just try to find a cure for cancer. In 1991, he was Top of Honor Roll in the ARRL DXCC program; at his death, he had 347 countries confirmed. In the March/April 1987 issue of NCJ, Tim Duffy, K3LR, described K3TUP as "a relatively new contest call," but said Kanzius had been DXing for many years: "As he has caught the contest bug, John has taken a station which was designed for busting DX pileups and converted it over to have the flexibility and brute force required to compete in Multi-Single contesting." Duffy described the station as sitting "situated on a high ridge that overlooks Lake Erie. The station is well secluded from city-type radio noise and the rural setting allows John to run several temporary beverages for low band receiving." Both Duffy and Randy Thompson, K5ZD, have operated from Kanzius's station.

Pitts recalled that in 2007, he received an e-mail from a ham, asking if he was aware of the research Kanzius was attempting: "I looked at the attached video clip and I was skeptical. But I became more curious about this kitchen table tinkerer-ham and investigated the claims. I learned two major things: First, this was not a harebrained scheme -- it really worked (!), and -- even more important for me -- John Kanzius was a true gentleman. Bright, polite and enthusiastic without being overbearing, I

liked him. Over the next months as I wrote the QST article about his work, I came to know him and his true desire to help other cancer victims. Since then, we stayed in touch by phone and e-mail. I enjoyed his delight as each step in the process of bringing his machine and concept to human use was proven by M. D. Anderson and other cancer research facilities. Some people just make your world better by being there. John was one of those people. Though I never met him in person, it was always good to hear from him and I enjoyed the friendship. Losing him makes the world a little colder. I will miss him."

Kanzius is survived by his wife Marianne, two daughters -- Sherry Kanzius and Toni Palmer -- and two grandchildren. Calling hours are Sunday, February 22 from 2-5 PM and 7-9 PM at the Duskas-Martin Funeral Home <http://www.dusckasmartinfuneralhome.com/>, 4216 Sterrettania Rd, Erie, Pennsylvania. A funeral service is planned for 10:30 AM on Monday, February 23 at the Episcopal Cathedral of St Paul <http://www.cathedralofstpaul.org/>, also in Erie. Memorial contributions may be made to the John Kaznius Research Fund <http://www.kanziuscancerresearch.org/>, Palace Business Center, 915 State St, Erie, PA 16501.

==> DIETER SCHLIEMANN, KX4Y (SK)

Dieter Schliemann, KX4Y, of Scottsboro, Alabama, passed away February 9 after a battle with cancer. He was 68. According to Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss/oindex.htm> International Chairman Frank H. Bauer, KA3HDO, Schliemann was instrumental in leading and supporting many key activities in AMSAT <http://www.amsat.org> and on the ARISS program. "Those that knew Dieter recognized that he was a 'class act,'" Bauer said, "a great gentleman and colleague who will be sorely missed by all."

Schliemann, an ARRL Life Member, was involved with ARISS, leading the school contact IRLP/EchoLink initiative. Through this Amateur Radio VOIP system, Bauer said Schliemann and his team "substantially extended our reach of the school contacts. And through his efforts, tens of thousands of school students and ham radio operators, worldwide, could listen to other school contacts, enhancing education and giving all a better understanding of what it is like to live and work on ISS. Dieter's diplomacy, teambuilding skills and attention to the details were impeccable and were well respected within the team. He rose to the challenge when I asked him to lead the IRLP/EchoLink team. At the time, there were strong, divergent opinions on the use of IRLP and EchoLink on ARISS. He singlehandedly developed a cohesive team that is producing great results and is enjoying working together."

Bauer said that Schliemann had been fighting cancer for a few years: "A month ago, all of us thought he was on the road to recovery. Unfortunately, that did not come to pass. Through it all, Dieter remained the gentle, caring person that we all have grown to love. During his illness, he remained dedicated to his AMSAT and ARISS causes and responsibilities. When he received the surprising news from the

doctors that he had only two weeks to live and despite being weak from a long hospitalization, Dieter got on e-mail and worked on a transition plan to ensure that IRLP/EchoLink capabilities on ARISS continues. What a great, compassionate, loving human being."

Rosalie White, K1STO, fondly remembered Schliemann. "As team members reported on what a great person Dieter was, and the ways he had helped ARISS, more and more came to light regarding so many things he had accomplished without many others knowing," she said. "He shunned the spotlight, yet he quietly took the initiative, never shying away from solving problems. The ARISS Team will miss Dieter terribly -- a wonderful friend and dedicated volunteer."

==>SOLAR UPDATE

Tad "Love comforteth like sunshine after rain" Cook, K7RA, this week reports: We saw a sunspot on February 11-13, then it was gone. Typical of sunspots recently, it was only seen briefly; this one was a relic of Solar Cycle 23, according to its magnetic signature. For at least a couple of years now, we've been expecting Solar Cycle 23 to bottom out and new Solar Cycle 24 spots to emerge, but the sunspot minimum drags on. Most projections are based on past cycle activity, so according to the timing of past solar minimums, we keep thinking surely soon there will be an explosion of new solar activity, but the Sun seems to tease us. Sunspot numbers for February 12-18 were 11, 11, 0, 0, 0, 0 and 0 with a mean of 3.1. The 10.7 cm flux was 69.7, 70.1, 70.1, 69.6, 69.5, 70.6 and 69.8 with a mean of 69.9. The estimated planetary A indices were 4, 3, 14, 10, 3, 1 and 2 with a mean of 5.3. The estimated mid-latitude A indices were 1, 2, 9, 6, 2, 1 and 1 with a mean of 3.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Shakespeare's "Venus and Adonis" <http://www.shakespeare-w.com/english/shakespeare/w_venus.html>.

==>IN BRIEF:

* This Week on the Radio: This week, the ARRL International DX Contest (CW) is on February 21-22. The AM QSO Party and the REF Contest are also February 21-22. Next week, the Russian WW PSK Contest is on February 27-28. Look for the UBA Contest (CW), Mississippi QSO Party, North American QSO Party (RTTY), CQ WW 160 Meter Contest (SSB) and the CQC Winter QSO Party to be on the air February 28-March 1. The High Speed CW Contest is March 1. The North Carolina QSO Party and DARC 10 Meter Digital "Corona" are both March 1-2. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar

<http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday March 8, 2009 for these online course sessions beginning on Friday, March 20, 2009: Amateur Radio Emergency Communications Level 2, Antenna Modeling, and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Get Ready for the ARRL International DX CW Contest this Weekend: This weekend will be a busy one for CW operators as the 2009 ARRL International CW DX Contest takes center stage. First started in 1929 as the ARRL International Relay Party, the ARRL DX CW Contest is the longest running contest in Amateur Radio. Stations from all around the world -- from Australia to Zimbabwe -- should be active for this great event that takes place on 160-10 meters (no contest QSOs are permitted on 12, 17, 30 or 60 meters). Stations in the US and Canada work only DX stations (Alaska and Hawaii are considered DX for this contest), and DX stations only work the US and Canada. DX stations will be trying to make as many QSOs with all US states and Canadian provinces as they can. The contest exchange is simple -- US and Canadian stations send a signal report and their state or province, while DX stations send a signal report and the amount of power with which they are transmitting. The ARRL International CW DX Contest runs from 0000 UTC Saturday, February 21 through 2359 UTC Sunday, February 22, 2009. Complete rules and forms can be found on the ARRL Contest Web site <http://www.arrl.org/contests/rules/2009/intldx.html>. Electronic logs should be e-mailed <DXCW@arrl.org>; paper logs can be sent to ARRL DX CW Contest, 225 Main St, Newington, CT 06111. Logs sent via postal mail must be postmarked no later than 2359 UTC Monday, March 23, 2009.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

46. CC&R's question

Newsgroup: rec.radio.amateur.moderated
Date: 2009-02-27 02:06:20 UTC
From: KC4UAI <kc4uai@gmail.com>
Message-ID: <df3796bd-fc16-468e-bbf7-ae2de3a93716@v39g2000yqm.googlegroups.com>
Source record: 2156

Hi,

I happened to be doing a bit of research in an effort to find out exactly what the CC&R's said about antennas for my house. I used to have a 75M inverted-V dipole in my back yard, but the association sent me a letter that said it had to come down because it was not allowed. I just took their word for it at the time because I didn't have a copy of the restrictions. Since then I've struggled to get something in my attic to work, with very little success.

Deed Restrictions must be "recorded" by the county clerk, just like liens and deeds, so I started to search the online records provided by my county but because restrictions are not filed on each lot, when I searched for them on my lot I didn't find them. Apparently they file them on the whole subdivision at once, so the search on my lot came up empty. What to do now?

Well, on a hunch, I did a search using the developer's name within a year of when my house was built and sold and I finally found the restrictions but I also found something else.

It seems that the developer actually sold the house and lot I own BEFORE they filed the restrictions on the deeds. In this case they sold my house to the original owner and signed the warranty deed on March 12th but didn't sign the deed restrictions until the 31st of the same year. Both documents where recorded by the clerk on the same day with the warranty deed being recorded first.

Am I totally off base here to think that because the title of the property was sold by the developer before the deed restrictions where in force that the developer didn't have the right to place restrictions on my lot? Or am I just nuts?

-= bob =-

Bob,

I am not a lawyer, and this is not to be construed as legal advice.

What about your deed? Does it mention the CC&R's? If not, then you
have a clear case that the CC&R's don't apply to you. But you might
have to go to cour, or at least hire a real-estste lawyer, to convince
the association of this.

If you deed does mention the CC&R's, then it is a bit murkier. It
would depend upon whether your state requires that CC&R's be recorded

before the deed. Seek competent legal council.

Dick, AC7EL

48. Amateur Radio Newsline(tm) Report 1646 - February 27 2009

Amateur Radio Newsline(tm) Report 1646 - February 27 2009

Amateur Radio Newsline report number 1646 with a release date of Friday, February 27th, 2009 to follow in 5-4-3-2-1.

The following is a QST. K5D goes QRT after more than 100,000 QSO's from Desecheo Island; ham radio monitoring stations prepare for big changes on 40 meters, a third conviction in the murder at sea of two hams and celebrating the life and legacy of John Kanzius, K3TUP. A very special report on a very special ham by Mark Abramowicz, NT3V, on Amateur Radio Newsline(tm) report number 1646 coming your way right now.

(Billboard Cart Here)

**

DX NEWS: K5D BREAKS 100,000 QSO BEFORE GOING QRT

The Desecheo Island K5D team says that it broke the 100,000 contact mark before going QRT. This event took place at 04:14 UTC on February 23rd when K5D made contact on 40 meter C-W with Zdravko Kalaba - Kale, E77U, who is located in Bosnia Herzegovenia. And in a satellite telephone interview with Wolf Harranth, OE1WHC, team co-leader Glenn Johnson, W0GJ, said that the propagation seemed to be with them all the way:

--

"The propagation has been very good except for the very high bands. We have worked quite a few stations on 6 meters but most of that has been meteor scatter.

"10 and 12 meters have been very sketchy. We've made few contacts on 10 and 12. 15 and the bands down below have really opened up and we've made some really good contacts.

"The fortunate thing is that with our antenna spacing we have been able to work two and sometimes even three modes on any given band, even with high power. So we have been able to take advantage to some really good band openings to our target areas."

--

The DXpedition a made its first satellite contact on Friday, February 20th with Andrew Glassbrenner, KO4MA, in New Port Richey, Florida. That QSO was conducted at 20:14 UTC through the SO-50 ham radio bird.

As the operation began winding down the team modified the radio schedule to try to pick up those areas of the world that have been obscured by the huge pileups from the population centers of in North America, Japan and Europe. By the terms of the groups Special Use Permit the operators had to vacate the island no later than the February 26th.

The last night on the air saw three stations stations still in operation emphasizing 80, 40 and 30 meter operation. They departed Desecheo at sunrise on the 26th. QSL's go to N2OO

The complete interview between Wolf Harranth, OE1WHC and Glenn Johnson, W0GJ, is now available on the "Documentary Archive Radio Communication" KP5 special Web page at www.dokufunk.org/desecheo
(Southgate, OE1WHC, PS8RF)

**

RESTRUCTURING: GETTING READY FOR THE AN EXPANDED 40 METERS

Ham radio operators world wide are preparing for the expansion of 40 meters. This, as the date approaches where shortwave broadcast operations must vacate the spectrum from 7 point 1 to 7 point 2 MHz. Jim Linton, VK3PC, in Forrest Hill, Australia, says that hams down-under are prepared:

--

With four weeks to go before broadcast stations are due to have migrated from the band 7100-7200kHz as that band is restored to the Amateur Service, a scan watch has begun to identify stations still currently using that segment.

IARU Region 3 Monitoring Systems Coordinator, B.L. (Arasu) Manohar VU2UR has been scanning the segment.

He did this for four days recently to identify 58 broadcast transmissions, their frequencies, times and signal strengths. The broadcasters use 5kHz channel spacing.

The worthwhile yet painstaking task also notes the languages of the transmissions including Arabic, Burmese, Chinese, English, French, German, Indian, Japanese, Russian and Turkish.

Adding to the complexity of the task are jamming stations, heterodynes, low powered regional or domestic stations and many powerful broadcasters using relays to cover their audience target area.

Arasu VU2UR says similar scanning and monitoring work may be necessary in other parts of the world to get a fuller picture of broadcast activity and he's prepared to share the spreadsheet result of his work.

Mapping of broadcasters on the 40-metre band will be important should be IARU need to mount a case to fight any continued occupancy of the 7100-7200kHz after 29 March.

That is the departure date set by the World Radio Conference 2003 and coincides with the new broadcasting schedule for 2009.

For the Amateur Radio Newsline, I'm Jim Linton VK3PC.

--

Again that's March 29th when, at least in theory, all shortwave broadcasting in the 7 point 1 to 7 point 2 MHz segment of 40 meters is supposed to go away. (VK3PC)

**

RESCUE RADIO: COSPAS-SARSAT GOES DIGITAL

The Cospas-Sarsat satellite based rescue radio locator system has gone digital. As of February 1st, the satellites are no longer monitoring for analog distress beacons at 121.5 and 243 MHz. All mariners, aviators and individuals who use emergency beacons on those frequencies had been previously advised to switch to the newer, digital 406 MHz frequency to be detected by the on-orbit monitoring birds.

The United States National Oceanic and Atmospheric Administration claims that in 2008, beacons monitored by the Cospas-Sarsat worldwide system were responsible for almost 300 lives saved. This included 203 people rescued in 65 at-sea incidents and 12 people rescued in 7 aviation incidents.

SARSAT stands for Search and Rescue Satellite Aided Tracking. Cospas is the Russian word for the same. The Cospas-Sarsat satellite tracking system is a joint effort of the two nations. (NOAA)

**

THE DTV TRANSITION: SOME ANALOG STATIONS FORCED TO STAY ON THE AIR

Meantime, back in the United States, not every TV station that wanted to go digital-only on Tuesday, February 17th was permitted to do. Only days prior to the then voluntary analog turn-off date the Federal Communications Commission told 123 broadcasters that were planning to stick to the original February 17th date that they will have to justify not extending their transmissions for four months.

In denying their applications to terminate analog service on February 17th, the FCC told the targeted stations that they must certify at least one in any affected market would continue to broadcast information about the transition and local news in analog for at least two months. Affected stations are in or near areas where all of the major network owned or affiliated stations has applied to turn off their analog transmissions on February 17th.

All full-power TV stations had been planning for years to turn off analog transmissions on February 17th. Congress and the president extended that date to June 12th. (Adapted from FCC release)

**

ENFORCEMENT: THIRD CONVICTION IN KA7VWJ - KA7VWK MURDERS

A jury in Santa Ana, California, has found a third defendant guilty in the murders of Thomas and Jackie Hawks, KD7VWJ and KD7VWK. John Fitzgerald Kennedy who is described as a former gang intervention worker for the city of Long Beach was convicted of two counts of first-degree murder in the killings of a couple tied to an anchor and thrown off their yacht. Amateur Radio Newsline's Bruce Tennant, K6PZW, picks up the story from here:

--

Forty-three year old John Fitzgerald Kennedy is the third person to be convicted for the killing of Thomas and Jackie Hawks, who were murdered at sea off the Southern California coast on November 15, 2004. This, after taking men posting as prospective buyers out for a test run on their 55-foot trawler the Well Deserved.

The seven-woman, five-man jury deliberated several hours before convicting Kennedy of the two murder counts. They also found true the special circumstance allegations of multiple murder and murder for financial gain.

Prosecutors are seeking the death penalty for Kennedy. They say that he was recruited as muscle man in the killings.

Under California state law the jury that convicted Kennedy will have to decide between recommending capital punishment or life in prison without the possibility of parole.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Deputy District Attorney Matt Murphy said the mastermind of the plan to steal the yacht was former child actor Skylar Deleon. Deleon has already been convicted of the murders and faces the death penalty when he is sentenced on March 20th. Deleon's former wife, Jennifer Henderson, was sentenced to life in prison without parole in October 2007 for her role in the plot. (Published news reports)

ENFORCEMENT: FCC FINES TELECOMS FOR CPNI FORM FAILURE

Ham radio is not the only service where the Federal Communications Commission requires compliance with its rules. The agency's Enforcement Bureau has just proposed more than $12 million in fines against some 600 mostly small telecommunications companies for failing to file their annual

Customer Proprietary Network Compliance or CPNI certificates. That is a form that certifies that each business has a plan for preventing phone call data from unauthorized access and disclosure by data brokers and others.

The FCC toughened its customer proprietary network compliance rules in 2007. Based on them it fined each company up to $20,000, although it has the right to assess up to a $130,000 for each non compliant filing. In setting the fine amount the FCC said that it took into account that fact that this was the first year for compliance with the form, and the fact that most of the companies were rather small business entities. (FCC)

**

ENFORCEMENT: INDIANAPOLIS HAMS BUST COPS FOR LANGUAGE ON UNOFFICIAL CHAT CHANNEL

Hams in Indianapolis are taking credit for getting city police in that city to top using unofficial extra radios on which the cops reportedly used language that might make a sailor blush. Jack Parker, W8ISH, has the details:

--

Dozens if not hundreds of Indianapolis Metro Police Officers have been busted for using Amateur Radios illegally to rag chew while on duty. According to a report aired on an Indianapolis TV station, complaints to the FCC from local hams lead to a shake down of all Metro Police vehicles. Amateur Radio operators reported hearing foul language and improper usage of Amateur Radio frequencies by Metro Police officers.

This prompted the department to do a three-day inspection of cruisers, ordering everyone with an unlicensed radio to remove them..

Department PIO Lt. Jeff Duhamel had this to say:

--

"Apparently, there has been a problem with some language, which is a violation of the FCC regulations. The chief has decided that the officers should pull them out of their vehicles."

--

Amateur radio repeaters were ripe with reaction to News of the police radio crackdown.

--

First Ham: "They were talking on blogs like they were using ham radios like they were on ham radio frequencies. Well that wasn't the case. Still they're transmitting and talking on frequencies they are not licensed to use. It doesn't matter if they were licensed twenty years ago they are not licensed now and they should not be using them period.

Second Ham: "They are not type accepted. So they have a type acceptance problem. So far that is the only thing I've seen that's inappropriate other than the report of language which is not appropriate on any frequency."

--

Local hams are expected to monitor the success of this crackdown and report further violations.

Reporting from Indianapolis, this is Jack Parker, W8ISH.

--

While some bloggers are advising Indianapolis hams to keep a low profile for a while others point out that the officers are the ones that are likely worried. Now they know that there are thousands of ears listening to their every word on what they thought was their unofficial chat channel. Ears with tape recorders ready to send more complaints to the FCC. (W8ISH)

**

EMERGING TECHNOLOGY: HIGH TEMPERATURE CONDUCTIVITY

A new paper published in the Journal of the American Chemical Society will help to broaden our understanding of the nature of superconducting materials and of the origin of the superconductivity phenomenon in high critical temperature materials.

For those not aware, superconductors are materials that conduct electrical current with zero resistance at low temperatures. The phenomena was discovered in 1911, and the researchers in this area of solid state physics have been regular recipients of the Nobel Physics Prize.

Now, the discovery of high critical temperature superconductivity is being considered as one of the most remarkable chapters in modern science. It is being looked on as a major breakthrough in developing new technologies and compounds in solid state physics and materials science that may lead to new products not even imagined only a few years in the past. You can learn more at the U-R-L in this weeks printed Newsline report.

EMERGING TECHNOLOGY: FIRST DRM RECEIVER COMING TO THE USA

Media Network reports that a new Digital Radio Mondiale receiver designed in France may soon be coming to American shores. The Di-Wave receiver from UniWave Development SAS is expected to make its debut March 25th at the DRM General Assembly in Germany. This is an all band plus FM receiver that is Digital Radio Mondiale capable on the Shortwave, Medium Wave and Long Wave bands. It will also expected to be the first consumer level Digital

Radio Mondiale receiver authorized by the FCC for sale in the United States. (Media Network)

**

EMERGING TECHNOLOGY: NEW LAPTOP PLATFORM FROM INTEL

Something long awaited in the world of laptop computers has finally arrived. This with word that Intel Corporation is set to launch new hardware for laptop computers. Jim Damron, N8TMW, reports:

--

The new products are a package of components including the main processor as well as all the secondary chips that add features such as the ability to connect to a wireless network.

Platforms such as this rarely grab focus outside of technical circles, but Intel is generating wider interest this time. This is because its new products are the first to use flash memory which it hopes will translate into faster performance and longer battery life.

According to market researchers the laptop and notebook computers are the fastest growing segment part of the personal computer business. Last year, worldwide shipments of desktop machines rose just over 2 percent, but sales of laptops jumped 26 percent.

I'm Jim Damron, N8TMW.

--

Most in the mobile data storage field believe that it won't be long before high speed flash memory replaces mechanical hard drives in laptop and notebook computers. (Intel release)

RADIO HONORS: NOMINATIONS SOUGHT FOR 2009 HORKHEIMER PRIZE\

Nominations for the 2009 Horkheimer Prize are being solicited by the German Amateur Radio Society, the DARC.

The Horkheimer prize is awarded for merit in amateur radio and to the further development of the service. Both individuals and institutions are eligible it and any member of any amateur radio society that's a member of the International Amateur Radio Union can be nominated. Letters of nomination should include the name and address of the nominator, a short description of the nominee and any other information that might be useful. The deadline for submitting nominations I March 31st. They can be sent by e-mail to darc <at> darc <dot> de

The 2009 Horkheimer prize will be presented during the opening ceremonies of HAM RADIO fair in Friedrichshafen, Germany this spring. The recipient gets a beautiful etched glass plate along with a prize of of 2,500 Euros. The money is given to further support the recipients amateur radio

related activities. (GB2RS, ARNewsline(tm))

HAM HAPPENINGS: THE 2009 NORTH DAKOTA QSO PARTY IN MARCH

The 2009 North Dakota QSO Party runs from 1700 UTC on Saturday, March 21st to 0100 UTC on Sunday, March 22nd. Operation is on 80, 40, 20, 15, 10, 6 and 2 meters. Stations working on the new ARRL Triple Play Award or Year of the State QSO Party Award will want to be on the air for this one. More information is on-line at k0ln.com. (Via e-mail)

**

HAM HAPPENINGS: WEAK SIGNAL ON 2 METERS FROM A UK TOWER

Meantime members of the United Kingdom's Kilmarnock and Loudoun Amateur Radio Club will be active on Sunday March 1st operating with the call GB250RB. This, from Burnweil Tower in South Ayrshire. What makes this operation unique is that it will only be on VHF and possibly UHF with an emphasis on 2 meter SSB. However there is a good chance that a station will also operate the 70 centimeter band as well. (Southgate, MM0GHM)

**

NAMES IN THE NEWS: W5GM IS NEW NORTH TEXAS SM

ARRL members in the North Texas Section have elected a new Section Manager. Jay Urish, W5GM, of Flower Mound beat out incumbent Tom Blackwell, N5GAR, of Dallas, by a vote of 740 to 678 votes. Blackwell has served as North Texas Section Manager since 2005.

In Arizona, members re-elected incumbent Tom Fagan, K7DF, of Tucson. Fagan, who has been Section Manger since 2005, received 1016 votes while challenger Robert Spencer, KE8DM, of Yuma, received only 205.

The ballots were counted and verified at ARRL Headquarters on Tuesday, February 24th. (ARRL)

RADIOSPORTS: US ARDF CHAMPIONSHIP IN JUNE

It may be cold and snowy where you are right now, but spring is not that far off. Nor is the season for master level hidden transmitter

hunting. Newsline's Joe Moell, K0OV, tells us about the upcoming direction finding championship games for the Western Hemisphere.

--

Fans of on-foot hidden transmitter hunting are getting ready for the Ninth USA Championships of Amateur Radio Direction Finding, or ARDF, which will take place June 5 through 7 near Boston. The best radio-orienteers in the country will be there, as well as some experts from around the world. That's because these national championships are being combined with the championships of IARU region 2. You don't need to be an expert, because anyone can join in the competition as a learning experience.

Site of the contests will be the Blue Hills Reservation, a 7000-acre open space that is about ten miles south of downtown Boston. This year's organizer and host is Vadim Afonkin KB1RLI. He learned the sport as a youth in his native Russia. When he got back into it here in the states six years ago, he began a streak of winning medals at every national championship.

KB1RLI says that to encourage first-timers and foreign visitors, the competition fee will be waived for persons who have never participated in the USA ARDF Championships and for persons coming from outside North America.

If you would like to take part as a competitor or a helper, point your Web browser to www.bostonardf.org for the latest information and registration forms. For more about the sporting side of radio direction finding, including rules and ideas for equipment, go to www.homingin.com. Yes that's one word: homingin.com

>From southern California, where the weather is so nice that we can practice ARDF any month of the year, this is Joe Moell K0OV, for the Amateur Radio Newsline.

--

Again that website for the New England Orienteering Club is www dot bostonardf dot org. (K0OV)

HAM RADIO IN SPACE: PA ARISS CONTACT GARNERS BIG PUBLICITY

A recent contact between a school in Pennsylvania and an Astronaut ham radio operator aboard the International Space Station has garnered a lot of news coverage from the local press.

The QSO took place on Tuesday February 17th between the South Park Elementary Center in South Park, Pennsylvania and Pittsburgh native Mike Fincke, KE5AIT, who was orbiting some 200 miles above the Earth. An audience of approximately 460 including reporters from three Pittsburgh TV stations and two newspapers watched as students posed twenty questions to KE5AIT via the Maryland based K6DUE telebridge. The audio was also fed into the EchoLink AMSAT and JK1ZRW servers and received by stations in

England and the U.S..

Among the media outlets covering the event were the Pittsburgh Post Gazette, the Pittsburgh Tribune-Review along with news crews from stations KDKA, WPXI and WTAE. The K6DUE callsign used on the telebridge belonged to the late NBC newsman Roy Neal who is considered by many to be the father of manned ham radio in space operations. (ARISS)

**

HAM RADIO IN SPACE: KIWISAT TRANSPONDER TEST TAKING PLACE

The linear flight transponder for New Zealand's planned KiwiSAT ham radio satellite is now on air in a ground simulation test from near Whangaparaoa. The transponder is connected to a pair of beam antennas that are pointing south during the on air evaluation..

The KiwiSAT transmit is reportedly running to be 2 watts peak envelope power with a beacon frequency at 145.885 MHz. The operational frequencies are 435.265 to 435.235 MHz uplink using lower sideband and a downlink of 145.850 to 145.880 MHz on upper sideband.

The transponder is of the inverting variety to compensate for orbital Doppler shift. Being a linear transponder 30 kHz wide, any mode can be used but FM is discouraged. New Zealand hams who are within range are encouraged to try out the transponder while its in ground test and on the air. (ANS)

**

DX

In D-X, W6DXO be operating portable C6A from South Andros Island between March 1st to the 7th. Activity will be holiday style operation with focus on the 30, 17 and 12 meter bands as propagation allows. His QSL Manager is KF6JOQ.

The closing date for the South African Radio League High Frequency Field Day logs to be submitted is midnight on Monday March 2nd. Logs can be sent by e-mail to hfcontests <at> netactive <dot> co <dot> za or by surface mail to SARL Box 12104, Brandhof, 9324, South Africa.

Lastly, JM1LJS and JG7PSJ will be active as JD1BLK and JD1BMH, respectively from Chichijima Island `between April 29th and May 12th. Their operation will be on 160 through 6 meters using CW, SSB and the Digital modes. QSL as directed on the air.

(Above from various DX news sources)

**

THAT FINAL ITEM: 73 TO JOHN KANZIUS, K3TUP

And finally this week we take a look back at the life of a ham who dedicated hi final days to solving the medical riddle that has eluded

medical researchers for decades. Finding a cure for cancer. Hers Mark Abramovich, NT3V

--

John Kanzius, K3TUP, will best be remembered for his cancer treatment model that used radio waves to attack the disease.

No, Kanzius wasn't a doctor or medical researcher. He was just a ham, a tinkerer, if you will.

Kanzius spent his career in television as a broadcast engineer and later a general manager in Erie, Pennsylvania.

Upon his retirement to Florida, Kanzius was diagnosed with leukemia and began chemotherapy. Friends and family say the sight of sick children with cancer prompted him to action.

He reasoned that radio waves might somehow be a way to target the cancer cells and kill them.

Kanzius hooked up with the cancer researchers at M. D. Anderson - part of Houston's University of Texas Health System and a group at Rice University to test his theories.

Kanzius built a special machine that was able to use RF at a frequency of 13.56 MHz to heat up nanoparticles - tiny metal objects measured by the billionths of an inch - which could be sent to attack the cancer.

Allen Pitts, W1AGP, the American Radio Relay League's media and public relations manager, had contact with Kanzius in recent years and was quite impressed by his ingenuity and humility.

Indeed, Pitts says Kanzius always credited his amateur radio skills and interest in the technical and home-brew projects with providing him the impetus to press on with his idea.

"We often think that that era is gone, that in a sense, everything that can be invented by the individual has been invented," Pitts says. "And, John proved that wrong.

"John was the poster child of the garage tinkerer who went and took an idea that came to him in the middle of the night and started playing with it and, dang, the thing worked!"

Pitts says Kanzius was excited about the prospects of his treatment concept.

"They were now finally getting to the place where they were about to be able to do human trials," Pitts says. "They had done a whole lot of different things in the animal trials and things had gone and had gotten the thing fast-tracked.

"And they were going to start doing some limited human trials. Now the whole process is still years in the making with all of the safeguards that have to be done with this.

"But, at this point, everything is still looking very, very good."

Pitts says Kanzius, who was losing his battle to cancer in recent weeks, had hoped to make it to see the first human trials get under way.

"One of John's biggest things is he knew that even his own thing would not be able to save himself," Pitts recalls. "He knew that but his desire as expressed to me a couple of times was that he really wanted to live long enough to see the first person cured using this process."

"There are a lot of people that would take something like this and try to commercialize it or beat their own drum or puff out their chest and say: 'Oh, look what I did, etcetera, etcetera,' Pitts continues. "John never was like that. He promoted the process, he wanted to see it go. But I encountered him and found him to be a true gentleman and the world's a little smaller without him."

During his days in Erie, Kanzius also put a station together that was masterful in busting DX pileups. During the late 1980s, he got involved in contesting and assembled a competitive multi-single contesting set-up.

In 1991, Kanzius was at the top of the Honor Roll in the ARRL's DXCC program. When he died at age 64, he had 347 countries confirmed.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

John Kanzius, K3TUP, is survived by his wife Marianne, daughters Sherry Kanzius and Toni Palmer and two grandchildren. In lieu of flowers memorial contributions may be made to the John Kaznius Research Fund, Palace Business Center, 915 State St, Erie, Pennsylvania 16501.

And this final note: Dr. Steven Curley of the M.D.Anderson Cancer Center speaking at K3TUP's funeral said -- and we quote: "We will complete John's work." (NT3V, ARNewsline(tm))

Yes, I understand that having a lawyer is good thing in such
situations.

As I see this: The deed restrictions where filed on the whole sub-
division at one time and not on individual lots. This means that when
you do a deed search on the lot, it's history only goes back to the
point in time the lot was created. Before it was subdivided it was
part of a larger peice of property with it's own history and that
history includes the restrictions. Other lots in the subdivision don't
have a deed restriction listed either because that would require that
they get recorded for all 119 lots, one at a time. That would be
pretty expensive. They just file them on the whole tract and that
applies them to all the lots that got created from that tract.

Apparently my builder was fond of not finishing up all the required
filings to get all the restrictions in place until the first lot was
sold. I've found a number of other subdivisions that have similar
situations, where a lot was sold before the restrictions where filed.
It kind of makes sense in a way, to wait until you've actually sold
something to go though the expense of drafting and recording these
things. Why put yourself under these restrictions if you don't have
to because it's a situation that is not easily reversed once you do
it.

I'm guessing that the builder thought of this. There has to be some
other way to get the deed restrictions applied to these lots that are
sold before they get recorded for the whole subdivision. Otherwise
there are a bunch of houses paying HOA dues that don't owe them... At
least for the developer that built my house.

And I'm not trying to "get out" of the HOA and not pay dues. I'm
really looking for some leverage that I can use to get them to accept
reasonable antennas for HF operations on my property.

-= Bob =-

***************
The ARRL Letter
Vol. 28, No. 8
February 27, 2009
***************

IN THIS EDITION:

* + ARRL National Convention to Feature Richard Garriott, W5KWQ
* + BSA Updates Radio Merit Badge Requirements
* + ARRL DX Phone Contest Brings DX in Full Force to HF Bands
* + QEX: The March/April 2009 Issue
* + Train the Trainers Course Debuts at Orlando HamCation
* + 2009 Winter Section Manager Election Results
* Solar Update
* IN BRIEF:
This Week on the Radio
ARRL Continuing Education Course Registration
+ Field Day Station Locator Service Returning for 2009
+ RAC Elects New President
EMCOMMWEST to Include ARRL Pacific Division Convention
ARRL Sweepstakes and RTTY Roundup Set New Records
WSJT Monthly Sprints to Begin this Weekend
FCC Revokes License of Indiana Ham

+Available on ARRL Audio News <http://www.arrl.org/arrlletter/audio/>

==========================================================

==> ARRL NATIONAL CONVENTION TO FEATURE RICHARD GARRIOTT, W5KWQ

Richard Garriott, W5KWQ, will be attending the 2009 ARRL National
Convention -- hosted by the Dayton Hamvention -- as a special guest of
the ARRL and AMSAT. Garriott, who took off for the International Space
Station (ISS) on October 12, became the sixth private citizen to fly
with the Russian Federal Space Agency (RKA) for a short-term mission on
the ISS <http://www.arrl.org/news/stories/2008/10/09/10382/?nc=1>. Not
two hours after he arrived on the ISS on October 14, Garriott was making
ham radio contacts, just as his father, Owen Garriott, W5LFL -- the
```

first ham to make QSOs from space -- did in 1983 while aboard the space shuttle Columbia on STS-9. Both Richard and Owen are ARRL members.

"We are so excited to have Richard be a part of our National Convention this year," said ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R. "He will spend some time in the ARRL EXPO exhibit area, meeting convention attendees and signing autographs <http://www.arrl.org/expo>. He's also been confirmed as a Hamvention forum speaker." The ARRL EXPO is a large exhibit area located in the Ballarena Hall (near the 400-numbered booths) at Hara Arena.

"This mission to the ISS fulfilled a lifelong dream to experience spaceflight, just as my father first did 26 years ago," Richard said. "It's an honor to be the first American to follow a parent into space." While living on the ISS, Richard conducted scientific experiments and environmental research -- but he also had a chance to do quite a bit of Amateur Radio operating, including sending slow-scan TV (SSTV) images.

Richard said that after his first QSOs with Earth, he understood how "well-networked" the global ham community really is: "I received specific reports back through Mission Control-Moscow about the technical aspects of my work and how the [amateur] community was enjoying the transmissions. This redoubled my enthusiasm to do quality work for the Amateur Radio legions around the world, as I realized how much it meant to those with whom I had the chance to talk. By late in my flight, I had contacted many hundreds of hams by voice and I have good records of these contacts."

For the past 26 years, ham radio operations from aboard the space shuttles and the International Space Station have helped to spotlight the innovation and experimentation that are benchmarks of the Amateur Radio Service. Richard Garriott's story as a private astronaut embodies that same "can-do" spirit. "We are absolutely delighted that Richard has agreed to take part in the 2009 ARRL National Convention. His biography reads like an adventure novel -- one that spans global expeditioner, explorer and entrepreneur," Inderbitzen said. "Like many radio amateurs, Richard has an innate fascination with science and technology. He has written very enthusiastically about his experience using Amateur Radio from aboard the ISS. He found it particularly gratifying to find hams around the globe eager to make radio contact with him at any time of the day or night. Throughout the mission, he made hundreds of radio contacts with individuals and classrooms full of children. When we greet Richard in Dayton, we'll welcome him as one of our own!"

==> BSA UPDATES RADIO MERIT BADGE REQUIREMENTS

The Boy Scouts of America (BSA) has updated the requirements needed to earn the Radio merit badge. The new requirements became effective with the publication of Boy Scout Requirements 2009. While no new content has been added to the program, the new merit badge pamphlet features lots of new information -- including color pictures and updated charts and text -- that reflects the changes in the Amateur Radio Service since the last

pamphlet update in 2002. Approximately 4000 Radio merit badges are earned each year.

According to ARRL ad hoc Scouting Committee member Larry Wolfgang, WR1B, the new Radio Merit Badge pamphlet had been in the works for some time. "BSA has been replacing all merit badge pamphlets with new booklets using color graphics and more modern presentations," he said. "With attractive color photos and clear text explanations of the requirements, the new merit badge pamphlet is a pleasure for the Scouts to read. The new text is due in large part to the efforts of longtime Radio Merit Badge Counselor and K2BSA National Jamboree Staff member Mike Brown, WB2JWD. I am looking forward to using the new pamphlet to teach Radio merit badge at our Council's Merit-Badge-O-Ree this spring, and to having a supply of the new books available for Scouts during the 2009 summer camp season."

Wolfgang said that the requirements for the badge have been shifted around: "The old Part 4 of Requirement 7(b) Broadcast Radio was pulled out and placed in the main body of the requirements as Requirement 8. In addition, the old Requirement 8 (to visit a radio installation and discuss what types of equipment, how it was used, what types of licenses are required to operate and maintain the equipment, and the purpose of the station) was moved up to Requirement 7, so that now the three options appear as Requirement 9. The main result is one additional full requirement."

ARRL Rocky Mountain Division Director and Chairman of the League's ad hoc Scouting Committee Brian Mileshosky, N5ZGT, called the Radio Merit Badge "a perfect avenue to introduce Scouts and Scouters to the wonderful world of ham radio. Ham clubs across the nation should locate a local Boy Scout Troop, secure permission from their Scoutmaster and/or committee to teach the merit badge and deliver an exceptional Radio merit badge class. What the boys -- and their leaders and parents -- will learn in the process is a fair amount of what is part of the Technician license exam, so the next logical step after a merit badge class is an all-out recruiting effort to get that Troop involved in Amateur Radio. They'll meet new friends and have a great way of communicating while in transit to and from the field, as well as additional peace of mind through an effective means of emergency communications while in the backcountry."

For a complete overview of the Boy Scout Radio merit badge, see the Radio merit badge page on the BSA Web site <http://www.scouting.org/boyscouts/advancementandawards/meritbadges/mb-RADO.aspx>.

==> ARRL DX PHONE CONTEST BRINGS DX IN FULL FORCE TO HF BANDS

With the 2009 ARRL International DX CW Contest now history <http://www.arrl.org/news/stories/2009/02/11/10644/?nc=1>, the first full weekend in March brings the next round of competition: The 2009 ARRL DX SSB Contest

<http://www.arrl.org/contests/rules/2009/intldx.html>. Like its CW predecessor, this event focuses on DX stations working all US states and Canadian provinces, while US and Canadian amateurs try to work as many DX countries as possible over the 48 hour contest period.

"While the origins of the ARRL DX Contest go back to 1929, the first Phone weekend wasn't until 1937," said ARRL Contest Branch Manager Sean Kutzko, KX9X. "AM was the voice mode used at that time. The rules may have changed since the event was held back in the 1930s, but the premise remains the same: How many contacts with stations in far-away locales can you make?"

Just as in the CW contest a couple of weeks ago, US and Canadian stations send a signal report and their state or province, while DX stations send a signal report and their transmit power. Remember that for this contest, Alaska and Hawaii are considered DX stations -- this means stations in KH6 and KL7 focus their efforts on working Stateside and Canada.

How can you participate? Kutzko said you're only limited by your imagination and willingness to get on the air: "Even though we are at the bottom of the 11-year solar cycle, there will be plenty of chances to work DX, even for stations running 100 W and a dipole or vertical antenna. If you live in an area where antenna restrictions exist, take your contest effort on the road! Operate from your car, set up a portable antenna in a park or campground or see if a friend's station is available. If you have a station and won't be using it, consider opening your doors to members of your club to try their hand at working some DX. If you make 100 QSOs, you're eligible to purchase a commemorative pin for your efforts."

The ARRL DX Phone Contest runs from 0000 UTC Saturday, March 7 to 2359 UTC Sunday, March 8. Complete rules and forms are available online <http://www.arrl.org/contests/forms/>. Why let all this DX pass you by? Get on the air and have some fun!
==> QEX: THE MARCH/APRIL 2009 ISSUE

The March/April issue of QEX is coming soon, and it is full of theoretical and practical technical articles that you don't want to miss <http://www.arrl.org/qex>.

In this issue, Gary Steinbaugh, AF8L, introduces us to "A Cybernetic Sinusoidal Synthesizer." The initial part presents some interesting history and theory of feedback control. The system includes an oven-stabilized crystal-controlled oscillator, a PLL frequency synthesizer with a low phase noise sinusoidal output, a variable gain RF amplifier for automatic power level control and an RF power meter with a digital readout in dBm and an analog voltage output. Subsequent articles will describe these circuits in detail. Ron Skelton, W6WO, takes us "Exploring Near-End-Fed Wire Antennas" by modeling his design using EZNEC, and then building a 40 meter version to verify the modeled performance. Ken Grant, VE3FIT, describes "A Versatile Two-Tone Audio

Generator for SSB Testing." This handy piece of test gear could be a valuable addition to your test bench.

Thomas Alldread, VA7TA, continues to describe his "NimbleSig III" dual output DDS RF generator. This circuit provides signals over a range from 100 kHz to 200 MHz, with 1 Hz resolution. In this part of the series we learn about the control software design, computer interface, MPU programming and initial testing. Rudy Severns, N6LF, presents more of his research in "Experimental Determination of Ground System Performance for HF Verticals." Part 3 compares the performance of antennas using ground-surface radials and those using elevated radials. If you use vertical antennas on HF, or have thought about using vertical antennas on HF, you will want to read all of the articles in this series. Roger Monroe, K7NTW, introduces the process of programming a microcontroller in "Some Assembly Required." As a practical application, he describes how he used a microcontroller in the design of a QSK amplifier keying interface for use between his Ten-Tec Omni IV+ radio and his Heath SB-220 amplifier.

Ray Mack, W5IFS, continues his software defined radio column. In this installment of "SDR: Simplified," Ray looks at signals in the time domain and the frequency domain, and introduces the concept of Fourier transforms. He also explains the Nyquist criterion for sampling signals in analog to digital conversions as well as the filtering requirements for digital to analog conversions. Mark Spencer, WA8SME, has been sending results of his further data collection based on his article, "SID: Study Cycle 24, Don't Just Use It" from the September/October 2008 issue of QEX. The "Tech Notes" column in this issue includes some graphs of Mark's data, as well as a re-designed SID receiver and interface. The "Reader's Page" includes photos of two different GPS-derived frequency standards. Readers are encouraged to submit photos of their projects, to show off their handiwork.

Would you like to write for QEX? It pays $50/printed page. Get more information and an Author's Guide <http://www.arrl.org/qex/#aguide>. If you prefer postal mail, send a business-size self-addressed, stamped envelope to QEX Author's Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494.

QEX is edited by Larry Wolfgang, WR1B <wr1b@arrl.org>, and is published bimonthly. The subscription rate (6 issues) for ARRL members in the US is $24. For First Class US delivery, it's $37; in Canada and internationally by airmail it's $31. Nonmembers add $12 to these rates. Subscribe to QEX today.

Editor's Note: Due to production difficulties, the March/April issue of QEX will be arriving about two weeks later than normal. Readers should expect to see their copies in their mailboxes in mid March. We regret any inconvenience this may cause.

==> TRAIN THE TRAINERS COURSE DEBUTS AT ORLANDO HAMCATION

The inaugural Train the Trainers course -- supported by a grant from the ARRL Foundation -- made its first appearance on February 13-14 at HamCation <http://www.hamcation.com/> in Orlando, Florida. Led by ARRL Education and Technology Program Coordinator Mark Spencer, WA8SME, 12 participants -- primarily from the ARRL Southeastern Division -- completed the course. HamCation is the ARRL Southeastern Division's convention.

According to Spencer, the focus of the Train the Trainers course is on course development, instructional techniques and instructional resources -- not on the technical content of the course. The objective of the course is to develop and validate a model program that could be used to provide instruction to volunteer ham radio licensing course instructors, helping to improve their teaching effectiveness.

ARRL Chief Development Officer Mary Hobart, K1MMH, attended the Train the Trainers course: "When I agreed to attend the Train the Trainer sessions at Orlando HamCation, I intended to be a fly on the wall. But as a volunteer instructor myself, I found that I was caught up in the enthusiasm of those who signed up for the course. Each of the participants came with a set of teaching experiences, and left with even more -- and some made dramatic changes in their philosophy and approach to teaching licensing classes. I found the hours I spent under Mark's leadership rewarding and very, very useful. Kudos to Director Sarratt and the HamCation team for their support of this pilot project. I hope that this is just the beginning of something that can enhance our teaching of ham radio licensing."

Spencer commended the Orlando Amateur Radio Club (OARC) <http://www.oarc.org/> -- HamCation's sponsor -- for their "exceptional job of providing a venue for the class. ARRL Southeastern Division Director Greg Sarratt, W4OZK, and his primary point of contact, Ed Tyler, KI4GKS, did an excellent job of advertising the course, accepting applications from interested volunteer instructors and vetting and selecting the final pool of participants."

Spencer said the response from the course's participants was enthusiastic. Here are a few comments:
* The course provided some great insights to different approaches to subject matter, including out-of-the-ordinary presentation strategies and considerations for class preparation.
* Participations were able to compare real-life classroom experiences.
* I expected new techniques, and I got them. Rearranging the material in a logical manner was something that made sense, but I had not given any thought.
* The other (more important?) way the class exceeded my expectations was the caliber of the "students" themselves. They were engaged, brilliant and motivated for this to work. I like to think of myself as a really good instructor, but I learned quite a number of useful and interesting things from the classroom discussions just with the students.
* The most valuable feature of the class was the opportunity to "face down my fear" and present in front of an audience of top-notch people

who were there to critique my work -- scary, yes; on the edge, yes. But a very powerful motivational and quality-oriented tool to really pay attention to the lessons and put forward one's very best effort, and then learn from those critiques.

==> 2009 WINTER SECTION MANAGER ELECTION RESULTS

ARRL members in the North Texas Section have elected a new Section Manager. Jay Urish, W5GM, of Flower Mound, received 740 votes; his opponent, incumbent Section Manager Tom Blackwell, N5GAR, of Dallas, received 678 votes. Blackwell has served as Section Manager since 2005. In Arizona, members re-elected incumbent Tom Fagan, K7DF, of Tucson. Fagan, who has been Section Manager since 2005, received 1016 votes; Robert Spencer, KE8DM, of Yuma, received 205 votes. Ballots were counted and verified at ARRL Headquarters on Tuesday, February 24.

Iowa will have a new Section Manager starting in April. Tom Brehmer, N0LOH, of Muscatine, was the only candidate to run for office when veteran Section Manager Jim Lasley, N0JL, of Chillicothe, decided not to run for another term. Lasley has been the Iowa Section Manager since 1994. Brehmer is presently the ARRL Official Observer Coordinator in Iowa and a Volunteer Examiner. He is serving as the Secretary/Treasurer of the Muscatine Amateur Radio Club.

In Wyoming, Garth Crowe, N7XKT, continues as Section Manager for the April 2009-March 2011 term of office. Crowe was appointed in January to take the reins from LeeAnne Sachau, WY7DTW, who decided to step down after she was the only nominee for the next term of office.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their upcoming terms of office beginning April 1: J.M. Rowe, N5XFW, Arkansas; Jim Brooks, KY4Z, Kentucky; Malcolm Keown, W5XX, Mississippi; Doug Dunn, K7YD, Montana, and Carl Gardenias, WU6D, Orange.

==>SOLAR UPDATE

Tad "A savage Sun consumes its hidden day" Cook, K7RA, this week reports: Excitement mounted a few days ago when new Solar Cycle 24 sunspot 1013 emerged, but two days later it was fading away, similar to other recent sunspot appearances. The sunspot number for February 24-26 was 12, 14 and 12. Today's number will likely be 0. Sunspot numbers for February 19-25 were 0, 0, 0, 0, 0, 12 and 14 with a mean of 3.7. The 10.7 cm flux was 68.9, 69.2, 70.6, 70.3, 70.8, 71 and 70.7 with a mean of 70.2. The estimated planetary A indices were 1, 3, 3, 3, 5, 6 and 3 with a mean of 3.4. The estimated mid-latitude A indices were 0, 3, 2, 3, 3, 6 and 2 with a mean of 2.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by David Gascoyne's "Winter Garden"

<http://www.poetryarchive.org/poetryarchive/singlePoem.do?poemId=174>.

==>IN BRIEF:

* This Week on the Radio: This week, the Russian WW PSK Contest is on February 27-28. Look for the UBA Contest (CW), Mississippi QSO Party, North American QSO Party (RTTY), CQ WW 160 Meter Contest (SSB) and the CQC Winter QSO Party to be on the air February 28-March 1. The High Speed CW Contest is March 1. The North Carolina QSO Party and DARC 10 Meter Digital "Corona" are both March 1-2. Next week is the ARRL International DX Contest (SSB) on March 7-8. The NCCC Sprint is March 6. The Wake-Up! QRP Sprint is March 7 and the Open Ukraine RTTY Championship is March 7-8. Look for the SKCC Weekend Sprint, the UBA Spring Contest (CW), the DARC 10 Meter Digital Contest and the NSARA Contest on March 8. The CLARA HF Contest is March 10-11 and March 14-15. The RSGB 80 Meter Club Championship (CW) is March 11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March 8, 2009 for these online course sessions beginning on Friday, March 20, 2009: Amateur Radio Emergency Communications Level 2, Antenna Modeling, and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Field Day Station Locator Service Returning for 2009: First introduced in 2008, the ARRL's Field Day Station Locator Service was a popular addition to the Field Day toolbox. This service -- an interactive map that helps amateurs or those interested in Amateur Radio find a Field Day <http://www.arrl.org/fieldday> site near them -- is free to clubs or individuals who will be operating public Field Day stations. Stations can also be listed by state or province. If your group would like to be

a part of the Station Locator Service, it's easy to get started -- just go to the Field Day Station Locator Web site and follow the instructions <http://www.arrl.org/contests/announcements/fd/locator.php>. ARRL Field Day is the most popular on-the-air operating event in Amateur Radio. On June 27-28, join tens of thousands of Amateur Radio operators as they gather for a public demonstration of our Service.

* RAC Elects New President: Radio Amateurs of Canada (RAC) President Dave Goodwin, VE3AAQ/VO1AU, announced he was resigning his post, effective immediately, at the RAC Board of Directors teleconference meeting on February 24. At the same teleconference meeting, the RAC Board elected Bob Cooke, VE3BDB, as RAC President. Cooke will serve until December 31, 2009, the end of the current term. According to RAC Vice President for International Affairs Daniel Lamoureux, VE2KA, Goodwin indicated that his decision was motivated by his inability to devote enough time to RAC affairs, due to a recent increase in personal and professional responsibilities. Goodwin became RAC President on January 1, 2008 at the end of President Earle Smith's, VE6NM, tenure. Cooke has a long history of working with RAC. His involvement started in the early 1990s as an Assistant Director; he was served as RAC Ontario South Director from November 2001-January 2005. He was then elected by the RAC Board as Vice President for Field Services, serving from January 2006-February 2009 when he resigned to accept the appointment as President. -- Information provided by RAC

* EMCOMMWEST to Include ARRL Pacific Division Convention: EMCOMMWEST 2009 -- an ARRL specialty convention devoted entirely to emergency communications -- will host this year's Pacific Division Convention (Pacificon) at the Circus Circus Hotel Resort in Reno, Nevada May 1-3. Supervisor of the ARRL's Field and Public Service Team Steve Ewald, WV1X, will host an emergency communications forum and deliver the keynote address. Riley Hollingsworth, K4ZDH, former Special Counsel of the FCC's Enforcement Bureau, will be the speaker at the Saturday evening banquet; Hollingsworth will also present a forum on the legal aspects of emergency communications. Other forums in the works include an introduction to the work of Public Information Officers (PIO) and the PR-101 Course <http://www.arrl.org/news/stories/2009/01/22/10578/?nc=1>; how to create an effective ARES team (and even how to create an ARES team from scratch); how to work with ARES from an Emergency Manager's view; packet software and operations for emergency communications; practical emergency communication functions for ATV; how to creating a Section-wide intercom using EchoLink and VoIP, and more! SKYWARN and storm spotter training will also be offered. ARRL Pacific Division Director Bob Vallio, W6RGG, and Vice Director Andy Oppel, N6AJO, will lead the ARRL Forum. Registration is now available online via the EMCOMMWEST Web site <http://www.emcommwest.org/>.

* ARRL Sweepstakes and RTTY Roundup Set New Records: The lack of good HF propagation didn't seem to affect participation in the 2008 Sweepstakes or the 2009 RTTY Roundup contests. According to ARRL Contest Manager Sean Kutzko, KX9X, both contests were record-breaking events. "We have

received 3298 logs for the November SSB and CW Sweeps combined in 2008," Kutzko said. "That is -- at bare minimum -- a 5 year high. The 2009 RTTY Roundup in January saw 1564 entries, also a 5 year high." Kutzko said he attributes some of the increase to the hoopla surrounding the 75th running of Sweepstakes: "The excitement over the new Triple Play Award <http://www.arrl.org/awards/#tripleplay> was likely a large factor in the RTTY Roundup increase. Interest in contesting in general is on the rise."

* WSJT Monthly Sprints to Begin this Weekend: The first monthly WSJT Sprint contest will be held this Saturday, February 28 between 4 AM and noon (local time). WSJT <http://www.physics.princeton.edu/pulsar/K1JT/> is a popular software suite created by Joe Taylor, K1JT. It is used to make digital contacts by reflecting signals off the ionized trails left by meteors (a technique known as meteor scatter). The same software can be used to make contacts by using the moon as a radio reflector (moonbounce). WSJT Sprint points are based on the distances worked. Participants are allowed to make random or assisted contacts (skeds via Ping Jockey <http://www.pingjockey.net/cgi-bin/pingtalk>). Enter as 6 meter only, 2 meter only or Combined class. Simultaneous 6/2 meter operation is permitted in the Combined class. Complete rules are available online <http://www.ykc.com/wa5ufh/>; click on "Sprints" in the content bar on the left.

* FCC Revokes License of Indiana Ham: On February 25, the Federal Communications Commission revoked the license of Lonnie L. Keeney, KB9RFO, of Greencastle Indiana. According to the FCC, Keeney's 2002 conviction of child molestation, a Class C felony, renders him "lack[ing] the requisite character qualifications to be and remain a Commission licensee." Keeney has 30 days to appeal the revocation <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-456A1.pdf>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur

When you do get a copy of the CC&R's, see if there's a clause (like in mine) that says "no antennas without permission." That'd mean you could ask for permission, outlining what you plan to do, provide a drawing, etc. If they don't permit them at all, then you have to go "stealth," which'd make operating reliably on 75m difficult. I have an MFJ Hi-Q Loop that operates 10-30 meters (very well) mounted vertically on a 5 foot mast in a post anchor in the ground. I painted the plastic body a light green and called it my "yard sculpture." (They also offer one for 15-40 meters, but it's only 25% efficient on 40.)

I suppose, too, if you wanted to operate 6 and/or 2 meters you can mount yagi(s) on the roof for those bands, telling them it's for tv (if there are any OTA stations in your area). They can't stop you from erecting a tv antenna. There are lots of possibilities.

IMHO, it's not just a good thing; it's absolutely essential. Not just
any lawyer, either, but an experienced Real Estate attorney that is
well known in your township, borough, etc.

(insert standard I-am-not-a-lawyer disclaimer HERE)

> Apparently my builder was fond of not finishing up all the required
> filings to get all the restrictions in place until the first lot was
> sold. I've found a number of other subdivisions that have simila
r

If the builder didn't file the restrictions before your lot was sold,
you *may* have a case. OTOH, there may be a clause in there someplace
that permitted the builder or a subsequent owner to add the
restrictions later - which may or may not have been done.

A qualified RE attorney can tell you if you have a case worth
pursuing.

> It kind of makes sense in a way, to wait until you've actually sold

> subdivision.

Any owner could add deed restrictions to a property at any time, as
long as they're legal restrictions. Unless you bought the house from
the builder, another owner may have signed up. Or maybe not. That's
the kind of thing you need an attorney for.

>Otherwise
> there are a bunch of houses paying HOA dues that don't owe

> accept
> reasonable antennas for HF operations on my property.

There may be a requirement to pay the dues that is separate from the anti-antenna deed restriction. Or there may be benefits to joining even if you don't have to.

IMHO, you should not be thinking in terms of "leverage" or "reasonable antennas" at this point. If it were me, I'd find an RE attorney who could tell me for sure whether the no-antennas deed restrictions apply to my house or not. Or at least who could tell me how to find out for sure - quietly.

If they apply (say, a previous owner added them) then you are out of luck. If they don't apply, you don't need "leverage" or HOA approval at all.

Related topic: I wonder if the current housing "downturn" gives hams any new methods to ease antenna restrictions?

53. [ADMIN,META] Allow crossposting to rec.radio.amateur.moderated?

Newsgroup: rec.radio.amateur.moderated
Date: 2009-03-03 14:22:16 UTC
From: rram@panix.com
Message-ID: <gojeci$m74$1@reader1.panix.com>
Source record: 2163
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.amateur.moderated

(Followups directed to poster by default. If followup to newsgroups is desired, edit your headers on followup to drop rec.radio.amateur.moderated from the Newsgroups line, else your article will be rejected.)

The rec.radio.amateur.moderated newsgroup enters its 3rd year of operation this month. Since its creation in February of 2007, we have approved nearly 3,000 articles about amateur radio and closely related subjects. We would like to thank our readers and posters for their quality contributions to our newsgroup.

When we first started out, consistent with our newsgroup's Charter and Posting Guidelines:

http://www.panix.com/~rram/usenet/rram/

we allowed discussion threads to be posted to our newsgroup only. Our moderation software is programmed to automatically reject any crossposts. The one exception has been periodic information postings that are crossposted to rec.radio.info, rec.answers, and/or news.answers.

Some moderated newsgroups, such as those in the comp.lang.perl.* and misc.kids.* hierarchies, started accepting crosspostings to appropriate unmoderated newsgroups after a suitable waiting period from their initial creation. Now that our newsgroup is well-established and carried at most major sites, we would like to implement this customary followup and allow some crossposting. We would propose to allow simultaneous crossposting (i.e., one article, with all newsgroups specified at once on the Newsgroups line in the headers) to rec.radio.amateur.moderated and one other unmoderated newsgroup in the rec.radio.amateur.*, alt.radio.amateur.*, and alt.ham-radio.* hierarchies only.

Pros:

- Allows the moderated and unmoderated newsgroups to share discussion threads of common interest, without propagating more than one set of articles to news, or showing them more than once in a newsreader. Presently, threads of common interest have to run in parallel, with different sets of followups, and requiring readers to have to follow two threads, possibly with duplicate articles, in different newsgroups. We have seen multiple examples of this happening in the amateur-radio-related newsgroups over the past 2 years.

- Provides the default action of submitting articles and followups to moderator review, as news servers will forward to us for approval any article that contains rec.radio.amateur.moderated on the Newsgroups line. This allows the moderated newsgroup crossposting to serve as a "guardian" or "sentinel" to discourage threads from getting hijacked into running off-topic or into personal abuse. This may also encourage posters to use the underutilized rec.radio.amateur.misc or .policy newsgroups as crossposting targets for articles that might otherwise be posted only to .moderated.

- Readers of the unmoderated newsgroups will enjoy high-quality, on-topic, discussion threads that would otherwise require subscribing to and reading a moderated newsgroup. Readers of the moderated newsgroup will enjoy high-quality, on-topic, discussion threads that would otherwise require subscribing to and reading other unmoderated newsgroups. Those unmoderated newsgroups may contain articles of widely varying degrees of quality and topic relevance.

- Participation in this crossposting scheme is completely voluntary. Posters of initial articles in threads will make the voluntary choice to add rec.radio.amateur.moderated and one other unmoderated newsgroup to the Newsgroups line when posting. Those following up to these crossposted threads will make a voluntary choice whether to keep rec.radio.amateur.moderated or any other newsgroup on the Newsgroups line, or remove them. Followups may be directed by default to any subset of the newsgroups on the Newsgroups line (or via E-mail to "poster") by specifying them on an appropriate Followup-To line. In short, you control what you post, where you post it, and what default destinations you want for any followups. This proposed crossposting scheme does not change any of these long-standing features of Usenet and newsreader software.

Cons:

- This will subject all such simultaneously crossposted articles to moderator review by us. If they do not meet the Charter and Posting Guidelines of rec.radio.amateur.moderated, they will be rejected. We will attempt to work with submitters to let them know what is happening, and how their articles can be fixed for eventual approval. However, rejected articles that were submitted anonymously without a traceable/derivable E-mail address or identity will have to be dropped silently without feedback to the unreachable submitter.

- Moderator review will introduce some posting delay. However, it has been our experience over the last 2 years that with our large moderation team distributed across many time zones, and the automation provided by our moderation software, we can turn submissions around relatively quickly, often within an hour.

- Many newsreaders do not give clear feedback to the user what newsgroups in which a given article appears, nor to what newsgroups a followup to that article will be sent by default. We expect to initially have to handle a few confused, possibly angry, submitters

who will insist that they did not intend to post to a moderated newsgroup. We are willing to provide the necessary polite feedback and user education to them to allow this crossposting scheme to work effectively. This will help ensure that the scheme is only used by those who are reasonably aware of the various pros and cons. We hope that this problem will diminish with time and greater user awareness.

- Not all newsgroups, especially those in the alt.* hierarchy, are carried at all sites. Users may find themselves following up by default to newsgroups that do not exist on their local news server, possibly resulting in article rejection from their server. Those users would have to edit their Newsgroups line for successful resubmission. We will work with users to get appropriate newsgroups added to their local servers, as well as with Panix to get those newsgroups added to Panix's server. However, as with default followups described in the previous paragraph, we expect to have to go through an initial period of user and news service provider education and polite feedback. We hope that this problem also will diminish with time and greater user awareness.

We propose to enforce this scheme in our moderation software as follows:

- Submissions simultaneously crossposted to more than 2 newsgroups will be automatically rejected with a rejection form letter (same as what happens now to submissions that are posted to more than 1 newsgroup).

- Submissions that contain newsgroups on the Newsgroups line other than approved newsgroups in the rec.radio.amateur.*, alt.radio.amateur.*, or alt.ham-radio.* hierarchies will be automatically rejected with a rejection form letter.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

To help publicize this new editorial policy, we will update our Posting Guidelines, which are posted to the moderated newsgroup on the 15th of each month. Changes to our Posting Guidelines are indicated by an updated date in the Revision: auxiliary header at the top of the body, as well as "change bars" ('|') after each modified line of text. We will also add a short announcement, posted on the 1st of each month and cross-posted to the unmoderated newsgroups, restating this new editorial policy, and encouraging crossposted submissions.

Since this is a change to our newsgroup's editorial policies, and with some impact to the readers and posters of the unmoderated newsgroups, we would like to solicit 30 days of direct feedback and/or public discussion regarding this proposed change. For example, we would be interested to know if allowing crossposting to one other unmoderated newsgroup is enough, or if two would be preferable. We feel that more than two additional crossposted newsgroups greatly increases the probability of misconduct or accidental misposting that may result in article rejection by us. Also, should this scheme be opened up to uk.radio.amateur and aus.radio.amateur.* as well? You may send us E-mail directly to our administrative contact address below, which is the default Followup-To/Reply-To for this article. You may also discuss this publicly on the unmoderated newsgroups. In fact, we cannot stop you from doing so. We will make every reasonable effort to incorporate any feedback and suggestions. If we decide to implement this proposal, we will make a public announcement shortly after the end of the 30-day discussion period.

(Followups directed to poster by default. If followup to newsgroups is desired, edit your headers on followup to drop rec.radio.amateur.moderated from the Newsgroups line, else your article will be rejected.)

Amateur Radio Newsline(tm) Report 1647 - March 6 2009

Amateur Radio Newsline report number 1647 with a release date of Friday, March 6th, 2009 to follow in 5-4-3-2-1.

The following is a QST. A California jury condemns another of the Hawkes' murderers to death; the killer of a ham couple in Nebraska gets life with no parole; a ham convicted of molesting a child looses his license, a new rescue information service is announced by Holland's leading broadcaster and a ham radio space tourist prepares for his second trip to the ISS. Find out who on Amateur Radio Newsline(tm) report number 1647, coming your way right now.

**

THE HAWKES CASE: THIRD CONSPIRATOR WILL FACE DEATH PENALTY

John Fitzgerald Kennedy will be put to death for his part in the murders at sea of Thomas and Jackie Hawks, KD7VWJ and KD7VWK. Bruce Tennant, K6PZW. Reports:

--

The same jury that convicted John Fitzgerald Kennedy last week of two counts of first-degree murder with special circumstances in the killings took only 7 hours to decide that the 43 year old former gang member should be condemned to death. This, for his part in the gruesome Hawkes killings at sea in November of 2004.

Kennedy is the third defendant to stand trial for the double murders at sea, which occurred somewhere off the coast of California. 29 year old Skylar Deleon, of Long Beach, California, the plotter, recruited Kennedy at the last minute to help to subdue Thomas Hawkes aboard the boat. He was convicted last year and is awaiting a sentence of death on March 20. Jennifer Henderson, Deleon's former wife, was convicted in 2006 for her role and was has been sentenced to life without parole.

Senior Deputy District Attorney Matt Murphy, who prosecuted all three, said that the murder conspiracy would not have succeeded had it not been for Kennedy. Murphy described Kennedy a muscular street gang member with an extensive criminal background. By the time he was 40, Kennedy had accumulated 21 arrests for such charges as battery, theft, drugs and attempted murder. In March 2005, he was arrested and charged with murdering the Hawkes for financial gain.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Superior Court Judge Frank F. Fasel scheduled Kennedy's official sentencing for March 27th. No Orange County judge has ever reversed a jury's death verdict at sentencing. (Published news reports)

**

ENFORCEMENT: MURDERER OF TWO NEBRASKA HAMS SENTENCED TO LIFE IN PRISON

The man who murdered two Nebraska hams last summer will never again see freedom. This, as Brandon Crago is sentenced to two terms of life in prison without the possibility of parole for the killings of Steve Baily, N0US and his wife Carolyn, N0LAL, in their rural Lincoln home on August 10th 2008.

The crime was discovered when a neighbor dropped by to let the Baily's know that their dogs were loose. When he reached the Baily's house he found Steve Baily's body outside beneath a blanket. Carolyn Baily was on the floor inside a broken front storm door. Each had been shot twice and their home ransacked.

Investigators found a spent shotgun shell at the crime scene. Crago's shotgun was found later in a Lincoln trash bin. Lab tests showed that the gun had Crago's and Carolyn Baily's DNA on it. Tests also showed that Crago's shoes had Steve Baily's blood on them.

Last month Crago pleaded no contest to all charges against him. District Judge Jodi Nelson has now sentenced him to the two life terms which, under Nebraska state law, was the only sentence possible in this case.

Chief Deputy Lancaster County Attorney Joe Kelly said that his office didn't seek the death penalty because of the uncertainty surrounding executions in the state.

One of the victims' daughters, Jennifer Baily, was in the courtroom to hear
Judge Nelson hand down the sentence. (Lincoln Journal Star, K0NEB)

**

RADIO MISTAKE: THAT'S NOT A BOMB IT'S AN ANTENNA

Still in Nebraska, a sad yet funny story out of Omaha. That's where Police and a Bomb Squad have blown up a trap from a ham radio antenna because nobody could figure out what it was.

It all happened on Thursday, February 26th. That's when both agencies were
called out following the discovery by a cleaning crew of a device that they thought looked like a PVC pipe bomb.

The house in question belonged to Bob Rennolet, W0AEX. There had been an electrical fire in the house 2 weeks ago and he had hired the clean-up crew but it had no idea as to what it had found. So, rather than take chances, the Bomb Squad decided to blow it up. That's when they realized it was

not
a bomb but a piece of W0AEX's ham radio gear.

Ironically, W0AEX lives next door to a fire station, so they didn't have far to go to put out the fire or blow up the trap. (K0NEB, W0HXL)

**

ENFORCEMENT: FCC REVOKES LICENSE OF CONVICTED CHILD MOLESTER

The FCC has revoked the amateur radio license of an Indiana ham who was convicted several years ago of molesting a child. Amateur Radio Newsline's Mark Abramovich, NT3V, has the details:

--

Lonnie Keeney, KB9RFO, will have to surrender his ham license after the FCC ruled "he lacks the requisite character and qualifications to be and remain a commission licensee."

Kris Anne Monteith, the FCC's chief of the Enforcement Bureau, issued the ruling after a more than two-year process that started with a compaint filed in 2006.

The FCC investigated and found Kenney pleaded guilty in December 2002 to inappropriate contact with a 5-year-old.

He was sentenced to six years in prison. Because of his conviction, Kenney is required to register as a sex offender and must register his address with law enforcement.

He was also barred from any contact with youth during a period of probation which ended last May.

In her order filed with the commission, Monteith said the character of a licensee is one of the factors the commission considers in determining whether a person should be granted an operating license.

She noted the commission has applied such character standards developed for broadcasters to applicants and licensees of the Amateur Radio Service.

Monteith said since Keeney acknowledged his conviction and continues to be supervised by law enforcement as a sex offender, his license should be revoked.

The revocation order was adopted Feb. 25.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Keeney's license revocation is effective on the 40th day after release of the revocation order, unless he files a Petition for Reconsideration. He also has the option of filing an Application for Review within thirty 30 days. If he does either, the effective date of the revocation order will be suspended pending further order of the Commission. (FCC)

WORLDBEAT: RNW ESTABLISHES RESCUE RADIO INFO SERVICE

In case of an international disaster, a shortwave broadcaster in Holland will be there to bring you the latest news and information. Randy Ross, KI4ZJI, has the rest of the story:

--

Radio Netherlands Worldwide has a new international disaster information system set to launch this spring. Using a combination of special broadcasts, a separate Web site and mobile phone alerts, the international service will report on events and provide complete information for any Dutch victims and their relatives.

A specially trained Radio Netherlands team will answer questions via phone, radio, the Internet and the Dutch BVN television network. It will cover incidents such as natural disasters, social conflicts or any terrorist attacks that may occur. The news and information stream will be kept up to date from minute to minute.

Editor-in-Chief Rik Rensen is in charge of the project. He says that the disaster team is Radio Netherland's response to the urgent requests for help and information we received during recent violence in Mumbai and the lengthy airport strike in Bangkok.

For the Amateur Radio Newsline, I'm, Randy Ross, KI4ZJI, in Shelby, North Carolina.

--

This new service from Radio Netherlands will be in addition to their many other international broadcasts. (Media Network)

BREAKING DX NEWS: THE K5D TEAM SAYS THANK YOU

The recent Desecheo Island K5D DXpedition netted a grand total of 115,783 QSO's. According to co-leaders Bob Alperin, K4UEE, and Glenn Johnson, W0GJ, it means that the DXpedition ranks seventh for all-time for the total number of QSO's, and first for the most 30 Meter contacts.

In recent times, Desecheo Island was the number two most-wanted contact in Asia, and number three most-wanted in Europe. Alperin and Johnson say that 40% of the K5D contacts were with those two continents, making it an

important goal that was achieved.

The team leaders say that a special K5D QSL card is in the final stages of design and will be available in the next few weeks. In the meantime, QSLs go directly to N2OO and are also being accepted on-line.

Alberin and Johnson add that the Desecheo 2009 team wants to thank everyone for working them and helping to make this DXpedition such a success. The K5D operation ran from February 12th to the 26th. (K5D release)

**

HAM RADIO IN SPACE: CHARLES SIMONYI, KE7KDP HEADS BACK TO THE ISS

Software pioneer Charles Simonyi, KE7KDP, is to make a return trip to the International Space Station. If all goes as planned, Simonyi is expected to blast off for the ISS later this month on board the Soyuz TMA-14 crew change and re-supply flight.

In early 2006, Simonyi expressed interest in becoming a space tourist and signed agreements with the space tourism company, Space Adventures, Ltd., for a ten-day mission to the International Space Station. He launched on April 7, 2007on board Soyuz TMA-10, sharing a ride with two Russian cosmonauts to the International Space Station.

During his last stay on the ISS, Simonyi made numerous ham radio contacts with kids in schools world wide. Most were made using his United States KE7KDP callsign but Simonyi used his Hungarian call of HA5SIK when he contacted 25 radio amateurs in that nation on April 12th.

He returned aboard the Soyuz TMA-9 in April 21st. In October 2008, he booked a second trip to the ISS through Space Adventures that's about to take him back to the ISS, with liftoff slated for March 26th at 11:48 Moscow time. (ARNewsline(tm) from published reports)

**

HAM RADIO ON THE NET: RADIO ARCALA CONTEST

A ham radio station that exists primarily on the Internet has launched a story writing contest to get more kids interested in the hobby. Jeramy Boot, G4NJH, is in Nottingham, UK, with more:

--

The Arcala radio station, OH8X, is believed to be the first-ever amateur radio station to be active in a Virtual World on the Internet in the hope of attracting more young people to the hobby.

Millions of computer-minded youngsters gather there daily. They have launched a competition asking amateurs to imagine themselves as an 18 year old enthusiastic radio amateur. Then, in 250 words or less, describe the excitement of being an amateur to other young people and say why they should join amateur radio. The writing should be either in English or Spanish.

Please submit your paper by e-mail no later than 15 March to oh8x<at>sral<dot>fi for English papers or yv5amh<at>iaru-r2<dot>org for Spanish ones.

The papers will be reviewed by a panel of well known international radio amateurs. The three best papers will receive plaques and the winning text will be made available to amateur radio publications and in the Virtual Reality world.

For the Amateur Radio Newsline, I'm Jeramy Boot, G4NJG

--

Full details are on line at www.radioarcala.com. (RSGB, Radio Arcala)

RADIO ACCIDENTS: SOUTH CAROLINA TOWER FELLED

High winds from the winter storm may have toppled a broadcast tower in Spartanburg, South Carolina. According to news reports, the felled tower belonged to CBS affiliate WSPA and was located atop Hogback Mountain near Spartanburg. It collapsed on Sunday afternoon, March 1st as a major winter storm was passing through the area. Nobody was injured in the mishap and WSPA remained in operation by streaming its programming on-line. It's not known if any local ham radio repeaters were located on the WSPA tower. (WCSC On-Line)

**

ON THE NET: A COMPUTER WORM CALLED DOWNADUP

A computer worm called Downadup, continues to spread after infecting millions of corporate computers and servers. Don Carlson, KQ6FM, is here with the details on this one:

--

Considered to be the most severe outbreak in years, about 1.2 million networks were contaminated as of January 23rd. This, according to the Helsinki- based Internet security software maker F-Secure.

That's up from less than a million on January 20th. According to F-Secure the worm, also know as Conficker, infects computers and servers running the Microsoft Windows operating system. It can then block users from accessing their accounts, also spreads through portable storage devices.

F-Secure posted a warning about the virus on its Web site on January 7th. The strain is different from other outbreaks because it mainly affects corporate networks rather than consumer's home systems.

I'm Don Carlson, KQ6FM, in Reno.

--

More on the Downadup worm can be found on the websites of most security software companies such as F-Secure, McAfee, E-Trust and numerous others. (Published reports)

**

ON THE AIR: PRACTICE MORSE ON 2 METER FM

If you live in the Kansas City area and want to practice CW, take your radio to 2 meter FM. Specifically to the Kansas City 145.37 repeater for the Independence CW over FM Net. The net meets at 1900 Central Standard Time every Monday night. Anyone with an interest in Morse and who owns a CW practice oscillator is more than welcome to participate. (KC0WTS)

**

NAMES IN THE NEW: GENACHOWSKI NOMINATED TO HEAD FCC

Some names in the news. President Barack Obama has nominated Julius Genachowski as Chairman of the FCC. A lawyer by training, the 46 year old Genachowski was the architect of the new President's hugely successful drive to use the Internet to raise funds for the primary and general election campaigns. Genachowski also pushed the idea of using wireless as a way to connect with supporters

Julius Genachowski, who attended Harvard with President Obama is also a venture capitalist with long ties to Silicon Valley. He spent eight years at IAC InterActive and was a law clerk for two Supreme Court justices. He later served as chief counsel to former FCC chairman Reed Hundt. His appointment has to be approved by the Senate. (FCC)

**

NAMES IN THE NEWS: NEW APPOINTMENTS AT RAC

The Radio Amateurs of Canada Board of Directors has appointed Sue Cooke, VE3SUH, as Vice President for Field Services. Cook will hold this position for the remainder of a two-year term which ends December 31st or until a permanent replacement is appointed, whichever comes first.

Former Vice President for Field Services Bob Cooke, VE3BDB, resigned from that post to accept appointment as the Radio Amateurs of Canada President. Both appointments were made at a Board meeting on February 24th. (RAC)

**

THE SOCIAL SCENE: INTERNATIONAL DX CONVENTION IN CALIFORNIA IN APRIL

Turning to the social calendar, the annual International DX Convention in Visalia, California, will be held April 17th to the 19th. 2009 marks the 60th anniversary of this event with some added attractions this year include a Contest Academy sponsored by the Northern California Contest Club and a report on the Radio Arcala Project by OH2BH and OH8NC. This years special guest and banquet speaker is retired Navy Vice Admiral J. Scott Redd K0DQ. For complete program information, take your web browser to

www.dxconvention.org (Via e-mail)

**

THE SOCIAL SCENE: RADIOFEST MONTEREY MARCH 7 AND 8

Radiofest Monterey Bay 2009 runs March 7th to the 8th at Moose Lodge in Del Rey Oaks, California. Look for displays by Elecraft, Ham Radio Outlet and several other top names. Talk-in is on the K6LY 146.97 repeater using a 94.8 tone plus machines on 220 and 440. More information is on line at www.radiofest.org. (Via e-mail)

**

THE SOCIAL SCENE: CHARLOTTE NC HAMFEST MARCH 14 - 15

The 2008 Charlotte North Carolina Hamfest is slated for March 14th and 15th at the Cabarrus Arena & Events Center in Concord. Talk-in will be provided on 146.655MHz repeater with backup on 146.94 machine. More information is www.w4bfb.org/hamfest2009/hamfest.html (Via e-mail)

CHANGING OF THE GUARD: DON ELLIOT HEALD - THE VOICE OF WWV - SK

The recorded voice of Time and Frequency Station WWV has fallen silent. This with word that announcer Don Elliot Heald, of Atlanta, Georgia, who gave WWV its human touch passed away on Thursday, February 19th.

Known in the broadcast world as Don Elliot, Heald had distinguished career that ranged from work at Atlanta Georgia's WSB to his automated and internationally heard WWV broadcasts on shortwave. He was also the voice of the Audichron telephone dial-in Time-Weather-Temperature service and of the Protestant Hour radio show for over 40 years. For nearly five decades Heald narrated the televised Christmas Eve service from Atlanta's Episcopal Cathedral of St. Philip, where he served as a vestryman, junior warden and senior warden.

Heald was originally from Massachusetts, but came to Atlanta via Lakeland, Florida. He was a graduate of the University of Florida at Gainesville and began his broadcast career after graduation when he accepted a position at WRUF where remained for three years. In Atlanta he spent much of his spare time devoted to public service work with charities and civic clubs.

A Service of Celebration of Don Elliot Heald's life took place on Tuesday February 24th at the Cathedral of St. Philip. He is survived by his wife Sara Farmer Heald of Atlanta, GA; sons and daughters-in- law David and Deborah of Ponte Vedra Beach, Florida, Tom and Evelyn Heald and Frank and Mary Heald of Atlanta. Don Elliot Heald was 86. (Various sources via AE6DW)

EMERGING TECHNOLOGY: MELT ICE WITH VARIABLE RESISTANCE WIRE

A new way to keep ice off your antenna and transmission lines is on the horizon. This thanks to a group of New England researchers and a businessman with a vision. Newsline's Jeff Clark, K8JAC, tells us about this new technology that might some day keep your antenna from falling down in an ice storm:

--

Dartmouth engineering professor and entrepreneur Victor Petrenko and his colleagues at Ice Engineering in Lebanon, New Hampshire, have invented a way to cheaply and effectively keep ice off power lines.

The new proprietary technology is called a variable resistance cable de-icing system. With only minor cable modifications plus some off-the-shelf electronics, the system switches the electrical resistance of a standard power line from low to high. The high resistance automatically creates heat to melt ice build-up or keep it from forming in the first place.

Ice Engineering plans to install and test a full-scale system prototype on a section of power line in Russia, in late January. The company is also currently negotiating full-scale installations of in other regions of Russia and in China.

--

No word yet as to if and when a personal version of this new technology will be available to the ham in the ice cold street. (Science OnLine)

HAM RADIO IN SPACE: NEW CERTIFICATE FOR OPERATING VO-52

Still with ham radio space related news, VU3TYG has announced that AMSAT India will issue a certificate to radio amateurs who establish two-way contact through the VO-52 ham radio satellite between now and May 5th. The first fifty certificates will be sponsored and includes postage. After the 50 certificates have been issued a fee will apply. Please send your QSL card containing the details of your QSO on VO-52 to AMSAT India (Regd.), No. 201, 2nd Main Road, Mahalakshmi Layout, Bangalore 560086 India. Make sure to include the mailing address where you would like to have the certificate sent to VU3TYG)

**

WORLDBEAT: GERMAN AMTOR MAILBOX TO MOVE FREQUENCIES

Turning to news from around the world word that the Germany-based DA5TOR AMTOR mailbox will move its 40 meter access frequencies on March 29th. This, in order to comply with the new worldwide 40 Meter bandplan. The new frequencies are 7.047, 7.049 and 7.051 MHz with the new activity center for AMTOR in Europe will be 7.042 MHz for direct connections. All frequencies and technical details of the mailbox can be found on line art www.amtor.de. (RSGB)

**

WORLDBEAT: RSGB NEGOCIATES 500 kHz NOV EXTENSION

The Radio Society of Great Britain has negotiated extensions to 500 kHz Notices of Variation that permit UK amateurs to utilize that spectrum. Following proposals from the RSGB, Ofcom has extended existing permits for 501 to 504 kHz until February 28th 2010. The RSGB says that letters are being set to all Notices of Variation holders. The extension of the Notices of Variation also authorizes an Effective Radiated Power of up to 10 Watts. (GB2RS)

**

DX

In DX, word that AA7JV and HA7RY will be active from Mellish Reef as VK9GMW in what they call another low-key DXpedition between March 22nd and April 6th. The operation will have a strong low-band focus. QSL via HA7RY direct, by the Bureau or using Logbook to the World. And please note that the dates of this operation are approximate and subject to change with little notice.

A group of 10 operators will be on the air April 12th to April 17th from the Western Sahara using S04R callsign. Operation will take place on 10 to 160 Meters using SSB, CW and some digital modes. The QSL manager will be EA5RM. EA5BZ will be the pilot station and additional info is already available at www.dxfriends.com.

F5TGR will be active as stroke FG from Guadeloupe March 14th to the 28th. Look for him on 40 through 10 Meters using CW and SSB. QSL via F5TGR.

F5UOW, will be active from Boucan Canot near St. Gilles les Bains between March 8th to the 22nd operating holiday style mostly CW on 20 Meters. QSL via his home callsign.

Look for W5JON portable J 6 from Saint Lucia from March 1st through 11th. He will be on 160 through 6 Meters using SSB from Marigot Bay. Antennas are dipoles on the HF bands and a Yagi for 50 Mhz. QSL via W5JON.

PF4T will be active from the Maldives as 8Q7TB from between June 8th to the 25th. Listen for him on 40 and 20 meters using SSB. QSL via PF4T.

(Above from various DX news sources)

THE CHANGING OF THE GUARD: KATY WILLIAMS, KI6FJQ, AGE 19 - S.K.

With this weeks final words, here's our producer Bill Pasternak, WA6ITF:

--

Every now and then a story truly touches a reporter's soul and so it is with this one. We are sad to report the passing of Katherine E. Williams, KI6FJQ, of Salinas, California. What separates the death of this ham operator from others that we have reported over the years is that Katy -- as she was known by her friends -- was only age 19. She was also the daughter of one of the unofficial members of our Amateur Radio Newsline family, Scott Avery, WA6LIE.

In a note from Scott we learned that Katy died at about 4 p.m. Pacific time on Tuesday, February 24th from complications with pneumonia. Scott tells us that this might have been the result of staph infection contracted from a visit to a dentist.

Scott tells us that Katy got interested in becoming a ham after he let her say hello to an astronaut on-orbit during a space to ground contact. Scott says that Katy thought it was neat to talk to astronauts and cosmonauts. He told her that she could do it on her own by getting her ham ticket.

So Katy studied hard and finally got her license and the call KI6FJQ. And eventually she did get to talk to someone in space when she hooked up with Charles Simonyi, KE7KDP. That's when Simonyi was a space tourist visiting the ISS. She also attended many radio events with Scott and thought it was all "kinda cool."

Scott tells us that Katy had plans to major in medicine as a career. She had a boy friend and truly enjoyed life. Scott describes Katy as a vibrant young teen with her life ahead of her.

Katy Williams is survived by her dad, her mother Mary, KG6LGS, and three brothers and sisters. And no matter how old the rest of us get, Katy Williams, KI6FJQ, will always be age 19. It is to her memory and her young spirit of amateur radio that we dedicate this week's newscast.

--

Our condolences go out to Scott Avery, WA6LIE, and his family on their loss. (ARNewsline(tm) from information supplied by WA6LIE)

==> FCC SPECIAL COUNSEL LAURA SMITH VISITS ARRL HQ

Laura Smith visited ARRL Headquarters on March 5 and 6, her first
official visit as Special Counsel. Smith was named to the position
earlier this year, filling the vacancy created when Riley Hollingsworth,
K4ZDH, retired in 2008; Hollingsworth served in that position for more
than 10 years as the Commission's enforcement watchdog over the Amateur
Radio Service <http://www.arrl.org/news/stories/2008/07/03/10198>.
```

While at Headquarters, Smith visited with various departments, such as the Lab, the Volunteer Examiner Coordinator (VEC), the Regulatory Information Branch and Membership and Volunteer Programs (MVP).

Spending all Thursday afternoon with ARRL Lab staff, Smith discussed power line noise and how it can affect Amateur Radio. "Since Riley had retired last year, very little had been done at the FCC with regard to the power line noise enforcement," said ARRL Laboratory Engineer and power line noise expert Mike Gruber, W1MG. "The Lab staff discussed the status of the ARRL-FCC Cooperative Agreement on power line noise with Laura and how best to proceed forward <http://www.arrl.org/news/stories/2002/07/26/3/?nc=1>. While the ARRL is not in the enforcement business, the Cooperative Agreement was an attempt to help the FCC focus its limited resources in the area where they are most needed -- enforcement. The ARRL's goal is to help resolve as many of these cases as possible with technical and other help before they ever get to the FCC."

Gruber also briefed Smith on some power line noise basics, including a demonstration of some professional grade locating equipment. Using a Model T spark coil as a noise source, Gruber was able to show Smith how a utility can locate power line noise - in many cases, without too much difficulty.

According to ARRL Regulatory Information Branch Manager Dan Henderson, N1ND, the FCC committed to Smith visiting the ARRL once she accepted the position. "I think this visit has been a very productive two days. We are getting to know Laura, and she is getting to know our organization and what we, as the ARRL, can do to help her make her job easier to help the amateur community as a whole," Henderson said. "I just kind of played tour guide and facilitated the visit, introducing her to all the departments here at Headquarters."

Smith, a lawyer, is no stranger to the FCC or Amateur Radio. She began her legal career with the Commission, working in the Mass Media Bureau and Wireless Telecommunications Bureau (WTB), working with Senior System Analyst Bill Cross, W3TN; she also served as Deputy Division Chief of the Public Safety and Private Wireless Division. Smith also knew Hollingsworth through her father-in-law Richard M. Smith, former Chief of the Field Operations Bureau, at the time responsible for all FCC field engineering and enforcement activities. Richard Smith led many investigations of illegal uses of the radio spectrum, including the successful apprehension of "Captain Midnight" who overrode a satellite television broadcast signal <http://en.wikipedia.org/wiki/Captain_Midnight_%28HBO%29>. Smith also served as Chief of the FCC's Office of Engineering and Technology (OET).

"Riley worked for my father-in-law for years," Smith said. "My father-in-law was the Chief of the Field Operations Bureau at the FCC for 25 years. So enforcement is actually something that is a long-standing family tradition. A member of my family -- the Smith family -- has worked at the FCC continuously since 1964: Myself, my husband and my father-in-law."

Calling Hollingsworth "irreplaceable," Smith said what he did for the Commission and for the amateur community was "amazing. He volunteered for that job. He stood up and said, 'I'm an amateur. I love this community and I want to give back to it.' This position needs to be filled by somebody who is interested in doing it long-term. This [job] is not a stepping stone; it's not a short term process. This wouldn't work if I were trying to be Riley. I'm not going to be Riley. We're very different people. But we both have the same goal: To make the amateur community better."

Smith emphasized that an Amateur Radio license is "a privilege, not a right. When you come to the FCC and you sign up for a license and you get that license, you have agreed to abide by those Rules. That is inherent in the application process. As an applicant and a licensee, you have said, 'I will hereby comply with the Rules that have been enacted by the FCC.' So you have said, 'I will adhere to that.' And if you choose not to, then you are subject to losing that privilege."

Smith is not yet a licensed amateur. She said that she will get her license "someday," but that she did not want to get her license just because her job involves Amateur Radio: "I didn't want to come into this job and become a ham, saying, 'I'm getting this job so I'm going to be a ham -- not because I'm interested in being a ham, but because it looks better on paper.' So ultimately I will become a ham." Smith said that her father-in-law, when stationed in the FCC"s Field Office in Los Angeles, used to administer the Morse code test to prospective licensees: "So he has challenged me that before I can become an amateur on any level, I must learn Morse code and I must past the test with him administering the Morse code. So I have a challenge. I am going to begin learning Morse code this summer. He is going to start teaching me, so once I have sufficient proficiency, then he will let me take the [Technician] test."

==> FCC HAS DONE "LITERALLY NOTHING" TO COMPLY WITH COURT RULING

On February 25 -- 10 months to the day that the US Court of Appeals for the District of Columbia Circuit released its decision on the ARRL's Petition for Review of the FCC's Orders adopting rules governing broadband over power line (BPL) systems <http://www.arrl.org/news/stories/2008/04/25/10064/?nc=1> -- ARRL General Counsel, Chris Imlay, W3KD, sent a letter to FCC Acting Chairman Michael Copps, requesting that the Commission "revisit the BPL rules without further delay, and to comply with the obligations placed on it by the Court" <http://www.arrl.org/news/files/Feb2509_Letter_to_Copps.pdf>. In its April 2008 decision, the Court agreed with the ARRL on two major points and remanded the rules to the Commission. According to Imlay, "to date, literally nothing has been done by the Commission to comply with these instructions."

In its 2008 ruling, the Court did not vacate the Commission's 2004 BPL rules. Imlay said that the ARRL did not request the Court do so, as the current Part 15 rules governing BPL, "inadequate though they are, were

slightly preferable to the general application of the Part 15 rules to BPL systems in terms of interference prevention." Imlay said that the FCC's "inaction" since the remand has "served neither BPL deployment, nor Amateur Radio, well."

Imlay pointed out to Copps that without such rules protecting the Amateur Radio Service, Amateur Radio operators have no protection from the interference from BPL systems: "While there are configurations of BPL systems which can adequately reduce the probability of interference ex ante and without significant constraints on BPL deployment, the current BPL rules do not mandate the use of these interference prevention mechanisms."

The Court demanded two things from the FCC in its ruling: release the redacted studies that the Commission relied on for its BPL findings, and provide a "reasoned justification" for an extrapolation factor of 40 dB per decade, or adopt another factor and provide a reasoned explanation for it.

Regarding the redacted studies, the Court ordered the Commission to "make available for notice and comment the unredacted 'technical studies and data that it has employed in reaching [its] decisions' [with respect to BPL]...and shall make them part of the rulemaking record." The FCC used five substantially redacted field studies that the Commission's Office of Engineering and Technology (OET) staff conducted of BPL field trials. To date, these unredacted studies have not been released.

The Court also ordered the FCC to "either provide a reasonable justification for retaining an extrapolation factor of 40 dB per decade for access BPL systems sufficient to indicate that it has grappled with the 2005 studies, or adopt another factor and provide a reasoned explanation for it." The 2005 studies refer to those conducted by the Office of Communications, the FCC's counterpart in the United Kingdom. The ARRL submitted these studies to the Court, along with the League's own analysis showing that an extrapolation factor closer to 20 dB per decade was more appropriate, as part of the record in its petition for reconsideration of the FCC's BPL Order. The Court said that the FCC "summarily dismissed" this data in a manner that "cannot substitute for a reasoned explanation." The Court also noted that the record in the FCC proceeding included a study by the National Telecommunications and Information Administration that "itself casts doubt on the Commission's decision."

The extrapolation factor pertains to the rate at which radiated emissions from power lines carrying access BPL decay with distance from the power lines, and therefore the extent to which the radiated energy from the lines can interfere with licensed radio services, such as Amateur Radio.

Imlay said that since its 2004 rulemaking in Docket 04-37 <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-245A1.pdf>, BPL technology has "evolved," and the opportunity now presents itself to

craft revised BPL rules that address the "actual interference potential of BPL systems while enabling BPL as a broadband delivery or grid management technology." He reminded Copps that eight months ago, ARRL President Joel Harrison, W5ZN, and ARRL Chief Executive Officer David Sumner, K1ZZ, met with representatives from the FCC's OET with a plan for BPL. "The revised regulations suggested by ARRL would be sufficient to reduce the potential interference to the point that it would be practical to address such instances on a case-by-case basis," Imlay said. "Compliance is achievable with present BPL technology without significant limitation on BPL deployment."

Calling the Commission "long overdue" in complying with the Court's "very clear and specific" instructions, Imlay said that the Commission's inaction "cannot be allowed to continue. It is necessary to commence further proceedings in ET Docket 04-37 after making the requisite disclosures, and we respectfully urge the Commission to do so without further delay."

Imlay reminded Copps that on his inauguration day earlier this year, President Barack Obama placed a series of goals on the White House Web site. "Among these," Imlay said, "was the following: 'Restore Scientific Integrity to the White House: Restore the basic principle that government decisions should be based on the best-available, scientifically valid evidence and not on ideological predispositions.' The Commission has the opportunity to implement this goal in this Docket proceeding."

==> JULIUS GENACHOWSKI NOMINATED AS NEXT FCC CHAIRMAN

On Tuesday, March 3, President Barack Obama nominated Julius Genachowski as FCC Chairman <http://www.arrl.org/news/stories/2009/01/13/10561/>. Genachowski, 46, is a technology executive and a former classmate of Obama's from Harvard Law School. Upon Senate confirmation, Genachowski will replace Acting FCC Chairman Michael Copps; Copps took over the Commission on January 20, 2009, when then-Chairman Kevin Martin resigned. Genachowski has been widely praised by industry executives and consumer-activist groups -- two groups often at odds -- for his wide-ranging experience and intimate knowledge of technology issues.

"I can think of no one better than Julius Genachowski to serve as chairman of the Federal Communications Commission," said President Obama. "He will bring to the job diverse and unparalleled experience in communications and technology, with two decades of accomplishment in the private sector and public service. I know him as the son of immigrants who carries a deep appreciation for this country and the American dream; and as the proud father of three children working with his wife Rachel to be responsible parents in this digital age."

According to the Wall Street Journal, speculation has been rife as to why President Obama had not put forth Genachowski's name before now, saying that "his nomination has centered on the administration's efforts to find at least one more nominee -- more likely two -- to fill other

open spots on the FCC's five-person board. Agency nominations tend to move through the Senate more quickly if a Democratic nominee is paired with a Republican nominee" <http://blogs.wsj.com/washwire/2009/03/03/genachowskis-fcc-nomination-ends-weeks-of-speculation/>.

The Wall Street Journal said that a number of Republicans -- including FCC Deputy General Counsel Ajit Pai -- have been mentioned as a possible replacement for the seat left vacant by Republican Deborah Taylor Tate when she left the Commission in January <http://www.arrl.org/news/stories/2009/01/05/10541/>. "On the Democratic side, speculation is growing that FCC Commissioner Jonathan Adelstein may not be renominated for the seat he currently holds. South Carolina public utilities commission official Mignon Clyburn (daughter of [Democrat Representative] Jim Clyburn) has been most often mentioned by people close to the Obama team as a candidate for that seat," the Journal reported. "Adelstein could be up for a job elsewhere in the Obama administration, insiders say, possibly at the Agriculture Department, which is going to have $2.5 billion in economic stimulus money to give away for broadband infrastructure."

Acting Chairman Copps said President Obama "made an excellent choice in announcing his intent to nominate Julius Genachowski to be the next Chairman of the FCC. Julius has the knowledge, experience and dedication to lead this Agency forward as we tackle the many challenges confronting the country -- and the Commission. I look forward to the prospect of working with him on a communications agenda focused on serving consumers and the public interest. He will find here a talented and energized team of public servants committed to precisely this goal. I wish him a successful Senate confirmation."

Commissioner Adelstein also added his congratulations: "I warmly congratulate my friend Julius Genachowski on his nomination by President Barack Obama to be Chairman of the Federal Communications Commission. He is the right person at the right time for the job. His leadership, experience and intelligence will serve him and the American people well as he takes the helm of the FCC during this pivotal time for our country and the agency. By designating a Chairman with such a strong strategic vision, striking talents, wealth of experience inside and outside the Commission, and practical understanding of technology, President Obama once again demonstrates his commitment to the transformational power of communications technology and innovation."

Commissioner Robert McDowell congratulated Genachowski on his nomination, saying he "will bring a valuable perspective to the Commission with his experience not only in government, but in the private sector. I look forward to working closely with Mr Genachowski on the many important communications challenges that lie ahead for the American people."

After graduating from law school, Genachowski clerked for federal judge Abner Mikva; he also clerked for Supreme Court Justice David Souter.

Genachowski later served as chief counsel to Reed Hundt, chairman of the FCC from 1993-1997. After leaving the FCC, Genachowski was a senior executive at IAC/InterActiveCorp, Barry Diller's e-commerce and media company. He went on to found an investment and advisory firm for digital media companies and co-founded the country's first commercial "green" bank. According to Obama's campaign Web site, Genachowski raised at least $500,000 for Obama during the presidential election campaign.

Early in the Obama presidential campaign, Genachowski urged then-candidate Obama to capitalize on the organizing power of the Internet. The New York Times called Genachowski "a prolific fund-raiser and chairman of the campaign's group of technology-policy advisers, who produced a report advocating an open Internet, diversity in media ownership and a nationwide wireless system for emergency personnel" <http://topics.nytimes.com/top/reference/timestopics/people/g/julius_genachowski/index.html?inline=nyt-per>. The Washington Post, which described Genachowski a "local venture capitalist," credited him with "spearheading Obama's online campaign strategy, which used social networking and other tools to spread Obama's campaign message and raise record campaign contributions" <http://www.washingtonpost.com/wp-dyn/content/article/2009/01/12/AR2009011203417.html>.

Genachowski explained in his Obama campaign blog <http://my.barackobama.com/page/community/blog/juliusgenachowski> that he "was fortunate to chair the group <http://www.barackobama.com/issues/technology/> that advised Senator Obama and the [Presidential] campaign on the tech & innovation plan, a large and hardworking group that generated terrific ideas, rooted in the great work that the Senator and his strong Senate staff have been doing in this area for quite some time."

==> APRIL QST ON THE WAY TO YOUR MAILBOX

The April issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Paul Stone, KQ6RJ, discusses how to make your station truly portable in his article "A Removable HF/VHF/UHF Mobile Installation." ARRL News Editor S. Khrystyne Keane, K1SFA, takes a look at the first 2009 meeting of the ARRL Board of Directors in her article "ARRL Board Sets Legislative Agenda, More, at 2009 Annual Meeting." Michael Keane, K1MK, tells about the MIT Wireless Society in "'Rah for Technology: America's Oldest College Radio Club Turns 100." Stephen Warrillow, VK3SN, and Gerard Warrillow, VK3GT, take readers to Australia's alpine region in their cover article, "VK Alpine Winter Mini-expedition."

In his monthly column "This Month in Contesting," ARRL Contest Branch Manager Sean Kutzko, KX9X, talks about how to prepare for the contest season by training during what he calls the "off-season." Using his

tips, he says, will get you on the path to a larger score during the 2009-2010 contest season -- and increase your enjoyment of Amateur Radio. Read about the results of the 2008 ARRL International EME Competition and go ahead and start planning for the 2009 IARU HF Championship, scheduled for July 11-12. Find out about other upcoming contests in this month's Contest Corral.

ARRL Contributing Editor Howard Robbins, W1HSR, reviews five dc to ac power inverters. Robbins said that "Modified sine wave (MSW) type inverters offer the most power capability for the money, but we found a wide variation in RF interference generated by the three units tested. The more expensive pure sine wave (PSW) units tested were both RF-quiet and generated a nice sine wave." ARRL Technical Advisor Ken Stuart, W3VVN, reviews the Maha MH-C9000 battery charger, saying this piece of equipment "can help you manage your collection of AA and AAA rechargeable batteries and keep them ready for emergency use. It can also help evaluate those mystery cells from the flea market."

Of course, there are the usual columns you know and expect in the April QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Hamspeak and more. Look for your April issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> ARRL SOLICITING NOMINATIONS FOR 2008 HIRAM PERCY MAXIM AWARD

The ARRL invites nominations for the 2008 Hiram Percy Maxim (HPM) Memorial Award <http://www.arrl.org/FandES/field/awards/hpm.html>. The League's premier youth recognition, the HPM Memorial Award goes annually to a radio amateur under age 21 in recognition of the recipient's accomplishments and contributions "of the most exemplary nature" to both the Amateur Radio community and the local community during the previous calendar year -- 2008 in this instance.

Nomination criteria may include:

* Participation or leadership in organizational affairs at the local or national level (for example: Local radio club, ARES, Net control or participation in civic groups).
* Technical achievement (for example: Building radios or putting up an antenna).
* Operating record (for example: Nets, disaster drills, contests, ARRL November Sweepstakes).
* Recruitment and training of new amateurs (for example: Helping to teach a license class or participation in Jamboree on the Air).
* Public relations activities (for example: Creating a ham radio Web page).

To nominate a deserving candidate, submit a completed nomination form <http://www.arrl.org/FandES/field/awards/hpm.html> to your ARRL Section

Manager, along with any supporting information and endorsements of ARRL-affiliated clubs and elected or appointed League officials. Section Managers make the formal nominations. There is no limit to the number of nominations an individual or club may submit to a Section Manager, and Section Managers may nominate more than one individual. Section Managers need to have all information in sufficient time to submit a formal nomination to ARRL Headquarters by March 31. A list of Section Managers is available on page 16 of any issue of QST or on the ARRL Web site <http://www.arrl.org/FandES/field/org/smlist.html>.

Nomination forms and supporting information should document as thoroughly as possible the Amateur Radio achievements and contributions of the nominee during the previous calendar year. ARRL must receive all supporting documentation by April 15. An award panel reviews the nominations and selects the winner.

HPM Memorial Award winners receive a cash award of $1500 and an engraved plaque. For more information, contact Steve Ewald, WV1X <wv1x@arrl.org>, tel 860-594-0265.

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the VE Newsletter, just to name a few.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "The green field sleeps in the Sun" Cook, K7RA, this week reports: There have been no new sunspots since the recent brief three-day appearance of quickly fading sunspot 1013 on February 24-26. It was another Solar Cycle 24 sunspot, but this is not too encouraging, considering how brief and weak it appeared. There are no predictions for new sunspots, but these events tend to occur suddenly. Sunspot numbers for February 26-March 4 were 12, 0, 0, 0, 0, 0 and 0 with a mean of 1.7. The 10.7 cm flux was 69.9, 68.9, 70.6, 69.4, 69.2, 69.1 and 69.7 with a mean of 69.5.The estimated planetary A indices were 2, 8, 5, 3, 2, 5 and 7 with a mean of 4.6. The estimated mid-latitude A indices were 2, 7, 4, 2, 0, 5 and 5 with a mean of 3.6. For more information concerning radio

propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Wordsworth's "Written in March" <http://www.poemhunter.com/poem/written-in-march/>.

==>IN BRIEF:

* This Week on the Radio: This week is the ARRL International DX Contest (SSB) on March 7-8. The NCCC Sprint is March 6. The Wake-Up! QRP Sprint is March 7 and the Open Ukraine RTTY Championship is March 7-8. Look for the SKCC Weekend Sprint, the UBA Spring Contest (CW), the DARC 10 Meter Digital Contest and the NSARA Contest on March 8. The CLARA HF Contest is March 10-11 and March 14-15. Next week, look for the AGCW QRP Contest, the SOC Marathon Sprint and the ARCI HF Grid Square Sprint on March 14. The EA PSK31 Contest and the Idaho QSO Party are on March 14-15. The North American Sprint (RTTY) and the UBA Spring Contest (6 meters) are March 15. The Wisconsin QSO Party is March 15-16. On March 16, be sure to check out the Run for the Bacon QRP Contest and the Bucharest Contest. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meter Club Championship (SSB) are March 19. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March 22, 2009, for these online course sessions beginning on Friday, April 3, 2009: Amateur Radio Emergency Communications Level 1, Radio Frequency Interference, Antenna Design and Construction, Ham Radio (Technician) License Course, Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Rick Campbell, KK7B, Wins February QST Cover Plaque Award: The winner of the QST Cover Plaque Award for February is Rick Campbell, KK7B, for his article "Designing and Building Transistor Linear Power Amplifiers." Congratulations, Rick! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the March issue by Tuesday, March 31.

* US ARDF Championships Registration Now Open: Registration is now open for the next USA Amateur Radio Direction Finding Championships, June 5-7, 2009, in Boston, Massachusetts <http://www.bostonardf.org/>. Radio-orienteers of all skill levels will gather for a practice day, followed by two days of intense competition -- first on 2 meters and then on 80 meters. This year's USA Championships will be combined with the IARU Region 2 championships. The events are open to everyone, with or without a ham license. The contest will be at the Blue Hills Reservation <http://www.mass.gov/dcr/parks/metroboston/blue.htm>, a 7000 acre open space, about 10 miles south of downtown Boston. To encourage first-timers and foreign visitors, the competition fee will be waived for persons who have never participated in the USA ARDF Championships and for competitors coming from outside North America. Learn more about ARDF here <http://www.homingin.com/>. -- Information provided by ARRL ARDF Coordinator Joe Moell, K0OV

* Get on the Air for the ARRL International DX Phone Contest this Weekend: With the 2009 ARRL International DX CW Contest now history <http://www.arrl.org/news/stories/2009/02/11/10644/?nc=1>, the first full weekend in March brings the next round of competition: The 2009 ARRL DX Phone Contest <http://www.arrl.org/contests/rules/2009/intldx.html>. Like its CW predecessor, this event focuses on DX station working all US states and Canadian provinces, while US and Canadian amateurs try to work as many DX countries as possible over the 48 hour contest period. Just as in the CW contest a couple of weeks ago, US and Canadian stations send a signal report and their state or province, while DX stations send a signal report and their transmit power. Remember that for this contest, Alaska and Hawaii are considered DX stations -- this means stations in KH6 and KL7 focus their efforts on working Stateside and Canada. The ARRL International DX Phone Contest runs from 0000 UTC Saturday, March 7 to 2359 UTC Sunday, March 8. Complete rules and forms are available online <http://www.arrl.org/contests/forms/>. Why let all this DX pass you by? Get on the air and have some fun!
* "Hints and Kinks": Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint, you will receive $20. Send your hints via e-mail to <h&k@arrl.org>; or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address. Items in "Hints and Kinks" have not been tested by QST or ARRL unless

otherwise stated. Although we can't guarantee that hints published will work for every situation, QST makes every effort to screen for harmful information.

* Get Youth Involved in Amateur Radio: Have you thought about how to convey the allure of Amateur Radio to today's teens? The group at Radio Arcala, OH8X, in Finland, is challenging the world's amateur community to write an essay of no more than 250 words explaining Amateur Radio in young people's terms. For complete information visit <http://www.radioarcala.com> and click on "Young People Terms."

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.)

Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

56. Vehicle auxiliary battery charging.

Newsgroup: rec.radio.amateur.moderated
Date: 2009-03-08 07:32:49 UTC
From: Tom Horne <hornetd@verizon.net>
Message-ID: <BrIsl.1886$gm6.506@nwrddc02.gnilink.net>
Source record: 2166

I'm looking for advise on how to charge an Absorbed Glass Mat (AGM) battery from the electrical system of a stock Chevrolet Express van. Since the van's starting battery is standard wet cell the voltages needed to charge it are different then those needed to charge AGM batteries. Can anyone suggest how I would go about isolating and charging the AGM battery; that will power my radio equipment, auxiliary internal lighting, external road hazard, and identification lights; without damaging the starting battery. This is to make sure that those loads cannot discharge the starting battery to the point were the vehicle cannot be started.

I'm also considering building a so called pup generator which is really a twelve volt alternator driven by a separate small engine. This would be to support radio operations from the vehicle for long periods without needing to run the vehicle engine. The hope is that the small engine will use a lot less gasoline then the vehicles engine would when run just to recharge the batteries.

Any advise or experience on either challenge would be very welcome.

A device which appears to accomplish this function is described at
http://www.yandina.com/mixedbattery.htm but I'm hoping that someone will
give us an actual circuit since it would be more fun to build one.

Depends on the Total LOADS attached to the AGM from my perspective.
If it were "Me", I would look at a Variable Input, Regulated Output
DC/DC Switching Power Supply, that had the Capability in Watts to stay
even with the applied Loads, on the AGM, averaged over a 24 Hour Period.
You get an Input voltage anywhere between 9 & 18 Vdc, with a Regulated
Output set to the AGM's specific Float Voltage. Just hook it up and
forget it. When your loads exceed the output capability of the DC/DC
Converter, the AGM makes up the difference, and when the loads are less
than the AGM's Float Voltage, the Converter charges the AGM Battery,
back to Float. The Converter drops out at 9 Vdc, so you don't KILL the
Main Battery completely, but you will have to Jump the engine to get
things going again, IF you are so forgetful as to leave the AGM's Loads
running longer than both batteries can sustain, over time. I have used
this design in MANY Emergency Response & Comm's setups and it works very
well.

Issues there: vertical shaft engines have poorer shaft bearing;
they are seldom use for belt drives.

You'll need flywheel to replace the blade's mass.

Someone on rec.crafts.metalworking makes a precut plate to fit the engine
AND the alternator; I just saw it mentioned... but can't find it now.

Tom-

How small an engine?

You might consider a small gas powered generator that has both 120 VAC and 12 VDC output. They typically specify that the 12 VDC is only for charging batteries.

If their 12 VDC is not compatible with your AGM battery, then how about using the 120 VAC to power the correct charger?

A couple examples are the Honda EU1000i and the older Honda EX650. Both are small, quiet and run for several hours on less than a gallon of gas.

Ever thought about getting a Hybrid car?

There is a little known secret about switching mode power supplies
that you can usually run them from 100-200V DC. Most hybrid battery
packs are between 100 and 200 volts so the wiring is easy. (Just be
careful to bench test your power supply actually work this way before
you risk your car.) Of course, be careful and don't expect your
warranties on the car or power supply to be honored.. :)

I'm 6'7" so I don't fit in a prius and I cannot afford a hybrid that I
do fit in so I won't be trying this any time soon. But it's fun to
think about. Can you imagine having that much power available for
your mobile station? Heck, how about for running your shack on
emergency power? When the power is on, you can use it to get back and
forth to work.

Amateur Radio Newsline(tm) Report 1648 - March 13 2009

Amateur Radio Newsline report number 1648 with a release date of Friday, March 13, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams in the United States mid-west face winter storms; Amateur radio stands down as bush fires subside down-under; the Global Simulated Emergency Test gets moved to April 18th, two on-orbit hamsats come back to life and the FCC busts a pirate radio station that was carrying ads for street gangs. Find out more on Amateur Radio Newsline(tm) report number 1648 coming your way right now.

RESCUE RADIO: HAM RADIO MEETS THE MIDWEST STORMS

Hams in parts of the United States went on alert as severe weather pelted the central and mid-west states. Jack Parker, W8ISH, reports from Indianapolis:

--

It wasn't the worst tornado outbreak on record, but one that kept Amateur Radio severe weather spotters and National Weather Service people busy. Conditions were ripe last Sunday as severe thunder storms swept across Illinois, Indiana and into Ohio. The National Weather Service confirmed Monday that damage in Illinois and Indiana on Sunday was the result of tornadoes.

The weather service said two tornadoes struck in central Illinois on Sunday. One damaged or destroyed about 30 structures near Champaign, Illinois, while another tornado destroyed a church and farm house near Greenfield. Three people suffered minor injuries and thousands of people lost power.

Weather service radar clocked one cell moving through Central Indiana at better than 80 miles per hour. They believe that cell produced a tornado that destroyed three trailers and damaged 20 others at a mobile home park just west of Ft. Wayne.

Amateur Radio operators feed reports of funnel clouds and wind damage as the swiftly moving storms ripped up homes and farms in southern Indiana. Winds were so powerful they leveled one home and left an empty school bus atop the flattened house in Lawrence County. At least 19 houses were damaged. There were no reports of severe injuries.

In northwest Ohio, high winds tore a roof off of one house, blew the windows out of another and damaged a barn near Defiance. Findlay, Ohio got the double whammy of high winds and torrential rains. The Blanchard River, which runs through downtown, flooded stores and closed dozens of roads. Conditions worsened later this week when a new wave of severe storms brought additional flooding to already stricken areas.

In Bay County, Mich., high wind drove ice over seawalls and into homes along a stretch of Lake Huron beachfront. Authorities evacuated about 30 homes.

Reports of Amateur Radio operators helping with disaster relief following the storms are just now coming in. By the way, March 15 through 21 is severe weather preparedness week in Indiana. During this week people are encouraged to prepare for severe weather and have a plan of what to do if severe weather strikes.

Amateur Radio operators across Indiana have been attending Skywarn classes taught by the weather service officials. Those attending spotter sessions in the coming weeks will certainly have something to talk about.

Reporting from Indianapolis, this is Jack Parker, W8ISH.

--

According to weather forecasters, more bad weather could be on its way. (W8ISH, ARNewsline(tm))

**

RESCUE RADIO: HAM RADIO STANDS DOWN FROM VK BRUSH FIRES

Thanks to some needed rain, Australia's bush fires are coming under control and ham radio involvement is finally winding down. This, after more than a month of emergency communications provided by Australia's Wireless Institute Civil Emergency Network and other ham radio groups. Mark Dods, VK3XMU, in Box Hill, wraps it all up:

--

Audio report only. Please download the audio newscast at www.arnewsline.org

--

The Wireless Institute Civil Emergency Network better known as WICEN is the Australian equivalent of ARES and RACES here in the United States. Dods took a moment in his latest public report to congratulate the Australian ham community on a job well done:

--

Audio report only. Please download the audio newscast at www.arnewsline.org

--

Its been a hot summer in the Southern hemisphere and especially in Australia. As their fall season approaches the hams down-under hope that

they will soon be off emergency stand-by alert. (WIA News)

**

RESCUE RADIO: GLOBAL SET ON APRIL 18

Still with rescue radio news, word that the date for the 2009 Global Simulated Emergency Test has been changed to coincide with World Amateur Radio Day which is slated for April 18th. The theme for the day will be "Amateur Radio: Your Resource in Disaster and Emergency Communication" with the event running from 1100 to 1500 hours UTC.

In a change for this and future events, the focus of this years Global Simulated Emergency Test will be on generating and relaying messages in a common format across country borders rather than the information gathering about capabilities which has taken place in the past. It also makes for ideal opportunity to showcase the work of ham radio emergency communications groups around the world.

The Global Simulated Emergency Test is sponsored by Region 1 of the International amateur Radio Union. More information will be posted on the IARU Region One website at www.iaru-r1.org as it becomes available. (GB2RS, IARU, Southgate)

**

RESTRUCTURING: HAM RADIO IN PORTUGAL GETS A SPRING 2009 MAKEOVER

Major changes are coming to amateur radio in Portugal. According to an e-mail from CT1FBF, that nations new structure includes the introduction of a three class licensing system that will parallel the existing classes which have been grandfathered but which will no longer be issued.

In other changes, the minimum age to obtain a Portuguese ham ticket has been lowered to 12. All applicants regardless of age will be required to enter the hobby with a third class license and remain there for at least two years before upgrading. The new 3rd class license will be good for 5 years giving a ham three years in which to upgrade to 2nd class. If a 3rd class ham fails to upgrade he returns to what amounts to SWL status. That means he or she can only use their own station as a listening post and must go to a 2nd grade or higher licensee's station to transmit under the control of that ham.

As to the current and separate station license. That too will be discontinued and is being replaced by the new National Amateur Certificate. It allows a main fixed station, one additional fixed station, a mobile station and a portable station. This permit will have a 10 year life span and is renewable. The new rules also create community stations, club stations and provide for the issuance of special event call signs with a one year license term.

Portugal's new ham radio rules become effective on June 1st. More information in the Portuguese language is on-line at ct-spot dot blogspot dot com. (CT1FBF, CT-Spot News Team)

**

BREAKING DX NEWS: MAYOTTE OPERATION HAMPERED BY A SLIM

Someone appears to have pirated a callsign during the recent operation from Mayotte by G3SWH and G3RWL. Both operators have now returned from the island only to find the DX Summit Database showing a number of contacts on SSB listed to F H stroke G3RWL. Only one problem: Neither that callsign nor mode was used by the DXpedition pair.

The only call used from Mayotte by both operators was FH stroke G3SWH and none of their over 10,000 contacts was made using SSB voice. So if you contacted a station using the call G3RWL portable FH and claiming to be on Mayotte, you worked what the DX community calls a slim and no QSL card will be coming your way.

We will have more DX related news later on in this weeks report. (OPDX)

RADIO LAW: TEXAS HAMS RALLY AGAINST PROPOSED MOBILE PHONE LAW

Hams in Texas have been peppering their state legislators with e-mails. This, after learning about twin bills in the House and Senate that were both aimed at outlawing any sort of mobile radio operation that was not entirely hands free.

As we go to air it appears as if the campaign has been partially successful. They have apparently succeeded in getting an amendment attached to Senate measure SB582 that exempts federally licensed radio amateurs but at airtime are still trying to convince the author of the house version to accept an exclusion that would keep the bill from affecting amateur radio operations from a moving vehicle.

And this late word. Texas State Representative Jose Menendez's office says that it is considering offering an amendment to HB 220 to include similar language to that found in SB582.

As of now both bills are still in their respective legislative committee's. We are told that ARRL Legislative Action Assistant Glen Reid, K5FX, in Austin has been the ham radio point man in negotiations with senate and house leaders with the full backing of radio amateurs state wide. We will let you know how Texas ham radio community fares on this one in a future Amateur Radio Newsline report. (ARNewsline(tm) from various sources)

ENFORCEMENT: FLORIDA BUSTS PIRATE ADVERTISING GANGS

Federal Communications Commission officials and deputies from the Orange County Florida Sheriff's gang unit have busted a pirate radio station. One they say was reportedly broadcasting information on where to buy drugs.

Authorities say the station calling itself "Street Heat" allegedly broadcast live advertisements for criminal gangs and discussions of where to buy drugs. Arrested in the March 6th raid were Balthazard Senat and Christopher Robert Roth. Both were charged with unauthorized transmission and possession of cannabis with intent to deliver.

The sheriff's office said a two-week investigation found Senat was operating a pirate radio station which broadcast on a frequency 91.3 Mhz. They say Roth was a disk jockey for the radio station and that the station was actually located in his bedroom.

A judge set Senat's bond at $1,250 and Roth's bond was set at $1,500. (Published reports)

ENFORCEMENT: OVER POWER CONSUMER TRANSMITTER LEADS TO FCC CITATION

The distributor of the Whole House FM Transmitter is in trouble with the Commission for, among other things, marketing a device with too much RF power. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

Back on September 29, 2008, the Spectrum Enforcement Division of the Commission's Enforcement Bureau initiated an investigation into whether TAW Global, LLC, of Portage, Michigan had been marketing an unauthorized and non-compliant radio frequency device in the United States, called the Whole House FM Transmitter. In its response to a Letter of Inquiry the company responded that it began importing the Whole House FM Transmitter in May 2004. Also that it had imported a total of 18,371 units, and that it had distributed and sold in the United States a total of 11,689 units through its website.

TAW Global also stated that the Whole House FM Transmitter is manufactured by Richfield Electronics Limited based in China, and that it is certified. According to TAW, it exercised due diligence by receiving verbal assurances and documentation from Richfield verifying that the FM Transmitter does indeed meet FCC requirements and has a proper ID. TAW did however acknowledge that the Whole House FM Transmitter was not properly labeled with the FCC ID, as required by Section 2.925 of the Rules.

But the FCC looks at things differently. In its February 26th official citation to TAW Global the FCC says that the consumer transmitter does not meet its specifications. It says that tests conducted by its Office of Engineering and Technology shows that samples tested exceed the power levels authorized under its rules.

The FCC ends by telling TAW Global that if after it receives the letter of Citation it again violates the rules regarding such devices that it will be subject to a fine of up to $16,000 for each offense and each day the offense is permitted to continue.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

TAW Global, LLC was given 30 days from the date the Citation was issued to respond. (FCC, CGC)

**

ENFORCEMENT: COLLEGE STATION FINED FOR INCOMPLETE PAPERWORK

The FCC this has fined Wayne State College station KWSC FM $7,200. This, in a case involving proper maintenance of the public file.

The small Nebraska station was issued notice of apparent liability for $9,000 in August 2005. In September it filed a response asking for a reduction based on the corrective measures it had taken. Specifically, KWSC had not placed quarterly issues and programs lists in its public inspection file for a period of about three years. When it managers realized its error they began including them. The station also notified the FCC noting that it had records of its programming, if not in the required form.

But the FCC rejected its arguments but noted the station's history of compliance and reduced the fine to $7,200. KWSC was given the customary 30 days to pay or to file an appeal. (FCC)

**

ON THE NET: BE WARY OF 3rd PARTY APPLICATIONS ON FACEBOOK

Facebook users are being victimized by several variants of a rogue application. One that appears to have been designed to exploit public interest in the controversy surrounding the networks recent changes in its terms of service. Rebecca Bruce has more:

--

According to the Internet security firm Trend Micro, the rogue program posts a notification messages to user profiles that falsely claims a friend had just reported the user for violating the site's terms of service. The messages advises recipients to click on a phony Facebook application link to find out why.

Now here's where it gets interesting. If someone fall for the bait and does go click, he or she is taken to a rogue application called "facebook closing down." Once installed, it spams the victim's friend list with the same warning message, and possibly harvests personal information in the process.

This is the second such attack in the past two weeks. Recently a rogue application called "The Error Check System" was detected and is suspected to also have been harvesting personal information from those duped into installing it.

For the Amateur Radio Newsline, I'm Rebecca Bruce in Los Angeles.

--

Facebook only began its application verification program last month. As such it is urging its users to exercise more control over the third-party Facebook applications that they accept. (InfoOnLine, others)

DIGITAL TV CHANGEOVER NEWS: LITTLE PROBLEM ON FEBRUARY 17

Now that the digital transition has begun in earnest, early reports suggest only a relatively modest level of disruption for television viewers. The National Association of Broadcasters said stations that made the change on February 17th averaged only 50 to 200 calls from viewers while the Federal Communications Commission has received a total of about 28,000 calls.

The NAB said 421 stations made the shift on February 17th joining 220 local affiliates that had already changed to digital in advance of the new June 12 deadline. The NAB says that most of the calls were questions about connecting converter boxes and rescanning them. (RW)

**

EMERGING TECHNOLOGY: WHITE SPACE DEVICE TESTING COMES TO CALIFORNIA

The FCC has granted a new experimental permit to operate in the 174 to 216, 470 to 608 and 614 to 698 MHz bands has been granted to Adaptrum, Inc. This, for the testing of so-called white space devices within State of California. Translated, this means testing on TV Channels 7 through 51 with the exception of Channel 37 which is reserved for Radio Astronomy.

White spaces refer to frequencies allocated to a broadcasting service but not used locally. In the United States, the term has gained prominence after the FCC ruled that unlicensed devices that can guarantee that they will not interfere with assigned broadcasts can use the empty white spaces in spectrum. The call sign issued to Adaptrum experiment with white space devices is WE2XXI. More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-288835A1.doc (CGC)

NAMES IN THE NEWS: UK STUDENT DEVELOPS PARTICLE DETECTOR

A 17-year-old student, Peter Hadfield, , has won the first ever United Kingdom's National Young Scientist of the Year award. This, for developing a hand-held particle detector called Lucid. Lucid will be sent into space on a Surrey Satellite Technology SSTL satellite and used for research in 2010. (Southgate)

**

RADIO EDUCATION: RCA DONATES STATION TO FLORIDA CLUB

The Education Committee of the Radio Club of America says that it has received its first donation of a complete amateur radio station that will be given to the Lake Monroe Amateur Radio Club in Orlando, Florida. The Lake Monroe Amateur Radio Club has a specially equipped trailer that it takes to schools to demonstrate amateur radio communications. It also goes into schools and children's hospitals to demonstrate how to make contact with the International Space Station via ham radio. The club says it's extremely grateful to The Radio Club of America for the donation of the much-needed equipment. (RCA, WB2MGP)

**

HAM HAPPENINGS: HONORING OUR TROOPS WITH ARMAD DAY 2009

Amateur Radio military Appreciation Day or ARMAD will be held this year on May 23rd. Planners hope to encourage all radio clubs and their operators to get on the air and show thanks, support, and appreciation to our troops, military retired, and veterans. More is on-line at www.armad.net (ARMAD)

**

SOCIAL SCENE: IDAHO IN APRIL

Turning to the ham radio social scene, word that retired FCC Special Counsel Riley Hollingsworth, K4ZDH, will be the banquet speaker at the first ever Idaho Section Hamfest. The event takes place the weekend of April 24th through the 26th at the Holiday Inn Hotel in Boise. The event is sponsored by the Voice of Idaho Amateur Radio Club. More is on-line at www dot voiceofidaho dot org. (Via e-mail)

**

THE SOCIAL SCENE: WELLINGTON RADIO EXPO '09

And if you plan to be in New Zealand before months end, you might want to add the Wellington Region EXPO '09 to your travel plans. The date for this event is Saturday March 28th at the Knox Church Hall in Lower Hutt. Doors open to the public at 10 am local time and the entry feel is only entry $4.00 New Zealand. More information is on-line at http://www.nzart.org.nz/events/index.html (NZART)

HAM RADIO IN SPACE: AO-27 BROUGHT BACK TO LIFE AS FM REPEATER IN SPACE

Some good news from up in space. This with word that the Amsat Oscar 27 satellite has been brought back to life. Bruce Tennany, K6PZW, reports:

--

The Amsat Oscar 27 satellite failed back in December, 2008 and went off the air. The control team pursued what it termed as a strategy to drain the batteries in the hopes of resetting the locked up modem.

The idea worked and during February the control team managed to upload the high level control software needed to bring AO-27 back on-line. They then took a week to collect data to check on the battery status and conduct an on-orbit checkout before making ready to return the satellite to operation to its analog mode.

As of March 1st the AO-27 control team reports that telemetry is looking good. During several passes over the US they turned on the analog voice repeater with a target for full operation on or about March 7th. You will easily know if its there as it will be in its FM repeater mode with an uplink at 145.850 MHz and a downlink 436.795 MHz.

Give it a try.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

More is on line at www dot ao27 dot org. (ANS)

**

HAM RADIO IN SPACE: AO-7 SPRINGS BACK TO LIFE

Still with amazing news from space, an aging ham radio satellite has sprung back to life. This with words that the Amsat Oscar 7 UHF Beacon at 435.100 MHz has been reported as becoming operational.

The satellites 70 centimeter beacon was monitored with very strong signals during February 28th passes and also since then with satellite telemetry in RTTY format is being copied. Some listeners reported that the beacon initially sounded as if it was in a two-state mode that sounded a bit like RTTY in idle. Successful RTTY decodes have since been accomplished.

AO-7 is one of the oldest ham radio birds still on-orbit. It was launched from Vandenberg Air Force Base in California on board a Delta 2310 rocket way back on November 15, 1974. (ANS, N1JEZ)

**

HAM RADIO IN SPACE: SA HAMSAT ON LAUNCH HOLD AGAIN

The launch of the South Africa's SumbandilaSat ham radio satellite has been delayed again. This time due to a technical problem at the Russian Baikonur

Cosmodrome launch site.

The Director-General of the South African Department of Science and Technology is Dr. Phil Mjwara. He told S A AMSAT that the launch agency in Russia had sent a message that the launch would probably be at some time in May this year.

Dr. Mjwara said that as the Russian launch agency had not been specific in its communication. Therefore he will not make a public announcement until the Department of Science and Technology had received full details about the reasons for the delay and a new confirmed date.

It is speculated that the wait is being caused by problems with the on time delivery of one of the other payloads. Meantime, South Africa Amsat's SumbandilaSat is still safely stored at the satellite test range. (SA AMSAT)

**

RADIO IN SPACE: KEPLER MISSION BLASTS OFF

NASA's Kepler mission to search out habitable planets the far reaches of the universe successfully launched from Cape Canaveral on Friday, March 6th. Kepler is designed to find the first Earth-size planets orbiting stars at distances where water could pool on the planet's surface. Liquid water is believed to be essential for the formation of life.

Kepler is a NASA Discovery mission. By radioing its findings back to Earth, Kepler will give scientists their first look at the frequency of Earth size planets in our galaxy as well as the frequency of these planets that could theoretically be habitable.

More information about the mission is on-line at www.nasa.gov/kepler . (NASA)

**

RADIO IN SPACE: SATELLITE COLLISION POSES FUTURE ON-ORBIT PROBLEMS

Debris from a recent satellite collision between an out of control Russian military satellite a working U.S. Iridium commercial bird and could circle Earth for up to 10,000 years. This, according to Russia's Mission Control chief who admits that the debris field could threaten the safety of many other satellites in an already crowded low Earth orbit area of space.

Vladimir Solovyov is the Mission chief. He says that the smashup occurred some 800 kilometer above Earth. He notes that this is the busiest part of near-Earth space and is a very popular orbit which is used by Earth tracking and communications satellites.

Solovyov says that the clouds of debris pose a serious danger to all of them and especially those made of light weight alloys because debris fragments travel a very high speed and can damage a spacecraft. (Space.com)

**

WORLDBEAT: LACK OF FUNDS CAUSES UK REPEATER TO GO QRT

Time has taken its toll on a popular United Kingdom repeater and now there is no money to bring it up to the standards needed for it to continue in service. Because of this, the GB3WA, 70 centimeter repeater located near the village of Kilmington in South Wiltshire, has been permanently taken out of service.

For it to have been saved from extinction the repeater needed several of its 30 year old cavities replaced and a new power amplifier to bring it up to full output. The site needs a new tower to support both the repeaters antennas replacing the temporary mast that's now in use.

Unfortunately, the funds are just not available and so the sponsoring groups has made the decision to remove the repeater from the air. You can read more at the URL in this weeks printed Newsline report.

(DO NOT READ http://twxrg.web.googlepages.com/home) (GB2RS)

**

DX

In D-X, W5JON advises a correction in his operation from St. Lucia. John tells Newsline that he will be active stroke as J6 from Marigot Bay from March 24th to April 2nd with activity on 160 through 6 meters. He will also be on for the CQ WPX SSB Contest on March 28th and 29th. QSL via W5JON

DL3OCH reports that his trip to Nigeria will be slightly delayed. Listen out for him to start his activity later than the March 5th date that he had previously announced. He has also reported that he has received his Nigerian license and will use the callsign 5N0EME. QSL via DL3OCH.

IK4ALM, will be operating portable 6W from Senegal between March 29th and April 9th. Activity will be on 40 through 10 meters using CW and SSB with 100 watts into a ground plane. QSL via IK4ALM.

ON4AEO, will lead a team of operators on a DXpedition to Mozambique from April 9th to the 13th. The call sign will be C-91-F-C and They hope to activate 80 through 10 meters using CW, SSB, RTTY and PSK. The QSL Manager is ON4CJK.

DL3KWF and DL3KWR are reported active from Madiera Island signing portable C-T-3 from the Hotel Royal Orchid. They should be there through March 19th operating primarily C-W on 30, 17 and 12 meters. There may be some RTTY and PSK-31 as well. QSL via their home call signs.

Lastly, listen out for LA3JJ portable EA8 from Isla de Fuerteventura in the Canary Island. He will be at that location through March 26th operating 30 and 17 meters using C-W only. QSL this operation to LA3KK direct or by the Bureau.

(Above from various DX news sources)

**

THAT FINAL ITEM: PAVING THE INFORMATION SUPER HIGHWAY

And finally this week, discarded electronic hardware, including bits and pieces that built the information superhighway, can be recycled into an additive that makes super-strong asphalt paving material for real highways. Amateur Radio Newsline's Randy Ross, KI4ZJI, has the details:

--

Researchers in China think that they have the answer as to what to do with old computers, cellphones, and even old ram radio gear. They say to use them to literally pave highways and by-ways around the world.

A study by a research team headed by Professor Zhenming Xu describes the development of a new recycling process that can convert discarded electronic circuit boards into an asphalt modifier. The material makes high-performance paving material asphalt that is cheaper, longer lasting, and more environmentally friendly than conventional asphalt, the scientists report.

The researchers note that millions of tons of electronic waste pile up each year. The printed circuit boards used in personal computers, cell phones, and other electronic gear contain toxic metals such as lead and mercury. This in turn poses a difficult problem in disposing of them in an environmentally friendly and safe manner.

But the research group found that the boards, which provide mechanical support and connections for the electronic components,contain glass fibers and plastic resins. They reasoned that these could be re-used to strengthen asphalt paving.

Now, the scientists are describing a new recycling method that quickly separates the toxic metals from circuit boards, yielding a fine, metal-free powder. In laboratory tests, hen mixed into asphalt the powder produced a stronger paving material less apt to soften at high temperatures.

When this research might lead to actual real world trials of the recycled P-C boards as highway pavement material is unknown.

For the Amateur Radio Newsline, I'm, Randy Ross, KI4ZJI, in Shelby, North Carolina.

--

Who knows. One of these days you may be operating mobile on some newly paved highway, hit a bump and think to yourself: "Hmmm. Was that my old Pentium computer or my 2 meter H-T?" (ScienceDaily)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is

newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2009 Amateur Radio Newsline Young Ham of the Year Award is now open. Complete details are on our website at www.arnewsline.org Just scroll down to the words "2009 YHOTY Nominations Now Open" and click for more information and an official nominating form.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

==> AGENDA FOR WRC-11 POSES OPPORTUNITY AND CHALLENGES FOR HAMS

The next World Radiocommunication Conference (WRC-11)
<http://www.itu.int/ITU-R/index.asp?category=conferences&rlink=wrc-11&la
ng=en> is scheduled for fall 2011. These periodic conferences of the
Member States of the International Telecommunication Union (ITU)
consider allocations to the various radio services -- including the
Amateur Radio Service -- and evaluate what new technologies and
applications should be addressed by future conferences.

The agenda for WRC-11, developed by the delegates at the last WRC in
Geneva in 2007 (WRC-07), was formally adopted by the ITU Council in
2008. There are 25 agenda items addressing potential new or revised
```

spectrum allocations to existing services. Of most interest to amateurs is agenda item 1.23, "to consider an allocation of about 15 kHz in parts of the band 415-526.5 kHz to the amateur service on a secondary basis, taking into account the need to protect existing services."

"This agenda item is the highest item on my long term priority list," said ARRL Technical Relations Manager Brennan Price, N4QX. "We are fortunate that WRC-11 presents an opportunity for a new secondary allocation in the medium waves. While the outcome in 2011 is far from certain, our experience in other bands -- most notably 30 meters -- indicates Amateur Radio's compatibility with certain other services as a secondary user."

Price said that some WRCs have posed great challenges for Amateur Radio, with blocks of spectrum potentially at risk. "This was the case at WRC-03 and WRC-07, which posed a very real potential reallocation of portions of the 40 meter band in Region 2 to HF broadcasting," he said. "The agenda for WRC-11 does not pose any threats to Amateur Radio as clear or as overt as those faced in prior years." Price and ARRL Technical Relations Specialist Jon Siverling, WB3ERA, are monitoring developments on a number of other agenda items that could affect Amateur Radio if they take unanticipated turns, including:

* Agenda item 1.14, considering requirements for and implementation of the radiolocation service (radar) between 30-300 MHz.
* Agenda item 1.15, considering possible allocations between 3-50 MHz for oceanographic radar applications.
* Agenda item 1.19, considering regulatory measures to enable software-defined and cognitive radio systems.
* Agenda item 1.22, examining the effect of emissions from short-range devices.

"Oceanographic radar is perhaps our biggest defensive issue," Price said. "Fortunately, its proponents, at least domestically and at least at this time, are acknowledging that sharing with Amateur Radio would be problematic."

WRC-11 is tentatively scheduled for October 24-November 18, 2011, in Geneva.

==> ARRL SEEKS NOMINATIONS FOR ANNUAL AWARDS

Each year, the ARRL Board of Directors has the opportunity to select recipients for a number of awards that honor Amateur Radio operators. These awards, designed to recognize educational and technological pursuits in Amateur Radio, represent many categories, including education and technical excellence. If you know of someone who deserves to be recognized by the ARRL for the service and dedication they have shown on behalf of Amateur Radio, now is the time to submit their name for consideration. Nominations and supporting information should be submitted to ARRL Headquarters by March 31, 2009. Nomination forms and further information on these awards are found on the ARRL Web site

<http://www.arrl.org/FandES/ead/edunom.html>.

The ARRL Herb S. Brier Instructor of the Year Award <http://www.arrl.org/FandES/ead/award/herb-tor.html> goes to a volunteer Amateur Radio instructor. The ARRL Professional Educator of the Year Award <http://www.arrl.org/FandES/ead/award/pey-tor.html> is given to a professional teacher who has incorporated Amateur Radio into his or her class curriculum.

The ARRL Microwave Development Award <http://www.arrl.org/FandES/ead/instructor/instructor/awards.html> is presented to a licensed radio amateur (or to individuals who are licensed radio amateurs) who contribute to the development of the Amateur Radio microwave bands.

The ARRL Technical Service Award <http://www.arrl.org/FandES/ead/instructor/instructor/awards.html> recognizes a licensed radio amateur (or individuals who are licensed radio amateurs) who provides Amateur Radio technical assistance or training to others.

The ARRL Technical Innovation Award <http://www.arrl.org/FandES/ead/instructor/instructor/awards.html> is granted to the licensed radio amateur (or to individuals who are licensed radio amateurs) who develops and applies new technical ideas or techniques in Amateur Radio.

The ARRL also offers an award to recognize someone who has served admirably as an ARRL Section Manager. The Knight Distinguished Service Award recognizes exceptionally notable contributions by a Section Manager to the health and vitality of the League. The first such award was presented to Joe T. Knight, W5PDY (now SK) in 2003 -- for whom the award was named -- in recognition of his exemplary service not only as the ARRL New Mexico Section Manager for more than a quarter century, but also for his willingness to share his knowledge and skills.

The Knight Distinguished Service Award may be awarded to an ARRL Section Manager who has distinguished himself or herself in accordance with the following ideals: Exceptionably notable contributions over and extended period of time within his or her Section and beyond; demonstrated efforts that have contributed to the health and vitality of the ARRL and its Field Organization, and displayed actions that are in the spirit of the unselfish contributions of Joe T. Knight, W5PDY. Nominations may be made by any ARRL member and shall be accompanied by a narrative of the accomplishments of the nominee identifying the long term contributions of the nominee to ARRL and its Field Organization.

If you have questions on any of these awards, please contact Steve Ewald, WV1X, via e-mail <wv1x@arrl.org> or by phone at 860-594-0265.

==> APPLICATION DEADLINE APPROACHING FOR ARRL TEACHERS INSTITUTE ON WIRELESS TECHNOLOGY

Donors to the ARRL Education & Technology Program (ETP) fund <http://www.arrl.org/FandES/tbp/> have made it possible to offer seven sessions of the Teachers Institute on Wireless Technology this summer <http://www.arrl.org/FandES/tbp/ti.html>. According to Education Services Manager Debra Johnson, K1DMJ, she is receiving applications for the Teachers Institute daily, but seats are still available in most sessions: "If you are a teacher -- or you know one who may be interested in exploring the world of wireless technology in their classroom -- now is the time to apply!"

This year, Teachers Institute sessions will be offered in Roswell, New Mexico (May 26-29); Rocklin, California (June 15-18); Tucson, Arizona (June 15-18); Viera, Florida (June 23-26); Berrien Springs, Michigan (June 29-July 2); Dayton, Ohio (July 6-9), and Newington, Connecticut (July 27-30). Educators interested in the New Mexico, California and Arizona sessions need to apply no later than April 15, while those interested in the sessions in Florida, Michigan, Ohio and Connecticut have until May 15 to apply.

Johnson said that wireless technologies "underpin so many areas of daily life. It is increasingly important for today's education to include at least some basic understanding of the technology involved," she said. "One of ARRL's goals for the Education & Technology Program, and the professional development opportunity that we have developed with the Teachers Institute, is to build wireless technology literacy among America's citizens. It's equally essential to provide an opportunity at an early age for students who will become tomorrow's scientists and engineers to engage their imagination with the fascinating world of radio science."

Teachers who are interested in exploring the basic principles of electronics, satellite communications (including communications with weather satellites), radio signals and radio science, radio astronomy, scientific data collection, microcontroller technology and robotics -- and who want to gain a transmissible understanding of the wireless technologies that are so vital to so many areas of everyday life -- will want to investigate this opportunity. The instruction and resources presented in the seminar provide the tools to engage with subject matter in core classroom curricula in science, math, geography and language arts. The resources offered at the Teachers Institute can be adapted to engage students in the primary levels through university. Applicants do not need to be licensed radio amateurs. Teachers need to complete an application <http://www.arrl.org/FandES/tbp/TeachersInstituteApplication2009.doc> for this 4 day, expenses-paid seminar. Check the ARRL Web site <http://www.arrl.org/FandES/tbp/ti.html> for more information.

For the first time this year, Johnson said that the ARRL is offering an Advanced Teachers Institute, open to six graduates of the TI program that will focus on satellite communications. "This opportunity has been enthusiastically received and is at full enrollment," she said. "As demonstrated by the application response, we are pleased that the

teachers who have participated in the past see the value of the resources that the ARRL offers through this program and are eager to take their exploration of wireless technology to the next level."

If you would like to contribute to this very important educational outreach of the ARRL to students in classrooms across the US, you can find more information here <https://www.arrl.org/forms/development/donations/education/education.html>.

==> HAMS TO ACTIVATE MIDWAY ATOLL AS K4M IN OCTOBER 2009

Earlier this year, US Fish and Wildlife Service (USFWS) announced that they would open Midway Atoll <http://www.fws.gov/midway/> to Amateur Radio operations for two weeks only, from October 5-19, 2009 <http://www.arrl.org/news/stories/2009/01/27/10596/>. Tom Harrell, N4XP, of Monroe, Georgia, and Dave Johnson, WB4JTT, of Aitkin, Minnesota, have put together a team of 19 operators from all over the world to activate Midway Atoll for a 10 day period as K4M <http://www.midway2009.com/>. This the first time that USFWS has allowed amateurs to operate from the wildlife refuge since 2002.

"Midway ranks as Number 24 worldwide and Number 13 in Europe on DX Magazine's Most Wanted List <http://www.dxpub.com/>," Harrell and Johnson said. "Activity will be on 6-160 meters with 5 to 6 stations. At least one station will be active on 20 meters around the clock for those who need it for a new country. Major efforts will be made to meet the demand to the most needed geographical areas, the low bands and RTTY." The team has posted a list of planned frequencies on their Web site <http://www.midway2009.com/kh4freqs.html>.

The co-leaders said that travel to the atoll is only allowed by chartered aircraft: "Because of the size of the aircraft, the team is presented with unique challenges. As such, the aircraft will only be able to carry the team, requiring the equipment to be shipped by boat some months ahead."

In January, the USFWS started a program to encourage visitors to experience Midway's wildlife, history and culture, as well as non-wildlife-dependent activities -- including Amateur Radio. To ensure the safety of the wildlife on the Refuge, Midway Atoll Refuge Manager Matt D. Brown said that Amateur Radio operations will be permitted for two weeks only, and only within a designated area on the north side of Sand Island. Brown also said that while portable generators will not be permitted, there is 120 V power available at the operation site; any modifications to the island power grid/infrastructure must be approved in advance and be paid for entirely by the radio operators.

Brown said that the K4M team will also be required to attend a refuge orientation shortly after their arrival designed to enhance visitor safety, wildlife protection and overall enjoyment of the wildlife refuge. "Although determined to be a wildlife-compatible activity,"

Brown said, "this [Amateur Radio] opportunity is being conducted on a trial basis." Brown has the authority to discontinue the activity at any time, based on wildlife protection and conservation goals.

Midway is located in the North Pacific Ocean (near the northwestern end of the Hawaiian archipelago) -- approximately 1250 miles northwest of Honolulu -- about one-third of the way between Honolulu and Tokyo. At less than 150 miles east of the International Dateline, Midway Atoll is truly "midway" around the world from the Greenwich meridian. The atoll is an unincorporated territory of the United States and is the only atoll/island in the Hawaiian archipelago not part of the State of Hawaii. Midway Atoll National Wildlife Refuge is owned and administered by the USFWS on behalf of the American people and has international significance for both its historic and natural resources.

In 1988, Midway became a National Wildlife Refuge, at the time subject to the primary jurisdiction of the Navy. In 1993, the Navy decided to close the Naval Air Facility after more than 50 years of continuous operation. On May 20, 1996, custody and accountability for Midway Atoll transferred from the Department of the Navy to the Department of the Interior. President Clinton signed Executive Order 13022 on October 31, 1996, effectively superseding earlier orders assigning responsibility for Midway to the Navy. A new code of regulations governing activities at Midway Atoll National Wildlife Refuge was published in the Federal Register on March 10, 1998.

When Midway became a national wildlife refuge, it joined a network of more than 500 separate units of the National Wildlife Refuge System, encompassing nearly 93 million acres, throughout all 50 states and several territories and possessions. Refuges represent the only Federal lands set aside and managed principally for the conservation of fish and wildlife.

==> GAREC-2009: EMERGENCY COMMUNICATIONS ACROSS BORDERS

The Fifth Global Amateur Radio Emergency Communications Conference (GAREC) -- hosted by the Japan Amateur Radio League (JARL) -- will be held in conjunction with the JARL Ham Fair <http://www.jarl.or.jp/English/4_Library/A-4-6_ham-fair/ham-fair.htm> at Tokyo Big Sight on August 24-25, 2009. Registration for GAREC-2009 will begin in early May.

According to GAREC 2009 Organizing Committee Member Seppo Sisatto, OH1VR, this year's theme is "Emergency Communications across Borders." The program will include presentations about operations during disasters that have occurred since GAREC-2008 in Friedrichshafen, Germany, as well as discussions about new developments in technology and their application in emergency communications. The detailed program will be published in late April.

All Amateur Radio operators interested in Emergency Communications are invited to participate in GAREC. The fifth GAREC continues the work of

its four forerunners: After the first and the second GAREC in Tampere, Finland, the third GAREC in Huntsville, Alabama, USA, and the fourth GAREC in 2008, this year's event will be the first GAREC conference in IARU Region 3. The proceedings and the statements of the 2005, 2006, 2007 and 2008 conferences can be found at the GAREC Web site <http://www.rientola.fi/oh3ag/garec/index.html>.

Sisatto pointed out that the theme of GAREC-2009 mirrors the theme chosen by the IARU for World Amateur Radio Day <http://www.iaru.org/worldAmRadioDay.html> on April 18, "Amateur Radio: Your Resource in Disaster and Emergency Communication."

==> US COAST GUARD TO DISCONTINUE LORAN STATIONS

Last month, the US Coast Guard <http://www.uscg.mil/> announced that due to economic conditions, they would be closing down the 24 LORAN-C (Long Range Aid to Navigation) <http://www.navcen.uscg.gov/loran/default.htm> stations operated under the auspices of the USCG. LORAN stations provide navigation, location and timing services for both civil and military air, land and marine users. According to the USCG, LORAN-C is approved as an en route supplemental air navigation system for both Instrument Flight Rule (IFR) and Visual Flight Rule (VFR) operations. The LORAN-C system serves the 48 continental states, their coastal areas and parts of Alaska.

LORAN-A stations were developed beginning in World War II, and signals were transmitted on frequencies in and around our present-day 160 meter band. LORAN-A was responsible for reduced amateur radio operations, including frequency and power limitations, on 160 meters in the United States. In 1979, the Coast Guard phased out the LORAN-A stations; they were replaced by LORAN-C stations. The newer stations operated on 100 kHz, enabling the restrictions on the 160 meter amateur band due to LORAN functions, to be dropped.

According to the Coast Guard, the nation's oldest continuous sea-going service will continue to operate the current LORAN-C system through the end of fiscal year 2009; it is in the process of preparing detailed plans for implementing the fiscal year 2010 budget. According to USCG Vice Commandant and Chief Operating Officer Vice Admiral V. S. Crea, further details of the LORAN-C termination plan will be available upon the submission of the President's full budget. -- Some information provided by Cliff Appel, W7CGA

==>SOLAR UPDATE

Tad "Where Suns peep in every sheltered place" Cook, K7RA, this week reports: Last week's report again mentioned briefly appearing sunspots and it happened again this week. For just two days, another Solar Cycle 23 spot appeared, number 1014. The latitude of the spot was consistent with an old and fading solar cycle. As this period of quiet Sun drags on, statistic based projections of a return to solar activity continue to be pushed out. Sunspot numbers for March 5-11 were 0, 12, 12, 0, 0, 0

and 0 with a mean of 3.4. The 10.7 cm flux was 69.2, 69.1, 69.1, 68.9, 69.1, 68.8, and 68.9 with a mean of 69. The estimated planetary A indices were 3, 2, 1, 8, 2, 3 and 3 with a mean of 3.1. The estimated mid-latitude A indices were 3, 0, 0, 7, 1, 3 and 2 with a mean of 2.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Clare's "Young Lambs" <http://johnclare.blogspot.com/2005/03/young-lambs.html>.

==>IN BRIEF:

* This Week on the Radio: This week, look for the AGCW QRP Contest, the SOC Marathon Sprint and the ARCI HF Grid Square Sprint on March 14. The EA PSK31 Contest and the Idaho QSO Party are on March 14-15. The North American Sprint (RTTY) and the UBA Spring Contest (6 meters) are March 15. The Wisconsin QSO Party is March 15-16. On March 16, be sure to check out the Run for the Bacon QRP Contest and the Bucharest Contest. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meter Club Championship (SSB) are March 19. Next week is the Feld Hell Sprint, the AGCW VHF/UHF Contest and the 10-10 International Mobile Contest on March 21. On March 21-22, be sure to tune in for the SARL VHF/UHF Contest, the Russian DX Contest, the Oklahoma QSO Party and the North Dakota QSO Party. The BARTG HF RTTY Contest and the Virginia QSO Party are March 21-23. The UBA Spring Contest (2 meters), the 9K 15 Meter Contest and the QRP Homebrewer Sprint are March 23. The SKCC Sprint is March 25. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March 22, 2009, for these online course sessions beginning on Friday, April 3, 2009: Amateur Radio Emergency Communications Level 1, Radio Frequency Interference, Antenna Design and Construction, Ham Radio (Technician) License Course, Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful

feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Two New ARRL Section Managers, Six Remain in Office: Daniel L. Pruitt, AE6SX, of Fresno -- the only nominee for San Joaquin Valley Section Manager -- will take over from Charles McConnell, W6DPD. Tom Dick, KF2GC, of Saranac Lake, will be the Section Manager in Northern New York. Tom -- who served as Section Manager from 2000-2006 -- is taking the reins from Tom Valosin, WB2KLD; Dick's term will be 18 months. The following incumbent Section Managers were unopposed after being nominated. They will begin new two-year terms of office in July: Jim Cross, WI3N, Maryland-DC; Al Shuman, K1AKS, New Hampshire; Rich Krohn, N2SMV, Northern New Jersey; Joe Giraudo, N7JEH, Nevada; Bob Beaudet, W1YRC, Rhode Island, and John Dyer, AE5B, West Texas. All terms begin July 1.

* NASA Delays Discovery's Trip to ISS: Due to a leak in the venting system outside the giant external fuel tank, NASA has decided to postpone the launch of a space shuttle headed to the International Space Station (ISS), originally scheduled for 9:20 EDT on March 12. The launch has been rescheduled for Sunday, March 15 at 7:43 PM EDT. Discovery will carry a crew of seven astronauts, including Flight Engineer Koichi Wakata, KC5ZTA; Wakata is with the Japan Aerospace Exploration Agency (JAXA). He will stay on the ISS, replacing Flight Engineer Sandra Magnus, KE5FYE, who will return home on Discovery. Wakata is scheduled to return to Earth when Endeavour launches to the ISS in June 2009; Flight Engineer Timothy Kopra, KE5UDN, will replace Wakata. Discovery's 14 day mission, which has four spacewalks scheduled, will deliver the fourth and final set of solar array wings to the ISS <http://www.nasa.gov/pdf/312777main_fs-2009-01-004-jsc-Web.pdf>. With the completed array, the station is expected to be able to provide enough electricity when the crew size is doubled to six in May. The shuttle also will carry a replacement for a failed unit in a system that converts urine to drinkable water.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast"

compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Actually, the answer is to use a regulated supply and run from the 120v
because the 12v winding is usually skimpy and unregulated. I use an EM500
to drive an Astron 35, modified for battery float. The 12v DC winding is
only rated 10A Unreg.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations | campaigns will not be permitted. Relatively unbiased announcements or | reviews of new amateur radio-related products or services may be | permitted at the discretion of the moderators. Such posters are asked | to disclose their financial or professional interest, if any, in such | products or services. |

Mentions of small amounts of free items for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. | However, a pointer to a website or other external source of information | is permitted and encouraged in cases where it is relevant to an existing | thread, with appropriate context being given in the post. A URL with no | information about what a user should expect to find there will be | rejected. A pointer to information that is off-charter for | rec.radio.amateur.moderated will be rejected, as will a pointer which | itself does not meet the rec.radio.amateur.moderated guidelines (such as | a URL containing embedded name-calling). |

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar

government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

Anyone checked out the digital over-the-air broadcasts? My old analog, portable TV in my exercise room is not hooked to cable. So I got one of the converter boxes and tried it out. I was impressed with the improvement in the picture. We're kind of marginal for reception of analog signals with rabbit ears here. Using the same rabbit ears, I got a clear picture with the digital signal compared to the fuzzy, snowy analog picture.

This is exactly the same experience that I had. My in-laws are very pleased with the improvement in their picture and with the additional channels now available to them after installing the converter box. (Our public TV stations transmit multiple digital channels.)

On the other hand, my brother-in-law has had less than optimum performance after deciding to dump his cable TV service and use DTV. His problem is simple -- he needs an actual outdoor antenna. You can't get something from nothing. Assuming that spring will one day arrive, we'll easily take care of the problem.

Glad to hear it!

When it does work, it works VERY well. And really, most of the time it *does* work. I know up here, 30 miles from the towers, my digital reception is crystal-clear. I definitely cannot say that for my analog reception, *especially* on the most popular channels 2/4/5/8.

And I get *more* channels. I got 11 analog channels. I get twice as many digitals. Indeed, 8-2 is probably the most popular channel in my house these days. (don't tell my boss - I work for 4-1/4-2...)

We have heard from a few viewers who are having problems.

I think a lot of them were living with VERY poor analog signals. Some seem to have felt these amplified indoor "digital" antennas were some kind of "magic" -- one viewer was trying to watch us with an indoor antenna in a town 50 miles from the tower. Amazingly, it worked about 40% of the time!

I would estimate the most common issues we're seeing are:

- One or two channels didn't scan in on the first try. Rescanning brings in the missing channel(s).

- Trying to use a UHF-only antenna. Right now our station is the only digital on VHF in town. It should be noted that will change here -- and in MANY other markets -- in June when the analogs go off.

(we also heard from one viewer with a VHF-only antenna. They were really happy with our digital signal but wanted to know why they couldn't get anyone else!)

- Believing an amplified indoor antenna is a suitable replacement for an unamplified outdoor antenna.

- Somehow, not understanding that the antenna must be connected to the *converter box*, not directly to the TV.

Since it's just my exercise room, I used an antenna I had on hand, which was
VHF only but am getting the UHF signals well too.

It's far more likely to work in that direction (receiving UHF on a
VHF-only antenna) than the other way around. (receiving VHF on a
UHF-only antenna) Especially if a preamp is involved!

No preamp on that old thing. I do think I'll eventually get a better one
with a pre-amp as it is very touchy on the orientation at the moment.

You'd probably be better off with a separate outboard preamp.

We've been watching digital/HDTV at our house since late 2003. My setup until this past autumn was a CRT-type 4:3 27" Samsung monitor with outboard Samsung tuner. We went to a 42" Vizio wide screen LCD HDTV last Fall and it is fantastic. We use the same medium-sized, gable mount VHF/UHF antenna we've had since 2003 and use a four-port Philips Preamp feeding other TV's in the house (including a sweet little HDTV computer PCI card with output fed to a Samsung 19" wide screen monitor in the ham shack.

The reason I use outboard preamps is so that I can put an Ameco highpass filter right ahead of the preamp.

Since it's just my exercise room, it isn't worth investing too much in the
setup though. I already receive all the channels available in this area if
I pay attention to the antenna orientation.

I received the following via email. This small-town business has been around since the 1930's. It's sad to see it diminished.

73, de Hans, K0HB

Burghardt Amateur Center Inc will now be called Burghardt Radio Repair Inc and will no longer sell amateur radio transceivers and accessories. All backorders have been cancelled.

The current economic conditions have caused us to re-evaluate our goals and direction. We will continue to provide radio repair service as it has become a very busy business. Thank you for your support in the past and look forward to continuing our relationships through our servicing facility.

I'm sorry to see Burghardt's get out of the business of salling amateur
gear. My knowledge of place began around the time I received my Novice
license in '63. One of the first envelopes full of adverts for ham gear
which arrived was from Stan Burghardt.

That question depens largely on what you want to do and if there are
any D-Star repeaters in your area.

First, if there are no D-Star repeaters near you, why spend the money?

Second, if there are D-Star repeaters.. Then is it worth the extra $$
being able to talk on these machines?

I personally don't really think that D-Star is worth it even in the
Dallas area where we have multiple D-Star repeaters. However, I know
folks who love it and swear it is the wave of the future. I suppose if
you are into data services, it might be worth it.

Depends:

1. Do you know anyone in your area that uses D-Star or runs a D-Star repeater or gateway? If not, then D-Star would be pointless. If so, you should decide whether or not you need or want to participate. It would be

pointless to get D-Star if you don't plan top use it.

2. What are these "other features"? Do you want/need any of them? If not,

then just go ahead with D-Star.

Really, you have to weigh out what you want out of your radio. I myself probably would the D-Star, since I have been wanting to try it out, and I

probably wouldn't need any of those extra features. However, I am not the

one buying the radio here. Inform youself on D-Star, and decide for yourself whether or not to get it.

Amateur Radio Newsline(tm) Report 1649 - March 20 2009

Amateur Radio Newsline report number 1649 with a release date of Friday, March 20th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Civil unrest causes a DXpedition to be cancelled in Bangladesh, a radio club looses it fight to remain in a New York City museum, a new study shows that walking and talking on a cellphone can be hazardous to your health, experts say that 5 Mhz should be a band to watch and the story of ham radio and the American Boy. Find out the details on Amateur Radio Newsline(tm) report number 1649 coming your way right now.

(Billboard Cart Here)

**

BREAKING DX NEWS: DXPEDITION TO BANGLADESH ON HOLD DUE VTO CIVIL UNREST

A civil war has put a halt to a long anticipated DXpedition. Bill Paternak, WA6ITF, is in the newsroom with more:

--

Political unrest has lead to the cancellation of a long awaited DX operation to Bangladesh. This with word that members of the Korea DX Club had to postpone their operation from Dhaka due to a civil war that has broken out in the city.

The report from the team mentions that the situation was chaotic and that their S21KD was cancelled when they first arrived. They did eventually get a new license and S21CZY call sign. They also moved to another location 2 1/2 hours away.

The team hoped to be on the air that day but could not retrieve the radio gear from the airport. As safety was the team's first priority they cancelled the operation and headed back home.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

The group hope to get another chance to operate from Bangladesh once the civil unrest subsides and they can schedule a new date. For updates please visit http://dxpedition.co.kr on the Word Wide Web. (Southgate)

**

BREAKING DX NEWS: 6 METER EME DXPEDITION TO THE COOK ISLANDS

A 6 meter EME DXpedition to the South Cook Islands is now slated for moonrise on Thursday March 26, with the last 6 meter activity probably be the moonrise window on Saturday April 4 GMT. This with word that Lance Collister, W7GJ, and Bob Sutton ZL1RS are meeting in Rarotonga at the end of March to activate E51 on EME on both the 6 and 2 meter bands.

Unless otherwise indicated after we get there, the 6 meter operation will take place on 50.190 Mhz. Collister will be at the controls of the 6 meter station using the call sign E51SIX from grid square BG08dr

Collister says that 6 meter QSL requests go to E51SIX slash W7GJ, Lance Collister, P.O. Box 73, Frenchtown, Montana, 59834-9973 in the USA Please include a self addressed envelope with sufficent return postage.

By the way, if the name Lance Collister and his Frenchtown, Montana, home address sound familiar its because he was the first ham on good old mother Earth to contact space adventurer Owen Garriott, W5LFL, during the STS-9 space shuttle mission. That took place way back in November of 1983 when Collister held the call sign WA1JXN.

We will have more DX related news later on in this weeks report (OPDX)

**

NEWSLINE FOLLOW-UP: HALL OF SCIENCE ARC LIKELY TO BE EVICTED FROM ITS NAMESAKE

New York City's historic Hall of Science Amateur Radio Club appears to have lost its fight to retain a station at its namesake home of 35 years. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the latest on the clubs hunt for a new home:

--

Despite a cordial meeting and demonstration of amateur radio with the museum's boss, Thomas Tumino, N2YTF, says it appears very unlikely WB2JSM will ever be activated again from the Hall of Science.

"I would say that there is a 90 percent chance that it is all over at the Hall of Science," Tumino says.

You might recall a few months ago, we told you how the museum, located in Flushing Meadows on the site where the World's Fair was held in the mid-1960s, had asked the club to take down its antennas during a renovation project.

It then banned them from putting them back up and began talking about ousting the organization.

That sparked an on-line petition drive which netted some 13-hundred signatures.

But Tumino, president of the Hall of Science Amateur Radio Club, concedes that hasn't changed the museum's mind.

An item in the New York Daily News recently quoted a museum official as saying there isn't room for the amateur radio station.

Tumino says there were discussions with the museum about putting the ham radio exhibit on a cart on wheels with remote control of the radios. That's the 10 percent chance of return Tumino is talking about.

But, he concedes that's slim, and the Hall of Science Amateur Radio Club in New York, is now looking elsewhere for a home.

"A well-known New York City area ham, has kind of taken up our cause to some extent and is helping us with that," Tumino says. "So, we don't know yet whether that's a set solution, moving to another museum within the New York City limits.

"But that also looks very promising and we've already had one meeting with that institution and hope to schedule a second."

While Tumino declined to identify that museum for fear of jeopardizing negotiations, he did say it may be in one of New York's boroughs - but not in Queens.

He did say it's an ideal operating location for amateur radio, especially emergency communications.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

If you would like to sign the petition to help keep the Hall of Science Amateur Radio Club at New York City's Hall of Science, please take your web browser to http://tinyurl.com/6ljost (ARNewsline(tm))

**

RADIO SAFETY: CELLPHONES VS. PEDESTRIAN FALALITIES

First it was driving with a cellphone that was tagged as a dangerous act. Now its just walking along while chatting that is coming under attack in a new study released on March 8th. Amateur Radio Newsline's Don Carlson, KQ6FM, is in Reno with more:

--

A new study by Rutgers University Economics Professor Peter D. Loeb and his associates says that cellular phones as related to accidents are a danger on the road in more ways than one. Hi study along with another show that talking on the phone while traveling, whether you're driving or on foot, is
increasing both pedestrian deaths and those of drivers and passengers.

One of the new studies, lead-authored by Dr Loeb, relates the impact of cell phones on accident fatalities to the actual number of cell phones in use. It purports to show that the current increase in deaths attributed to cell phone use follows a period when cell phones actually helped to reduce pedestrian and traffic fatalities. However, the study also found this

reduction in fatalities disappeared once the numbers of phones in use reached a critical mass usership of 100 million.

Loeb and his co-author determined that, at the current time, cell phone use has a significant adverse effect on pedestrian safety and that cell phones and their usage above a critical threshold adds to motor vehicle fatalities. Loeb says that in the late 1980s and part of the 1990s, before the numbers of phones in use exploded, cell phone use actually had a life-saving effect in pedestrian and traffic accidents. Loeb notes that cellphone users were able to quickly call for medical assistance when involved in an accident and hypothesizes that this quick medical response actually reduced the number of traffic deaths for a time. But says the report, this life-saving effect was canceled out once the numbers of phones reached a critical mass" of about 100 million and the life-taking effect where increased accidents and fatalities began to outweigh the benefits of quick access to 911 services. Another study titled "The Cell Phone Effect on Pedestrian Fatalities" from Bentley University in Waltham, Massachusetts
also looked at pedestrian fatalities related to cell phone use.

And why should these studies be of interest to ham radio operators? Call it possible guilt by association.

Its well known that both the public and law makers tend to lump anything that looks like a cellphone as being one. Also, as seen with the current spate of state laws dealing with mobile cellphone use, regulators tend to make sweeping all-inclusive regulations that affect everything in sight rather than targeting a problem. With both reports recommending that that governments consider more aggressive policies to reduce cell phone use by both drivers and pedestrians, its reasonable to assume that anyone carrying anything that even resembles a cellphone might one day be affected. And a lot of today's tiny H-T's can easily be mistaken for a cellphone as has been the case.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

Also remember that its been almost a half century since Class D CB was created and even today most people and political leaders really do not know the difference between it and amateur radio. More on these twin reports are at www.sciencedaily.com/releases/2009/03/090304160404.htm (Rutgers University, Science Daily)

RESCUE RADIO: NWS CHANGES HAIL REPORTING CRITERIA

Winds of change are sweeping across Indiana, in an effort to streamline the Severe Thunderstorm Warning Criteria. Beginning April 1, 2009,reporting stations and Skywarn spotters will begin reporting hail that is one inch or larger. Previous reports looked for hail that was pea size or larger.

McCarthy audio: " Usually damage begins at one and a quarter size hail rather than warning for hail that is penny size or smaller."

Dan McCarthy, Meteorologist in Charge of the Indianapolis National Weather Office, says parameters for reporting wind speed have also been refined. He says winds reaching 58 miles per hour are now considered a threat. At 60 miles per hour tree branches break and trees begin to uproot.

McCarthy: " The whole idea is to provide a more precise service for the public."

This change in criteria comes following a four year study of hail damage and the issuance of Severe Thunderstorm Warnings in Kansas and the central plains. The study found one inch hail rather than the historical three-quarter inch threshold as a better indicator for Thunderstorm Warnings. Illinois, Iowa and Missouri will join Kansas and Indiana April 1st to change the hail stone criteria.

N-W-S officials felt the public was becoming desensitized by numerous warnings being issued for marginal hail sizes. McCarty say this new criteria should cut down on the number of warnings and cut down on the number of programming interruptions that local broadcast stations are forced to make for Severe
Thunderstorm Warnings.

McCarthy audio: "We'll be able to warn people of more damaging hail than the smaller hail."

The bottom line is fewer Severe Thunderstorm Warnings. And when Severe Thunderstorm Warnings are issued, the storms will have the potential to cause damage.

From Indianapolis, this is Jack Parker, W8ISH. (W8ISH, ARNewsline(tm))

**

RESCUE RADIO: HAM RADIO TAKES PART IN NC NWS TORNADO DRILL

Ham radio has participated in a major emergency training drill in North Carolina. Amateur Radio Newsline's Randy Ross, KI4ZJI, has the details:

--

At 9:30AM local time on Wednesday, March 4th, the National Weather Service issued a simulated tornado warning for several counties in North Carolina. Almost immediately, members of the Cleveland County Amateur Radio Service, Foothills Weather Net, and Rutherford County ARES were

activated. The groups worked closely with the National Weather Service forecast office to coordinate with amateur radio severe weather spotters. As a result, the National Weather Service was able to solicit weather reports and other information related to the drill from amateur radio operators from Asheville to Charlotte.

During the drill Herb Switzer, N4BXB, of Shelby noted several weaknesses in the communications system installed at the National Weather Service office. The Cleveland County Amateur Radio Service says that it will be working with other local amateur radio operators to resolve these problems before the severe weather season begins.

Bryan McAvoy is the Forecaster at the National Weather Service Office in Greer North Carolina. He says that he hopes to schedule more drills like this one involving the regions ham radio community in the not to distant future.

For the Amateur Radio Newsline, I'm Randy Ross, KI4ZJI, in Shelby, North Carolina.

--

The National Weather Service has come to rely on the ham radio as their primary means of communication between their office and those storm spotters during severe weather outbreaks. (KI4ZJI, ARNewsline(tm))

RADIO LAW: FCC SAYS NO TO PRISON CELLPHONE JAMMING DEMO

The FCC has told a company that manufactures cellular telephone jamming equipment that it cannot demonstrate it here in the United States. In a March 17th letter to CellAntenna Corporation of Coral Springs, Florida, the FCC says that it us denying the company's request to conduct a demonstration of equipment designed to block unauthorized wireless telephone calls by prisoners at the Pine Prairie Correctional Center in Pine Prairie, Louisiana.

CellAntenna had wanted to demonstrate that its gear could be used by prison officials to block calls being made by prisoners with illicitly obtained cellular phones. It has placed a request before the regulatory agency for a demonstration to take place on Friday, March 20th. CellAntenna's request indicated that the demonstration would use directional jamming that can be operated so that its impact is limited to a jail or prison, without interfering with other cellular phones or lines of communication beyond the walls of the
correctional facility, or otherwise outside the established test area.

But a number of entities challenged the test. Among them was the politically powerful Cellular Telecommunications Industry Association which argued that the proposed demonstration is prohibited by
Section 333 of the Communications Act. Others opposing the test stated that CellAntenna could not conclusive show that its gear would not cause interruption to cellular service outside the prison walls and could lead to inadvertent jamming of calls for emergency assistance.

In the end the FCC denied the request based on the fact that its rules state that it I against the law to manufacture, import or sell any form of device here in the United States that deliberately interferes will radio communications. It also notes that CellAntenna, is not a federal entity subject to any statutory exemption to this rule. As such, the CellAntenna request to hold the demonstration has been denied. (FCC)

RADIO SPECIALTIES: WEBCAM WATCHES CONSTRUCTION OF 1049 FT MIAMI TOWER

Meantime, a webcam in Florida is bringing the construction of WPLG-TV's new 1049 foot high candelabra tower in Miami, right to your computer screen.

Billed as one of the tallest such towers in the South-Eastern United States, each individual section is thirty feet long with the heaviest section weighing in at about 26,500 lbs. Its total weight of 1,013,450 pounds and it features a 12 foot wide face with a two person elevator to take repair crews to the top.

Once completed it will permit 50 foot center to center separation between antennas. Besides WPLG-TV, stations WSVN-TV and WLYF-FM will be moving to the new tower.

Fabrication of the new tower began on March 12th. The webcam lets anyone watch the work progress at http://tinyurl.com/d9vw8l (CGC, Gary Blau)

WITH THE LEAGUE: ARRL SEEKS NOMINATIONS FOR FOUR AWARDS

The ARRL is seeking nominations for its Herb S. Brier Instructor of the Year Award, Microwave Development Award, Technical Service Award and Technical Innovation Award. Each of these honors covers a different aspect of ham radio. Full details on each along with nominating rules for each are at the ARRL's website. Its in cyberspace at www.arrl.org. (ARRL)

**

THE SOCIAL SCENE: NEAR-FEST IN NH IN MAY

Turning to the ham radio social scene, word that the 2009 New England Amateur Radio Festival or Near Fest is lated for May 1st and 2nd at the Deerfield New Hampshire Fairgrounds. In addition to the hundreds of hams tailgating in the flea market there will be three huge buildings filled with commercial vendors and dealers. The gates open at 9:00 AM for both buyers and sellers with talk in on the K1JEK 146.700 MHz repeater., Talk in is also on 146.52 MHz simplex and 3.885 MHz on SSB. And during the hamfest you can also tune your car radio to FM 95.1 or AM 650 for continuous news and entertainment More information is on-line at www.near-fest.com. (Via QRZ.com)

**

THE SOCIAL SCENE: HEART OF GEORGIA HAMFEST MAY 9TH

And Byron Georgia will play host to the 2009 Heart of Georgia Hamfest on May 9th. This event is sponsored by the combined efforts of the Central Georgia Amateur Radio Club, the Middle Georgia Radio Association, the Byron Middle School Amateur Radio Club and the Macon Amateur Radio Club. The venue is the Byron Middle School and there will be free tailgating with paid admission and on-site license testing will be available. For more information please take your web browser to www.heartofgeorgiahamfest.com and to download the hamfest flyer. (QRZ.com)

**

THE SOCIAL SCENE: QCWA MEMBERSHIP MEETING AT HAMVENTION 2009

And in a change from past tradition, this years Quarter Century Wireless Association Annual Membership Meeting will be held as a forum at the 2009 Dayton Hamvention. QCWA members and those interested in becoming members are invited to the session that takes place on Sunday May 17th at 9:15 a.m. Eastern Daylight time.

On hand to answer your questions will be QCWA President Bob Roske, N0UF, along with many of the organizations directors. In years past these meetings were held only at QCWA conventions and meetings. Bringing the meeting to Hamvention means that more amateurs can find out first hand what the Quarter Century wireless Association is and what it offers to the ham radio community. (QCWA, ARNewsline(tm))

WITH NEWSLINE: ARNEWSLINE NOW ON FACEBOOK

Amateur Radio Newsline is now on Facebook. After looking at all the social networking sites we decided that the format of Facebook is the best way for direct interaction with you, our listeners.

Already several of your favorite Newsline reporters and anchors are there . Others will be joining over the next several weeks.

If you are already on Facebook we invite you to join and "friend" the Amateur Radio Newsline page. You will find it by searching the Organizations, Clubs and Societies area of Facebook or simply taking your web browser to the U-R-L you will find at:

www.facebook.com/group.php?gidW437231871#/group.php?gidV461269209&ref=nf

We look forward to meeting many of you there. (ARNewsline)

ON THE AIR: 5 MHZ IMPROVEMENTS

As the end of March approaches, there are several items of interest to High Frequency operators around the world, most of which concern the 5 MHz band. Here's Jeramy Boot, G4NJH, in Nottingham, England, with the details:

--

UK operators holding a 5MHz NoV may like to note that after dark propagation on the East-West path to the USA peaks when America also falls into darkness. To check the condition of the path, European hams should listen
out for AM broadcasting stations WWCR in Nashville on 5,070kHz and WWRB on 5,050kHz which is also in Tennessee. Both employ 100kW.

American operators can check the path in the opposite direction by listening for the USB AIRMET stations RAF VOLMET on 5,450kHz and Shannon VOLMET on 5,505kHz.

UK operators should find US amateurs congregating on 5,403.5kHz around 01.00 to 02.00 GMT.

The path to the Far East can be checked by listening out, after sunset, for the Chinese Standard Frequency station BPM. It identifies at regular intervals in Morse code on 5,000kHz. The chance of a contact on 5MHz in this direction is remote, but one or two American radio amateurs are believed to have authorization to operate from military bases in the Pacific.

I'm Jeramy Boot, G4NJH.

--

Another important event at the end of March is that the portion of the 40 meter now infested with shortwave broadcasters is supposed to revert exclusively to amateur radio. Whether or not all of the stations now there will disappear remains to be seen. (GB2RS)

**

RADIO AND SPACE: AIR FOCE PERMITS AMSAT TO CONTINUE KEPS

AMSAT North America has received approval from the Air Force Space Command to continue re-distribution of Keplerian elements data sourced from the Space Track website.. This means that the AMSAT version of these Keplerian Elements in verbose format and the 2-line format can be freely distributed by those who receive them from AMSAT. The agreement covers the period of April 1, 2009 to April 1, 2010 (WA5QGD, ANS)

**

HAM RADIO IN SPACE: AMSAT-UK SPACE COLLOQUIUM IN JULY WANTS SPEAKERS

The 2009 AMSAT-UK Colloquium is now slated for Friday July 24th to Sunday 26th July at the University of Manchester. This 3 day event attracts an international audience of those involved in building and operating Amateur Radio satellites and CubeSats.

Now, AMSAT-UK is inviting speakers on topics regarding amateur radio space and associated activities for this event. They are also invited to submit papers for the "Proceedings" document which will be published at the same time but note that printed papers are not mandatory.

Either way, submissions should go to G4DPZ via e-mail to david dot johnson at blackpepper dot co dot uk. More about the 2009 Colloquium and previous events can be found at http://www.uk.amsat.org/colloquium (AMSAT-UK, ANS)

**

RADIOSPORTS: TICKETS NOW AVAILABLE FOR VISALIA IDXC CONTEST DINNER

If you are planning to attend the 2009 International DX Convention in Visalia, California, you can now purchase your tickets to the Contest Dinner on Friday night, April 17th. The venue is the Oak room at the Holiday Inn, Visalia. Tickets are $38 each or $360 for a table with 10 seats paid in advance.

This year guest speaker will be Tim Duffy, K3LR, who will speak on "The Never-Ending Challenge of Improving Your ContestStation." Also, the 2008 C-Q-P Awards will be presented. For complete details on the dinner banquet, please visit www.elbloggotorcido.com/contest-dinner-2009.html (OPDX)

DX

In DX, some welcome news. Bill Moore, NC1L, ARRL Awards Branch Manager, reports that the just completed K5D Desecheo Island 2009 has been approved

for DXCC Credit.

VK9GMW will be active from Mellish Reef in a low-key DXpedition between March 22nd and April 6th. The operation will have a strong low-band focus. QSL via HA7RY direct, by the Bureau or using Logbook to the World. Also, please note that the dates of this operation are approximate and subject to change with little notice.

F5TGR will be active as stroke FG from Guadeloupe between 14th and 28th March. Look for him from 40m up to 10m using CW and SSB. QSL via F5TGR.

LT9L will operate from the shores of Lake Luna in Argentina. Activity will be on the 80, 40, 20 and 15 meter bands using CW, SSB, PSK, RTTY and SSTV. QSL via EA5FL to the address at qrz.com.

An international DXpedition will activate Lord Howe Island between March 23rd and the 3rd of April. It will use the callsign VK9LA. QSL this one to VK9LA in care of the Oceania Amateur Radio DX Group in Australia.

2E1EUB will be active on all satellites from North-East Scotland for the week starting March 21, 2009. Check out qrz.com under 2M1EUB listing for more information.

I2AE says that he plan to be active from several Danish islands between May 1st and the 15th No callsign has yet been mentioned but it is suggested that you monitor mainly 7.050 to 7.060 and 14.250 to14.260 MHz during that time frame.

Lastly, a chance for some 6 meter contacts across the Atlantic pond. This with word that the RSGB 50MHz Activity Contest runs from 20.00 to 22.30 UTC on March 24th. This contests permits participants to use all modes. If you make a contact, QSL the stations as they direct you on the air.

(Above from various DX news sources)

**

THAT FINAL ITEM: THE AMERICAN BOY

And finally this week, a quick look back at the history of amateur radio and some of the politics that kept it alive after the first world war. It's a story that might best be called The American Boy and here's Jim Linton. VK3PC:

--

The 3rd National Radio Conference was held in Washington DC in October 1924.

In the chair was Secretary of Commerce, Herbert Hoover who in his opening address said, "Nor have we overlooked in these previous conferences the voice or interest of the amateur, embracing as he does that most beloved party in the United States - the American boy.

"He is represented at this conference, and we must have a peculiar affection for his rights and interests.

"I know nothing that has contributed more to sane joy and definite instruction than has radio.

"Through it the American boy to-day knows more about electricity and its usefulness than all of the grown-ups of the last generation.

"I have during the past year somewhat extended this wave band. I hope that this conference may dismiss the objections that have been raised to this action."

A member of the conference coordinating committee was the ARRL's Hiram Percy Maxim, the "Father of Organised Amateur Radio" in the United States.

At the end of the conference amateurs substantially retained their frequency bands - spectrum we know today as 160m, 80m, 40m, 20m and 6m.

The conference recognized that rapid changes were being imposed by scientific discovery and invention.

It looked at the emerging trends in broadcasting that was making radio available to every home in the country.

Interference was a hot topic with references to electrical devices and methods to reduce their impact on radio reception.

For the Amateur Radio Newsline I'm Jim Linton VK3PC.

--

The internet address of the conference report can be found in the text edition of this weeks Amateur Radio Newsline bulletin. It makes for some rather interesting reading.

(DO NOT READ: http://earlyradiohistory.us/1924conf.htm) (VK3PC)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

A reminder that the nominating period for the 2009 Amateur Radio Newsline Young Ham of the Year Award is now open. Complete details are on our website at www.arnewsline.org Just scroll down to the words "2009 YHOTY Nominations Now Open" and click for more information and an official nominating form.

Also be sure to mark April 18th as this year World Amateur Radio Day. World Amateur Radio Day will focus on the hobby as it empowers people and supports communities by providing emergency communication as well as public service oriented interaction for community and other special events.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

==> HAMS ASSIST WOMAN INJURED IN DESERT

It was a sunny day, not a cloud in the sky, when Hal Whiting, KI2U, Todd
Kluxdal, Kluxdal's father and Whiting's two sons decided to go out to
the Poverty Mountain area in Arizona to search for airplane crash sites.
Whiting, who lives in St George, Utah, and Kluxdal, who lives in
Mesquite, Nevada, took two vehicles that day. According to Whiting, they
always take two vehicles, just in case a problem pops up: "We always
have two spare tires, extra gasoline and a tow rope. We take enough food
```

and supplies to stay two or three days." In addition to the extra equipment, Whiting took the one thing he never goes without -- his ham radio.

"It was a bit after lunch, about 73 miles into our trip," Whiting told the ARRL," when we were flagged down by a man wanting to know if we had a satellite phone, since he couldn't get coverage on his cell phone." Whiting didn't have a satellite phone, but he asked the man if this was an emergency. Whiting said that the man told him that one of his friends had been injured when her ATV rolled on top of her. "I told him I could call for help on my ham radio," he said. The injured woman was knocked unconscious by the fall, but had regained consciousness and was speaking coherently, but was in pain.

"I picked up my mic and put out a call on the 146.910 repeater, one of four repeaters run by Dean Cox, NR7K," Whiting said. "I called for assistance a couple of times when Mac Magee, N6LRG, in the Arizona Cane Beds, answered."

"Mac lives about 50 miles away from the accident site," Whiting said. "It's funny -- it's usually Washington County hams who are on the repeaters, since that's the direction they're pointed in. But Mac lives in Mohave County. And the accident happened in Mohave County. We were lucky, since if the call was answered by a ham in Washington County, there would have been a delay in them getting the info to the proper authorities in Mohave County, but with Mac answering, all our information went right to the proper place."

That morning, Magee told the ARRL that he came into my shack "and for some reason, turned on the 2 meter rig and it happened to be on the 146.910 repeater. I usually have a problem with the repeater 'hearing' me, so I rarely use it. About 11:20 Arizona time, I heard someone call and say they had emergency traffic and needed help. I fully expected a bevy of hams to answer the call, since so many are in range of that machine, but after his second call, and no answer, I took it."

Magee said that the calling station had been flagged down by another motorist. "He told me there had been an accident in the vicinity of Poverty Mountain," he said. "I really had no idea where that was, but I began to write down details. As soon as I had basic info, I called 911. The Mohave County Sheriff Office answered; I explained who I was and what the call was about."

The dispatcher asked Magee for the coordinates to the site, and Magee relayed the request to Whiting. "I looked at my GPS and gave Mac my coordinates, but he said the dispatcher wanted the coordinates from the accident site," Whiting said. "So I got in my 4-wheel drive and drove down the ridge to the site, about 5600 feet above sea level, and got the coordinates. I had to drive back to the ridge, another 1000 feet up, to call Mac back, because I couldn't get a signal down there."

Whiting told the ARRL that in addition to his ham radio, he also carries a set of FRS radios. "I gave one of the FRS radios to Todd and he drove his Jeep down the ridge to the accident site," he said. "I kept the other one and Todd was able to relay me information about the injured woman's condition and I was able to relay that information to Mac who in turn relayed it to the 911 dispatcher. Mac put the mic right up to the phone so the dispatcher could hear exactly what was going on."

Magee said the 911 dispatcher requested more information: "While Hal was replying, I held the phone up to my radio speaker. When he finished with the details, I asked them if they copied that. The dispatcher said he did, and they held me on the line. Hal and I talked a while as he gave more data. When the dispatcher returned, they said a chopper was being dispatched from Phoenix! Well, we finished that call after they had the actual accident site GPS coordinates that Hal had passed on."

With emergency help on the way, Kluxdal returned to the ridge and he and Whiting and his group went on their way to go check out an airplane crash site, the original intent of their trip. "The family members told us to go on and get on with our trip, so we did, after making sure they were all okay," Whiting said. "So we left to go to the crash site, about 3-4 miles away. As we were getting ready to return, we saw the helicopter overhead, taking the injured woman to the hospital in Las Vegas. We returned to the top of the ridge and a sheriff's deputy was there and he told us that our GPS coordinates were off, but only by 20 feet! He said that the helicopter crew was real happy that they were so on-target."

Whiting said they were glad to have been able to help. "This is a remote area," he said. "There's only one way in, one way out with no shortcuts to get in and out. There are only dirt roads, and it can get very muddy when it rains a lot. I was out that way two weeks ago and got stuck in the mud there, but it was all dry this past weekend."

Whiting said he learned a few things after this trip: "I am glad I had my radio equipment with me, and I am glad there was someone listening on the repeater to take the emergency call. Having the spare FRS radios created an efficient means for relay with a non-ham person, and having the GPS equipment provided a very effective means for the helicopter rescue team to locate the accident, since they did not want the road designation information but the exact patient coordinates. It would have been useless to have my equipment if there had not been someone listening. This proves that there is a good reason to keep your radios with you and in good operating condition."

Whiting, who was first licensed in 1976, is the ARES Assistant Emergency Coordinator for Washington County. A CAD Manager and Aerial Photographer for Bulloch Brothers in Mesquite, Nevada (he and Kluxdal are co-workers), he is currently teaching an Amateur Radio licensing class to 13 prospective hams at the Dixie Regional Medical Center in St George.

Magee said that before this incident he had never been involved in an actual emergency. "I have established emergency communications networks, in particular for the LDS Church in Newbury Park, California, where I was the Stake Emergency Communications Coordinator." He told the ARRL: "Our communications group won the first worldwide test of the system back in the late 1980s. This is like ARRL Field Day, but involved mostly LDS members and facilities, then under the name of Mercury Amateur Radio Association (MARA) <http://www.mara.net/>. I feel very pleased in knowing that I had the opportunity to serve in this rescue incident and that every penny I spent on my system, radio and antenna was certainly worth it. In these days of extensive cell phone service and coverage, isn't it satisfying to know that ham radio can still be of use for public service?"

==> ARRL YOUTH EDITOR: YOUNG PEOPLE CAN HELP WITH EMERGENCY COMMUNICATIONS, TOO!
ARRL Youth Editor Duncan MacLachlan, KU0DM, of Prairie Village, Kansas, says many young hams want to help out with Emergency Communications and ARES activities, but really don't know where to start. "One disadvantage of being younger hams is the fact that legal guardians are a must for most situations," MacLachlan said. "While a young ham may not be able to go out and save the day with a handheld transceiver after a large storm, there are many ways they can aid in emergency operations."

MacLachlan said that the first step in helping to support Emergency Communications is to join the Amateur Radio Emergency Service (ARES) or a local club that works with city or county to provide emergency communications services. "When you approach your EC -- the Emergency Coordinator, basically the president of that ARES group -- I recommend that you have discussed with your parents what you can and can't do in an emergency in terms of Amateur Radio response. If your parents are like mine, chances are they're not fond of the idea of having their kid running around a disaster zone in the name of emergency communications. I'd recommend asking your EC if there is a position you could fulfill from home, or even in the EOC (Emergency Operations Center) where operations are carried out."

One example of a duty that a young ham could fulfill at the EOC would be Net duty. In an emergency response effort, MacLachlan said that hams establish a Net to relay emergency traffic or other information to the people responsible for responding to the event: "Chances are the Net will last longer than 10 hours, and since hams are human, the primary Net Control (NC) will need a break at least several times in that time period -- you could help as back-up. Another duty that could be performed is shadowing various emergency response personnel for the city. Believe it or not, not a lot of Emergency Managers have their Amateur Radio license. If they go out to drive around and survey damage, they need to have a link to the ham radio Net in case they hear anything they need to respond to."

MacLachlan recommends that young hams contact their EC and ask what roles there are that they could perform for the group in an emergency.

"If you know your parents' threshold of what you can and can't do, let the EC know upfront that you do have limits," he cautions. "Make sure you participate in as many emergency communication drills as you can and consult with your EC and other members."

According to ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, young hams also need to check with their local government officials, as well. "Due to legal considerations, not all emergency management officials can have young people in their domains, such as an EOC," Dura explained. "While you can still help out with your ARES group, you might not be allowed to help out in the EOC."

MacLachlan strongly encourages local Emergency Coordinators to think of ways of creating positions that younger hams could fulfill in an emergency. "We're the next generation," MacLachlan said, "and starting emergency response at a young age is the best training for when we're ready to take the helm."

==> ARRL RELEASES REVISION OF "EXPERIMENTAL METHODS IN RF DESIGN"

The revised first edition of "Experimental Methods in RF Design" is now available from the ARRL <http://www.arrl.org/catalog/?item=9239>. Co-written and updated by Wes Hayward, W7ZOI, Rick Campbell, KK7B, and Bob Larkin, W7PUA, "Experimental Methods in RF Design" explores wide dynamic range, low distortion radio equipment, the use of direct conversion and phasing methods and digital signal processing. Use the models and discussion included in the book to design, build and measure equipment at both the circuit and the system level.

Readers are immersed in the communications experience by building equipment that contributes to understanding basic concepts and circuits. The updated version of "Experimental Methods in RF Design" is loaded with new, unpublished projects. Presented to illustrate the design process, the equipment is often simple, lacking the frills found in current commercial gear. The authors understand that measurement is a vital part of experimentation. Readers are encouraged to perform measurements on the gear as they build it. Techniques to determine performance and the measurement equipment needed for the evaluations are discussed in detail and include circuits that the reader can build.

Contents of "Experimental Methods in RF Design" include:
* Basic Investigations in Electronics
* Amplifiers, Filters, Oscillators and Mixers
* Superheterodyne Transmitters and Receivers
* Measurement Equipment
* Direct Conversion Receivers
* Phasing Receivers and Transmitters
* DSP Components
* DSP Applications in Communications
* Field Operation, Portable Gear and Integrated Stations

A follow-up to the widely popular "Solid-State Design for the Radio Amateur" (published in 1977), "Experimental Methods in RF Design" includes a CD-ROM with design software, listings for DSP firmware and supplementary articles. It is available from the ARRL for $49.95.

==> FCC DENIES PETITION TO INCREASE SIZE OF AMATEUR RADIO QUESTION POOLS

In April 2008, Michael Mancuso, KI4NGN, of Raleigh, North Carolina, filed a petition with the FCC, seeking to increase the size of the question pools that make up the Amateur Radio licensing exams <http://fjallfoss.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6520001890>. Mancuso sought to increase the question pool from 10 times the number of questions on an exam to 50 times more questions. On March 19, 2009, the Commission notified Mancuso that it was denying his petition <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-618A1.pdf>.

In his 2008 petition, Mancuso claimed that the current question pool is too easy to memorize and "that there has been a significant increase in the number of Amateur Radio operators receiving their licenses over at least the last decade or more who do not appear to possess the knowledge indicated by the class of license that they have received. Most discussion about this topic, both on the air and on Internet forums, generally refers to these widespread observations as the 'dumbing down' of Amateur Radio. It has been widely assumed that the cause of this observed situation is based upon the subject material addressed by the license examinations, that the material requirements specified for the examinations does [sic] not meet some minimum level of knowledge expected by some or many in the Amateur Radio community."

The FCC pointed out to Mancuso that each applicant for a new or upgraded Amateur Radio operator license "is required to pass a written examination in order to prove that he or she possesses the operational and technical qualifications required to perform properly the duties of an amateur service operator licensee, i.e., that he or she is qualified to be an amateur service licensee."

The Commission summed up Mancuso's petition, saying, "You argue that the current question pool size is no longer adequate, because online practice examinations enable examinees to memorize a question pool without fully comprehending the subject matter being tested. Consequently, you propose to increase the size of the question pools, in order to hinder memorization."

The Commission concluded that Mancuso did not present grounds for the Commission to amend its rules: "As noted above, the purpose of the examinations is not to demonstrate an applicant's comprehension of certain material, but rather to determine whether he or she can properly operate an amateur station. Moreover, your contention that there has been 'a significant increase in the number of Amateur Radio operators...who do not appear to possess the knowledge indicated by their class of license' is not supported by any data or facts."

The FCC pointed out to Mancuso that the Commission's Rules only dictate the minimum number of questions for each question pool for the three Amateur Radio license classes. This, the Commission told Mancuso, "does not prevent the National Conference of Volunteer Examiner Coordinators (NCVEC) from increasing the number of questions in a question pool should it decide that this is appropriate. We conclude, therefore, that the petition presents no evidence of an existing problem or other reason for a rule change."

ARRL Chief Executive Officer David Sumner, K1ZZ, said that while he agreed with the Commission's decision, he disagrees with the rationale behind it. "The International Radio Regulations require that administrations verify the operational and technical qualifications of prospective amateur licensees, using Recommendation ITU-R M.1544 for guidance," he said. "The present examinations confirm to this requirement."

==> GLOBAL SIMULATED EMERGENCY TEST SCHEDULED FOR APRIL

IARU Region 1 has invited the HQ stations of IARU Member-Societies, as well as the EOCs of Emergency Communications Groups (ECGs), to participate in the 2009 Global Simulated Emergency Test (GlobalSET), on Saturday, April 18, 2009 from 1100-1500 UTC <http://www.arrl.org/news/files/2009GlobalSET.pdf>. The GlobalSET will take place on and near the emergency Center of Activity (CoA) frequencies on 80, 40, 20, 17 and 15 meters, +/- QRM. IN the US, ARES groups that will be representing EOCs need to register through their IARU International Emergency Communications Coordinator. Registrations should be e-mailed to ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD <k2dcd@arrl.org>, and must include the call sign (this will be used as the name of the ECG) and the EOC that the ECG is representing, as well as a list of the names and call signs of all operators involved.

The intent of the 2009 GlobalSET is for established IARU Headquarters stations and EOCs to test their capabilities. Dura said that W1AW will be the official ARRL and ARES representative for this event. Other ARES groups that participate from EOCs (as per their established response plan) are also invited to participate. "While we appreciate individual interest in participating, the purpose of the GlobalSET is to allow IARU Member-Societies and other EOCs they support to test their infrastructures and procedures at the highest levels," Dura said. "Other events, such as ARRL Field Day and the annual ARRL SET are available for individuals to test their preparedness."

According to IARU Region 1 Emergency Communications Coordinator Greg Mossop, G0DUB, the GlobalSET is not a contest, but an emergency communications exercise to develop skills needed to provide an international emergency network.

Mossop said that the GlobalSET has four objectives:
* To increase the common interest in emergency communications.
* To test how usable the CoA frequencies are across ITU regions.

* To create practices for international emergency communications.
* To practice the relaying of messages using all modes: Voice (SSB), Data or CW.

"The exercise will build on earlier GlobalSET exercises and will focus on generating and relaying messages in a common format across country borders, rather than the information gathering capabilities that we've done in the past," Mossop said. "We will pass messages in a format that we may have to use for the agencies we may serve. The message exchange will take longer than in previous exercises, and stations will have to be patient to transmit their messages across country and language boundaries."

Each participating station is to send messages to their Regional HQ station using the IARU International Emergency Operating Procedure <http://www.darc.de/referate/notfunk/info/emerg-ww.pdf>, using IARU message forms <http://www.iaru-r1.org/IARU-msg1.pdf>. Stations should relay the messages they receive to their Regional HQ station; the Region 2 station is TG0AA in Guatemala. To comply with license regulations in some countries, all messages should be addressed to Greg Mossop, G0DUB, and should come from a licensed radio amateur. Messages should contain fewer than 25 words and should not include anything that would be considered as a "real emergency" message by a listener. Mossop suggests constructing messages that include weather conditions, the number of operators at the station or even an interesting fact about the station. "There is no limit on the number of messages to be sent," he said, "but each one must have a unique message number." Regional HQ stations will not be sending messages, only receiving them.

Mossop recommends that in order to create "a more realistic situation, please limit your transmitting power during the exercise to 100 W. We are especially interested in stations operating mobile/portable and/or on emergency power."

Usually held in May, the 2009 GlobalSET was moved to April to tie into World Amateur Radio Day. The theme of the 2009 World Amateur Radio Day is "Amateur Radio: Your Resource in Disaster and Emergency Communication." "This is an ideal opportunity to showcase the work of emergency communications groups around the world," Mossop said.

For more information on the 2009 GlobalSET, including a list of CoA frequencies for Regions 1, 2 and 3, please see the GlobalSET announcement <http://www.arrl.org/news/files/2009GlobalSET.pdf>.

==> AFRICAN RADIO ORGANIZATION APPLIES FOR IARU MEMBERSHIP

In the IARU Calendar, No 188 dated March 11, 2009, IARU Secretary David Sumner, K1ZZ, reported that the Union des Radioamateurs du Congo (URAC) in the Republic of the Congo has applied to become an IARU Member-Society (IARU Proposal No 245) <http://www.iaru.org/cal188.html>.

Sumner said that the Republic of the Congo (whose capital is Brazzaville) is not to be confused with the Democratic Republic of the

Congo (whose capital is Kinshasa); that country's amateurs are already represented in the IARU by the Association des Radio Amateurs du Congo (ARAC). The Republic of the Congo was formerly a part of French Equatorial Africa and became independent in 1960. Its ITU-allocated call sign prefix is TN.

URAC was formed in Brazzaville on October 8, 2008. Its officers are President Mao Monguimet, TN5MM; Secretary General Ulysse Yinda, and Treasurer Chynauldat Bangue. The URAC lists 15 members on its roster, including three licensed radio amateurs.

Sumner said that the URAC has stated to the IARU that it has the ability to meet its financial obligations as a member of the IARU through fees from members; that it is legally able to act in the furtherance of IARU objectives within the Republic of the Congo; that it will adequately represent the interests of radio amateurs throughout the country, and that it will adhere to the Constitutions of the IARU and of IARU Region 1. The IARU Region 1 Executive Committee has examined URAC's application and has found it to be in order.

In accordance with Bylaw 3 of the Bylaws of the International Amateur Radio Union <http://www.iaru.org/iarucnst.html>, it is proposed that Union des Radioamateurs du Congo be elected to IARU membership. A voting sheet for Proposal No 245 was sent to all IARU Member-Societies. Member-Societies need to submit their votes no later than August 11, 2009; votes received after this date cannot be counted.

==>SOLAR UPDATE

Tad "By banks where Sun beams earliest rest" Cook, K7RA, this week reports: This reporting week -- March 12-18 -- there were no sunspots, but we saw a couple of promising magnetic anomalies which faded away before ever emerging as sunspots. Sunspot numbers for March 12-18 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68.7, 68.2, 68.5, 68.4, 69.4, 68.8 and 68.4 with a mean of 68.6. The estimated planetary A indices were 6, 16, 9, 7, 5, 3 and 1 with a mean of 6.7. The estimated mid-latitude A indices were 6, 10, 7, 5, 4, 3 and 0 with a mean of 5. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Clare's "May" <http://www.poemhunter.com/poem/may-2/>.

==>IN BRIEF:

* This Week on the Radio: This week, the Feld Hell Sprint and the 10-10 International Mobile Contest are on March 21. On March 21-22, be sure to tune in for the the Russian DX Contest, the Oklahoma QSO Party and the North Dakota QSO Party. The BARTG HF RTTY Contest and the Virginia QSO Party are March 21-23. The 9K 15 Meter Contest and the QRP Homebrewer

Sprint are March 23. The SKCC Sprint is March 25. Next week, look for the CQ WW WPX Contest (SSB) and the EU EME Contest on March 28-29. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March 22, 2009, for these online course sessions beginning on Friday, April 3, 2009: Amateur Radio Emergency Communications Level 1, Radio Frequency Interference, Antenna Design and Construction, Ham Radio (Technician) License Course, Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* W1AW QSYs on 160 Meters: On Monday, March 9, the Hiram Percy Maxim Memorial Station, W1AW <http://www.arrl.org/w1aw.html>, began using a new 160 meter frequency for its CW transmissions. According to W1AW Station Manager Joe Carcia, NJ1Q, there was "increasing activity" near the previous bulletin frequency of 1817.5 kHz. "In order to reduce the possibility of interference, W1AW has moved to 1802.5 kHz," Carcia said.

* Addressing Change Coming to ARRL Magazines: A change in the postal regulations for flat mail processing takes effect March 29 that will require the addressing area on the front of any flat, bulk-processed mail (such as magazines) be positioned to new specifications. According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, QST, QEX and NCJ magazines will all have the delivery address imprinted upside down, but positioned in the same area on the front covers.

* Rich Beebe, N0PV (SK): South Dakota Section Manager Rich Beebe, N0PV, of Sioux Falls, passed away March 16. He was 46. Beebe had served as Section Manager since October 2002, running unopposed for each two-year term of office. According to the ARRL Field Organization Rules and Regulations, ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, in consultation with Dakota Division Director Jay Bellows, K0QB,

will appoint a new Section Manager to fulfill Beebe's remaining term of office that ends March 31, 2010.

* Burghardt to No Longer Sell Amateur Radio Equipment: On March 16, Jim Smith, W0MJY, owner of Burghardt Amateur Center in Watertown, South Dakota <http://www.burghardt-amateur.com/>, announced that the company will no longer sell Amateur Radio transceivers and accessories. The company, now called Burghardt Radio Repair, has canceled all backorders. In an e-mail, Smith blamed the current economic conditions for the change that forced the company "to re-evaluate our goals and direction. We will continue to provide radio repair service as it has become a very busy business. Our technicians are very experienced and parts inventories are good. Thank you for your support in the past and we look forward to continuing our relationships through our servicing facility." Jim Smith's son, Mike Smith, KC0FTM, told the ARRL that even though the company has had to lay off employees in the past couple of months, "Burghardt will concentrate on service, just like we have been doing since 1973." Burghardt was founded in 1937 by Stan Burghardt, W0IT (SK), as Burghardt Radio Supply. He sold the company to Smith in 1982, remaining active in the company until January 2002. Burghardt passed away in 2004 at the age of 93.

* Eighth Annual VoIP Conference Scheduled for April 18: Each spring since 2002, the Nevada Amateur Radio Repeaters, Inc (NARRI) has sponsored the Annual VoIP (Voice over Internet Protocol) Conference in Las Vegas. Attendees have discussed such protocols as the Internet Radio Linking Project (IRLP). IRLP System Designer David Cameron, VE7LTD, was the keynote speaker for the first six years of the conference. The 2009 conference is open to discuss all forms of VoIP communications. This year's meeting encompasses a broader scope, including all major VoIP systems in use by the Amateur Radio community such as IRLP, EchoLink, EchoIRLP, All Star, D-Star and DV Dongle; VoIP for emergency communications will also be on the agenda. According to Conference Chair Kent Johnson, W7AOR, there will be plenty of presentations and demonstrations at the conference. The conference is from 8:30-5 on Saturday, April 18 in Las Vegas in the conference area of the Circus Circus Hotel, under the North High Rise; enter from northeast side of the swimming pool. There will be plenty of presentations with demonstrations. For more information, please contact Johnson via e-mail <w7aor@narri.org> or visit the VoIP Conference Web site <http://www.narri.org/Annual_VoIP_Conference.html>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news

updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

83. rec.radio.info Posting Guidelines

Newsgroup: rec.radio.amateur.moderated

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

84. BREAKING NEWS FROM ARNEWSLINE: FCC RULES THAT DIGITAL VOICE REPEATERS ARE REPEATERS

Newsgroup: rec.radio.amateur.moderated
Date: 2009-03-23 20:44:35 UTC
From: "William M. Pasternak" <newsline@ix.netcom.com>
Message-ID: <5.2.0.9.2.20090323132809.01737e38@popd.ix.netcom.com>
Source record: 2194
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

FCC RULES THAT DIGITAL VOICE REPEATERS ARE REPEATERS

The fcc has ruled that the claim by some owners of digital repeaters and some frequency coordinators that digital voice repeaters are not actually repeaters due to the time delay inherent in digital to analog and analog to digital conversions is erroneous.

In response to a request for a Declaratory Ruling on this issue from the Northern California Packet Association the FCC says that when a receiver and transmitter are tied together as a repeater it is a repeater. The full text of the FCC response to Gary R. Mitchell, President of the Northern California Packet Association is reprinted below.

ARNewsline will have more on this issue in our next newscast to be released on Friday, March 27th.

ARNewsline

**

Text of FCC Digital Voice Repeater Decision

Mr. Gary R. Mitchell
President, Northern California Packet Association
P.O. Box K
Sunnyvale, CA 94087

Re: Petition for Declaratory Ruling filed December 5, 2007

Dear Mr. Mitchell:

This is in response to the petition for declaratory ruling that you filed on December 5, 2007, requesting that the Commission clarify the definition of a repeater in the amateur service rules. A repeater in the amateur service is defined as "[a]n amateur station that simultaneously retransmits
the transmission of another amateur station on a different channel or channels." You seek clarification of whether the word "simultaneously " in
the definition refers to the signal information being retransmitted, or to the fact that the receiver and transmitter must both be active at the same time while acting on the same signal information.

Section 97.205(b) of the Commission's Rules specifies the bands on which amateur repeater stations may operate. You state that some amateur radio

operators are operating on bands other than those set forth in Section 97.205(b) with systems that are essentially voice repeater stations, but that digitize and retransmit the user's voice, on the theory that because there is a small delay in retransmitting the signal of another amateur station, the signal is not "simultaneously" retransmitted and, therefore,
the system is not a repeater.

Prior to 1994, a repeater was defined as "[a]n amateur station that automatically retransmits the signals of other stations." The Commission revised the definition in order to clarify that certain accommodations for message forwarding systems do not apply to other operating activities such as repeaters and auxiliary stations. The Commission proposed to define a repeater as "[a]n amateur station that instantaneously retransmits the transmission of another amateur station on a different channel or channels," but ultimately replaced "instantaneously"
with "simultaneously" because commenters noted that there is always a small
propagation delay through a repeater. As one commenter explained, "The word ï¿½simultaneously' in this case means that the repeater is receiving and
transmitting concurrently, whereas each signal might be slightly displaced in time between receive and transmit."

To be able to repeat another station's transmission, a repeater must be able to receive a transmission from another station and retransmit it. Because the word "simultaneously" in the definition is used to modify "retransmit," we believe it refers to a repeater station's transmitter being active when retransmitting the signal received by the repeater station's receiver from another amateur station. We conclude, therefore, that "simultaneously" as used in the definition of a repeater refers to the
receiver and transmitter both being active at the same time.

Accordingly, IT IS ORDERED that, pursuant to Section 4(i) of the Communications Act of 1934, as amended, 47 U.S.C. ï¿½ 154(i), and Section 1.2
of the Commission's Rules, 47 C.F.R. ï¿½ 1.2, the Petition for Declaratory Ruling filed on December 5, 2007 by Gary R. Mitchell IS GRANTED to the extent indicated above.

This action is taken under delegated authority pursuant to Sections 0.131 and 0.331 of the Commission's Rules, 47 C.F.R. ï¿½ï¿½ 0.131 and
0.331.

FEDERAL COMMUNICATIONS COMMISSION

Scot Stone
Deputy Chief, Mobility Division
Wireless Telecommunications Bureau

85. BREAKING NEWS FROM THE AMATEUR RADIO NEWSLINE FRANK BAUER, KA3HDO, STEPS DOWN FROM AMSAT AND ARISS POSITIONS

Newsgroup: rec.radio.amateur.moderated
Date: 2009-03-24 18:30:07 UTC
From: "William M. Pasternak" <newsline@ix.netcom.com>

BREAKING NEWS FROM THE AMATEUR RADIO NEWSLINE(tm)
FRANK BAUER, KA3HDO, STEPS DOWN FROM AMSAT AND ARISS POSITIONS

By Mark Abramowicz NT3V
Amateur Radio Newsline - East Coast Bureau
Philadelphia PA.

Frank Bauer KA3HDO today (Tuesday, March 24, 2009) announced his resignation from all of his duties with the Amateur Radio on the International Space Station program, including work with NASA education office as ARISS program leader, support as the ARISS international chair, responsibilities as ARISS US delegate, and AMSAT VP of human space flight.

Bauer made the stunning announcement during an hour-long international conference call at about 7:20 a.m. EDT.

Bauer said a number of factors entered into his decision including family health issues and increasing responsibilities in his job at NASA related to the International Space Station and exploration.

He thanked several members of the ARISS international community and AMSAT for their dedication to the program.

He expressed appreciation for the support and friendship of the international ARISS team and urged them not to lose sight of the goal of inspiring the next generation of young students to get involved in space, ham radio and math and science technology.

Bauer said he simply had to step away completely, but has high hopes there will be a seamless transition.

He announced that AMSAT's Will Marchant, KC6ROL, will succeed him as the new AMSAT vice president for human space flight. Marchant also will become the new AMSAT USA delegate for the ARISS international working group.

(Much on the announcement, including Frank Bauer's own words explaining his decision to step down, on the next edition of Amateur Radio Newsline to be posted on Friday, March 28, 2009.)

Amateur Radio Newsline(tm) Report 1650 - March 27 2009

Amateur Radio Newsline report number 1650 with a release date of Friday, March 27th, 2009 to follow in 5-4-3-2-1.

The following is a QST. The FCC rules that a repeater is a repeater even if there is a built-in audio delay. How will this effect the growth of digital audio repeaters nationwide?

Also, a follow-up on the story about those Indianapolis police officers found using ham radio gear in their cars. You may not believe the outcome.

And the recession hits ham radio as one of the nation's most respected retailers stops selling amateur radio gear and a special April 1st report from roving reporter Pierre Pullinmyleg. All this and more on Amateur Radio Newsline(tm) report number 1650, coming your way right now.

**

RADIO RULES: DIGITAL REPEATERS - FCC SAYS A DUCK IS A DUCK

The FCC has clarified its use of the word simultaneous in its rules governing repeater operation, and their decision is not going to make some, planning digital voice repeaters, very happy. That's because they will have to get in-line with those planning analog FM systems and wait for a channel pair. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details:

--

The FCC decision came in response to a 2007 request for a Declaratory Ruling filed by Gary Mitchell, WB6YRU. Gary is the president of Northern California Packet Association.

Gary's filing was the result of some frequency coordinators and the license holders of some digital voice repeaters claiming that these digital voice repeaters need not be constrained to repeater sub bands. This, because they were technically not repeaters. Those coordinators and licensees asserted that the delay inherent in converting the spoken word to a digital data stream and then back again to audible sound meant that these devices were not simultaneously receiving and retransmitting.

But the FCC says audio processing time is irrelevant. Rather, it concludes that the word "simultaneously," as used in the definition of a "repeater," refers to the receiver and transmitter both being active at the same time. In other words, the fact that it takes a second or two for audio to be digitized and un-digitized is incidental to a digital audio repeater's

operation.

Mark Thompson, WB9QZB, in Chicago, follows the digital voice repeater scene world wide. He tells Newsline that the small number of digital voice repeaters in Northern California that actually went the out-of-sub-band-route moved to legitimate repeater sub band channel pairs some time ago. Mark says that he knows of no other digital voice machines currently operating under the guise of being other than repeaters.

We cannot find any either, but if there are, they will need to be re-coordinated inside repeater sub bands or go off the air until such time as channels become available within repeater sub bands.

Because of the time it took the FCC to issue its Declaratory Ruling, it's right now a solution looking for a problem to solve. If nothing else, it does serve as a warning to coordinators and those who might be thinking of putting up a digital voice repeater. One that says to keep them confined within the recognized repeater sub bands and find ways to integrate their operation with the existing analog FM systems because repeater sub bands are the only place where repeaters belong.

One last item. From what we have seen posted on the Internet forums, one thing needs clarification. Neither Gary Mitchell, WB6YRU, nor the Northern California Packet Association coordinate repeaters. The request was filed so as to assure all spectrum users that they will have a place to operate and that digital repeaters will not take over the VHF and UHF bands.

For the Amateur Radio Newsline, I'm Bill Pasternak, in the newsroom in Los Angeles.

--

This ruling on the part of the FCC may well go down in the history of ham radio as the "Duck Decision." That's because a number of those who filed in favor of it used the metaphor "if it looks like a duck, waddles like a duck and quacks like a duck, it's a duck." And if a repeater repeats, it's a repeater. (ARNewsline(tm) from FCC release. Additional info from WB9QZB)

**

RADIO LAW: INDIANAPOLIS POLICE UNOFFICIAL RADIO FOLLOW-UP

A follow up to our recent news item on the Indianapolis Indiana police found by local hams to be operating unlicensed personal radio gear in their police vehicles. The story is taking an unexpected twist as we hear from Jack Parker, W8ISH:

--

More facts are beginning to emerge following a crackdown on Indianapolis Metro Police officers using ham radios for out of band conversations. Over a three-day period last month, police cruisers were searched and officers not holding a valid Amateur Radio license were forced to remove the illegal radios. This follows a complaint to the FCC that law enforcement officers

were using modified ham radios for a talk-around tactical (Tac) channel. Some conversations were heard in the VHF police bands, at the bottom of the 2-meter band and on frequencies assigned to the MURS radio service. Recordings of profanity being used brought action by the FCC.

Inside sources say many of the police officers obtained their 2-meter radios through Ebay. One of the most popular radios modified is the Yaesu FT 2800.

Some officers reportedly, paid as much as $350 dollars to a local radio shop for a used amateur radio that, new, sold for just over a hundred dollars. That is just one example how desperate some Indianapolis police officers are for a reliable Tac channel while fighting crime.

Handcuffed by FCC regulations, many officers are now cracking the cover on Technician Class License study guides to earn their Amateur Radio ticket.

This past weekend three Metro Police officers showed up on the door step of the VE team in Franklin, Indiana. All three passed their test and are anxiously awaiting their new call sign.

Further, this same ARRL examination team is working with one of the newly licensed officers to provide a test session at one of the Indianapolis Metro Police roll call sites so more officers have the opportunity to test and join the ranks of licensed Amateur Radio Operators.

Reporting from Indianapolis, this is Jack Parker W8ISH.

--

It will be interesting to see just how many Indianapolis police officers earn their ham radio tickets and how involved they become in that city's ham radio community. More on this story as it becomes available. (ARNewsline(tm), W9ISH)

THE EXAM SYSTEM: FCC SAYS NO TO QUESTION POOL SIZE INCREASE

The FCC has denied a petition to increase the size of the question pools used to create amateur radio exams. Back in April of 2008, Michael Mancuso, KI4NGN, of Raleigh, North Carolina, had filed a petition with the FCC, seeking to increase the size of the question pools from 10 times the number of questions on an exam to 50 times more questions.

Now, almost a year later the FCC has told Mancuso that it is denying his request. The regulatory agency says that in it's view, Mancuso did not present grounds for the Commission to amend its rules. It also noted that the purpose of the examinations is not to demonstrate an applicant's comprehension of certain material, but rather to determine whether he or she can properly operate an amateur station.

In his rules change request Mancuso had claimed that the current question pool is too easy to memorize and that there has been a significant increase

in the number of Amateur Radio operators receiving their licenses over at least the last decade or more who do not appear to possess the knowledge indicated by the class of license that they have received. But the FCC said it does not see it that way. In fact, the regulatory agency says that this claim on Mancuso's part is not supported by any data or facts.

An interesting open forum discussion on this topic started by KI4NGN is currently taking place on QRZ dot com. You will find it at http://forums.qrz.com/showthread.php?t7338 (ARNewsline(tm), QRZ.com)

**

RADIO LAW: YOU DO NOT NEED TO SHOW THE PAPER ON THE WALL

The FCC has denied a request from Thomas Baldwin, KA6ZPY, of Anaheim, California, who wanted a rule that would force all radio amateurs to post their original license document at the operating position for the licensee's station. In denying his petition, the FCC noted that this was a requirement until 1994. It was eliminated when the Part 97 rules were amended to authorize operation of an amateur station on the basis of the licensee data appearing in the amateur service licensee database.

The FCC says that the change was made in order to eliminate the delay between the time a license is granted and the time that the licensee may begin to operate. Another reason for the rule change was that it is no longer necessary to require the license document to be immediately available because a licensee's authorization now can be confirmed by the information in the licensing database. The FCC did note that there is no rule that prevents licensees from posting their license should they so desire. (FCC)

**

RADIO POLITICS: COMMISSIONER ADELSTEIN TO GET WHITE HOUSE APPOINTMENT

FCC Commissioner Jonathan Adelstein is expected to be nominated by President Barack Obama to serve as Administrator for the Rural Utilities Service. This is an office of the Rural Development Agency of the United States Department of Agriculture.

The ARRL reports that on Friday, March 20, the President announced his intention to nominate the Democratic FCC Commissioner to that post. It is speculated that Adelstein will not leave the five-member Commission until at least one of the three Commissioner vacancies is filled, since his departure would leave the FCC without a quorum. Adelstein's nomination will need to be confirmed by the US Senate. (ARRL)

**

NAMES IN THE NEWS: FRANK BAUER, KA3HDO RETIRES FROM ARISS

Frank Bauer KA3HDO has announced his resignation from all of his duties with the Amateur Radio on the International Space Station program. Amateur radio Newsline's Mark Abramowicz, NT3V, has the details:

--

Frank Bauer's stunning announcement came March 24 during a special teleconference of those associated with the many programs engaged in amateur radio activities in space.

"I'm going to need to step down from all of my ARISS duties and that includes, you know, the work I've been doing with the NASA Education Office as the ARISS program leader, and, then also, my support as the ARISS international chair, my responsibilities as the ARISS U.S. delegate and my responsibilities to AMSAT as the AMSAT vice president for human space flight programs," Bauer told the group dialed in from the U.S. and other international spots.

Bauer said family health issues and increasing responsibilities in his job at NASA, where he is the chief engineer for the space agency's Exploration Systems Mission Directorate, played a role in his decision.

This group is working on the next generation of space vehicles which will carry astronauts to the International Space Station, the moon and Mars.

He thanked members of the ARISS international community and AMSAT for their dedication to the programs.

"I want you to all recognize that you all have, amongst yourselves and as a team, grown this team over the past decade and a half, the ARISS team, to a substantially large working group that actually can lead and direct a whole lot of things, " Bauer said.

"So don't lose sight of that. And don't lose sight of the fact that what you're trying to do as a team is to inspire our next generation of young children and students to get involved in space and ham radio and math and science and technology."

Bauer also paid tribute to those who helped make amateur radio in space possible.

"It's crucial that we identify and recognize the space agencies for their help and guidance in making ARISS a success and making it happen," Bauer said.

"They provided the resources, both financial as well as resources like equipment, you know, upmasts and time with the crew, to make ARISS a truly phenomenal educational outreach activity."

And, finally, Bauer paid respects to a man who was so instrumental in getting amateur radio into the space program: the late Roy Neal, K6DUE.

"We wouldn't be here today if it wasn't for Roy, because Roy is the one that got the first space agency, NASA, interested in doing amateur radio on a human space flight vehicle," Bauer said.

"He had the tenacity, the courage and the authority to actually make this happen; and for that we thank him for what he has done to allow us to be where we are today."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

KA3HDO announced that AMSAT's Will Marchant, KC6ROL, will succeed him as the new AMSAT vice president for human space flight. Marchant also will become the new AMSAT USA delegate for the ARISS international working group. (ARNewsline(tm), NT3V)

RADIO LAW: NEXT WRC IN GENEVA IN 2011

The next World Radiocommunication Conference is tentatively scheduled for October 24th to November 18th, 2011, in Geneva, Switzerland. The agenda for WRC-11, developed by the delegates at the last conference in 2007 has 25 agenda items addressing potential new or revised spectrum allocations to existing services.

Of most interest to amateurs is agenda item 1.23. It will consider developing an allocation of about 15 kHz in part of the band from 415 to 526.5 kHz on a secondary basis to the amateur service.

These periodic World Radiocommunication Conferences are comprised of the member states of the International Telecommunication Union. Their primary mission is to consider allocations to the various radio services, including the frequencies used by radio amateurs. Attendees also evaluate what new technologies and applications should be addressed by future conferences. (RW)

RESCUE RADIO: HAMS WIND DOWN FIRE SUPPORT DOWN UNDER

Summer is gone down-under and so have the Australian bush fires. Ham radio communications assistance has also wound down as we hear from Jim Linton, VK3PC.

--

It is six weeks since the Black Saturday disaster that involved a third of Victoria claiming 210 lives, destroying more than 2000 homes, wiping out townships and killing farm animals and wildlife in its path.

WICEN Victoria is tallying up its deployment which lasted 28 days and involved 52 radio amateurs including two-each from New South Wales and the Australian Capital Territory.

WICEN Secretary Mark Dods, VK3XMU, says the deployment went as well as possibly could be expected.
One of its designated roles is to provide relief operators for other agency communications equipment and that it did in a commendable fashion at a number of Incident Control Centers and a Municipality Emergency Coordination Center.

Just like the debriefing process now underway for all emergency services and response agencies, WICEN, too, will be looking at its performance and to identify room for improvement.

Another aspect of the disaster is how the fire storm affected communications. The satellite navigation systems which were meant to guide emergency services failed because the smoke was too thick to get the GPS signals from satellites.

Some crews had to open up their printed maps and old-fashioned Melway directories to do the job. And with power failures, the old-fashioned battery-powered radio was the only way for people in its path to keep reliably informed of the bush fires.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

This year's Australian fire season may now be over, but the hams down under
are well aware that they will likely be called out again next year if the hot dry temperatures return. (WIA News)

**

RESCUE RADIO: VK HAMS SUPPORT OIL SPILL CLEAN-UP

Meantime, ham radio operators down-under are supporting clean up efforts in the wake of a massive oil spill. This, after some 230 tons of crude escaped from a tanker off the Queensland coast and become an environmental hazard to some 60 kilometers of Australia's coastline.

About 350 people have joined the clean-up as well as caring for wildlife that may be affected. Among the resources being utilized is the Sunshine Coast Amateur Radio Club's emergency communications van that has been based at Kawana Surf Club on the Sunshine Coast.

The van was donated by the Maroochy Shire Council. Volunteers at the club converted it into a mobile emergency communications unit. Using it, radio amateurs have been deployed to the spill site operating under the auspices of Emergency Management Queensland.

In recent years, Queensland radio amateurs have volunteered to become members of the State Emergency Service, in a dedicated communications unit. The group has built a communications network which is interoperable with Emergency Management Queensland, the Queensland Police Service and the Australian Red Cross RECOM systems. (Amateur Radio Victoria)

**

RADIO LAW: IM NOT DEAD YET I'M JUST RESTING

From the "whoops they made a mistake" file comes word that the FCC wants to do some callsign swapping. This, after it learned that a ham the agency thought was dead, was, to use a Monty Python metaphor, just resting. The story goes this way.

On October 6, 2006, the FCC granted the call sign K4ZL as a vanity callsign to the Amateur Radio Station of Peter Birk. Based on information subsequently received by the Commission, it appears that the call sign K4ZL was made available under the vanity call sign system as a result of a defective cancellation of the license originally held by Elmer B. Jackson, Jr..

Jackson had received the K4ZL call prior to 1978 and it was due to expire on June 11, 2008. On October 3, 2006, the Commission received information indicating that Jackson had become a Silent Key on February 14, 2004. Based on this information, the license was canceled as of February 14, 2004. Birk then filed the above-captioned application, requesting that his license for Amateur Radio Station WB2DCG be modified to show the call sign K4ZL. This application was granted on October 21, 2006.

In June 2008, the FCC got a surprise. That's when Jackson contacted the Commission to report that he was not deceased and that he wished to renew his license and K4ZL callsign. Further review determined that the information submitted to the Commission in 2006 pertained to a different person with the same name.

Anyhow, to correct this error, the FCC is proposing to modify Birk's amateur radio license to show the call sign WB2DCG. That was the call sign assigned to Birk's amateur station prior to the grant of the K4ZL vanity call application. It also wants to modify Jackson's license from his present AJ4JT call back to K4ZL. It will do that shortly unless Birk decides to file an appeal. (FCC)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, we are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org, and being relayed by the volunteer services of the following radio amateur:

**

RADIO BUSINESS: BURGHARDT NO LONGER SELLING HAM RADIO GEAR

Call it a sign of the tough economic times we live in. This, with word that South Dakota-based Burghardt Amateur Center will no longer be selling ham radio gear.

As reported by the ARRL, on March 16, Jim Smith, W0MJY, the current owner of Burghardt, announced that his enterprise will no longer sell amateur radio transceivers and accessories. The company, now called Burghardt Radio Repair, has canceled all backorders and will concentrate on providing repair to ham radio gear.

Jim Smith's son Mike, KC0FTM, told the ARRL that even though the company has had to lay off a number of employees in the past couple of months, it will continue to operate and will concentrate on service. This, as it has done since 1973.

Burghardt Amateur Center was founded in by the late Stan Burghardt, W0IT, as Burghardt Radio Supply. In 1982 he sold the company to Smith, but he remained active in it until January 2002. Stan Burghardt passed away in 2004 at the age of 93. (ARRL, others)

SPECIAL EVENT: N8O FROM A CABOOSE IN OHIO

A special 6 meter event on rails. This, as Andy Sargent, N8OFS, announces that he will be active June 13th to the 15th as N8O 'portable caboose' from Jefferson, Ohio. His operation is to celebrate the 25th anniversary for the Ashtabula Carson & Jefferson Railway. Listen out for him between 1800 to 0300 UTC on 52.525, 51.500 FM and 50.300 and 50.2 MHz SSB. QSL's go to N8OFS, PO Box 517, Jefferson, Ohio, 44047. For more details about the railroad, visit the Web page at: http://www.acjrscenic.net/history.htm (N8OFS)

EMERGING TECHNOLOGY: MIT SCIENTISTS INVENT FAST CHARGE LION BATTERY

Materials scientists at the Massachusetts Institute of Technology report that they've invented a new kind of lithium-ion battery. One that can fully charge or discharge in seconds instead of minutes.

Gerbrand Ceder is a professor of materials science and engineering at MIT. Along with his graduate student Byoungwoo Kang, he discovered a way to build lithium-ion batteries with a performance level more like that of ultra-capacitors. These are capacitors that store less energy but can charge and release it very quickly.

If commercialized, this new breed of Lithium Ion battery could allow future hybrid cars to rapidly recharge. It could also lead to improvements in two-way radio as well as to new consumer and industrial products. More is on-line http://www.spectrum.ieee.org/mar09/8149 (CGC from IEEE Spectrum)

HAM RADIO IN SPACE: SWISS HAM CUBSAT TO LAUNCH

The Swiss Cube Amateur Radio satellite is slated for a ride into space shortly on the Polar Satellite Launch Vehicle from India. Once orbited, the bird will operate on a downlink frequency of 437.505 MHz. The launch

will also carry several non-amateur satellites into space. If all goes as planned, all of the satellites may be on-orbit by the time you hear this report. (Southgate)

RADIO IN SPACE: 2001 MARS ODYSSEY SPACECRAFT RESTART POSTPONED

NASA has postponed a move to restart the data processing system on the 2001 Mars Odyssey spacecraft.

According to a news release from the space agency, the delay occurred on Tuesday, March 10th. This, after engineers noticed a spike in temperature on the craft's navigation camera. After consultation, mission managers decided to put off the computer reboot until they can probe the cause of the temperature rise. Odyssey has been put in safe mode in preparation for the reboot. A new date has not been set.

Scientists at NASA's Jet Propulsion Laboratory in Pasadena, California, are concerned that the Odyssey computer's memory may have been corrupted. This, from the many years of exposure to radiation in space.

The 2001 Mars Odyssey spacecraft was launched on April 7, 2001, and arrived at Mars on October 24, of that same year. It is a part of NASA's Mars Exploration Program. Odyssey is a long term project of robotic exploration of the red planet. (NASA)

WORLDBEAT - ATV GOING DIGITAL DOWN UNDER

The Brisbane, Australia amateur television repeater going digital. Three Brisbane-based radio clubs are combining their resources to provide the improved service. These are the South East Queensland ATV Group, Brisbane Digital ATV Group and Queensland Digital Group.

Using their combined talents, the VK4RMG ATV repeater will undergo a major refurbishment. This includes the instillation of an Australian-standard digital transmitter operating on 446.5 MHz.

Australia is among the latest nations moving its amateur television operations from analog to digital. Germany is believed to have been the first to begin making the digital ATV switch some time ago. (VK4YAR, WIA News, ARNewsline(tm))

WORLDBEAT: RADIO AMATEURS OF CANADA POSTPONES ANNUAL GENERAL MEETING

The 2009 Annual General Meeting of Radio Amateurs of Canada has been postponed. This, due to a change in the bookkeeping system at the Radio Amateurs of Canada headquarters office resulting in unforeseen complications. As a result, the meeting scheduled for May 24, 2009, in Quebec, has had to be canceled and a new date will be announced in the future. (RAC)

WORLDBEAT - RADIO CLUB CELEBRATES CROATIAN CITY

Croatia's Djurdjevac Radio Club will activate special event station 9A09P between now and December 31st. This, to celebrate the city of Djurdjevac. Operations will be on all bands and modes with special QSL card will be issued with the city's story on it. All QSOs will be confirmed automatically via the bureau. Under the new administrative division of Croatia, Djurdjevac gained the status of a city in 1997. (OPDX)

DX

In DX, word that NL8F will be active as E51COF for 14 days from Rarotonga Island through April 4th. Activity will be on 80 through 10 meters and possibly 17 meters on SSB only. QSL manager for this operation is K8NA.

SV1QN, SV1AIN, SV1GYG and SW1GYN will be active through month's end using their personal calls from the Greek resort island of Zakynthos. They are purportedly operating on 160 through 6 meters using all modes. QSL via each operator's home call.

Lastly, sponsors are being sought for the next DXpedition to Mogador island. Mogador was last activated in 2002 and another DXpedition is planned for late April 2009. Check out their website at www.mogador2009.altervista.org for more details.

THAT FINAL ITEMS: MISSING SUNSPOTS MAY HAVE BEEN EMBEZZLED

And finally this week, word that the mystery of the missing sunspots and lack of propagation may have been traced, incredibly, to some of the same roots as the current global economic crisis. Newsline Roaming Investigative Reporter Pierre Pullinmyleg has roamed into his shortwave communications news transmission center with the details he has uncovered:

--

It now appears zat convicted swindler Bernard Madoff not only made off with zee 65 billion dollars of investors' money, but with zee cycle 24 sunspots as well. A little-known corner of zee financial marketplace actually more of a back alley is zee sunspot futures market, where traders buy and sell

based on predicted sunspot values for a given date.

Our investigation has revealed that when the stock market was trading at ionospheric levels, Madoff accepted millions of dollars zat he promised to invest in future sunspots, but instead simply deposited in an offshore account in zee Serrano Bank on the fabled Ponzi Island IOTA NA-0401 for those who wonder. When zee time came to actually purchase the sunspots for cycle 24, the accounts set up for that purpose were empty. As a result, za sun has declared bankruptcy and zee universe has begun foreclosure proceedings.

Attorneys for zee sun are trying to negotiate a bailout package but are not optimistic that they can meet zee April 1st deadline.

From zee somewhat darkened beaches of Ponzi Island, zis is Pierre Pullinmyleg reporting for Newsline.

--

Pierre says that he will be back in about 12 months to bring you up to date on further developments in the solar foreclosure proceedings. And just in case he did not mention it earlier, Pierre says to have a very happy April 1st. (Roving reporter Pierre Pullinmyleg via shortwave)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline <at> arnewsline <dot> org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2009 Amateur Radio Newsline Young Ham of the Year Award is now open. Complete details are on our website at www.arnewsline.org. Just scroll down to the words "2009 YHOTY Nominations Now Open" and click for more information and an official nominating form.

Also be sure to mark April 18th as this year's World Amateur Radio Day. World Amateur Radio Day will focus on the hobby as it empowers people and supports communities by providing emergency communication as well as public service oriented interaction for community and other special events.

For now, with Bill Pasternak, WA6ITF, at the editor's desk, I'm Don Carlson, KQ6FM in Reno, Nevada, saying 73 and we thank you for listening.

==> FCC CLARIFIES WHAT CONSTITUTES AN AMATEUR RADIO REPEATER

In December 2007, Gary Mitchell, WB6YRU, President of the Northern
California Packet Association (NCPA), filed a Petition with the FCC,
asking for the Commission to clarify the definition of a repeater.
According to Part 97, Section 3(a)(39), a repeater in the amateur
service is "[a]n amateur station that simultaneously retransmits the
transmission of another amateur station on a different channel or
channels."
```

Mitchell sought clarification on the word "simultaneously," asking if it referred to the signal information being retransmitted, or to the fact that the receiver and transmitter must both be active at the same time while acting on the same signal information. On March 23, 2009, the Commission clarified that even if there is a slight delay between what is received and what it transmits (as in the case of D-STAR and other digital repeaters), it is considered simultaneous if the receiver and transmitter are both active at the same time.

Mitchell pointed out in his petition that while the Commission's Rules specify on which bands amateur repeaters may operate, "some amateur repeaters are operating on bands other than set forth in Section 97.205(b) with systems that are essentially voice repeater stations, but that digitize and retransmit the user's voice, on the theory that because there is a small delay in retransmitting the signal of another amateur station, the signal is not 'simultaneously' retransmitted and, therefore, the system is not a repeater."

In its reply, the Commission pointed out that prior to 1994, a repeater was defined as "[a]n amateur station that automatically retransmits the signals of other stations." This, the Commission told Mitchell, was revised to clarify "that certain accommodations for message forwarding systems do not apply to other operating activities such as repeaters and auxiliary stations." The Commission proposed to define a repeater as "[a]n amateur station that instantaneously retransmits the transmission of another amateur station on a different channel or channels," but ultimately replaced "instantaneously" with "simultaneously" because commenters noted that there is always a small propagation delay through a repeater. As one commenter explained, "The word 'simultaneously' in this case means that the repeater is receiving and transmitting concurrently, whereas each signal might be slightly displaced in time between receive and transmit."

To be able to repeat another station's transmission, the Commission said that a repeater "must be able to receive a transmission from another station and retransmit it. Because the word 'simultaneously' in the definition is used to modify 'retransmit,' we believe it refers to a repeater station's transmitter being active when retransmitting the signal received by the repeater station's receiver from another amateur station. We conclude, therefore, that 'simultaneously' as used in the definition of a repeater refers to the receiver and transmitter both being active at the same time."

==> NORTH DAKOTA HAMS HELP TO HEAD OFF RIVER FLOODING

Early on Friday, March 27, the Red River -- the natural boundary separating North Dakota and Minnesota -- rose to 40.32 feet, more than 22 feet above flood stage and inches more than the previous high water mark of 40.10 feet set April 7, 1897. According to Mark Johnson, KC0SHM, President of the Red River Radio Amateurs (RRRA) <http://www.rrra.org/>, hams are "substantially involved" with the flood operations. "This flooding event is impacting residents in both North Dakota and Minnesota" he told the ARRL. "National Weather Service forecasters are

predicting that the river will crest to 41 feet, maybe even as high as 43 feet, by Saturday."

Johnson said that on March 22, officials in North Dakota's Cass County and Minnesota's Clay County requested the assistance of local amateurs. Hams set up local nets on the W0ILO repeater system, using 444.875+ and 145.350-. "Initially, hams supported the area, helping out with coordinating food and water requests for the Salvation Army and Red Cross," he said. "In addition, Clay County hams have been heavily involved with coordinating sand and sandbag logistics."

In Fargo, schools were closed and trials in the municipal court were suspended. According to "The New York Times," hundreds of people swarmed onto the floor of the Fargodome, home of the North Dakota State University football team and where a rodeo had been scheduled for this week. In the center of the stadium, the "Times" reported that "mountains of clay- and rock-filled sand were surrounded by college students, children, members of the National Guard and ordinary residents, all bearing shovels and filling white sandbags. Thousands of volunteers -- from places as far as Florida and Alaska -- have filled 2.5 million sandbags in just five days. Little forklifts whirred around bearing pallets of bags and dump trucks drove through delivering more sand, even as volunteers offered 'fresh hot cookies,' neck massages and tetanus shots" <http://www.nytimes.com/2009/03/27/us/27flood.html?_r=1&ref=us >.

Johnson said that as the river continues to rise and sandbagging operations near completion, "ham activity is morphing from dike preparations to developing emergency communications for evacuations, in the event should that become necessary. As of Thursday, March 26, we are currently communicating between three hospitals, two county Emergency Operation Centers, volunteer centers, the Salvation Army, the American Red Cross, the Coast Guard and a helipad." Johnson said these are 24 hour operations.

"Honestly, I do not know the number of hams participating; I would estimate roughly 30 or more at this time to support the operations," Johnson told the ARRL. "The volunteer response has been enormous -- we believe we have enough volunteers on hand to manage through the weekend. After the weekend, we are relying on other area hams who have responded to the call that are standing by." Since all resource needs are being met by amateurs in the North Dakota and Minnesota Sections, ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, said that there is no need for Amateur Radio assistance from other Sections at this time.

Cass County Sherriff Paul Laney told the "Times" that south of the city -- near the Red River and the Wild Rice River -- 46 residents and 12 pets had to be rescued by boat from homes in which water had pressed through sandbags and made its way into first floors, and that on Thursday, he and his officers were headed off on boats to make 11 additional rescues.

Concerns about major flooding extend well beyond Fargo. Throughout parts of North Dakota and western Minnesota, residents are bracing for the Red River, nearby streams and rivers and the Missouri River to spill their banks -- the result, according to the NWS, of a combination of factors. In the fall, the flat terrain was saturated by rain, followed by a winter of heavy snow, and now -- as so much snow began melting -- came days more of rain and, on Wednesday, half a foot of snow in some places.

In the Canadian province of Manitoba, the Manitoba Emergency Measures Organization and the City of Winnipeg Emergency Program have requested assistance from local ARES groups there to help out with the flooding on that side of the border, said Radio Amateurs of Canada's Manitoba Section Emergency Coordinator Don Gerrard, VE4DWG. "Both organizations are in the process of activating their Emergency Operations Centers and have requested ARES radio operators to begin staffing the radio room at the facilities beginning Monday March 30, 2009," he posted on an RAC ARES reflector. "Jeff Dovyak, VE4MBQ, District Emergency Coordinator of the Capital Region, advises that he is beginning the process of scheduling ARES radio operators for these current taskings. Further requirements are likely as water levels rise, and will be communicated when received."

"As both a ham and a resident of Fargo, I am deeply touched by the community outpouring of support for fellow man," Johnson said. "Volunteers by the thousands have poured into churches to help with food, volunteer centers to help fill sand bags and to the front lines for sand bag placement. Everyone pray for us -- we need a miracle for the community as a whole to pull this off."

==> FRANK BAUER, KA3HDO, STEPS DOWN FROM ARISS AND AMSAT DUTIES

Citing personal and professional reasons, Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss/oindex.htm> International Chairman Frank Bauer, KA3HDO, announced on March 24 that he will be step down from all his ARISS duties, effective immediately. Bauer served as ARISS Program Leader, ARISS International Working Group Chair and as the Radio Amateur Satellite Corporation's (AMSAT) <http://www.amsat.org/> Vice President for Human Spaceflight Programs, a position he has held since 1991. He is also one of two ARISS USA delegates, serving with ARRL ARISS Program Manager Rosalie White, K1STO.

Bauer is currently the Chief Engineer for the Exploration Systems Mission Directorate at NASA. This directorate is developing the next generation human spaceflight vehicles that will take NASA to the International Space Station (ISS) <http://www.nasa.gov/mission_pages/station/main/index.html> and then to the Moon, Mars and beyond. He is also providing some backup support to the Space Operations Chief Engineer who supports the space shuttle and ISS programs. "Work responsibilities, which have increased substantially over the past couple of years, coupled with some recent health issues within my immediate family, led me to the conclusion that I could not continue to provide the leadership and passion that has been characteristic of my past support to these amateur radio endeavors,"

Bauer explained. "This was a very hard decision. I will certainly miss the phenomenal ARISS international team and our mission to inspire the next generation of space explorers using ham radio as our platform. But I thought it would be best to step down at this juncture. Over the past 12 years, we have developed, mentored and matured an outstanding volunteer team with a wide breadth and depth. I am fully confident that they will keep the ARISS program running smoothly without missing a beat."

AMSAT-NA President Barry Baines, WD4ASW, has tapped Will Marchant, KC6ROL, to become the next AMSAT Vice President for Human Spaceflight Programs and the AMSAT USA delegate of the ARISS International Working Group. "AMSAT is fortunate that we have a very capable leader in Will Marchant who is intimately familiar with ARISS, our extensive human spaceflight program, and is well respected internationally," Baines said. "Frank's leadership has left a significant mark on the overall ARISS program and the cooperative relationship between Amateur Radio, NASA and other governmental space agencies; however, Frank also ensured that his team evolved to the point where the work that he pioneered will be carried on by those that he mentored and encouraged to take on greater responsibility."

In his new role, Marchant will work with White and the other ARISS International Delegates and the ISS Space Agencies to coordinate the development and operations of the Amateur Radio systems onboard the ISS. White said that she looks forward to working with Marchant in his new role: "He has provided outstanding leadership and support to ARISS from its very beginning, most recently as an Operations Team Leader. He helped pioneer the school group mentor role as part of the Shuttle Amateur Radio Experiment (SAREX) program in the early 1990s <http://spaceflight.nasa.gov/station/reference/radio/sarex.html>. Frank will be missed tremendously. It is incredible how much volunteer time and effort he put into ARISS educational activities; it was easy to see it was his passion."

With Bauer stepping down from the ARISS International Chairman role, ARISS International Vice Chair Gaston Bertels, ON4WF, will become the ARISS International Chairman, effective immediately. Bertels has been a leader of ARISS from its inception and serves as the Chairman of the ARISS-Europe team. He has established a close relationship between ARISS and the European Space Agency (ESA). This resulted in the development and the installation of ARISS L- and S-band antennas on the nadir of Columbus, the European Space Laboratory. Bertels also chairs IARU Region 1's Amateur Radio Space Exploration Working Group (ARSPEX). "We can understand the reasons of Frank Bauer's resignation," Bertels said, "but we also feel how difficult this decision has been. Frank has inspired a worldwide group of passionate radio amateurs, working together to a common goal. Now it is up to us to continue in the same direction and with the same spirit. That's the best farewell present we can offer Frank."

Bauer's departure represents the culmination of more than 25 years of leadership and support to Amateur Radio activities on human spaceflight vehicles, including NASA-sponsored ham radio activities on the shuttle, Space Station Mir and the ISS. Starting in 1983, he led the Goddard Amateur Radio Club team that provided around-the-clock space shuttle retransmissions from the WA3NAN club station. These retransmissions provided the international ham radio community with up-to-the-minute information during the flight of Owen Garriott, W5LFL, on STS-9 <http://www.nasa.gov/mission_pages/shuttle/shuttlemissions/archives/sts-9.html> and subsequent SAREX flights. In the days prior to the Internet, these real-time bulletins and frequent orbital element updates could only be obtained through Amateur Radio.

In 1996, when the International Space Station design development was well underway, NASA Headquarters Education Office Executive Pam Bacon (Mountjoy) requested that the Amateur Radio community form a single, international team to provide one voice for all ham radio development and operations on the ISS. The SAREX Working Group, led by Roy Neal, K6DUE, was tapped to turn this vision into reality. In November 1996, Neal and White, under the auspices of the ARRL, Bauer and NASA's Matt Bordelon, KC5BTL, organized a joint NASA-international Amateur Radio meeting at the Johnson Space Center in Houston. This led to the formulation of the ARISS International Working Group of delegates representing Canada, Europe, Japan, Russia and the US, leading up to the current day ARISS program.

Since the beginning, the ARISS team of volunteers has developed and deployed ham radio equipment that resides in three modules of the ISS -- the Service Module, the FGB and the Columbus Module, as well as having deployed a short duration satellite in a space suit called SuitSat-1/Radiosskaf/AO-54 <http://www.amsat.org/amsat-new/articles/BauerSuitsat/index.php>. These systems enable the ARISS team to inspire more than 15,000 students each year, encouraging them to pursue careers in science, technology, engineering and mathematics through Amateur Radio communications with the ISS on-orbit crew. It also introduces these students and millions from the worldwide general public to the fun, exciting, multi-faceted world of Amateur Radio. -- Information provided by AMSAT

==> FCC PROPOSES NEW RULES FOR MEDICAL DEVICES OPERATING ON 70 CM BAND

On March 20, the FCC issued a Notice of Proposed Rulemaking (NPRM) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-09-20A1.pdf>, proposing to allocate spectrum and adopt service and technical rules for the utilization of new implanted medical devices that operate on 413-457 MHz (70 cm). According to the Commission, these devices, called implanted neuromuscular microstimulators, would greatly expand the use of functional electric stimulation to restore sensation, mobility and function to those persons with paralyzed limbs and organs; they would be implanted in a patient and function as wireless broadband medical micro-power networks (MMNs). The Amateur Radio Service has a secondary allocation in the 70 cm band.

The FCC said that several proponents claim that this technology "could revolutionize medical treatment and therapy for millions of people living with brain and spinal cord injuries and neuromuscular disorders such as multiple sclerosis, polio, cerebral palsy and ALS (amyotrophic lateral sclerosis, often referred to as 'Lou Gehrig's Disease'), as well as numerous other neurological disorders. It could be used in conjunction with next-generation prosthetic limbs to provide wireless sensation and control to the prostheses. Of particular note, this technology can provide an important tool in the medical treatment and care of numerous US soldiers who suffered spinal cord, brain and other serious injuries in Iraq, Afghanistan and other missions abroad."

Last month, ARRL General Counsel Chris Imlay, W3KD, and Technical Relations Manager Brennan Price, N4QX, met with officials of the Alfred Mann Foundation, developers of the implanted neuromuscular microstimulators, to discuss ARRL concerns with the NPRM. Imlay and Price both came away satisfied that the project should have little, if any, impact on Amateur Radio operators. "There are redundant layers of interference rejection mechanisms built into the product that should protect its users from being impacted by strong Amateur Radio signals," Price said. "The very low power output of these devices should have no impact on the Amateur Radio Service. The ARRL Executive Committee will monitor this filing and take action as appropriate."

The FCC is seeking comments on the feasibility of allowing up to 20 MHz of spectrum in the 413-457 MHz band to be used under the Medical Device Radiocommunication Service (MedRadio Service, formerly the Medical Implant Communications Service [MICS]) in Part 95 of the Commission's rules, and seeks comments on the allocation of four specific segments for this purpose: 413-419 MHz, 426-432 MHz, 438-444 MHz and 451-457 MHz. The Commission also seeks comments on the prospective service and technical rules that would govern MMN operations, such as transmitter power, emission bandwidth, duty cycle, contention protocols, and other operating specifications that generally comport with the framework of the existing MedRadio Service.

==> LEGISLATION INTRODUCED IN US SENATE TO INVENTORY RADIO SPECTRUM

Two US Senators -- Democrat John Kerry of Massachusetts and Republican Olympia Snowe of Maine -- have introduced a bill in the Senate that would mandate an inventory of radio spectrum bands managed by the National Telecommunications and Information Administration (NTIA) <http://www.ntia.doc.gov/> and the Federal Communications Commission. The inventory would include those frequencies between 300 MHz-3.5 GHz managed by the two agencies.

The proposed legislation, known as the "Radio Spectrum Inventory Act" <http://thomas.loc.gov/cgi-bin/query/z?c111:S.649:>, states that the NTIA and the FCC would be required to inventory the spectrum no later than 180 days after the bill becomes law; after the initial survey, follow-ups would be required every two years. Both agencies would need to prepare a report listing the licenses or government user assigned in the band, the total spectrum allocation, by band, of each licensee or

government user (in percentage terms and in sum) and the number of intentional radiators and end-user intentional radiators that have been deployed in the band with each license or government user. Additionally, if the information is applicable, the report would be required to show the type of intentional radiators operating in the band, the type of unlicensed intentional radiators authorized to operate in the band, contour maps that illustrate signal coverage and strength and the approximate geo-location of base stations or fixed transmitters. The report would then be sent to the Senate's Committee on Commerce, Science and Transportation and to the House of Representatives Committee on Energy and Commerce.

The bill also mandates that both agencies create a centralized portal or Web site that lists each agency's band inventories. This information would then be made available to the public via an Internet-accessible Web site. Both agencies would also be required to make all necessary efforts to maintain and update the inventory information "in near real-time fashion and whenever there is a transfer or auction of licenses or change in allocation or assignment." The bill includes an exemption for licensees or users if they can demonstrate that disclosure would be harmful to national security.

"Our public airwaves belong to the American people, and we need to make certain we are putting them to good use in the best interests of those citizens," Senator Kerry said. "Last year's 700 MHz auction resulted in $20 billion for the treasury and will create greater opportunity and choice for consumers and businesses that need broadband service. We also took a great step forward when the FCC established a way for unlicensed devices to operate in white spaces. These two initiatives are evidence of how valuable spectrum is and how it serves as fertile grounds for innovation. We need to make sure we're making as much of it available to innovators and consumers as possible."

"Used by millions of consumers and countless businesses on a daily basis, wireless technology is a proud part of America's innovative history and a key to its economic future," Senator Snowe said. "But as radio spectrum is already a scarce yet valuable resource in many areas, we must ensure that this public good is allocated and used efficiently for the needs of the American people. This legislation is the first step to addressing comprehensive spectrum reform and will work to enhance advanced communications services to keep people on-line and in touch."

ARRL Technical Relations Manager Brennan Price, N4QX, said that the bill is in its infancy and that there is no corresponding legislation in the House of Representatives: "The text of the proposed legislation neither exempts Amateur Radio nor considers the frequency-agile and unfixed nature of most Amateur Radio operations. This bill merits watching and presents amateurs an opportunity to educate their Senators about the nature of our stations and our Service."

The bill is co-sponsored by Senators Bill Nelson, a Florida Democrat, and Roger Wicker, a Mississippi Republican.

==> HURRICANE WATCH NET SEEKS NEW MEMBERS

With hurricane season approaching, the various organizations that assist the National Hurricane Center (NHC) <http://www.nhc.noaa.gov/> in Miami are gearing up for what could be a very active storm season. One organization that assists the NHC is the Hurricane Watch Net (HWN) <http://www.hwn.org/>. To better assist the NHC, HWN Manager Dave Lefavour, W7GOX, told the ARRL that the HWN is looking for new members. "The Hurricane Watch Net relies on volunteer operators -- our members -- who serve as our net control stations," he said. "HWN members are hams who have above-average stations, are capable of effectively conducting HF net operations and are willing to commit their time to operating in support of the HWN's mission during Net activations. The Net sessions can be long, and, in the recent absence of sunspots, pretty grueling."

Lefavour said that the HWN is looking for new members with stations that can effectively communicate with Central America and the Caribbean, Mexico and South Texas on the 20 meter band. "With the low solar activity, our Assistant Net Manager Brad Pioveson, W9FX, is very interested in finding more members that can help with Net Control Station duties on the low ends of the 40 and 80 meter phone bands," Lefavour said, "as we're having to broaden our focus from only operating on 14.325 MHz. During the 2008 hurricanes, 20 meters died after the Sun went down -- we no longer had the ability to effectively communicate with reporting stations or the National Hurricane Center. So in preparation for the 2009 hurricane season, we're open to applications from qualified amateurs who are located anywhere within North America or the Caribbean. With propagation having been so unpredictable in the past couple of years, you never know who's going to be able to hear the hurricane-affected area."

Lefavour said that bilingual hams are especially welcome: "We recognize that some Latin American operators hesitate to check in and send reports to us if they aren't fluent in English, so we're also interested in hearing from hams that are fluent in both Spanish and English. When we're working storms that are either affecting or threatening areas where Spanish is the language of choice, we always try to have one or more bilingual HWN members on hand to help with reporting. Those who have previously applied for HWN membership are encouraged to submit new applications. New applicants are also encouraged to apply."

Lefavour said that the Hurricane Watch Net is generally activated when a named Atlantic basin storm is within 300 miles of landfall. Hurricane season in the Atlantic Ocean runs from June 1-November 30, peaking from late August through September; the Pacific Ocean season runs from May 15-November 30. Of course, hurricanes may occur at any time of the year. The Tropical Meteorology Project at Colorado State University predicts that the 2009 hurricane season will see above-average activity with 14 named storms and seven hurricanes, three of which will be Category 3 or higher. The National Oceanic and Atmospheric Administration (NOAA) defines a normal hurricane season as having 9-12 named storms -- with 5-7 of those reaching hurricane strength -- and 1-3 major hurricanes.

==> FCC CORRECTS CALL SIGN ERROR

In October 2006, Peter Birk (formerly WB2DCG) of Virginia Beach, Virginia, applied for a vanity call sign, K4ZL, under the FCC's Vanity Call Sign Program. This call sign was previously held by Elmer B. Jackson, Jr of Lavergne, Tennessee. Jackson held this call sign since before 1978; it was set to expire June 11, 2008. In October 2006, the Commission received notification that Jackson had passed away February 14, 2004, so the FCC canceled his license as of this date. More than two years after the date of Jackson's death, Birk applied for and received K4ZL.

Per FCC rules pertaining to vanity call signs, certain family members and previous holders of the call sign are eligible to receive the dead person's call sign; after the two year period, the call sign is open for anyone to acquire it under the vanity call sign program.

In June 2008, Jackson notified the FCC that he was still very much alive and that he wished to renew his license. According to the FCC, based upon information they had received, "it appears that the call sign K4ZL was made available under the vanity call sign system as a result of a defective cancellation of the license originally held by Jackson. Further review determined that the information submitted to the Commission in 2006 pertained to a different person with the same name."

On Friday, March 27, Birk told the ARRL he had no idea Jackson had passed away. "There was no way for me to know that Elmer Jackson was not dead at the time I applied for K4ZL," Birk said. "In fact, the FCC believed he was dead, as well."

On March 23, the FCC released an Order Proposing Modification and concluded that cancelling K4ZL in 2006 "was defective" and that the call sign should not have been made available in the vanity call sign pool <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-656A1.pdf>. To correct this error, the FCC "propose[s] to exchange K4ZL with the call sign previously assigned to Birk's amateur radio station, WB2DCG; and concurrently to assign call sign K4ZL back to Jackson's license, which was reinstated under call sign AJ4JT."

The Commission cited Section 316(a)(1) of the Communications Act of 1934, as amended <http://law.onecle.com/uscode/47/316.html>, saying it "provides the appropriate vehicle for resolving this matter. Section 316(a) permits the Commission to modify a station license if the action will promote the public interest, convenience, and necessity. In this connection, we note that the proposed modification would serve the public interest by ensuring that a licensee is not harmed by having his or her license canceled based on erroneous information submitted by a third party."

In accordance with Section 97.27(b) of Title 47 of the Code of Federal Regulations <http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr97.27.pdf>, the FCC will not issue a modification order "until Birk has received notice

of our proposed action and has had an opportunity to file a protest." Birk has 30 days from March 23 to submit a written statement to the FCC "with sufficient evidence to show that the modification would not be in the public interest." If Birk chooses not to file a protest, he will have waived his right to protest the modification and will have deemed to have consented to the modification.

==>SOLAR UPDATE

Tad "The Sun was warm but the wind was chill" Cook, K7RA, this week reports: Currently, USAF and NOAA predict a planetary A index of 8 for today, March 27, then leveling off at 5 (a very quiet, stable level) until April 9-10 when it jumps to 15, then 10. Geophysical Institute Prague predicts quiet to unsettled conditions March 27, quiet March 28-29, quiet to unsettled March 30-31 and back to quiet for April 1-2. Sunspot numbers for March 19 through 25 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 69.1, 68.7, 70.1, 68.7, 68, 69.1, and 68.5 with a mean of 68.9. The estimated planetary A indices were 3, 4, 8, 4, 3, 8 and 10 with a mean of 5.7. The estimated mid-latitude A indices were 3, 2, 5, 4, 2, 6 and 7 with a mean of 4.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Robert Frost's "Two Tramps in Mud Time" <http://www.etymonline.com/poems/tramps.htm>.

==>IN BRIEF:

* This Week on the Radio: This week, look for the CQ WW WPX Contest (SSB) and the EU EME Contest on March 28-29. Next week, the NCCC Sprint Ladder is April 3. On April 4-5, check out the Montana QSO Party, the Missouri QSO Party, the QCWA Spring QSO Party, the ARCI Spring QSO Party, the SP DX Contest and the EA RTTY Contest. The 144 MHz Spring Sprint is April 6 (local time). All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* Get Ready for ARRL Field Day 2009: The official 2009 ARRL Field Day Web page is up and running <http://www.arrl.org/FieldDay>. This page includes a summary of available resources, with links to Field Day forms and rules, logos and reference links. The page also includes a quick link to the map-based Field Day Station Locator where users can search for public Field Day sites. "Field Day is the largest on-the-air operating event," said ARRL Field Day Manager Dan Henderson, N1ND. "The

event draws tens of thousands of radio amateurs to the airwaves over a single weekend." This year, Field Day is June 27-28. According to Henderson, it has become a tradition to create a new logo each year to commemorate Field Day: "This year's logo evokes a sense of the 'great outdoors' in camp-like fashion. We hope the logo inspires even more participants to get active, get outdoors and get on-the-air." This year's logo was designed by ARRL Graphic Arts Supervisor Sue Fagan, KB1OKW, and Senior Technical Illustrator David Pingree, N1NAS. The Field Day page also includes a link for ordering commemorative Field Day T-shirts, hats, pins and other supplies. All of the items are available for ordering now; many of the items are already in stock. Radio clubs are encouraged to order early.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 5, 2009 for these online course sessions beginning on Friday, April 17, 2009: Amateur Radio Emergency Communications Level 2; Antenna Modeling, and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Good Friday: ARRL Headquarters will be closed in observance of Good Friday on Friday, April 10. There will be no W1AW bulletin or code practice transmissions that day. "The ARRL Letter" will be posted a day early on Thursday, April 9; there will be no "ARRL Audio News" on April 3 or April 10. ARRL Headquarters will reopen Monday, April 13 at 8 AM Eastern Daylight Time. We wish everyone a safe and enjoyable holiday weekend.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers

informative features and columns. ARRL Audio News
<http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast"
compiled and edited from The ARRL Letter. It's also available as a
podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole
or in part in any form without additional permission. Credit must be
given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Hello Hans,

I'm seeing this sort of stuff locally. One guy I've known for years has pretty much gotten out of the organ/keyboard repair and is doing sound installations. Much of the electronics is now throw-away. The margin for amateur gear is *very* slim at best. All the amateur radio retailers disappeared from the Rochester, NY, region probably about 25 years ago. The last one I remember was near the airport around 1985 and was gone in two years.

Rochester Radio was expanding in the 70s and it, too, disappeared in the early 80s. Very sad indeed.

73 from Rochester, NY

Even with a ham license, these police officers cannot legally use ham
radio frequencies for routine police business.

ï¿½97.113 Prohibited transmissions.

(a) No amateur station shall transmit:
....
(5) Communications, on a regular basis, which could reasonably be
furnished alternatively through other radio services.

I feared the same thing when I read the story. We hope that, while studying
their course materials, they'll realize the do's and don'ts of ham radio.

Also relevant:

97.113 Prohibited transmissions.

(a) No amateur station shall transmit:

(2) Communications for hire or for material compensation, direct or
indirect, paid or promised, except as otherwise provided in these rules;

(3) Communications in which the station licensee or control operator
has a pecuniary interest, including communications on behalf of an
employer.

If the police are using amateur radio as a tac channel when they are
"on the clock" in performance of their duties, and are being paid,
then I believe they'd be in violation of both of these sections.

There have been _some_ exceptions made to these rules (e.g. allowing
emergency-service workers to partitipate in ham radio training
exercises while on-duty) but I don't think that these have been
expanded to cover _regular_ on-duty use of amateur radio.

------ FWD MSG ------

It occurs to me that it may be time to undertake the development of a
Contesting Wikipedia - a single, comprehensive source of information
for
and about contesting, contest station-building, operating, and
related
topics. At a minimum it could be a one-stop source for links to
information already on the web, but over time it could evolve into a
way of
making sure that all the good stuff out there doesn't vanish over time
into
the wayback machine.

Just testing the waters here ... if there's interest then I'll work
on
fleshing it out.

Hamvention¿½ Names 2009 Award Winners

DAYTON, OH -- The Dayton Amateur Radio Association (DARA) will honor three amateur radio (ham) operators who have made significant contributions to the Amateur Radio Service, during Hamvention¿½ 2009 which opens in Hara Arena on May 15.

Recipients of this year's Hamvention¿½ awards are Amateur of the Year Wade D. "Danny" Hampton Jr., K4ITL, whose efforts helped create an extensive emergency radio network for North Carolina; Special Achievement winner Richard Garriott, W5KWQ, who introduced ham radio to thousands of students from the International Space Station (ISS); and Technical Excellence recipient Copthorne "Cop" Macdonald, VY2CM, a SSTV pioneer, ham radio author, and renewable energy advocate

Frank Beafore, WS8B, Hamvention¿½ Awards Chairman said the committee had a tough task selecting the winners from the number of worthy nominees. "We believe each winner has made a significant contribution to the ham radio community. We were again impressed with the quality of the nominations."

Hamvention¿½ Chairman Carl Rose, K8CPR, praised the winners, saying: On behalf of the Dayton Amateur Radio Association and Hamvention¿½ 2009 it is my pleasure to congratulate this years Award Winners. Their outstanding contributions and the many years of service exemplify what the amateur radio service is."

Amateur of the Year Wade D. "Danny" Hampton Jr., K4ITL, of Raleigh, North Carolina, is the architect of the Piedmont Coastal Repeater Network, established in the early 1970s, which today sports more than 40 machines in North Carolina. The system is heavily used for public service work. Hampton has enhanced the network's utility with custom audio processing boards and

RF components. The North Carolina Office of Emergency Management and SKYWARN have recognized the network's vital role in emergency communication. Recently, Hampton helped coordinate the development of a local hospital-based Amateur Radio emergency repeater system that ties 10 facilities together.

A ham since 1958, Hampton is Southeastern Repeater Association (SERA) technical committee chairman as well as ARRL North Carolina Section Technical Coordinator. "Danny's extensive knowledge of the two-way and broadcast radio industries in this state has enabled him to assist many repeater owners," said North Carolina SM John Covington, W4CC. "His advice in resolving RFI problems between repeater and commercial services, and other technical matters, has been extremely valuable to the Section."

The Hamvention 2009 Special Achievement Award winner Richard Garriott, W5KWQ, is a legendary video game programmer/designer and ham radio operator who was the sixth private citizen to fly to the International Space Station (ISS).

Like his father, Owen Garriott, W5LFL, who made history as the first ham to communicate from space with radio amateurs during the STS-9 Space Shuttle mission, Richard was a ham radio pathfinder in his own right through on-orbit experimentation, implementation of new capabilities, extensive operations using many diverse operations modes, and phenomenal educational outreach initiatives that inspired and transformed the lives of tens of thousands students, worldwide.

Garriott was the most prolific ham radio operator to fly on a short duration (<15 day) mission. His 10 day stay on the ISS represented an unsurpassed opportunity for hams and students worldwide. Over 500 2-way voice QSOs were conducted, over a thousand SSTV images were down linked, and tens of hours of packet operations were performed. He communicated with tens of thousands of students in seven different Challenger Learning Centers in the U.S., the Austin Liberal Arts and Sciences Academy in Austin, Texas, the Pinehurst School in Ashland, Oregon, the Budbrooke School in the U.K., and the National Space Challenge in Kuala Lumpur, Malaysia. Garriott also had numerous random chats with scouts world-wide as part of the amateur radio Jamboree on the Air (JOTA).

In an effort to kick-start the SSTV operations mode on ISS, Richard received a specially modified Kenwood VC-H1 from the ARISS team which was left on-board the ISS. This exciting, new capability will significantly enhance the stature of ARISS educational outreach. He performed numerous SSTV experiments, and helped the ARISS team test and debug several ham radio systems on ISS, including the software-based SSTV systems---SpaceCam and MMSSTV. In his short stay on ISS, he performed 10 times more SSTV downlinks than any other crew member on the Shuttle, Mir or ISS. .

The Hamvention award for Technical Excellence winner Copthorne "Cop" Macdonald, VY2CM, who got his first ham license at 15, and while an engineering student at the University of Kentucky designed and built the first ham radio SSTV system. The paper he wrote describing the system won

national first prize in the 1958 AIEE student paper competition. He worked with other SSTV pioneers to get the FCC to authorize SSTV operation in the HF ham bands an effort that succeeded in 1968.

Cop wrote many articles on SSTV for QST and CQ, and in 1973 started New Directions Radio a network of hams concerned with using ham radio and SSTV "to help create a more aware, more caring, and more responsible human society." Associated with this activity were his two magazine columns: "Cop's Column" in CQ and the "New Directions Radio" column in The Mother Earth News.

Cop moved to Prince Edward Island Canada in 1975. In the early 1980s he ran an energy conservation program there, and in the 1980s and '90s did much writing for the PEI and Canadian governments on energy conservation and renewable energy. At some point he realized that what we needed as individuals and a world society is that more insightful, more caring, more prudent way of being called wisdom. He has since written three books on that subject (Toward Wisdom, Getting a Life, and Matters of Consequence), and in 1995 started The Wisdom Page, a web presence devoted to wisdom resources now located at www.wisdompage.com.

Hamvention, the worlds largest amateur radio gathering, brings more than 20,000 people to the greater Dayton area each year. The three-day event includes exhibits, a flea market, forums and education sessions.

For more information about Dayton Hamvention 2009 (scheduled for May 15-17), visit the website at www.hamvention.org or e-mail media@hamvention.org.

Well if your going to have a go at it... I would recommend browsing
some of the QST very early CD's that would be the basis for contesting,
In the wayback machine is CW transmissions that were tracked for time
to get messages across the coast. Even baseball scores... Communication
alternatives during foul weather when the telegraphs and phones were down
to rescue trains stuck with peoples lives at risk.
I found a lot of the articles interesting but did not keep track of the
issues
they were in. Happy hunting. The real background of ARRL
Radio Relays were a prime activity among early hams.
Earliest of coarse were spark gap. I can't imagine listening to static and
trying to pick out code buzz from noise. Hats off to the ol' brass
pounders.

Amateur Radio Newsline(tm) Report 1651 - April 3 2009

Note: This weeks newscast runs 31 minutes 23 seconds and contains 3 breaks.

Amateur Radio Newsline report number 1651 with a release date of Friday, April 3rd, 2009 to follow in 5-4-3-2-1.

Amateur radio faces the raging Red River as it assists in flood relief duty; the Dayton Hamvention announces its 2009 award recipients, space adventurer Charles Simonyi KE7KDP, returns to the International Space Station; the Radio Society of Great Britain says that its time for A-M users to move off of a space to ground 2 meter frequency and the FCC says that P-R-B One does not really apply in a Yonkers, New York tower dispute. Find out why on an extended Amateur Radio Newsline(tm) report number 1651 coming your way right now.

**

RESCUE RADIO: HAM RADIO FACES THE SWOLLEN RED RIVER

Ham radio was on the front lines as the swollen Red River brought flooding to parts of Southern Canada and into North Dakota and Minnesota. But in this case pre-planning by ARES really paid off as we hear in this report from Amateur Radio Newsline's Mark Abramowicz, NT3V:

--

The members of the Red River Radio Amateurs in Fargo, North Dakota and Moorehead, Minnesota, had a luxury most hams don't have with an emergency upon them - time to prepare.

For those who have been following developments in the news media, the danger of flooding of the two cities straddling the river has passed and as Newsline goes to air, emergency communications operations are winding down.

The Red River crested Saturday, March 28, below the predicted 42-foot-level and has continued to go down, approaching 35 feet as our Friday, April 3 deadline approached.

Mark Johnson, KC0SHM, is president of the Red River Radio Amateurs and helped coordinate the response of a hearty group of more than 30 amateurs on both sides of the river.

Johnson says the good news is hams pulled together to help communities get through the crisis.

"People on both sides of the river, they're part of our local amateur radio family and truly there was no separation," Johnson says. "In fact, the operation itself really morphed into a single command situation where we operated together as one unified group.

"Being that we all know each other so well, there was absolutely zero segregation between section management lines and state lines and city lines. So, it was one group working for the common good of the area."

Johnson says the weather service predicted the rising river levels weeks in advance and that gave all the time they needed to get ready, pack and test radios, operating locations and repeaters.

"Our local repeater system utilizes both a VHF and a UHF repeater," says Johnson. "They're hot-linked together and that offered us a lot of flexibility. Hand-held coverage was excellent on the UHF repeater and we made great use of it."

Johnson says the hams began net operations on Sunday, March 22, supporting those on the front lines who were filling and placing sandbags along the Red River.

"In that capacity, we did a lot of roaming to basically patrol the streets looking for people that had need for additional supplies like food and what not," Johnson says.

"And they were able to guide the Salvation Army and, to some degree, the Red Cross as well to the hot zones - if you will - where people were needing the food and supplies to continue their operations. That would save them from having to stop sandbagging to go find something to eat."

As the sandbagging operation grew and more and more volunteers were brought in, the Red River Radio Amateurs moved to a 24-hour-a-day operation at a variety of locations.

"We operated upwards of 11 different locations throughout the city, not including the roaming vehicles," Johnson says. "At one point in time or another, and some of those positions included both Cass and Clay County Emergency Operations Centers.

" We also had positions stationed at two Red Cross locations, the Salvation Army. We had a group stationed with the West Fargo police department where the Coast Guard was stationed and an individual stationed at Innovi Hospital.

"And that's where basically any Coast Guard helicopters with people that were pulled from their homes or rescued, if they had a medical condition they were taken directly to Innovis."

Johnson says it was a tense time as the weekend of the projected crest of the river approached.

"Those were the days when people were scrambling, trying to finish up the levees," Johnson recalls. "We had just received word that the river crests were projected to go higher than anticipated. So there was a massive, massive volunteer push to get additional sandbags put in place.

"The difficulty was exacerbated by the snow that we had received which certainly made it a difficult challenge to both get vehicles and equipment where things needed to be and for the volunteer effort for people to get in from out of town to help.

"So, that Friday and Saturday were really just key days."

Johnson says it was a truly heroic effort put out by so many to save the communities.

"I think that the amount of effort that was put into the entire area - both with the amateur radio community and the non-amateur community doing other work from sandbagging to filling sand bags - I'm deeply humbled and touched at the amount of support we received from people in town and out of town to make it happen was absolutely critical.

"And had we not had that kind of help and resource and reaction from the people in the area, we would have never made it as far as we did."

In the Canadian province of Manitoba, the Manitoba Emergency Measures Organization and the City of Winnipeg Emergency Program requested assistance from local ARES groups there to help out with the flooding on that side of the border.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Obviously this story is far from over and we will have more in future Amateur Radio Newsline reports. (ARNewsline(tm) with thanks to KC0SHM, WD0AKO and RAC)

**

HAM RADIO IN SPACE: GERMAN HAMS CLAIM TO BOUNCE SIGNALS OFF VENUS

A group of German hams claim that they have bounced a signal off the planet Venus. This in an experiment that they call EVE which is an acronym for Earth-Venus-Earth.

In a press release, Amsat Germany President Peter Guelzow, DB2OS, reported that on March 25th a team from his organization used a ground station at the Bochum Observatory to transmit radio signals to Venus. He says that Morse code was used to transmit the well known letters "HI." This was the same message transmitted back to Earth from the early AMSAT OSCAR satellites.

But this time the trip in space was a lot longer than one to and from Earth orbit. After traveling almost 100 million kilometers round trip with an en-route delay of about 5 minutes, the two letters were clearly received back on Earth as echoes from the planets surface using.

DB2OS says that despite the bad weather, signals from Venus could be detected from 10:38 UTC until the planet reached the local horizon. He says that the experiment was repeated on Thursday, March 26th for several hours, again with good echoes from Venus.

Peter Guelzow, DB2OS, is very happy with the results of the EVE experiment. He calls it another milestone for ham radio on its way toward launching its own interplanetary probe towards planet Mars. (AMSAT-DL)

**

ENFORCEMENT: RSGB WILL ASK OFCOM TO HANDLE DOWNLINK INTERFERENCE TO ISS

A group of hams who seem to feel that they own the frequency that the International Space Station ham radio station uses as a downlink may soon come under the scrutiny United Kingdom radio regulator Ofcom. This, if the Radio Society of Great Britain proceeds with its plan to bring the matter before its enforcement branch. Jeremy Boot, G4NJH, reports:

--

The RSGB are dismayed to learn that a small group of AM enthusiasts based in the West Lothian district of Scotland continue to cause what appears to be deliberate interference to the ISS downlink frequency of 145.800MHz during ISS passes.

The RSGB is concerned that despite several years of negotiation with this group and a change of band allocation to move them away from the internationally agreed ISS frequency, they continue to disrupt ISS operation by their selfish disregard of their fellow radio amateurs and the Band Plan.

The RSGB intends to bring the matter up formally with Ofcom at a meeting of the RSGB/Ofcom Forum in early April.

--

Until now, little has been known about this A-M group outside of Scotland. That is because their signals are on the downlink and therefore are not being heard by the crew ion board the I-S-S. But their refusal to off the air during those times that hams on the I-S-S are trying to make space to ground contacts has become annoying to those stations on the ground attempting to hear what the Astronaut ham radio operators on-orbit are trying to say. (RSGB)

**

RESTRUCTURING: BROADCASTERS BEGIN VACATING 40 METERS HAM BAND

Shortwave broadcasters have begun to vacate 7 point 1 to 7 point 2 Mhz in ITU regions 1 and 3. This a a new I-T-U rules became effective on March 29th.

Following on from the decision made during the World Radio Conference in 2003, the amateur service becomes the primary user in this high frequency segment world-wide. In layman's terms, this represents everywhere except the Americas, who have always enjoyed this segment as part of the 7 to 7.3MHz allocation in Region 2.

Although this date also coincides with the start of the HF broadcasting schedule, it would be naive to think the segment might be completely clear

of broadcasting stations on that date. However a number of international broadcasters have already have been noted to have moved closer to 7 point 5MHz. and away from operations in the ham radio band. (Southgate)

NAMES IN THE NEWS: DAYTON HAMVENTION ANNOUNCES 2009 AWARD WINNERS

The Dayton Amateur Radio Association has selected the creator of an emergency communications network, a space explorer and an inventor to receive this years coveted Hamvention awards. Amateur Radio Newsline's Don Wilbanks, AE5DW, has the details:

--

Named as 2009 Amateur of the Year is Wade D. Hampton Jr., K4ITL, of Raleigh, North Carolina. Better known as Danny Hampton, K4ITL is the architect of the famed Piedmont Coastal Repeater Network. This system was first established in the early 1970's today serves more than 40 machines in North Carolina and is well known for its heavy use for public service work. And not all that long ago the North Carolina Office of Emergency Management and SKYWARN recognized the network's vital role in emergency communication.

A ham since 1958, Hampton is the Technical Committee chairman for the multi-state Southeastern Repeater Association as well as ARRL North Carolina Section Technical Coordinator. He is also credited with helping to coordinate the development of a local hospital-based amateur radio emergency repeater system that ties 10 facilities together.

The Hamvention 2009 Special Achievement Award goes to Richard Garriott, W5KWQ, the son of ham radio space pioneer Owen Garriott, W5LFL, who made history as the first ham to communicate from Earth orbit ground during the STS-9 Space Shuttle mission, The younger Garriott is a legend in his own right as one of the worlds best known and most highly respected video game programmer and designer. And like his father Richard Garriott has been a ham radio in space pathfinder in his own right.

W5KWQ was sixth private citizen to fly to the International Space Station. Through his on-orbit experimentation, his extensive operations using a number of diverse modes, and phenomenal educational outreach program he is said to have inspired and transformed the lives of tens of thousands students worldwide.

Garriott was also the most prolific ham radio operator to fly on a short duration mission. During his 10 day stay on the I-S-S he held over 500 two-way voice QSOs. Also, while on the I-S-S over a thousand SSTV images were down linked, and hours of packet operations were performed.

But more important were the one on one chats with classrooms. Using the ARISS station on board the orbiting outpost, W5KWQ communicated with students at seven different Challenger Learning Centers in the U.S. plus numerous other schools around the globe. He also had numerous random chats with scouts world-wide as part of the scouting's amateur radio Jamboree on the Air.

Last but by no means least, this years Hamvention award for Technical Excellence winner Copthorne "Cop" Macdonald, VY2CM. First licensed at age 15, Macdonald is best known as the father of Slow Scan amateur television. He developed the system in the 1950's while an engineering student at the University of Kentucky. The paper he wrote describing it won national acclaim and took first prize in the 1958 A-I-E-E student paper competition. Later, Macdonald worked with other slow scan pioneers to get the FCC to authorize operation of the mode in the High Frequency ham bands. That effort finally succeeded a decade later in 1968.

Macdonald has authored articles on slow scan for QST and CQ magazines. In 1973 he started New Directions Radio. This is a network of hams concerned with using ham radio and SSTV to help create a more aware, more caring, and more responsible human society.

With congratulations to all, I'm Don Wilbanks, AE5DW, for the Amateur Radio Newsline. Jim.

--

Danny Hampton, K4ITL, Richard Garriott W5KWQ and Cop Macdonald, VY2CM, will receive their awards during Hamvention 2009. That's slated for May 15th to the 17th at the Hara Arena in suburban Dayton, Ohio. Amateur Radio Newsline will again be there, providing comprehensive coverage of this years event. (Dayton Hamvention 2009)

**

HAM RADIO IN SPACE: KE7KDP AGAIN OPERATING FROM THE ISS

American entrepreneur Charles Simonyi, KE7KDP, is back in space and talking to kids in schools as well as the hams worldwide. This, from his perch some 250 miles straight up.

Simonyi was onboard a Russian Soyuz rocket that blasted off from Kazakhstan on Thursday March 26 and rendezvoused with the International Space Station the following day. Since then the software pioneer and aviator turned space explorer has been delighting hams on the ground with both voice contacts and slow scan pictures sent back from space.

In addition to his leisure time ham radio operations during his 13day stay, KE7KDP, is assisting with several research projects. He is also taking part in a series of live two way contacts with school classrooms world-wide

using ham station on board the ISS and the ground facilities of ARISS. The Amateur Radio station onboard the Space Station uses a downlink frequency of 145.800 MHz FM and moat Astronauts have tended to use that frequency for both voice and Slow Scan TV.

Simonyi's first trip to the space station in 2007 cost him an estimated $24 million. It is believed that this time it will have cost him $35 million by the time he returns to Earth on April 6th. More about Charles Simonyi's latest trip to the ISS is on-line at www.charlesinspace.com. (ARNewsline(tm) from various sources)

**

RADIO LAW: THE FCC SAYS YONKERS TOWER LAW NOT IN VIOLATION OF PRB-1

The FCC says that it will not retroactively extend PRB One to a Yonkers, New York tower and antenna case where the ham put up the structure before getting a proper permit. This, as it denies for a second time a request from Thomas R. Morrison, AB2PP, who wanted the FCC to intervene in his case. Bill Pasternak, WA6ITF, has more in this report:

--

By way of background, Thomas Morrison, AB2PP, had previously filed a request with the FCC for a declaratory ruling regarding his antenna tower. The FCC denied the request by a letter to him dated January 31, 2007. In that letter, the FCC explained that the Commission's PRB-1 decision requires that local regulation of amateur radio facilities must be the minimum practicable to accomplish the local authority's legitimate purpose. But PRB-1 does permit local authorities the right to determine what constitutes a reasonable accommodation based on the its legitimate purposes, policies and concerns. The FCC's 2007 letter also stated that the Commission does not have the resources to review all state and local laws that affect amateur radio operations. Rather, it is what the FCC terms as local tribunals that have authority to review local zoning decisions.

In his response to the Commission's decision against him Morrison again requested that the FCC find that the City's building permit requirements do not satisfy the legal requirements of PRB-1. He stated that since the FCC declined to act on his previous petition, the City Planning Board denied his request for a special use permit for his tower. Moreover, they also had indicted him for a misdemeanor for installing the tower without a permit. Morrison told the FCC that he has now filed litigation in the United States District Court for the Southern District of New York, requesting that it forestall the criminal trial.

But the FCC indicates that none of this is of any concern to that the agency. The FCC says that these intervening events do not affect its conclusion that, under the Commission's PRB-1 decision, Morrison has not presented an appropriate issue for Commission involvement. As such it will not support or act favorably on Morrison's request.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the Newsroom in Los Angeles.

--

The FCC says that Morrison's dispute with the city of Yonkers fundamentally involves whether its building code complies with PRB-1. It also notes that as PRB-1 recognizes that local tribunals have the authority to handle appeals of local decisions regarding antenna structures. As such the FCC says that the matter is best settled in what the regulatory agency terms as the appropriate forum. (FCC)

HAM HAPPENINGS: ARRL - TAPER DCC WANTS PAPERS

According to a note from Steve Ford, WB8IMY, technical papers are being solicited for presentation at the 28th Annual ARRL and TAPR Digital Communications Conference. That event is slated for September 25th to the 27th in Chicago, Illinois.

Steve says that papers will also be published in the Conference Proceedings exactly as submitted and authors will retain all rights. Also, authors do not have to attend the conference to have your paper included in the Proceedings.

The deadline for papers is July 31, 2009. Please send submissions to Maty Weinberg at ARRL Headquarters, 225 Main Street, Newington, Connecticut 06111. Papers can also be via e-mailed to maty (at) arrl (dot) org. (WB8IMY, ARRL)

ON THE AIR: NATA INAUGURATES 40 METER NEWS

The North American Traffic and Awards Net began meeting on 40 meters SSB on April 1st. The new nets meet on Sunday, Thursday, and Saturday on 7205 kHz starting at 0000 hours U-T-C with a late net at 0400 UTC. Both nets will last approximately one hour. This new net is in addition to the other North American Traffic and Awards Nets and comes exactly three months after the network returned to the air.

The North American Traffic and Awards Net also offers a series of free operating awards to anyone meeting the requirements for each award. All awards requirements and rules are on line at

www.northamericantrafficandawards.net. (NATA)

**

ON THE AIR: HPM STATION CHANGES 10 METER CHANNEL

The ARRL headquarters Hiram Percy Maxim W1AW Memorial Station recently began using a new 160 meter frequency for its CW transmissions. W1AW has moved to 1802.5 kHz in order to reduce the possibility of interference with other Top Band operations. The ARRL says that increasing activity near the previous bulletin frequency of 1817.5 kHz lead to the decision to make the change. (ARRL)

**

NAMES IN THE NEW: DJ0QN NAMED ACTING DARC SECRETARY OF INTERNATIONAL AFFAIRS

And a familiar name in the news. Mitch Wolfson, DJ0QN, has now taken over as Acting Secretary of International Affairs for the German national amateur radio society, the DARC. Wolfson succeeds Dennis Haertig, DL7RBI, who has moved to Switzerland for professional reasons.

Wolfson, is originally from Los Angeles, California, where he held the call WA6GSN. He currently holds the U-S call K7DX, is married to a German national, has two grown children and has lived in Munich over three decades. He is employed in the technology sector.

Over the years DJ0QN has been a contributor on ham radio happenings on the European continent for this news service. He tells Newsline that he will be covering both the giant Dayton and Friedrichshafen ham radio conventions for the DARC in the coming months. (ARNewsline(tm))

THE BPL WAR: INDUSTRY EXPRESSES DOUBTS OVER BPL

A year ago Broadband over Powerline Internet access was the fair hair boy of the business world. Now its detractors are growing as its champions fall away. Jim Linton, VK3PC, reports:

--

Strong doubts on BPL in the trade press.

It's encouraging to say the least that finally, the telecomms industry is admitting that Broadband over Powerlines has a multiplicity of issues in deployment.

According to the (3 March 2009 issue of the US industry journal Network World, it is now recognized that BPL doesn't really cut the mustard against alternative internet delivery technologies in under-served rural areas.

The three key points that publication makes are:

BPL networks have to be run jointly by an Internet Service Provider and an electricity utility; neither knows each other's business.

BPL is actually yet to be demonstrated working in a widespread deployment; a number of high-profile plans and installation trials over recent years have fallen through.

BPL has technological issues ranging from interference ingress and egress, power line noise and multiplexing problems.

Hardly a glowing endorsement of the technology!

Want to check out the Network World article, well its internet address is http://www.networkworld.com/news/2009/031309-broadband-fiber-wire.html?page=1

I'm Jim Linton, VK3PC.

--

B-P-L still has a few big name industry supporters but by and large those who used to be its biggest boosters are now championing other ways to get on the net. (Spectrum Digest & Amateur Radio Victoria)

WORLDBEAT: RADIO AMATEURS OF CANADA POSTPONES ANNUAL GENERAL MEETING

Turning to news from around the world, we first go North to where the 2009 Annual General Meeting of Radio Amateurs of Canada has been postponed. This, due to a shift in accounting procedures.

According to an announcement, a change in the bookkeeping system at the Radio Amateurs of Canada headquarters office resulting in unforeseen complications. As a result the Annual General Meeting of Radio Amateurs of Canada members, scheduled for May 24, 2009, in Quebec, has had to be canceled.

Radio Amateurs of Canada says that the presentation of an audited financial statement at the meeting is an important and long established practice. Because of the delay caused by the transfer to a new bookkeeping method, the possibility of having an audited statement being ready for the meeting is not possible. Another date and venue for the required 2009 Radio amateurs of Canada Annual General Meeting is being sought and will be announced as soon as it is known. (RAC)

**

WORLDBEAT- RAC AND CANADIAN RED CROSS ENTER INTO MOU

Also, a renewed Memorandum of Understanding has now been signed between Radio Amateurs of Canada and the Canadian Red Cross Society. The document spells out certain obligations by Canadian ARES volunteers and by the Red Cross. English and French versions may be seen online at http://www.rac.ca/fieldorg/download.htm (RAC)

**

WORLDBEAT: UK MILITARY TO TRY GPS JAMMING EXERCISE IN JULY

If you are driving in the U-K next summer and your G-P-S guidance system goes brain dead, it might be jammed and the jamming is legal. The United Kingdom's Ministry of Defense has informed telecommunications regulator Ofcom that between July 6th and 16th, that it will be conducting a Global Positioning System jamming exercise.

The July tests will be for limited periods between 11.00 and 15.00 U-T-C. The location for the exercise is to sea westwards from N58 deg. 57.4' W003 deg. 13.9' which is about 60 nautical miles west of Kirkwall. Ofcom warns that it cannot be held responsible that any loss of service is due to the military G-P-S jamming exercises.

The United Kingdom's Ministry of Defense conducts occasional tests on military systems which may result in some loss of service to civilian users of the Global Positioning System. This includes such equipment as in-car navigation devices and other networks which rely on GPS signals. (GB2RS)

**

DX

In D-X, members of the Texas DX Society are now active as C91TX from Bilene, Mozambique until April 5th. Operations are on 160 to 10 meters with 3 active stations, one station each for CW, SSB, and the Digital modes. For updates, visit www dot tdxs dot net slash c91 dot html on the World Wide Web.

The team bringing Mellish on the air finally were able to land there on March 27th. They came on the air on March 28th as VK9GMW and hope to be there through April 10th but this can change. More is on-line at www.vk9gmw.com

E51COF is currently on the air from Rarotonga in the South Cook Islands. He plans to operate SSB on 10, 15, 20, 40, 80 and maybe 17

meters. QSL via K8NA.

Members of Turkey's Special Wireless Activity Team will be active as TC57A to remember that nations 57th Regiment Martyrs. Operation is slated from April 22nd to the 27th on the HF bands. QSL as directed on the air.

Lastly, N5FF is in Damascus, Syria, and should be active as YK1BA from through April 10th. The purpose of the trip is not a DXpedition, so his operating will be spotty. QSL via N5FF

(Above from various DX sources)

THAT FINAL ITEM: THE 45 AT AGE 60

And finally this week, the 45 RPM record -- yes we said record -- is now 60 years old. While it has faded from the pop music distribution scene it is still very popular with some music collectors and vinyl record buffs. Rebecca Bruce has the rest of the story:

--

For those like this reporter who was born after the introduction of the digital compact disc and portable music player, the 45 R-P-M record with its small size and large center hole was a kind of a trip back in time. We saw them as kids and we heard our parents playing them on their record players. But by the time we grew up the only place you could find them was at the local swap meet or on eBay.

Up until the introduction of the C-D the 45 rpm record was the mainstay of delivering popular music to an entertainment hungry world. Only 7 inches in diameter, the disc spun at 45 revolutions per minute and was designed to hold two songs. One on each side of the disc.

I'm told that the best part of the 45 was its extreme light weight and durability. Unlike the older 78 R-P-M discs which would shatter if dropped, a 45 might get a scratch but could continue to be played with the added annoyance of some clicks and pops from the scratch. This made it an ideal and inexpensive format of that era for providing recorded music to teens and pre-teens of the mid to late 20th century. That's because most 45's sold for less than a dollar.

As a historic note, the first 45 rpm disc was "Texarkana Baby" recorded by country singer Eddy Arnold. It was released by RCA on March 31, 1949.

But the entertainer who likely benefited most from the 45 was likely the man they called the "King of Rock and Roll," Elvis Presley. He sold millions of records during his career and made the 45 R-P-M record a household word among teens.

So a happy birthday to the good old 45. I have the feeling that mom and dad kind of miss having you around.

Sitting here with my iPod and my three kids who will likely only see a 45 RPM record in a museum, I'm Rebecca Bruce reporting for the Amateur Radio Newsline.

--

Now, we are in the 21st century. The 45 had given way first to the C-D and more recently to direct download to music players like Rebecca's iPod. None the less, the 45 RPM record holds an important place in bringing music into the lives of oh so many. (RW)

==> ARRL COMMENTS ON FCC'S PROPOSED ESTABLISHMENT OF RURAL BROADBAND
PLAN

On March 10, 2009, the FCC invited comments via a Public Notice
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-561A1.pdf>
concerning the establishment of a comprehensive rural broadband strategy
```

as part of the Department of Agriculture's Food, Conservation and Energy Act of 2008, commonly known as the 2008 Farm Bill. Per the American Recovery and Reinvestment Act of 2009 (Recovery Act), Congress required the FCC to develop a "comprehensive national broadband plan." According to the FCC, they, Congress, and the Secretary of Agriculture "have repeatedly recognized the importance of ensuring access to advanced telecommunications and information services to all Americans, with a special focus on rural and hard-to-serve areas." The proceeding provided an opportunity for the ARRL to express its concerns about broadband over power lines (BPL) <http://www.arrl.org/tis/info/HTML/plc/> that the FCC has yet to satisfactorily address.

In the comments submitted by ARRL General Counsel Chris Imlay, W3KD <http://www.arrl.org/news/files/09-29_Rural_Broadband_Comments_03_2009.pdf>, the ARRL reaffirms its support of broadband opportunities in rural areas. "ARRL is in agreement that broadband is critical to the health of agricultural and other businesses, and to the educational interests of Americans who live in rural areas," Imlay stated. Imlay commended the FCC in looking for broadband solutions on both the short and long term, as well as identifying how Federal programs "might overcome obstacles that currently impede rural broadband development."

Imlay pointed out that while the FCC and various power utilities have touted BPL as a promising means of providing rural broadband service, the ARRL contends that there are "prohibitive limitations (notable among these being the large number, and the cost, of repeaters and couplers required on overhead, medium voltage power lines for what amounts to a limited number of subscribers' homes in rural areas)."

The ARRL maintains that before BPL could ever be considered as a long-term source of broadband in rural America, the FCC must adopt rules that provide against BPL interference to the licensed radio services. Imlay said that studies have pointed out that BPL systems cause interference to licensed radio services in "certain configurations," such as international broadcasting, aeronautical, maritime, disaster relief, military and the Amateur Radio Service. "Of particular concern in rural areas is that low-band VHF radio systems are still common among state police, volunteer fire departments and other 'First Responder' public safety agencies," Imlay told the Commission, adding, "BPL systems using this frequency range can and would, without additional rules, likely block communications between dispatch centers and emergency response vehicles."

Imlay said that Amateur Radio is a "continuous, intensive user of the high-frequency bands in residential areas," and as such, "is arguably the most pervasively affected" by deployment of BPL in rural areas. "Amateur mobile operation is a particularly notable victim of BPL interference, since medium-voltage power lines run parallel to roadways." The Commission's BPL rules "include no effective protection."

Imlay reminded the Commission that the ARRL, as well as broadcast industry representatives, challenged the adequacy of the FCC's BPL

interference rules: "On appeal to the United States Court of Appeals for the District of Columbia, the Court remanded the ET Docket 04-37 proceeding to the Commission <http://www.arrl.org/news/stories/2008/04/25/10064/?nc=1> with some very specific instructions, including reconsideration of assumptions relating to interference mitigation and disclosure of studies that had previously only been released in redacted form." Imlay pointed out that almost a year after the Court's decision, the Commission has done "literally nothing" to comply with the mandated instructions <http://www.arrl.org/news/stories/2009/03/04/10685/>.

In the six years that the BPL rules have been on the Commission's docket, Imlay said that there has been "continuous and extensive debate about the interference potential of BPL." This, he told the FCC, has created "some uncertainty" amongst the various utilities and municipalities that have been eyeing BPL as a broadband delivery mechanism, with the Commission's inaction since the Court's decision contributing to the uncertainty and "creating a dampening effect on the marketplace's interest in BPL." Before the FCC can implement a BPL policy for rural America, Imlay said that this "regulatory uncertainty" would need to be resolved.

The cost of implementing interference resolution must be considered by any rural broadband provider, Imlay said. While there is nothing in the FCC rules concerning this, Imlay reminded the Commission that the ARRL, "some eight months ago, offered a plan to the Commission's Office of Engineering and Technology in this regard <http://www.arrl.org/?artid=8341>. The revised regulation suggested by ARRL would be sufficient to reduce the potential interference from BPL to the point that it would be practical to address such instances on a case-by-case basis. Compliance is achievable with present BPL technology without significant limitation on BPL deployment, rural or otherwise. However, the absence of such rules is an obstacle to any consideration of BPL as a rural broadband mechanism and makes an evaluation of interference mitigation difficult or impossible." The deployment of a BPL system with a high potential for interference would require expensive mitigation afterwards, whereas if the potential is reduced to an acceptable level at the time of deployment, the need for mitigation -- and therefore the cost -- will be greatly reduced.

Imlay told the FCC that more than four years ago, the Department of Agriculture's Rural Utilities Service (RUS) <http://www.usda.gov/rus/> recognized "the need and willingness to utilize agency resources to remove interference concerns as an obstacle to rural broadband rollout (at least via BPL)." In a January 2005 letter from then-RUS Administrator Hilda Gay Legg to ARRL Chief Executive Officer David Sumner, K1ZZ, regarding the RUS's Community Connect Grant Program <http://www.usda.gov/rus/telecom/commconnect.htm>, the RUS acknowledged that the cost of interference mitigation from BPL systems was a "significant" issue, and told the ARRL that "whenever a loan or grant application proposes broadband service delivery via BPL, the RUS will

'consider the cost of interference mitigation in [its] financial analysis.'" On March 20, current FCC Commissioner Jonathan Adelstein was nominated by President Barack Obama <http://www.arrl.org/news/stories/2009/03/23/10716/?nc=1> to become the next Administrator of the RUS.

Imlay told the Commission that "[i]f the means by which a grantee would comply with the Commission requirements for interference avoidance are not clear (which as of now they are not), it is unlikely that any applicant for a grant for broadband service using BPL could address the RUS's concern about interference." Therefore, Imlay said that it is necessary for the FCC to address the BPL interference issues on remand from the Court of Appeals "in order to remove this additional obstacle to an assessment of rural broadband opportunities via BPL."

The ARRL is "constrained" to note that the FCC has, over the past six years, "acted not as a dispassionate technical agency in the evaluation of certain broadband mechanisms, including BPL," Imlay noted, "instead acting as a self described 'cheerleader' for certain technologies, also including BPL." By these actions, Imlay said that the Commission "has ignored technical evidence that is contrary to its predisposition," and urged the FCC that "those same mistakes" not be repeated here.

Imlay reminded the Commission that President Barack Obama, on his inauguration day earlier this year, placed a series of goals on the White House Web site. "Among these," Imlay said, "was the following, obviously laudable goal: 'Restore Scientific Integrity to the White House: Restore the basic principle that government decisions should be based on the best-available, scientifically valid evidence and not on ideological predispositions.' The Commission has the opportunity to implement this goal in this Docket proceeding."

Saying that rural broadband opportunities should be "evaluated in terms of the scientific realities of the technologies on the table, and not on the basis of what the Commission wants to believe about them," the ARRL asked the FCC to fulfill "without further delay the obligations placed upon it by the United States Court of Appeals in ET Docket 04-37, and adopt such revised and additional rules for BPL so as to eliminate the extant interference potential of the technology." With the regulatory uncertainty and unresolved interference issues that continue to surround BPL, the resolution of ET Docket 04-37 is a "prerequisite for the development" of a plan for a complete evaluation of rural broadband opportunities and the development of a rural broadband plan.

==> NEW VIDEOS PROMOTING FIELD DAY, AMATEUR RADIO TECHNOLOGY, AVAILABLE FROM ARRL

Two new video Public Service Announcements (PSAs) -- one promoting ARRL Field Day and another showing the technical side of Amateur Radio -- are now available from the ARRL Web site. "These videos are great for PIOs <http://www.arrl.org/pio>, clubs and hams in general to use in promoting the fun side of Amateur Radio," said ARRL Media and Public Relations

Manager Allen Pitts, W1AGP.

"The Field Day PSA is meant to be posted on Web sites, added to e-mails and shared via the Internet," Pitts explained. "While not broadcast quality resolution, it was intentionally made small enough to go through almost all e-mail systems and able to be seen on almost every computer. The PSA spotlighting Amateur Radio technology is meant for broadcast and cable TV; it is more general than the Field Day video and media outlets can use it all year long. This video complements the WeDoThat-Radio campaign <http://www.wedothat-radio.org/> and the Technology Pillar, one of the ARRL's five pillars."

Pitts said that the Field Day video is the League's first experiment in "viral" video. "We've seen how a good video can spread quickly via the Web and reach people. So we created a special Field Day Internet video for this year. Let's see what happens." Amateurs can download the video from the Field Day Web page <http://www.arrl.org/fieldday> and then send it to friends, e-mail lists, Web sites -- just about anywhere!
"Please do not modify it or change the ending!" Pitts requests. "Since the files can go all over the country -- and world -- the ending needs to be able to direct anyone, anywhere to the closest Field Day site near them. Just be sure your local group is listed on the ARRL Field Day Locator <http://www.arrl.org/contests/announcements/fd/locator.php> and they will find you." Since the technology PSA is targeted for commercial TV uses, it is a high resolution, 43 meg, MOV type file; it can be downloaded from the ARRL Web site <http://www.arrl.org/pio/videos/ARRL30secPSA2009.mov>. Because this version is meant for professional use, it has a formal 60 second lead-in followed by the 30 second PSA. A very low resolution preview version (not meant for distribution) is also available <http://www.arrl.org/pio/videos/LowRes2009.wmv>.

To get a copy of the technology video on a disc, please send Pitts an e-mail <mailto:apitts@arrl.org>, letting him know which TV stations or cable systems will be showing the video, and which format is needed.

Special thanks go to the volunteers of the national ARRL PR Committee who took the concept and helped bring it to reality. For the Field Day video, Kevin Pauley, KB9WVI, did the excellent video editing (right down to synchronizing shots with the music); Don Carlson, KQ6FM, did the voiceover work. Staff creativity came from Pitts -- who produced and created the video -- and ARRL Contest Branch Manager Sean Kutzko, KX9X, who did the music. The Delta DX Association in Louisiana, W5RU, with Bob McBride, AE5RN, and Albert DuPont, W5AFD, were a major help, providing action video clips and permissions from their last Field Day. The technology video was also designed by Pitts with extensive volunteer help. Special thanks go to Matt Aaron, KG4WXX, who guided the extensive video editing and to Don Carlson, KQ6FM, who did the audio work.

==> HAMS STILL ON ALERT AS RED RIVER FLOOD DANGER LESSENS

Since March 22, a group of ham radio volunteers has been providing communications during the Red River flood emergency that continues to threaten Fargo, North Dakota and Moorhead, Minnesota and surrounding areas. Hams from those cities, as well as surrounding areas, have been manning hospitals, Emergency Operations Centers and Salvation Army shelters.

Mark Johnson, KC0SHM, President of the Red River Radio Amateurs (RRRA), reports that operations have wound down as water levels continue to recede. The ham volunteers remain on alert, however, as flooding still threatens the area. As of April 3, the Red River was at 35.4 feet in Fargo. Flood stage is 18 feet.

==> FCC DENIES NEW YORK HAM'S REQUEST FOR PRB-1 RULING

On March 27, the FCC notified Thomas Morrison, AB2PP, of Yonkers, New York, that it was denying his petition concerning an Amateur Radio antenna support structure Morrison had installed at his home <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-680A1.pdf>. In his December 2008, petition, Morrison requested the Commission rule that the City of Yonkers did not provide "reasonable accommodation" in its building permit requirements per PRB-1 with regard to the installation of the support structure <http://www.arrl.org/FandES/field/regulations/PRB-1_Pkg/prb-1.pdf>.

This is the second time Morrison has sought assistance from the FCC in this matter. In 2006, he filed a request with the Commission asking for a declaratory ruling regarding the tower; the FCC denied his request in January 2007. "In that letter [denying your request]," the FCC reminded Morrison in its 2009 letter, "we explained that the Commission's PRB-1 decision requires that local regulation of Amateur Radio facilities must be the minimum practicable to accomplish the local authority's legitimate purpose, but permits the local authority to determine in the first instance what constitutes a 'reasonable accommodation' based on the its [sic] legitimate purposes, policies and concerns."

The Commission's 2007 letter also noted that the FCC does not have the resources to review all state and local laws that affect Amateur Radio operations and that local tribunals have authority to review local zoning decisions.

In his 2008 letter, Morrison told the Commission that since the FCC failed to act in his favor in his earlier petition, the Yonkers City Planning Board denied his request for a special use permit for his antenna support structure. The City of Yonkers has also indicted him for installing a tower without a building permit, a misdemeanor. Morrison also told the FCC that he has filed litigation in US District Court, requesting that it delay his criminal trial.

"We conclude that these intervening events do not affect our conclusion that, under the Commission's PRB-1 decision, you have not presented an appropriate matter for Commission involvement," the FCC told Morrison. "Because your dispute with the City fundamentally involves whether its

building code complies with PRB-1, and PRB-1 recognizes that local tribunals have the authority to handle appeals of local decisions regarding antenna structures, we believe that the matter you inquire about is in the appropriate forum. We therefore decline to act upon your petition."

==> GERMAN AMSAT TEAM TRANSMITS, RECEIVES SIGNALS FROM VENUS

On March 25, a group from AMSAT-DL bounced radio signals off the surface of Venus, marking the first time Amateur Radio operators have bounced radio signals off another planet <http://www.amsat-dl.org/pic/gallery2/main.php?g2_view=core.DownloadItem&g2_itemId=7561>. According to AMSAT-DL President Peter Guelzow, DB2OS, the Earth-Venus-Earth (EVE) transmission is another step in preparing for a mission to Mars. According to an AMSAT-DL press release, the team's transmitter was generating about 6 kW CW on 2.4 GHz.

Guelzow said that signals were sent from a ground control station at the IUZ Sternwarte observatory in Bochum: "After traveling almost 100 million kilometers and a round trip delay of about 5 minutes, they were clearly received as echoes from the surface of Venus. This was the first German success to receive echoes of other planets. In addition, this is the farthest distance crossed by radio amateurs, over 100 times further than echoes from the moon (EME reflections)."

The EVE experiment was repeated on March 26 for several hours with "good echoes" from Venus, Guelzow said. "Morse code was used to transmit the well-known 'HI' signature known from the AMSAT OSCAR satellites."

For receiving the EVE reflections, Guelzow said that the team used a fast Fourier transform (FFT) analysis with an integration time of 5 minutes. "After integrating for 2 minutes only, the reflected signals were clearly visible in the display," he said. "Despite the bad weather, signals from Venus could be detected from 1038 UTC on until the planet reached the local horizon."

Guelzow explained that with the EVE reflections, the high power amplifier "has therefore passed this crucial test as a final key component for the planned P5-A Mars mission. By receiving generated echoes from Venus, the ground and command station for the Mars probe has been cleared for operational use and the AMSAT-DL team is now gearing up for building the P5-A space probe. AMSAT-DL wants to show that low-budget interplanetary exploration is possible with its approach."

Development, design and construction of this first German Mars mission have been achieved by AMSAT-DL and its partner organizations, Guelzow explained. "Already a third of the total project costs were performed. More work shall follow during the mission. AMSAT-DL would like to demonstrate that their approaches to low-cost space missions are feasible." -- Information provided by AMSAT-DL

==> AUSTRALIAN, BRITISH RTTY CONTESTS TO MERGE

John Barber, GW4SKA, of the British Amateur Radio Teledata Group (BARTG) <http://www.bartg.org.uk/index.htm>, announced that 2009 will be the last running of the Australian National Amateur Radio Teleprinter Society (ANARTS) RTTY Contest <http://www.anarts.com.au/index.htm>. Citing the failing health of ANARTS Secretary and Contest Manager Pat Leeper, VK2JPA, Barber said that BARTG, with help toward expenses from ANARTS, will manage June's 2009 ANARTS Contest.

"BARTG have had close links with ANARTS over the years," Barber said, "and we felt that we should help in some way. After discussions between Pat and the BARTG committee, we have decided on a course of action."

Barber said that he briefly considered moving the BARTG HF Contest from the third weekend in March to the second weekend in June, the date ANARTS held their RTTY contest, but based on input from the RTTY contest community, decided against the move. "The general opinion seems to be that moving to a June date would be a bad idea, both for propagation and because there are better things to do in June," he said. "The contest calendar is very crowded and there are few options open if we were to consider a new date at the beginning or end of the year." Saying that the Russian DX Contest is also the third weekend in March, Barber said that "The RDXC contesters will just have to work round us and be tolerant if space gets tight, as we are to them."

Barber said that Leeper had "made every effort to find someone else in Australia to take over the contest, but with no success. My thanks go to Pat for her cooperation and hard work in running the previous contests."

Calling the BARTG HF Contest "a well liked and supported contest," Barber said that the March 2009 BARTG HF Contest attracted "around 2500 participants. I have no wish to change the character by messing around with the rules, so they will remain the same for next year." The ANARTS rules <http://www.anarts.com.au/rules2009.htm> will not change, but logs must be submitted to BARTG <mailto:anarts@bartg.org.uk>. The rules are currently on the ANARTS Web site, but he said they will be posted to the BARTG Web site soon.

BARTG runs two contests each year <http://www.bartg.org.uk/contests.htm>. The BARTG Sprint Contest is in January and the BARTG HF Contest is in March.

==> ARRL RELEASES 2009-2010 REPEATER DIRECTORY

With more than 20,000 listings for VHF/UHF repeaters across the US and Canada, "The ARRL Repeater Directory 2009-2010" is a must have. Once again, the ARRL is offering two sizes of the "Repeater Directory" --pocket size <http://www.arrl.org/catalog/?item=1288> and desktop <http://www.arrl.org/catalog/?item=1318>.

The pocket-sized Repeater Directory boasts a larger font size, making for easier reading. Both editions feature handy indexing tabs on the cover, easier to read listings and a "Key to Repeater Notes" located right up front in the Directory. Along with these new features, both editions have the features you know and enjoy from prior years: Repeater

operating practices, repeater lingo and hints for newly licensed hams; Frequency Coordinator contact information; listings for D-STAR and APCO 25 repeaters; a guide to using CTCSS tones and Digital Coded Squelch (DCS); VHF/UHF band plans and a 2 meter channel-spacing map; IRLP (Internet linked) nodes; tips for handling interference; listings for IRLP, WIRES-II and EchoLink (Internet linked) nodes; emergency message handling procedures, and a transceiver memory log.

Order your copy of "The ARRL Repeater Directory 2009-2010" today at the ARRL Online Store <http://www.arrl.org/catalog/?category=What%27s%20New>.

==> SOLAR UPDATE

Tad "The warm Sun thaws the benumbed Earth" Cook, K7RA, this week reports: Our Sun is in the news again, unfortunately not due to any hoped-for activity, but for the eerie quiet instead. The Sun is surprisingly calm by several measurements, including the large number of spotless days, with an average 10.7 cm solar flux and low solar wind pressure. Right now there are no sunspots, but the 10.7 cm solar flux is up a bit lately. The latest prediction has the usual quiet planetary A index at 8 for April 3-4, then back to 5, then 15 and 10 for April 9-10. Predicted solar flux is 71 for April 3-9, then back to 70 for April 10-22 then to 72 for April 23 and into May. Sunspot numbers for March 26-April 1 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 69.1, 71.6, 70.6, 70.9, 70.9, 71.2 and 70.8 with a mean of 70.7. The estimated planetary A indices were 7, 4, 4, 5, 4, 4 and 4 with a mean of 4.6. The estimated mid-latitude A indices were 6, 2, 2, 4, 3, 2 and 3 with a mean of 3.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Thomas Carew's "The Spring" <http://www.poetry.com/greatestpoems/poem.asp?id=508>.

==> IN BRIEF:

* This Week on the Radio: This week, the NCCC Sprint Ladder is April 3. On April 4-5, check out the Montana QSO Party, the Missouri QSO Party, the QCWA Spring QSO Party, the ARCI Spring QSO Party, the SP DX Contest and the EA RTTY Contest. The 144 MHz Spring Sprint is April 6 (local time). Next week is the NCCC Sprint Ladder on April 10 and the PODXS 070 Club PSK 31 Flavors Contest on April 11. On April 11-12, look for the Georgia QSO Party, the Yuri Gagarin International DX Contest and the JIDX CW Contest. The SKCC Weekend Sprint and the UBA Spring Contest (SSB) are April 12. The Low Power Spring Sprint is April 13. The 222 MHz Spring Sprint is April 14 (local time) and the NAQCC Straight Key/Bug Sprint is April 15. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL

Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 5, 2009, for these online course sessions beginning on Friday, April 17, 2009: Amateur Radio Emergency Communications Level 2; Antenna Modeling, and Radio Frequency Propagation.

Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Byron Black, W4SSY, Wins March QST Cover Plaque Award: The winner of the QST Cover Plaque Award for March is Byron Black, W4SSY, for his article "The W4SSY Spudgun." Congratulations, Byron! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the April issue by Thursday, April 30.

* 2009 National Hurricane Conference Has Amateur Radio Focus: The 31st Annual National Hurricane Conference <http://www.hurricanemeeting.com/> will take place April 6-10 in Austin, Texas. This annual event brings together many disciplines in the Emergency Management field to address tropical events that impact the United States. According to ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, the conference will feature several Amateur Radio presentations catering to Amateur Radio operators, Emergency Management and Non-Governmental Organization (NGO) officials. "This will be Amateur Radio's most significant presence at a National Hurricane Conference," Dura said. On the afternoon of Tuesday, April 7, Dura said an Amateur Radio Training Workshop will be offered free of charge to Amateur Radio operators, Emergency Management and NGO staff and volunteers attending the Conference. "This has been a yearly tradition at the conference," he said. "In addition, on Wednesday morning, April 8, an Amateur Radio

Workshop on Situational Awareness and Disaster Intelligence, as well as an Amateur Radio 'Rap Session,' will be held. For the Wednesday presentation, the conference registration fee is required."

* ARRL to Close in Observance of Good Friday: ARRL Headquarters will be closed in observance of Good Friday on Friday, April 10. There will be no W1AW bulletin or code practice transmissions that day. "The ARRL Letter" will be posted a day early on Thursday, April 9; there will be no "ARRL Audio News" on April 3 or April 10. ARRL Headquarters will reopen Monday, April 13 at 8 AM Eastern Daylight Time. We wish everyone a safe and enjoyable holiday weekend.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all

automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

97. What are these carriers in CW portion of 20M?

Newsgroup: rec.radio.amateur.moderated
Date: 2009-04-08 17:28:02 UTC
From: Bert Hyman <bert@iphouse.com>
Message-ID: <Xns9BE7B1A422093VeebleFetzer@85.214.105.209>
Source record: 2107

I was off the air for about 3 months during a basement remodel and when I got back on the air a few weeks ago I noticed a handful of constant carriers in the CW portion of 20M. Since I'd relocated two PCs at the same time, I was afraid that I'd introduced some sort of local QRM, but I still hear them after shutting down both PCs and all peripherals.

They drop greatly in strength when I switch to my 40M dipole and disappear when I switch out the antenna altogether.

As near as I can measure, they're at 14001.690, 14029.400, 14029.870, 14030.540 and 14032.230.

The carriers at 01.690 and 32.230 are keyed seemingly randomly, and I sometimes hear weak USB on 01.690.

Anybody have an idea of what I'm hearing?

--
Bert Hyman W0RSB St. Paul, MN bert@iphouse.com

Birdies around 14030kHz often originate from Ethernet devices. I
can hear three different carriers around that frequency here (all
at slightly different beats), one disappeared when I switched the
other computer here off. If your shack is connected to the
outside world with an Ethernet cable, that'd be the first thing
I'd check.

Interesting.

I can't help you much with those, I fear, but wonder if you've tried powering the whole house off and running the rig off battery. If doing that causes the carriers to disappear, they're being generated in your house somehow, and the next step is to power up the house breaker-by-breaker, device-by-device, until the carrier(s) come back, at which point you know the source(s) and can try some RF isolation on them.

If they're being generated _outside_ your house, that makes things rather more interesting. It could be a partially-rectifying joint in power lines, or in your phone or TV cable(s), or maybe even in a chain-link fence. I've got something of that sort doing really nasty things with a very nearby MW broadcast station, and have been tracking it a bit at a time for months.

During ice storms a year ago, I found that some of the wall-warts in the living room were putting out a lot of hash (nasty little switchers with nowhere near enough RF suppression). Other folks have had similar experiences with light dimmers, fluorescent ballasts, and whatnot.

Good luck and very 73, de

That was it.

As soon as I read the first line of your post, I realized that the
4-port switch was still powered up during my testing. It's not plugged
into either power strip since both PCs (and the rig) are connected to
it.

As soon as I unplugged it, all the birdies, including the one at
14001.69, went away.

Now that I know where they come from, I'll have to figure out what to do
about them.

Time: 1:30 pm
Amateur Radio License Test

Basement meeting room
Public Safety Building
318 E. 5th St.
Muscatine, IA 52761

FCC License Exams for all classes.
Preregistration requested.

For more information, contact Jerry Schroder Jr., KC&#65533;WWV
Phone (563) 607-0793
E-mail KC&#65533;WWV@arrl.net

* Examinees must bring current FCC form 605 or obtain one on site.
* Examinees must present personal picture ID or two other forms of ID
(no exceptions).
* If licensed, bring original and photocopy of current FCC license and
/ or CSCEs.
* Exam fee is $15.00.

We will monitor the 146.910- Repeater to help with directions.
We hope to see you and your friends there.

IIRC, the team must keep copies of the ID documents, so I suggest you
ask applicants to bring copies with them.

Geez... What DO I do about them?

A google search didn't turn up anything particularly useful, although I
didn't exhaust all combinations of search terms.

The signals are obviously radiated, since changing or removing the
receive antenna dramatically changes the strength.

Turning devices on and off and unplugging cables makes certain sets of
birdies come and go, but that might be a red herring since I'd bet that
the interfaces shut down on their own when the connectors are pulled.

Assuming that the signals are radiating from the cables and not the
devices, would ferrite chokes be of any use here?

They'd have to be the clamp-on variety, since all the cable runs have
large connectors on both ends.

You might try relocating the switch or swapping the power supply. I had trouble with a wall wort that only blew noise when it was loaded. Try double shielded coax in the shack. Try Cat 5E or Cat 6. Ethernet shouldn't radiate very far at all, and any attempts to filter it will thwart your bandwidth.

According to my VE manual, the team does not need to have copies of the IDs,
we just need to see two pieces of ID. The only thing we need copies of are
the license fro those who are upgrading an existing license.

==> ITALIAN HAMS RESPOND AFTER EARTHQUAKE

An earthquake that registered between 5.8 and 6.3 magnitude struck the
town of L'Aquila -- the capital of Italy's Abruzzo region, about 65
miles northeast of Rome -- early on the morning of April 6. News reports
say the quake has killed more than 250 people, with at least 50,000 left
homeless. Cluster spots reported that two HF frequencies -- 7045 and
3640 kHz -- were being used for emergency communications. Local hams
also reported that various VHF frequencies were also being used.

According to IARU Region 1 Emergency Communications Coordinator Greg
Mossop, G0DUB, the 7045 kHz frequency is being used to link local rescue
and coordination centers with Protezione Civile in Rome. "Cell phone
```

capacity in the area is being increased," he said, "and a second wave of volunteers and workers are being prepared to go to the area to take over from the first responders." He asked that 7045 kHz be kept clear as the Net remains active and stated that "it is now more important [to keep the frequency clear now] that a formal Net seems to exist."

Alberto Barbera, IK1YLO, of Ponderano (near Milan), told the ARRL hams are operating in VHF and UHF locally "because the area involved is not that large. About 30 villages around L'Aquila are involved. Our Dipartimento Protezione Civile does not need additional help at this moment; perhaps it will be necessary in a second step, we will see."

Fabrizio Villanova, IK6GTF, of Pescara (about a 90 minute drive from L'Aquila), said that several hams from his town and from Chieti are providing communications support after the quake. "We are using Pescara's repeaters to maintain contacts with hams in L'Aquila and to coordinate the activity of Pescara/Chieti's hams," he told the ARRL. "We operate from an institutional building especially equipped for emergencies where, joined with the police, fire department, Red Cross and other public services, all committed to provide aid. Our national emergency service is working in a very good manner and all activities seem to proceed well."

Rino Odoardi, IZ6BMP, of Alanno Stazione (near Pescara), told the ARRL that he and other hams from the Pescara section of the Associazione Radioamatori Italiani (ARI) "are in L'Aquila, involved in Civil Defense activities with officials in L'Aquila. The earth is still shaking now -- I hope it will finish soon!" ARI <http://www.associazioneradioamatoritaliani.it> is Italy's IARU Member-Society <http://www.iaru.org>.

The death toll reached 260 people, including 16 children, after rescuers pulled more bodies from the rubble in the days after the earthquake. Italian Prime Minister Silvio Berlusconi said in total 28,000 had lost their homes, with 17,000 now living in tents and the rest in free hotel rooms or staying with family. Aftershocks from Italy's worst quake in three decades lasted until April 8 in mountainous Abruzzo and were felt in Rome. According to Reuters News, Berlusconi vowed to build "a whole new town near L'Aquila."

==> NEW ARRL ADVANCED EMERGENCY COMMUNICATIONS COURSE IN THE WORKS

Over the past several months, ARRL staff have been reviewing the Amateur Radio Emergency Communications online course program <http://www.arrl.org/cep/> and have decided to combine two of the three Emergency Communications courses. According to ARRL Education Services Manager Debra Johnson, K1DMJ, the review included a critical examination of the course content, as well as methods of course delivery and interrelationships with government organizations. Johnson said that the decision was made to revise the Level 3 course to become a new Advanced Emergency Communications Course; this, she said, will replace both the current Level 2 and Level 3 courses. The new advanced course is set to

be released during the last quarter of 2009.

"Our aim is to develop professional level courses which are widely accepted by other organizations for the emergency communication component of Amateur Radio," she said. "We are investigating requirements that the Department of Homeland Security (DHS) is currently putting in place for approved courses, as well as other possibilities to develop emergency communications training that meets the emerging training needs surrounding emergency communications."

Students who have previously taken the Level 2 course will need to have the new advanced course to complete the current Amateur Radio Emergency Communications training program, Johnson explained. "Those who have completed the Level 1 course may progress directly to the advanced course when it is made available; this new course contains content formerly included in the former Level 2 and 3 courses." Johnson said that there are no current plans to change the Basic Level 1 course and that that course will continue to be offered in its current format.

With the combining of the Level 2 and 3 courses, Johnson said that anyone who had signed up for the Level 2 course set to begin April 17 may apply for a refund. Any scheduled field instruction of the Level 2 content, as well as Level 2 exam sessions, will also be suspended. "We will honor exam sessions that have been previously scheduled and award Level 2 certificates for any exams successfully completed up to May 31," she said.

"Our training program mandate is to provide the training that ham radio communicators need to be prepared to serve our communities in time of communications emergencies," Johnson explained. "This consolidation of program content will streamline the delivery of the training and apply volunteer and administrative support resources more effectively."

==> FCC DENIES MICHIGAN HAM'S REQUEST FOR RULING

In October 2007, Christopher Kaczmarek, KB8MLC, of Saginaw, Michigan, petitioned the FCC for a ruling regarding the installation of his Amateur Radio antenna. Kaczmarek told the FCC that he received a notice from the manager of his mobile home community stating the antennas were not allowed and asked for "a ruling from the Commission recognizing [his] right to an Amateur Radio antenna structure." On April 6, 2009, the FCC denied Kaczmarek's request for a ruling in his favor, based on the fact that PRB-1 protections do not extend to private homeowners' agreements
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-774A1.pdf>.

The Commission agreed with Kaczmarek that Section 97.15 of the Commission's Rules provides that "state and local regulation of antenna structures must not preclude amateur service communications, must reasonably accommodate such communications, and must constitute the minimum practicable regulation to achieve the state or local authority's legitimate purpose." In its letter to Kaczmarek, the FCC pointed out

that it has not, however, extended this policy to regulations promulgated by private parties.

Saying that it has considered this same question twice before, the FCC told Kaczmarek that it "chose not to preempt private land use regulations that restrict the installation of antennas and associated support structures used by Amateur Radio stations. As agreements between private parties are voluntarily established and freely entered into, the Commission is hesitant to interfere with them unless it is shown that private agreements will seriously disrupt the federal regulatory scheme."

==> SEATTLE HOSTS AMATEUR RADIO EMERGENCY COMMUNICATIONS SEMINAR

More than 250 hams and emergency communications professionals enjoyed two days of focused programs and socializing at the 11th Annual Communications Academy in Seattle over the weekend of April 3-4 <http://www.commacademy.org/>. Held at South Seattle Community College in West Seattle, the conference drew attendees from across the country, mostly from the Pacific Northwest: Washington, Oregon and British Columbia. "The organizing committee, led by Marina Zuetell, N7LSL, is to be commended for putting together this useful annual event that continues to get better each year," said ARRL Contributing Editor and conference attendee H. Ward Silver, N0AX. "The beginner's track was created by Brian Daly, WB7OML, who unfortunately was unable to attend the conference due to some emergency situations at work. He recruited a great team of individuals to take on teaching the five different segments."

According to Silver, the conference is designed to interest everyone from brand new hams to seasoned EmComm veterans -- even emergency management and planning professionals. The breakfast keynote speakers were King County (Washington) Emergency Management Director Robin Friedman and ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD. Silver said the program was organized roughly along three tracks: Introduction to Amateur Radio for new hams; technical topics of interest to EmComm operation, and reports or training programs with EmComm themes or subjects.

"The track for brand-new hams was particularly well received," Silver said." Hosted by Scott Currie, NS7C, the programs began Saturday morning with 'Getting Your First Radio' and concluded Sunday with 'I Get It Now!Basic EmComm Equipment Needs.' This is no substitute for hands-on Elmering and training, but it certainly helps the ham with a brand new Technician license in need of some guidance."

Silver noted there were two technical programs on digital voice modes, such as D-STAR <http://www.dstarinfo.com/> and Project 25 <http://www.project25.org/>. "The presenters guided the audience through some of the intricacies of digital voice technology, comparing and contrasting the strengths and weaknesses of each," he said. "Microsoft's Groove communications technology

<http://office.microsoft.com/en-us/groove/HA101656331033.aspx> was explored as a tool for EmComm teams along with the use of D-RATS <http://www.d-rats.com/wiki/> -- a software package that makes use of D-STAR's low-speed data mode. An 'Ask the Doctor' question-and-answer session proved lively with questions ranging from 'how to' about antennas through the regulations regarding identification on digital voice modes. Staff from a local wireless store gave a standing-room-only presentation on installing mobile radios of all sorts in vehicles."

Communications Academy also offered planning and training programs, including such seminars on how to recognize haz-mat situations through "windshield surveys," ways to provide neighborhood-level communications, methods to develop situational awareness and NOAA weather. "The most difficult thing about the Communications Academy," Silver said, "is deciding what programs to give up in order to see the ones you want!" One course offered was on the Emergency Alert System. According to Zuetell, the system is not an Amateur Radio system but is "a Federal program used by emergency management officials that utilizes the public broadcast system to send targeted local alerts out to the public. The thrust of the presentation was to begin training Amateur Radio operators to program the equipment on a regular basis to keep it current and correct."

One of the highlights of the Communications Academy is an opportunity to see the local EmComm organizations demonstrate their mobile communications facilities. This year, nearly a dozen vehicles from small cargo vans to full-sized trucks were lined up outside. "There was plenty of time and excellent weather for attendees to tour the vehicles, with radios spanning the low HF bands through microwave," Silver said. "While not every club or team is fortunate enough to have its own mobile radio center, you can't help but come away with ideas from improving any EmComm station."

The building competition, wherein individuals submit examples of their ability to create EmComm-related radio packages, is a recent addition to the programs at Communications Academy. Silver said that this year's theme was to build a portable radio system that could operate from portable dc power and on as many EmComm-related bands and modes as possible. "Each entry was judged by both a panel of judges and by the attendees, with the winning score a combination of both," he said. "Like the communication vans, even if you didn't have such a package yourself, it was impossible not to walk away thinking of incorporating some of the ideas at home or in your mobile station."

Silver said that one of the highlights of the Saturday morning "Donuts and Danish" introductory remarks each year is learning how many millions of dollars worth of volunteer time and thousands of driven miles are contributed to the public good by ham radio operators, working together to prepare and be ready: "As the news reports show, it's never very long before the next opportunity to serve, no matter where you live!"

==> FCC, INDIANAPOLIS POLICE DEPARTMENT ADDRESS UNLICENSED OPERATIONS

In response to an investigation by the FCC, the Indianapolis Metropolitan Police Department (IMPD) <http://www.indy.gov/eGov/IMPD/Pages/home.aspx> has taken action to prevent further use of Amateur Radio frequencies by unlicensed officers. Any Amateur Radio equipment in the cruisers of unlicensed officers was removed by order of IMPD Chief of Police Michael T. Spears.

According to the FCC, some IMPD officers were using the radios to supplement their normal communications channels, including using amateur frequencies for tactical communications during drug surveillance. As part of its inquiry, the FCC reminded the IMPD of the large number of tactical channels available on a secondary basis to police departments from the public safety pool of frequency allocations.

"We are pleased that IMPD has put a stop to this unlicensed activity," said ARRL Regulatory Information Manager Dan Henderson, N1ND. "The investigation by the FCC, coupled with the expedient cooperation and correction of the problem by the IMPD, eliminates a situation that had raised serious concerns in the amateur community."

The FCC stated they would monitor the situation and follow-up appropriately if needed.

==> NEW SECTION MANAGER APPOINTED IN SOUTH DAKOTA

Scott Rausch, WA0VKC, of Piedmont, has been appointed Section Manager of the ARRL South Dakota Section starting April 7. He will serve the balance of the term of Rich Beebe, N0PV; Beebe passed away on March 16 <http://www.arrl.org/?artid=8834>.

According to the Rules and Regulations of the Field Organization, when a vacancy in the office of Section Manager occurs between elections, the position is filled by appointment. Membership and Volunteer Programs Manager Dave Patton, NN1N, in consultation with Dakota Division Director Jay Bellows, K0QB, made the appointment effective Tuesday, April 7.

Rausch has served as a South Dakota Assistant Section Manager since 2003; he is also an Emergency Coordinator and an Official Emergency Station within the Field Organization. His term of appointment as Section Manager continues through March 31, 2010.

==>SOLAR UPDATE

Tad "The golden weather greeting on the Sun-warm hills" Cook, K7RA, this week reports: Recently, the 45 day forecast for daily solar flux and planetary A index has consistently predicted a solar flux at 70 for every day into the future. The last of these was on March 24. Then on March 25, the prediction was for the solar flux to be at 72 for March 28-31. That changed on March 26, showing solar flux at 72 on March 28-April 2. On March 27, the solar flux rose to 72 (actually 71.6) and the forecast was the same, but extended the 72 number through April 3. Solar flux has not reached 72 since then, but the March 28 forecast extends the reading of 72 through April 4. On March 29, it extends to April 5, and on March 30, to April 6. On March 31, it extends 72 until

April 9 -- three additional days -- but it also shows a new period with a flux of 72, April 23-May 6. April 1 is the same, but April 2 the flux is dropped to 71 for April 3-9. The April 3 prediction gives up on the slightly higher flux values for the near term, but still predicts 72 for April 23-May 6. The forecast remains the same until April 7, when the 72 flux for April 23-May 6 is shortened to April 23-29. So it appears that even these near term predictions for a very small increase in activity are continually revised downward. In the April 8 forecast, it shows the planetary A index for April 9-10 at 15 and 8, then dropping to 5 until April 21. Early on April 9, we are experiencing the effects of a solar wind stream, and planetary K index rose from 3 to 4 at 0300 UTC. Sunspot numbers for April 2-8 were 0, 0, 0, 0, 0, 0, and 0 with a mean of 0. The 10.7 cm flux was 70.6, 70.4, 70.1, 70.4, 68.8, 70.2 and 70 with a mean of 70.1. The estimated planetary A indices were 3, 2, 2, 4, 3, 2 and 5 with a mean of 3. The estimated mid-latitude A indices were 0, 2, 0, 3, 2, 2 and 4 with a mean of 1.9. Geophysical Institute Prague predicts quiet to unsettled conditions April 10, quiet April 11-14, quiet to unsettled April 15 and unsettled April 16. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Lucy Maud Montgomery's "Spring Song" <http://www.poemhunter.com/poem/spring-song-2/>.

==>IN BRIEF:

* This Week on the Radio: This week is the NCCC Sprint Ladder on April 10 and the PODXS 070 Club PSK 31 Flavors Contest on April 11. On April 11-12, look for the Georgia QSO Party, the Yuri Gagarin International DX Contest and the JIDX CW Contest. The SKCC Weekend Sprint and the UBA Spring Contest (SSB) are April 12. The Low Power Spring Sprint is April 13. The 222 MHz Spring Sprint is April 14 (local time) and the NAQCC Straight Key/Bug Sprint is April 15. Next week is the NCCC Sprint Ladder on April 17. Be sure to check out the Holyland DX Contest, the TARA Skirmish Digital Prefix Contest, the ES Open HF Championship and the Feld Hell Sprint on April 18. The Michigan QSO Party, the Ontario QSO Party and the YU DX Contest are April 18-19. The Run for the Bacon QRP Contest is April 20. The SKCC Sprint and the 432 MHz Spring Sprint are April 22 (the 432 MHz Sprint is local time). All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 19, 2009 for these online course sessions beginning on Friday, May 1, 2009: Amateur Radio Emergency Communications Level 1; Radio Frequency Interference; Antenna Design and Construction; Technician License Course; Analog Electronics, and Digital Electronics.. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Good Friday: ARRL Headquarters will be closed in observance of Good Friday on Friday, April 10. There will be no W1AW bulletin or code practice transmissions that day. "The ARRL Letter" will be posted a day early on Thursday, April 9; there will be no "ARRL Audio News" on April 10 or April 24. ARRL Headquarters will reopen Monday, April 13 at 8 AM Eastern Daylight Time. We wish everyone a safe and enjoyable holiday weekend.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I looked all through my ARRL/VEC VE Manual
http://www.arrl.org/arrlvec/vemanual/vemanual2008.pdf
and could find no reference to copies of ID documents. As Dee said,
ARRL/VEC requires only copies of ham licenses and CSCE's. Copies of
ham licenses are optional, if the candidate has lost his license
document; a timely printout from a ham license data server, such as
the FCC ULS or qrz.com, is sufficient proof.

I heard that in some states it is illegal to copy driver's licenses.
But I cannot confirm this.

Regarding the number of ID documents, the ARRL/VEC says we need one photo or two non-photo ID's. Here's the relevant section of the VE Manual:
The candidate must present a legal photo ID. This requirement is usually met with a driver's license, but it can be a passport or other legal identification card with the candidate's photo on it. When no photo ID is available, the candidate must present any two of the following:
ï¿½ Non-photo ID/driver's license (some states still have them);
ï¿½ Social Security Card;
ï¿½ Birth certificate (must have the appropriate seal);
ï¿½ Minor's work permit, school report card, school ID card or library card;
ï¿½ Utility bill, bank statement or other business correspondence that specifically names the person; or
ï¿½ Postmarked envelope addressed to the person at his or her current mailing address as it appears on the Form 605.

RADIO CRIME: FLORIDA HAM MURDERED IN ROBERY OF HIS HOME

A Florida ham radio operator has been killed by his neighbor in what appears to be a murder and rob crime. Amateur Radio Newsline's Mark Abramovich, NT3V, is at our East coast bureau with more:

--

Authorities say less than a day before he was to celebrate his 57th birthday, Sterling Howell, KG4KIU, a widower who lived alone in a trailer home in Glenn St. Mary was brutally stabbed to death by his neighbor.

Investigators in Baker County at the northeastern tip of Florida say Howell was stabbed by 25-year-old Aron Fox the evening of April 1st.

Baker County Sheriff Joey Dobson told local media outlets Fox, who had lived next door with his mother, stabbed Howell several times in the chest and head area.

Dobson said it was believed the murder weapon was a knife or some other very sharp object, which hasn't been recovered.

The sheriff says there was evidence of a struggle and defensive wounds on the body, which was found outside the trailer home covered by a blanket.

He said the attack was so savage that one of Howell's thumbs was nearly taken off.

Investigators say the apparent motive for murder was money.

Dobson says Fox's mother overheard her son on a cell phone telling someone he was going to get Howell's banking information.

She told authorities she tried to call Howell to warn him just as her son left the house wearing gloves, but she couldn't reach Howell.

Investigators say Fox took Howell's pick-up truck and later abandoned it miles away.

They say his sister helped deputies catch Fox and allowed authorities to take him into custody without incident.

Authorities say the investigation is continuing and they are trying to find the person with whom Fox was engaged in that telephone conversation on the night of the murder.

North Florida hams say Howell was active on local repeaters and was a regular on the South Cars net on 7.251 Mhz.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Aron Fox is expected to be charged with capital murder. If convicted he would face the death penalty or life in prison without the possibility of parole. (ARNewsline(tm) from various published reports)

**

RESCUE RADIO: HAMS AID IN WAKE OF ITALY QUAKE

Amateur radio may be assisting in the aftermath of a powerful earthquake struck Italy early on Monday, April 6th. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

According to several sources and some DX cluster reports, 3.640 MHz and 3.6343.5 on 75 meters along with 7.045 MHz on 40 are being used as emergency net frequencies into and out of the disaster area. But Alberto Barbera, IK1YLO, who is the IARU National Emergency Communications Coordinator for Italy says he is not aware of any nets operating on behalf of the emergency communications groups on the High Frequency bands. He believes that any such operation is being done on an individual basis.

Bob Josuweit, WA3PZO, is CQ Magazine's outgoing Public Service editor. He relays a report from IARU Region 1 Emergency Communications Coordinator Greg Mossop, G0DUB. Mossap says that Barbera is trying to coordinate various groups in light of the recent shutdown of Italy's national emergency communications organization. Bob says that IK1YKO has stated that practically all repeaters are still in operation, and that much of the region's cellphone infrastructure is intact as well.

The magnitude 6.2 quake hit Italy very early in the day killing at least 240 people, leaving thousands of people without homes and causing damage to many ancient buildings. The quake's epicenter was in a town of L'Aquila, about 70 miles from Rome. Numerous important churches and castles, some more than 700 years old, partially collapsed in the quake. Thousands of newer homes were leveled as well.

For the Amateur Radio Newsline, I'm Bill Pasternak, Wa6ITF, reporting.

--

As we go to air rescue efforts are still reported as ongoing and hams world-wide are being asked to keep the frequencies of 3.640, 3.6343.5 and 7.045 MHz clear until further notice, even if its all unofficial at this time. (WA3PZO, CQ, other reports)

**

RESCUE RADIO: CANADIAN HAMS ACTIVATED IN RED RIVER EMERGENCY

Minnesota and North Dakota hams were not the only ones activated when the Red River crested above flood stage almost two weeks ago. Their counterparts north of the U-S and Canadian border went on high alert after serious ice jams on the river north of Winnipeg caused several communities to declare state of emergency.

East St. Paul, West St. Paul, St. Andrews and St. Clements were all being impacted by rising water. St. Clements Emergency Coordinator Dave Place VE4PN, reported that ARES was activated and its members staffed the local Emergency Operations Center. This continued even after reports advised that the ice jam had been broken using explosives and that the water level in hardest hit areas was dropping. The hams stayed at the EOC because those communities were still at risk.

And it was due to the rapidly changing conditions that Manitoba emergency management went ahead with its planned opening of the Provincial Emergency Operations Center. Meantime, Jeff Dovyak, VE4MBQ, the Capitol Region District Emergency Coordinator advised that Winnipeg ARES had activated and had provided staffing to the Manitoba Emergency Management radio room. Plans were also in place to provide emergency communications to town and cities on the rivers edge down to the Canadian border with the United States.

Meantime on this side of the border, Mark Johnson, KC0SHM, President of the Red River Radio Amateurs reports that although operations are winding down in the Fargo North Dakota and Moorehead Minnesota areas, the flood threat along the Red River remains for later in April. (RAC, ARRL, others)

**

RESCUE RADIO: TEXAS TOWN WANTS HAM RADIO

Groves, Texas, says that ham radio operators are "invaluable" in keeping communication flowing after hurricanes. Because of this the Groves city manager D.E. Sosa says that he hopes to see better antennas on Groves water towers by the 2009 hurricane season.

According to the Port Arthur News, the Groves City Council members voted Monday, March 30th to research entering into a contract that would be of no cost the city. Chris Boone, WB5ITT, explained that the antennas could go on top of towers or clamp on to the climb ladder. Manager Sosa said he hopes that the process could be completed in about two months. (Port

Arthur News)

PUBLIC SERVICE: HAM RADIO HELPS IN TEXAS ROBBERY ARRESTS

Two men have been arrested in Texas and charged with robbery. This, as a result of the combined efforts of an observant victim, a ham radio operator and state and county law enforcement officers.

According to news reports the pair were charged with robbery after punching a woman in the mouth while in the process of burglarizing a campsite. The two made off with about $800 in fishing gear.

Figuring that the robbers might return to the lake in search of more victims authorities circvulted information on the suspects. An unnamed ham radio operator reportedly saw a suspicious vehicle and gave police its license number. A Game Warden found the vehicle parked in front of a residence near the lake and held its occupants until police arrived to take the suspects into custody. The two matched the description the victim had given. (Paris Texas News)

HAM RADIO IN SPACE: KE7KDP, KE5AIT AND RA3DT RETURN FROM THE ISS

Two members of the Expedition 18th International Space Station crew and a space tourist on his second trip to the I-S-S returned to Earth at 2:16 a.m. C-D-T on Wednesday, April 8th.

Landing safely in southern Kazakhstan were NASA astronaut Mike Fincke, KE5AIT, Russian cosmonaut Yury Lonchakov, RA3DT and spaceflight participant Charles Simonyi, KE7KDP. The three made the return trip on board a Russian built Soyuz spacecraft.

The Expedition 18 crew members undocked from the I-S-S at 10:55 p.m. April 7. The deorbit burn to slow the Soyuz and begin its descent toward Earth began at 1:24 a.m. on April 8th. The landing was moved to a more southerly site because of poor landing conditions at the original site.

Charles Simonyi, KE7KDP, spent 11 days on the I-S-S under a commercial agreement with the Russian Federal Space Agency. During his mission he was on the air as much as possible using the ARISS station that's a permanent part of the I-S-S. Simonyi is also the only paying spaceflight participant to visit the station twice with this trip reportedly costing him close to

$35 million dollars.

Meantime, astronaut Mike Fincke, KE5AIT, now officially holds the record for the most ARISS contacts on a single expedition as well as the most for multiple missions. During his stay on board the International Space Station, Fincke logged a total of 426 space to earth school contacts by an expedition and 22 ARISS supported terrestrial contacts. Because of this, Expedition 18 has now set the record for the greatest number of ARISS contacts by any single ISS expedition. (NASA, otrhers)

**

ON THE NET: APRIL FOOLS JOKE CONVINCES SOME HAMS THAT AMATEUR RADIO WAS BANNED

An April Fools joke posted at the radiobanter dot com website has some of the more gullible hams around the nation believing that a California county has banned ham radio over health issues. Bruce Tennant, K6PZWW, has the details:

--

The article titled "Silenced Hams Mean Safer County" claims that San Luis Obispo county supervisors took -- and we quote -- "drastic and unprecedented by passing an ordinance that would prohibit amateur radio operators from operating their transmitting stations."

The article claims that the reason the measure was put in place to eliminate what officials said were health risks associated with transmitters located close to children. It also claims that the action is aimed at addressing a recent Stanford University study that showed a correlation between ham radios and attention deficit disorder and hyperactivity in children, as well as nagging reports of interference caused by radio hams operating their high-powered transmitters in residential neighborhoods.

It was easy to prove the joke status of the story thanks to a few searches using Google. First, there is no reporters by-line to the article. No information on who wrote it. Then the so-called Stanford University study cited is non existent. Third is the posters claim that the story originally appeared in the April 1st edition of the Los Angeles Press-Telegram newspaper, but that also is totally erroneous. Lastly, when you read the entire story it becomes apparent that it contains items that the average newspaper reporter likely has never heard of including mention of PRB One.

The problem is that once posted on the Internet these stories seem to take on a life of their own. Because of this, we expect to see this one raising the hair on the backs of some hams for a long time. This, even though all it was trying to say was "April Fools" albeit not everyone is finding it to be all that funny.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.

--

And this just in. In response to numerous queries, including some from more than a few very irate hams, Cherie Aispuro, the San Luis Obispo County Legislative Assistant for District 2 has sent out the following statement.

Quote: "I want to tell you that the Board of Supervisors of San Luis Obispo have not and do not have anything scheduled to adopt an ordinance that would ban or prohibit amateur radio operators." -- end quote.

The item has now been removed from the radiobanter site but it's still making the rounds on several other sites and blogs including QRZ.com. See http://forums.qrz.com/showthread.php?t9547 (Tnx WA6ILQ)

**

ENFORCEMENT NEEDED: ANOTHER PILFERED CALL

Another case of a stolen callsign. Over the last few weeks Charles Wilmott, M0OXO, of Yorsshire in the U-K has received reports that his short contest call of M0X has been used by an unknown operator including in contests.

Recently, the M0X call was been used along with a regional designator for the Island of Guernsey. And as a result Wilmott has received several requests for QSL cards that he's not about to respond to. This is because he has never operated from Guernsey; at least not yet. (Southgate)

**

PUBLIC SERVICE: BUTTER, EGGS AND HAM (RADIO)

Radio amateurs in Northern California will be taking part I the upcoming City of Petalum's Butter And Egg Day Parade on April 25th. According to a note from KA6OPN, special event station K6P will be on the air to commemorate this years event. More can be found on Page 88 of the April edition of QST Magazine or on-line at www.repairguy.net/acs/index.html) (KA6OPN)

**

HAM HAPPENINGS: EMCOMM EAST 2009 SCHEDULED

You have heard a lot lately about the Emcommwest ham radio convention in Reno Nevada. Now comes word that EmComm East will be held on October 3, 2009, in Rochester, New York. Presentations on the agenda so far include such topics as managing large events, remote operations, N-V-I-S Emergency communications and much more. For more information, visit the shows website at www.emcommeast.org or drop an e-mail to info (at) emcommeast (dot) org (WY7Q)

**

HAM RAPPENINGS: GERMANY'S HAM RADIO SHOW GETS DISCOUT FLIGHTS

If you live in London England or are going through London on your way to the 2009 Ham Radio convention in Friedrichshafen, Germany, have we found a deal for you. The Southgate News repots that European budget air carrier Ryanair will be providing flights between London and Friedrichshafen just 10 United Kingdom Pounds each way. 10 Pounds is about $15 in U-S dollars.

The trip to Friedrichshafen departs London Stanstead Airport on June 25th at 12:15 in the afternoon with a 14:50 aerival in Germany. The return flight leaves Friedrichshafen on Junre 27th at 16:05 and arrives back in London at 16:45. All times are local. That price is hand luggage only and assumes you don't want travel insurance.

So why this deep discount? While the airline has not given a reason but we suspect that its economy related. We can tell you that Ham Radio in Friedrichshafen is one of the worlds largest amateur radio exhibitions and the largest on the European continent. This year it takes place June 26th to the 28th with 17,000 or more visitors expected. With Ryanair flies Boeing 737-800 series aircraft and that means the airline will be transporting about 140 hams to or from this show.

More about the flight discounts is is on-line at www.ryanair.com and the Ham Radio convention web page is
www.hamradio-friedrichshafen.de/html/e (Southgate)

**

HAM RADIO PROMOTION: ARRL RELEASES FD VIDEOS

New videos promoting Field Day and amateur radio technology are now available from the ARRL. Both are short Public Service Announcements better known as P-S-A's.

According to the League's Public Relations Manager Allen Pitts, W1AGP, the Field Day PSA is meant to be posted on Web sites, added to e-mails and shared via the Internet. . The other which spotlightings amateur radio technology is meant for broadcast and cable TV.

The two spots were an all volunteer effort on the part of ARRL's national Public Relations Committee. This included Newsline's Don Carlson, KQ6FM, who is the voice heard on the Field Day PSA. Its available for download from the ARRL's Field Day Web page. The technology PSA is targeted for commercial TV uses. As such it is a high resolution, 43 megabyte MOV type file thast can also be downloaded from the ARRL. Because this version is meant for professional use, it has a formal 60 second lead-in followed by the 30 second PSA. A very low resolution preview version not meant for distribution.
is also available. (ARRL)

**
THE SOCIAL SCENE: MOVIMIENTO RADIAL DE PUERTO RICO ON APRIL 18

Turning to the ham radio social calendar, the Puerto Rico Radio Movement or Movimiento Radial de Puerto Rico will be sponsoring a special ham radio activity day on April 18th. This, for those who want to learn about

Amateur Radio.

During the day there will be demonstrations of various digital modes used by ham radio operators. The afternoon hours will see a special event station WP4NPC take to the air to commemorate World Amateur Radio Day 2009. For more information please contact Fernando Reyes, WP4KS, by e-mail to wp4ks(at) prtc (dot) net

**

THE SOCIAL SCENE: BELTON TEXAS ON APRIL 18

The Belton Ham Expo is slated for Saturday, April 18th at the Bell County Expo Center in Belton, Texas. In addition to tailgate sales and vendors, attendees will also be able to upgrade by taking their ham radio tests at the event. Lots more on line about this one at www.beltonhamexpo.org. (Ham Expo)
**

THE SOCIAL SCENE: MT.BEACON ARC HAMFEST APRIL 26

And the Mount Beacon Amateur Radio Club is holding its annual Hamfest on Sunday April 26th. The venue is Tymor Park in the town of Unionvale. That's in central Dutchess County, New York. The gate opens at
8 a.m, Eastern Daylight time. More is on-line at www dot wr2abb dot org. (MBARC)

**

NAMES IN THE NEWS: KI6SN NAMED NEW PUBLIC SERVICE EDITOR OF CQ

CQ Magazine has announced that Richard Fisher, KI6SN, of Riverside, California, has been named the new Public Service Editor of CQ Amateur Radio magazine. Fisher has been a professional journalist for 35 years, working in various capacities for daily newspapers on both the east and west coasts. He is also a prolific writer on amateur radio matters, writing the "Washington Beat" column for Popular Communications and the "Trail-Friendly Radio" column for WorldRadio Online. He succeeds Bob Josuweit, WA3PZO, whose final column will appear in the May issue of CQ. Josuweit, who has covered amateur radio emergency and public service communications for CQ VHF, and then for CQ, since 1996, says that he is stepping down due to increased time demands at his full-time job. (CQ)

COMMUNICATIONS NEWS: MAY IS MILITARY APPRECIATION MONTH

May is Military Appreciation Month and Grace Broadcast Sales is offering a pair of free 60 second Public Service Announcements saluting local men and women serving in the armed forces. Each spot has an open front 10 seconds and open 20 seconds at the close for station or sponsor inserts.

The Grace Broadcasts press release notes that the month of May is filled with military related holidays. May 1st is Loyalty Day and May 8th is V-E Day. The latter commemorates the allied forces World War II Victory in Europe. The 8th is also Military Spouse Appreciation Day. But that's not all. May 16th is Armed Forces Day and May 25th is of coarse Memorial Day

Grace Broadcast Sales says that radio stations are welcome to download these features and air them as often as you like. You can find them marked Support Our Troops free salute one and two at
http://www.gracebroadcast.com/prodNMAM.htm

Also, we want to remind you that May 23rd is Amateur Radio Military Appreciation Day. That's when hams and their clubs are encouraged to get on the air and show thanks, support, and appreciation all current and past members of the military. More on this event is also on-line at
www.armad.net. (ARNewsline(tm), RW, ARMAD, others)

**

EMERGING TECHNOLOGY: OLED BLUE IMPROVED BY 25%

A promising technology called organic light-emitting diodes, or OLED'ds has just seen a major breakthrough. Rearchers at the Pacific Northwest National Laboratory have successfully synthesized and tested new materials that improve the power efficiency of blue OLEDs by at least 25 percent. They note that lighting consumes one-fifth of the electricity generated in the United States. They say that solid-state lighting offers tremendous potential to improve the situation once major research challenges are overcome.

OLED's are a multi-layered device that produce light by running an electrical current through a specially engineered host material into which light-producing phosphorescent molecules are embedded. The Department of Energy's solid state lighting program is funding the OLED research. (ScienceDaily)

**

EMERGING TECHNOKLOGY: MPEG SURROUND DESIGNATED INTERNATIONAL STANDARD

Proponents say MPEG Surround is now an international standard, ready for deployment. Agere Systems, Coding Technologies, Fraunhofer and Philips said the Moving Pictures Expert Group has finalized the standardization process at the 79th MPEG meeting in Marrakech, Morocco. The document is MPEG-D standard document IS 23003-1. (MPEG Group)

**

WORLDBEAT: 500 kHz COMING TO IRELAND

Turning to news from around the globe, wird that a limited number of radio hobbyists in Ireland may soon have access to a low frequency band for continuing experimentation. Irish regulator ComReg has agreed to allow the Irish Radio Transmitters Society to apply for a limited number of permits to operate in the region of 500 kHz under a blanket license to be issued to that national amateur radio society,

Stations to which permits are issued will have to send regular reports to IRTS consisting of their experience of propagation, type of propagation used, noise experienced and methodology used. This, so that the information collected be coordinated and periodic reports submitted to ComReg. (Southgate)

**

WORLDBEAT: CELEBRATING THE EUROPEAN GEO PARKS

And from the UK listen out on Saturday, May 23rd and Sunday, May 24th for Martin Foster, G3GOF, and six other radio amateurs. This as they put the special call GB6GEO on the air again this year during the European Geo Parks Communication Event.

The group will take to the ham radio airwaves from the Cavern in Torquay which right in the heart of the English Riviera Global Geopark. But they will not be the only ones involved in the event. If you live in France, Spain, Italy, Austria, Romania, Czech Republic, Norway, Brazil, or China and are interested in participating in this event and, can obtain the special "GEO" suffix., To do so please contact G3VOF as soon as possible via e-mail to martin (at) riviera (dot) fm. More information on the European Geo Parks Communication Event is on-line at http://www.qrz.com/callsign/GB6GEO (OPDX)

**
ON THE AIR: RNW ANNOUNCES MORE WORLDWIDE COOPERATION
Radio Netherlands Worldwide wants to expand and intensify its collaborations with foreign media partners over the next few years. The legendary shortwave broadcast station says that cooperation and the exchange of content, in the form of text, audio and video, fits into the station's multimedia policy. Visual content, particularly web video, will assume an increasingly prominent role in the coming months and years. (Media Network)

**

ON THE AIR: VO1MGY COMMEMORATES THE TITANIC

Ham radio will once again commemorate the loss of the fabled luxury liner the Titanic that sank in the North Sea on the morning of April 15, 1912. In remembrance of this disaster the Society of Newfoundland Radio Amateurs will be operating on April 15th 2009, using the historic Titanic call sign suffix of MGY. This, from the Society's ham station located in the former British Admiralty wireless telegraphy station. Listen out for VO1MGY using CW on all bands where propagation permits. QSL confirmation will be available via the bureau. More is on the web at www.sonra.ca. (SONRA)

**

DX

In D-X, an international team of operators known as the Tifariti Gang will be on the air from Western Sahara through the 17of April using the callsign S04R. Their activity will be on all bands from 160 to 10m using CW, SSB and digital modes. QSL via EA5RM.

G3RWL will be active as 8P6DR from Barbados until April 24th He will operate holiday style on 160 to 10 meters using CW and various digital modes. QSL via G3RWL, either direct or bureau.

And OH2YL will be active as portable OH0 from the Aland Islands through the 14th of April. She will operate CW and SSB on the H F bands. QSL requests go directly to OH2YL.

(Above from various DX sources)

**

THAT FINAL ITEM: FLORIDA GOES 11 METER CB

And finally this week, Florida has gained FCC approval to go 11 meter C-B. This as the FCC approves a request from the Florida Department of Transportation that asked the agency to permit it to operate an 11 meter Citizens Band remote base emergency alert system along the Florida Enterprise's Turnpike.

The Florida Department of Transportation had requested that it be permitted to operate wire controlled C-B remote bases at Orlando, Kissimmee, Yeehaw Junction, Ft. Pierce and Jupiter. This to provide emergency information to motorists along that highway.

In granting the request the FCC did put several restrictions on the operation of these remote base stations. Among these are that CB stations can transmit only during an emergency event such as hazardous weather conditions, impeded traffic flow, or incidents. They must cease transmissions when the event no longer presents a hazard.

Also, each transmission must identify the CB station operator as being with the Florida Department of Transportation. The operator must also provide a

telephone number or other contact information to which complaints of interference to CB communications can be directed.

Oh yes, less we forget. The FCC directed that the CB radio station operator should carefully consider channel selection to reduce the likelihood of harmful interference to on-going communications. And as they say on 11 meters, that's a "big 10-4." (FCC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

A reminder that the nominating period for the 2009 Amateur Radio Newsline Young Ham of the Year Award is now open. Complete details are on our website at www.arnewsline.org Just scroll down to the words "2009 YHOTY Nominations Now Open" and click for more information and an official nominating form.

Also be sure to mark April 18th as this year World Amateur Radio Day. World Amateur Radio Day will focus on the hobby as it empowers people and supports communities by providing emergency communication as well as public service oriented interaction for community and other special events.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

A quick Google search for "San Luis Obispo" "amateur radio"
turned up this article on the ARRL site:

http://www.arrl.org/news/stories/2009/04/09/10763/?nc=1

which links to a PDF version of a press release from the SLO
County Office of Emergency Services.

Note that the original Internet rumor was posted on April 1st.

Patty

You might want to consider browsing the ARRL web site.

Quick version: don't get your knickers in a twist.

Slightly less quick version: it's an April 1st hoax posting,
apparently written well enough that a fair number of people took it
seriously. It's a fabricated story, with no truth to it; it cites an
alleged news story from a news publisher which doesn't actually exist;
and it has been specifically denied by the SLO County Office of
Emergency Services.

Details can be found at:

Here in Canada we would add the words "government issued" to photo ID.

Although that won't work for student ID or library cards.

Tony

I've been wanting to take the Technician exam and was wondering if can
just skip to the general exam with out taking the Tech exam.
I see references to License upgrades, so it looks like I need to take
the Tech and general Exams one after the other, Is this correct?

Thanks
Martin

That is correct. You can take them at the same exam session if you wish.

No, you cannot. You must pass the Tech exam before you may take the
General.

>I see references to License upgrades, so it looks like I need to take
>the Tech and general Exams one after the other, Is this correct?

Correct.

Most VE groups I've heard of, will only charge you a single exam fee
to take both exams in a single setting (or even Tech, General, Extra
if you really want to go for it) - you only have to pay a second fee
if you fail one exam and wish to re-take it (which you can often do
immediately, depending on the VE group's policies).

And it's probably good advice to sign up to take all three. The worst
that can happen is you only pass the exams you studied for -- the best
that can happen is you show the examiners you know more than you thought!

You have to take all the tests in order, no skipping tests. You have to prove you passed the first before you can take the second and you have to have passed the second before you can take the third. Proof that you passed can be either a copy of your license or a certificate of successful completion if you haven't received your upgraded license yet so keep all the paperwork the VE hands you back when you pass a test.

You can usually take multiple tests at one exam session as long as you go in order and don't run out of time. If you keep passing keep taking the next one as long as the VE will allow. Who knows you might actually pass.

When I was trying to upgrade to General from Tech, I passed the General test then I took the Extra test even though I didn't think I was ready. I was suprised when it was a passing grade. I know a new ham who went from nothing to Extra all in one setting. Who knows, you might be next.

I had no idea so much had changed. Where do I go online to find out how it
is done now?

In 73' I walked in as a novice and since it was the same price for the
entire session, I checked Extra and walked out with Advanced. Used to be
certain elements were required to be pieced together. The General and Tech
tests were slightly different because the technical section was the same but
some differences in operation due to different bands and modes, so you took
either General or Tech, not both. This created a fork in the road. If you
took Tech, it wasn't good for anything higher and you would have to take the
General to go higher. You took the code tests first to see how high you
could go, then selected the required test modules starting from the lowest
to highest. You keep credit for all you passed even if you were short one
module for a higher class, you could go back and retake the missing element
for the upgrade. I upgraded to Extra in 93 with the 20wpm test and a 25
question test.

This is per the rules in FCC Part 97. At any one session, you can
take as many exams as you can pass for one exam fee.

In March 2000, after the FCC announced the reduced code speed efective
April 15, 2000, I passed the General written and the code. The VE
suggested I continue on with the Advanced and Extra tests (the rules
hadn't changed yet, so I had to take both of them). I said that I had
not looked at the questions in over a year. He replied, "It won't
cost you any more. Go ahead." I passed the Advanced and Extra that
day. I was a Tech+ until I got a paper upgrade on April 15th.

Last year, a friend went into a session with no license (he had let a
General lapse about 20 years ago). He passed all 3 current written
exams and came out an Extra.

At a VE session about 15 years ago I passed my Extra. No, it wasn't as exciting as passing my Advanced in 1970 at the FCC office in NYC.... After passing the Extra, I asked of the VE, who graded my written test and told me I passed, "Wow... what do I do now?" (Meaning, I've reached the top - what's next?) His reply? "You could take the Novice again." Then he commanded, "Now get out of here."

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. |

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader |
opinions in March of 2009: |

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326 |

the rec.radio.amateur.moderated Moderation Team has decided to consider |
amending its charter, and permit limited simultaneous crossposting to |
rec.radio.amateur.moderated and one other unmoderated |
amateur-radio-related discussion newsgroup. We are currently trying |
this on a temporary basis (90 days, through early July 2009), and adopt |
it permanently if successful. |

Approved rec.radio.amateur.* newsgroups are those that are currently |
listed in the latest version of the "List of Big Eight Newsgroups" which |
is crossposted monthly to news.announce.newgroups, news.groups, and |
news.lists.misc. |

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those |
that have been created consistent with the suggestions in "So You Want |
to Create an Alt Newsgroup" at: |

http://www.faqs.org/faqs/alt-creation-guide/ |

Approved regional hierarchy newsgroups are those that contain either |
"radio.amateur" or "ham-radio" in their names, including |
uk.radio.amateur and aus.radio.amateur.misc. |

We will make every reasonable effort to keep our list of approved |
newsgroups up-to-date. In case we have overlooked any, and a submission |
is rejected in error as a result, the rejected submitter can E-mail us |
at our administrative contact address (in the signature at the bottom of |
this article, and the default Reply-To for the rejection message) |
requesting that it be added, and that the article be approved. We may |
still choose to reject articles crossposted to any alt.* newsgroup with |
an inappropriate name, including obscene language, embedded |
name-calling, or encouragement of unlawful conduct. |

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and | equipment, for giveaway will be permitted on an occasional basis from | casual, non-commercial owners, and at the discretion of the moderators. | The items should be free except for reasonable direct costs such as | shipping, must be directly amateur-radio-related, must be in serviceable | condition, and be practical to ship to a distant recipient. This is | intended as a common-sense exception to our ban on forsale postings, | provided that it doesn't overwhelm the basic character of our discussion | newsgroup with classified ads or requests to haul off scrap or junk in | salvage condition. |

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be

more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

I just should be grandfathered, period.

Seriously(?) when I was 15 I graduated from CB to ham radio. My CB friend and I decided that, if we're going to screw around legally on the radio, we might as well get our ham licenses. That's when the *real* fun began for a couple of nerdy teenagers.

Amateur Radio Newsline(tm) Report 1653 - April 17 2009

Amateur Radio Newsline report number 1653 with a release date of Friday, April 17th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio replaces telephones after vandals cut cables in northern California, ham radios post earthquake response winds down in Italy, the murderer of two hams at sea is sentenced to death and more on a not so funny ham radio April Fools joke that has now reached all the way to the FCC. Find out the details on Amateur Radio Newsline(tm) report
number 1653 coming your way right now.

RESCUE RADIO: NORCAL HAMS RESPOND TO CUT CABLE PHONE OUTAGE

Investigators say that they are looking for leads to find the criminal vandals that cut a number of northern California fiber optic cables that took out telephone and Internet service across southern Santa Clara, Santa Cruz and San Benito counties. This, as ham radio operators stepped in to provide communications alternatives for medical and emergency services effected by the outage. Amateur Radio Newsline's Bill Pasternak, WA6ITF, is in the newsroom with more:

--

According to news reports, phones and Internet service went dead when one or more vandals severed 10 underground cables. Most were in San Jose, where the first four belong to AT&T were cut shortly before 1:30 a.m. on Thursday morning, April 9th. Four more underground were cut about two hours later at two locations in San Carlos, authorities said. Two others were cut in south San Jose. In ecah case the vandals had to access manhole covers weighing in excess of 250 pounds each.

Santa Clara County declared a state of local emergency as a result of the widespread outage. Among those services affected in all three counties by the sabotage were public safety crews that rely on 911 calls, hospitals trying to access medical records and people who wanted to make a landline or cell phone call. Jumping in to fill the communications gap were a number of the regions first responder amateur radio groups.

According to volunteer communicator Craig Smith, W6WL, ham radio operators organized themselves to assist with communications between

hospitals. About 25 operators were handling the radio traffic while another 50 to 60 had signed up to fill in when other volunteers got tired.

Meantime other teams of ham radio operators set up at Dominican, Sutter and Watsonville Community hospitals and a local American Red Cross office. They handled tactical traffic and messages between medical care providers, such as relaying information from one doctor to another.

News reports say that some of the hams who responded were the same operators who helped with communications during last summer's devastating wildfires and during the 1989 Loma Prieta earthquake.

Repairs were completed, and full service was restored early Friday, April 10th. That was about 24 hours after the first problems were reported.

For the amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

So far no suspects have been named. Police revealed only that they are tracking down a bunch of leads and reviewing traffic-camera footage taken near one of four sites where the cables were cut in hopes of catching the culprits who committed the cable cutting crime. A total of a quarter million dollars is being offered for tips that lead their arrest and conviction. (WA6UHA, WA6LIE, SFNewsOnLine, others)

**

RESCUE RADIO: HAM RADIO HF QUAKE OPERATIONS IN ITALY WIND DOWN

Amateur radio High Frequency operations related to last weeks deadly earthquake that devastated L'Aquila Italy have wound down. This, according to Alberto Barbera, IK1YLO, who is the IARU National Emergency Communications Coordinator for that European nation

He reports via IARU Region 1 Emergency Communications Coordinator, Greg Mossop, G0DUB, that he received a phone call on April 10th from the nations civil response agency stating that the use of ham radio on the High Frequency bands for emergency communications was being terminated. Also that all relief efforts were being transferred directly to L'Aquila.

Mossop says that monitoring the frequencies in use right after the quake shows no other emergency groups using them, so it is appropriate to return it to normal use. However since the post quake recovery is still ongoing, Mossop says to please listen before transmitting. If you hear any station passing emergency traffic please leave the frequency clear and avoid causing QRM. (Southgate, others)

**

RADIO LAW: FCC PROPOSES UP TO 20 MHz AT 70CM FOR MEDICAL BREAKTHROUGH

The FCC has suggested the allocation of 20 MHz of prime UHF spectrum in 413 to 456 MHz band for a truly worthy cause. But one that could adversely impact current spectrum users including the Amateur Radio and Amateur

Satellite services.

FCC Notice of Proposed Rulemaking ET Docket 09-36 seeks comment on a recommendation to allocate up to 20 MHz of currently occupied UHF band space for use by wireless medical devices. These are tiny appliances could be implanted into the human body and used to restore sensation and mobility to paralyzed limbs and organs.

The devices would act as a wireless medical micro-power network within the patient. Among the conditions that could be treatable using them include polio, Lou Gehrig's disease, cerebral palsy, and spinal cord injuries.

The 400 MHz band is targeted because it is optimal for RF propagation through body tissue. The devices would require at least 5 MHz of bandwidth to function and would operate on a low power, secondary non-interference basis.

Twenty MHz of spectrum in four band segments are proposed so that the device would have multiple options in case one band segment was already in use in a given area. These are 413 to 419 MHz, 426 to 432 MHz, 438 to 444 MHz and 451to 457 MHz. Its assumed this allocation would be on a secondary, non-interfering use with current users of this band space. In fact, comments are also being sought on the potential for interference between these new devices and current spectrum users. Amateur radio and amateur satellites have heavily used allocations in the 420 to 450 MHz band.

In announcing the release of ET Docket 09-36 acting Commission Chairman Michael Copps stated that he was pleased to support this Notice of Proposed Rulemaking which he says examines the possible allocation of additional spectrum and service rules for use by advanced wireless devices. He indicates that this new technology could significantly enhance the quality of life of many Americans that suffer from a wide array of neuromuscular disorders.

The text of the FCC news release can be found at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-289482A1.doc or http://tinyurl.com/ct8ntw) (FCC)

THE BPL WAR: FIBEROPTICS IN AND BPL OUT DOWN UNDER

Hams down-under appear to be safe from the rollout of a nationwide Broadband over Powerline or BPL system. This as Australia's government announces that it will be building a system based on fiber optic technology. Graham Kemp, VK4BB, is in Brisbane with the details:

--

The Australian Federal Government has announced its decision on Australias National Broadband Network. In a surprise move, instead of deploying a widely expected half-way-house fiber-to-the-node (FttN) solution from a consortium of companies, the Government is moving ahead with its own

full-blown 100Mb/s fibre to the home rollout, (FttH). The reported $43 billion project will include a mix of government and private sector funding which may or may not include telecommunications companies.

Telecommunications analyst Paul Budde states: "This is the most ambitious infrastructure ever undertaken in Australia and will be the most ambitious FttH network anywhere undertaken in the world. The Australian Government is one of the few governments who, in a holistic way, understand the importance of broadband across the various sectors. This network is not just for high-speed Internet and entertainment but, more importantly, for healthcare, education,
smart grids, etc".

This is good news for Australian's in general, and also for Australian radio amateurs. Australia's largest telecommunications carrier, Telstra, was excluded from the original selection process on the grounds of submitting a non-compliant bid, however, as Telstra owns most of the copper cable in the ground, any fiber-to-the-node solution which did not include Telstra would have resulted in a variety of 'alternative' access technologies used to connect the ï¿½node' to customers premises. Although there may be many steps along the way, the predominant access technology in Australian cities will now be fiber, and in less populated areas will likely be wireless.

This decision would appear to remove the possibility of widespread interference to radio communications from any network-wide adoption of BPL technology, but still leaves as a concern the possibility of interference from in-home use of BPL as an internal distribution technology.

--

The decision by Australia to opt away from BPL is likely a major blow to the world-wide implementation of this technology. This is because other nations will look at Australia's decision to go fiber and based upon it reconsider any commitment to BPL. (WIA News)

**

RESTRUCTURING: NEW ZEALAND MAY INTRODUCE FOUNDATION CLASS

New Zealand appears headed toward the introduction of an entry level Foundation Class ham radio operating permit. This according to the February minutes of the New Zealand national amateur radio society NZART
. .

The minutes report that ZL2UFI has presented a draft document on the creation of a Foundation Amateur Operators Certificate. Also that the Council agreed that while future members on Council may not share the view of an additional license that the present Council members had been tasked at the Annual General Meeting in Dunedin 2008 to proceed with the option of a Foundation Certificate.

But there is one caveat. Any New Zealand Foundation Class will not be considered as a full license. Rather it will be a Foundation Certificate so that the nations telecommunications regulator the MED is not forced to introduce a new grade of examination. MED will only have to make a change in New Zealand's Radio Regulations. (NZART)

**

BREAK 1

This week from the Auckland New Zealand and the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the K4LJP repeater system serving West Palm Beach, Florida.

RESTRUCTURING: INDONESIA HAMS GET CENTRALIZED LICENSING

Some welcome changes to the rules governing ham radio in Indonesia. This as that nations telecommunications regulator says that its taking over all aspects of issuing licenses. John Lego, VK3BUI, reports:

--

The Indonesian Government is seeking to take a central control of licenses for radio amateurs ending the current practice of permits being issued by provincial authorities. The Jakarta Global National reports that the proposed action is to plug a loop hole in permit issuing that has apparently resulted in commercial broadcasting.

Communications and Information Technology Ministry spokesman Gatot Dewa Broto says that new amendments are aimed at strengthening the guidelines for amateur radio activities.

He says ham radio is vital for establishing contact with areas where there are no telephone lines or cellphone access, including areas left without communications after disaster struck. In particularly the government recognizes the very good response by radio amateurs to the Indian Ocean Tsunami in December 2004 that severely hit the Indonesian provinces of Aceh and North Sumatra.

The IARU member society ORARI -- the Organisasi Amatir Radio Indonesia -- Secretary General Suryo Susilo YB0JTR says the new draft rules amend the permit application and frequency granting procedures. He said ORARI has been involved in the drawing up of the draft amendments which will be of benefit to ORARI's activities and radio amateurs, and demonstrates government support for them.

I'm John, VK3BUI.

--

No date was announced as to when the changes in Indonesian radio law will occur. (WIA News)

**

RADIO JUSTICE: MUDERER OF KD7VWJ AND KD7VWK SENTENCED TO DEATH

Back in the United States, The man who masterminded the murders of two hams in order to try to steal their boat and their life savings will pay the ultimate penalty. Bruce Tennant, K6PZW, has been following this case and has the latest:

--

The next stop for Skylar Deleon is Death Roe at California's San Quentin prison. This, after a California judge has sentences the former child actor to death for murdering an Arizona ham couple by tying them to an anchor and throwing them overboard from their yacht off the southern California coastline.

The same jury that had convicted Deleon last November of killing Tom and Jackie Hawks KD7VWJ and KD7VWK recommended that he be put to death. On Friday, April 10th Orange County Superior Court Judge Frank F. Fasel officially imposed the jury's recommendation that Deleon forfeit his life to pay for his crimes.

In fact, in his sentencing order Judge Fasel stated: "It is the judgment and order of this court you shall suffer the death penalty as to each count."

This, a reference to the findings that the Hawkes murders were premeditated and that Deleon was convicted for each one with special circumstances. That special circumstance was multiple murder for profit and is what made him eligible for the death penalty.

As previously reported, prosecutors say that Deleon faked interest in buying the Hawkes yacht and that he and his accomplices forced them to sign the boat over and then killed them during a test cruise in 2004. Three others including Deleon's former wife Jennifer have also been convicted of the same or related charges. Accomplice John Fitzgerald Kennedy's recent trial jury also recommended the death penalty. He will be formally sentenced sometime in May.

But Deleon will likely not be put to death anytime soon. Under California state law there are a series of automatic appeals that could go on for several years.

For the Amateur radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Deleon was also convicted in the 2003 killing of Jon Jarvi, whom he reportedly met on a work furlough program. (ARNewsline(tm) from published reports)

**

ON THE NET: BAD APRIL FOOLS JOKE CONTINUES TO BACKFIRE

When is a ham radio April Fools joke stop being an April Fools joke? How about when the FCC and county officials get involved. Randy Malick, KF0X, reports:

--

That not so funny April Fools Internet article reported on last week -- the one claiming that San Louis Obispo County California had banned ham radio operations as a health hazard has now reached all the way back to the nations capital. In fact its entered the doors at the FCC.

According to the ARRL, San Luis Obispo County officials were notified by the Federal Communications Commission on Wednesday, April 8th of the story which carried a date of April 1st. The FCC reported it had received a number inquiries about the posting, which first noted on radiobanter.com web log and was later picked up by Google Groups and re-posted world wide.

As a result of this and other notifications from the local southern California ham community, the San Luis Obispo County Office of Emergency Services has issued a statement. One that confirms the story to be a fraud while heaping praise on the nations ham radio community.

The release says in part that not only is the online story not true, but San Luis Obispo County government, along with the incorporated cities within the county and other entities work hand-in-hand with Amateur Radio operators. Hams who the county says are always ready to provide alternate and back-up communications in case of unique emergencies or disasters.

But that's not all. It added that that the County looks to sign ham radio operators up as Disaster Service Workers to assist in times of need and it calls their assistance absolutely appreciated.

Lastly, the county notes that radio amateurs have communications set up, or wired to be set up quickly, in city Emergency Operations Centers, the County EOC and other emergency and disaster coordination sites throughout the area. Obviously this is a very strong bond between the county and its ham radio community and one that no nameless blogger is going to break.

For the Amateur Radio Newsline, I'm Randy Malick, KF0X, in Tucson.

--

Meantime, hams across southern California and neighboring areas are getting increasingly agitated as the Internet-based rumor continues to spread. More and more calls are being heard for an investigation to locate, expose and if possible to prosecute the person who wrote and posted the article. There has also been at least one suggestion of a class action suit against the author for defaming the amateur radio service. If legal action is not possible then some feel that its apropos to at least publicly identify the person so as to subject him or her subject to public ridicule. This, in the hope that he or she will leave the hobby and never return. (ARNewsline(tm), ARRL, listener input and other published reports)

**

RADIO LAW: PRB-1 DOES NOT APPLY IN MOBILE HOME PARK

If you live in a mobile home park and the park managers tell you that you canny have a ham radio antenna, don't go to the FCC and ask it to impose PRB One. As one ham recently found out, the FCC is not going to do it. Here's Don Carlson, KQ6FM, with the reason the Commission says its not going to get involved:

--

In its second PRB-1 related ruling in the past two weeks, the FCC has again said that thiss aspect of federal preemption does not apply in cases where conditions, covenants and other deed restrictions are in force. This now includes hams living in mobile home parks where the management says that no outdoor antennas are allowed.

By way of background, back in October 2007, Christopher Kaczmarek, KB8MLC, of Saginaw, Michigan, asked the FCC if PRB-1 could be enforced to require the mobile home park in which he lives in to let him keep his ham radio antenna system. He had previously been notified by the parks management that no antennas of any type were allowed.

On April 6, 2009, the FCC denied Kaczmarek's request. In its ruling the regulatory agency noted that PRB-1 covers only state and local regulation of antenna structures. The agency told Kaczmarek that it is hesitant to become involved in the area where agreements between private parties are voluntarily established and freely entered into. This includes whatever restrictions that a mobile home park places on its space renters.

The FCC also noted that twice before it has addressed this same issue and that in all cases it has chosen not to preempt private land use regulations that restrict the installation of antennas and associated support structures used by Amateur Radio stations. This means that Kaczmarek or anyone else who wants to challenge a mobile home parks restrictions on outdoor antennas is going to have to do so in court, on their own.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM in Reno.

--

The bottom line appears to be that the FCC is not the place to go to look for relief from deed and renters agreements that preclude ham radio antennas. Rather its going to take congressional action to declare these restrictions as unconstitutional before the FCC will act. (FCC release)

SUGGESTED READING: THE IARU REGION 3 NEWSLETTER

A new issue of the IARU Region 3 newsletter is available to download. Among the items covered are this weekends World Amateur Radio Day and Global Simulated Emergency Test both on April 18th. Also included are reports on the recent Australian bushfire disaster and the now underway expansion of 40 Meter band. You can get copies in aP DF version: http://www.iaru-r3.org/news/r3nl-09-04.pdf or Word version at

http://www.iaru-r3.org/news/r3nl-09-04.doc (IARU Region 3, Southgate)

**

BREAK 2

This is ham radio news for today's radio amateur. This week from beneath the Southern Cross, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

RADIO BUSINESS: BUCKMASTER HAMCALL DATABASE EXCEEDS 2 MILLION

Buckmaster Publishing' has announced that its HamCall Callsign Database now exceeds 2,000,000 world-wide callsigns, with data from over two hundred countries.

HamCall says that it is the world's largest callsign database and is available on CD-ROM as well as on the hamcall.net website. A typical callsign listing includes mailing address, e-mail address, accurate latitude/ longitude, grid square, QSL manager, previous callsigns, photo and much more. And for those who want to have all of this information on their home computer a new HamCall CD-ROM is published each month.

For further information on HamCall and other Buckmaster products please contact: Jack Speer, N1BIC, at Buckmaster Publishing, 6196 Jefferson Hwy, Mineral, Virginia 23117. Or you can e-mail Jack to info (at) buck (dot) com. Either way you will get a quick response for one of the nicest people that we have ever met who is serving the needs of the world-wide ham radio community. (ARNewsline(tm) via press release)

**

HAM HAPPENINGS: AIRVENTURE 2009

The Fox Cities Amateur Radio Club will host a special event station from the Pioneer Airport durring the EAA's Airventure 2009 Airshow. The cub will be on the air daily on Wednesday July 29th through Sunday August 30th. This, from 1300 to 2100 UTC on 20 and 40 meters SSB and 6 meter FM. . Further information is on-line at www.fcarc.us or by e-mail to ab9ah (at) arrl (dot) net (Via e-mail)

**

HAM RADIO IN SPACE: NZ KIWI-SAT GETS ADDED FINANCIAL SUPPORT

New Zealand's KiwiSat has gotten some additional funding in the form of a $1000 from the Auckland VHF Group. This money will be used for the purchase of the special Aluminum blocks from which the very structure of KiwiSAT will be milled by Mike Jack of Stanier Engineering. Stanier is a small precision engineering company based in Auckland. Video of the milling

process will be available on the KiwiSat website at kiwisat.org/index.html. (ANS)

**

ON THE AIR: DEBRECEN OCCUPATION ON THE AIR REMINDER

Hungarian radio amateurs from the city of Debrecen will be active as the special call HG160FNY through July 31st. This ias an on the air activity is to remind everyone of the historical event 160 years ago where the Austrian army occupied the then capital city of Debrecen and of Transdanubium.

The principal special callsign will be HG160FNY will be used by several different operators. Listen out for it on all of the HF bands as well as VHF and UHF using various modes including some digital. QSOs are good towards the commemorative diploma. The QSL Manager is Zoli, HA0DX. (OPDX)

**

ON THE AIR: BULGARIA CELEBRATES CW

Members of the Bulgarian Federation of Radio Amateurs will be active as LZ8WHST. This, to promote the next World High Speed Telegraphy Championship to be held in Obzor, Bulgaria, from September 11th to the 15th.

This special callsign will be randomly activated by several different federation operators from their home QTH and will be active until the end of September. Operation will be 99% CW, with the possibility of some occasional SSB and digital contacts. QSL via LZ1PJ. (Southgate)

**

ON THE AIR: THE CARABINIERI AWARD

Its almost Carabinieri Award time. The aim of the Carabinieri Award is for amateurs and SWL around the world to contact or listen and log as many Carabinieri On The Air members. This, between 07:00 on May 20th and 19.00 UTC on June 5th. Contacts can be made using the 80, 40 and 20m bands on SSB, CW, PSK31 or RTTY and you are allowed one contact a day for the same band using the same mode with the same Carabinieri member. The official list of Carabinieri On The Air award amateurs as well as details of the points system and award that are available, are on line at www.cota.ce. (COTA)

**

DX

In DX, word that HB9TZA says that he will spend his Easter holidays on Malta and on the air through April 23rd as 9H3JR. Listen out for him mainly on 40 and 17 meters using SSB though he might show up on other high frequency bands as well. QSL via I2JJR.

OH4MDY is back again in Cambodia and is signing the call XU7MDY on CW, SSB, RTTY and PSK31/ Hes reportedly operating on 80 through 10 meters and will be at the location through April 21st. QSLs only direct via Reijo Laitinen, Mantytie 13, 76940 Nenonpelto, Finland.

The "4 M 5 DX Group" is planning another activity as Y-W-Zero-A from Aves Island. Up to 15 operators will be on using SSB, CW and RTTY on 160 through 6 meters but the activity is depending on the transportation by the Venezuelan navy. QSL this one to IT9DAA direct, via the bureau or electronically using Logbook to the World.

And word that SV1JG, will be active from the Maldives as 8Q7SV between April 29th and May 5th. His operation will be mostly CW and digital modes on all bands. QSL via SV1JG, direct or by the bureau.

N7EAA will be active from Guyana as 8R1AD between April 20th and May 3rd. Operations will be on 20 meters using CW, SSB and PSK31. The operators say that they plan to look for stations who are young ham operators and running low power. QSL via N7EAA.

Lastly, G3RWL, is once again active as 8P6DRfrom Barbados through April 24th. His operation is holiday style on 160 through 10 meters using CW and the Digital modes only. But don't look for him on April 18th or maybe a few days afterward as the 18th is his wedding day and he will likely have things other than ham radio on his mind. But if you make contact QSL via his home callsign, direct or via the bureau. We say congratulations to the new bride and the groom.

(Above from various DX news sources)

**

THAT FINAL ITEM: AC0MX TAKES PRIZE WITH HAM RADIO AT SCIENCE FAIR

And finally this week, a big shout out of congratulations to Jill Niemeier, AC0MX. This, on her award in engineering at the 53rd Annual Southeast Missouri Regional Science Fair. Rebecca Bruce, reports:

--

According to the Dulkin Democrat on-line newspaper, in her first year of competing in the science fair at the senior level, Jill Niemeier, AC0MX entered the third part in her continuing project "Emergency Communications." She not only took the second place in engineering, but also the Cape Girardeau Area Engineers Club Award, a U.S. Savings Bond, and a U.S. Army Award. Her first two entries at the junior level received several awards and acclamations as well.

But Jill's interest is not just in winning Science Fair's and awards. Rather it is in helping the community as evidenced by her newest aspect of the project titled "Emergency Communications Propagation." This is described as a micro-propagation study of the two-meter amateur radio band specific to emergency communications in a public school setting.

Jill's project focuses on helping the different campuses in the Kennett School District communicate with each other during a disaster. To accomplish this study, AC0MX is in the process of setting up low-power radio systems for the five campuses in the district. Each case will is equipped with a radio, a police scanner, a pack of batteries, and several adapters allowing the radio to draw power from vehicle batteries. A Health Services representative at each location will be trained and licensed to use the gear.

But that's not all. To go along with the radio aspect of the project, Jill
Niemeier gathered GPS data for every entry into every building on each campus. This information will be useful in the event that the buildings are on the ground. In planning for her project, AC0MX pursued the theory that if the New Madrid Fault area ever has a major earthquake, the normal means of communication will be lost. She wants to make certain that schools will be able to continue to talk with the outside world in such a circumstance.

For the Amateur Radio Newsline, I'm Rebecca Bruce, no call yet, In Los Angeles.

--

Jill is the daughter of Donna Gill and Mark Niemeier and attends Kennett High School. Her research project began four years ago when she became a member of the school's amateur radio club. That's where she became interested in radio operation, propagation, and emergency communications.. In 2007, Jill earned her Amateur license and the call KC0YQJ. She currently holds an Extra and the AC0MX call. (ARNewsline, Dulkin Democrat)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

A reminder that the nominating period for the 2009 Amateur Radio Newsline Young Ham of the Year Award is now open. Complete details are on our website at www.arnewsline.org Just scroll down to the words "2009 YHOTY Nominations Now Open" and click for more information and an official nominating form.

Also be sure to mark April 18th as this year World Amateur Radio Day. World Amateur Radio Day will focus on the hobby as it empowers people and supports communities by providing emergency communication as well as

public service oriented interaction for community and other special events.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen,
ZL2BHF, saying 73 and we thank you for listening.

==> WHEN VANDALS STRIKE INFRASTRUCTURE, HAMS PROVIDE COMMUNICATIONS SUPPORT

Just after midnight on April 9, someone climbed down four manholes in the San
Jose, California area and cut underground fiber optic cables. The sabotage
led to widespread disruption of phone service -- including tens of thousands
of land lines, an undetermined number of cell phones, Internet access and 911
emergency service -- in southern Santa Clara County, as well as in Santa Cruz
and San Benito counties. San Jose is the county seat of Santa Clara County.
With the infrastructure disabled, local Emergency Management officials called
on ham radio operators in their communities to provide back-up
communications. According to the "San Jose Mercury News," Santa Clara County
called a local state of emergency, "but worst-case scenarios were
successfully avoided through use of ham radios, door-to-door checks and
extra-vigilant patrols"
<http://www.mercurynews.com/centralcoast/ci_12121118?nclick_check=1>.
```

In Santa Cruz County, just over the Santa Cruz Mountains from San Jose, Santa Cruz County District Emergency Coordinator Cap Pennell, KE6AFE, was awoken just after 5 AM on April 9 by uniformed police at his door. Sent by Dominican Hospital President Nanette Mickiewicz, the police officers escorted Pennell to the hospital for a brief on this situation: The fiber optic lines that had been cut in San Jose had affected the Santa Cruz hospital's communications infrastructure, cutting off communications from the hospital to the outside world. Santa Cruz is located on the northern edge of the Monterey Bay, about 70 miles south of San Francisco.

"While I was meeting with hospital department heads, Bob Wolbert, K6XX, had started our ARES Resource Net on the W6WLS/W6MOW linked repeaters," Pennell told the ARRL. "During the briefing, the hospital determined to implement HICS/SEMS for this emergency. There hadn't been telephones or Internet anywhere since about 2:30 AM. The hospital's phone system did work, but only within the hospital. Their internal computer local area network wasn't working either, so they were instantly on a 'paper system.'"

By 6:15, Pennell said they had established tactical radio links on the K6BJ/KI6EH linked repeaters between the Dominican Hospital Emergency Operations Center in Santa Cruz and the Watsonville Community Hospital emergency room; Watsonville is about 15 miles south of Santa Cruz via the Pacific Coast Highway. "We established HEARNET 155.385 simplex between both hospital ERs and County 911; HEARNET is the Hospital Emergency Administrative Radio Network. Once HEARNET (ER staff) and K6BJ repeater (hams) were staffed and operating at both hospitals, I left the hospital to become our initial ham operator at the County Emergency Operations Center and operated as ARES/ACS shift supervisor from there for the rest of the day," Pennell reported.

Throughout the day, Pennell said that hams -- including some in Monterey County who had been working telephones -- helped dispatch ambulances, conferred with the Poison Center on a children's poisoning case, ordered replacement blood supplies for two hospitals from San Jose Red Cross, relayed a complex major "whole hospital" day's food order to the supplier out of county, tracked down various doctors for emergency consultations and shared status updates from our area. "We did all this while in unity with the County government, public safety agencies and California Emergency Management Agency's Coastal Region," he said. "Greg Smith of Cal-EMA <http://www.calema.ca.gov/> spent the day in the Santa Cruz EOC with us." All service was restored by 12:15 AM on Friday, April 10.

NETCOM, the dispatch center for most police and fire agencies in Santa Cruz County, was able to receive 911 calls placed from land lines, but could not receive calls placed from cell phones, said Santa Cruz County Senior Dispatcher Stephanie Zube. "Because the only phone number many land line phone owners could call was 911," she said the center received "countless calls" regarding the blackout: "At least several people attempted to call 911 before driving themselves to the emergency room. A lady in Gilroy fled her home when a robber broke in, and couldn't call 911 before fleeing to a nearby firehouse."

Vandalism Takes Out System

San Jose and San Carlos police are joined in their investigation of the cut fiber optic cables -- now considered by authorities to be a coordinated act of sabotage -- by the Santa Clara County Sheriff's Office and the FBI. The investigation also includes members of AT&T's security force, a handful of trained investigators working for the company. Authorities said on April 10 that evidence collection was complete, but would not elaborate on what exactly what they are examining or whether new security measures are in place to prevent similar acts of destruction.

San Jose police reported receiving about 10 tips concerning the sabotage; San Carlos police told the "Mercury News" that they were examining video surveillance of a major intersection near one of the four locations where AT&T's underground fiber-optic cables were sliced early Thursday morning.

On April 11, AT&T issued a $100,000 reward for information, but bumped up the reward to $250,000 the next day when it discovered that the damage was more serious than originally thought. According to the Daily Tech, some banks in the area were forced to close temporarily, while all service was disabled and hand-written receipts were offered to customers. Many businesses also were forced to either accept cash or close for a few hours, since credit card and ATM transactions were unavailable <http://www.dailytech.com/Vandals+Cut+Phone+Cables+Drop+Service+for+50K+People+911+Services/article14821.htm>.

Authorities say the communications sabotage occurred in two separate incidents, one at 1:30 AM in south San Jose and the other two hours later in San Carlos. Several companies, such as Verizon, "piggy back" on the AT&T-owned cables. AT&T spokesman John Britton told the "Mercury News" <http://www.mercurynews.com/centralcoast/ci_12115324?nclick> that it appears vandals opened a manhole and climbed down at least 8 feet to cut four or five fiber optic cables along Monterey Road just north of the Blossom Hill Road exit. The second vandalism was along Old County Road near Bing Street in San Carlos. San Jose police spokesman Sergeant Ronnie Lopez said the manhole covers are heavy and would take quite an effort to lift, perhaps even requiring a tool. Investigators do not have a suspect yet, he said, but have learned "to expect the unexpected. We have some obvious clues and can assume some things," but a motive remains elusive <http://www.mercurynews.com/valley/ci_12142268>.

Community Leaders Praise Hams

Gilroy, the southernmost city in Santa Clara County, was also affected. City Administrator/Director of Emergency Services Thomas J. Haglund expressed his thanks to the Amateur Radio operators who assisted with communications support, saying, "This particular emergency situation underscores that our reliance on technology should be balanced with maintaining the very types of capabilities that you provided to us. Communication is an obvious key to adequately responding to any emergency and the efforts of the Mutual Aid Communicators and the Gilroy Police VIP's provided the necessary communication and public visibility in this instance and demonstrated just how important your training and skill is to our community. Thank you very much for your dedication and expertise."

Gilroy Police Chief Denise Turner echoed Haglund's comments: "We truly appreciated all of your help during this challenging event! Each of you played a key role in a successful operation. I feel better knowing we have dedicated volunteers like you that will come to our aid in time of need! Thank you!" -- Some information provided by "The San Jose Mercury News" and "The Daily Tech"

==> ARRL COMMENTS ON BROADBAND PROVISIONS IN RECOVERY ACT

On March 24, 2009, the FCC invited comments from interested parties concerning the Commission's consultative role in the broadband provisions of the American Recovery and Reinvestment Act of 2009 (Recovery Act) <http://www.fcc.gov/Daily_Releases/Daily_Business/2009/db0324/DA-09-668A1.pdf >. In the Recovery Act, Congress assigned grant and loanmaking responsibilities to the Department of Commerce's National Telecommunications and Information Administration (NTIA) and the Department of Agriculture's Rural Utilities Service (RUS). On April 13, the ARRL, through General Counsel Chris Imlay, W3KD, submitted comments <http://www.arrl.org/news/files/BroadbandDefinitionDocket09-40.pdf> that expressed concern as "the threshold for what constitutes 'broadband' is a critical determination that will inevitably determine the success or failure of the [Broadband Technologies Opportunities Program] BTOP <http://www.ntia.doc.gov/broadbandgrants/> program going forward."

In the League's comments to the FCC, the ARRL asked the Commission to adopt as the definition of broadband "those technologies capable of the minimum threshold bidirectional speeds [as recommended in the ARRL's comments], without variation among the type of broadband technology under consideration, as a minimum threshold in order to be considered for grants or loans of public funds."

While the FCC has no funds under the Recovery Act for grant or loanmaking, it does, however, have what the Commission describes as "an important role to play in providing expert, technical advice to the NTIA" as it establishes the BTOP, "and the Commission may also provide expert, technical advice to RUS as it proceeds with its own programs."

Imlay pointed out to the Commission that the ARRL actively participates in the Committee for Communications Policy of the Institute of Electrical and Electronics Engineers-USA (IEEE-USA CCP), "which has engaged in considerable discussion of universal access to high-speed broadband networks, and in particular, broadband definitions and target goals for broadband deployment" <http://www.ieeeusa.org/volunteers/committees/ccp/>.

He told the Commission that the ARRL "wholeheartedly concurs" with that organization's views on broadband technologies, as detailed in its position statement, 'Nationwide High Speed Broadband Data Services,' that says "The most important short-term goal is broadening ubiquitous availability [of broadband]. Data rates should be sufficient to provide the equivalent of several channels of bidirectional, high resolution video, achievable by expanding the capabilities of current technologies" <http://www.ieeeusa.org/policy/positions/broadband.pdf>.

The IEEE also says that it "initially advocates" the achievement of at least 20 Mb/s bidirectional speed with 90 percent availability throughout the nation within five years. "The wide penetration of such speeds will achieve most of the expected benefits and accommodate numerous simultaneous applications per household or small business. Of course, greater speeds can be had by those with greater needs. We further advocate the achievement of at least 100 Mb/s bidirectional speed with availability to all businesses and households within 10 years. The technology necessary to meet this goal is scalable to almost any future need at inexpensive upgrade costs."

Imlay said that IEEE-USA's position statement concludes that there are "two overarching goals for nationwide high-speed broadband networks: widespread availability and high performance." In providing public funds to achieve widespread availability, Imlay stated that the FCC, NTIA and the RUS should ensure that high performance should not be set aside to achieve that goal. "This," he told the Commission, "to ARRL, means the establishment of a floor for throughput of at least 20 Mb/s bidirectional speed for funding of broadband systems to be developed between now and 2014, and 100 Mb/s bidirectional speed for those systems to be implemented between 2014 and 2019. Expenditure of public funds should be limited to the technologies that can meet these goals."

The IEEE-USA statement also notes, Imlay explained to the Commission, that the FCC's recently adopted definition of broadband speed "is a series of tiers, starting as low as 768 kb/s. As noted in the statement, this is woefully inadequate to perform even current computing applications." Imlay called for an elimination of tiers "at least for purposes of determining what broadband technologies should be funded with public funds."

Imlay, in his comments, said that the "most urgent" of the FCC's "consultative issues with the NTIA" involve defining just what broadband is. "The Commission is obligated pursuant to the Recovery Act to consult with NTIA on the establishment of a national broadband service deployment and expansion program, and the NTIA is obligated, through the BTOP program, to provide access to broadband service to consumers residing in unserved areas," he said. "It is not useful in the expenditure of large sums of Recovery Act funds to promote broadband technologies that do not include the capabilities needed by individuals and businesses located in rural or underserved areas. Therefore, the threshold for what constitutes 'broadband' is a critical determination that will inevitably determine the success or failure of the BTOP program going forward."

The ARRL recognizes that the FCC has struggled with this definition for some time, Imlay wrote: "Indeed, in the Notice of Inquiry in Docket 09-51, FCC 09-31, released April 8, 2009 (at ï¿½15-16), the Commission stated that 'Broadband can be defined in myriad ways. In order to ensure that all people of the United States have access to broadband capability, we must make sure that the Commission appropriately identifies goals and benchmarks in this regard...In addition, to the extent that broadband is defined by 'speed,' should the Commission consider raising the speeds that define broadband? Should we distinguish among the various broadband technologies?" <http://www.fcc.gov/Daily_Releases/Daily_Business/2009/db0408/FCC-09-31A1.pdf

>

Imlay said that it is the ARRL's position that the definition of "broadband" should include an "absolute lower threshold, minimum bidirectional speed. It should not be a variable concept determined by technology. To do otherwise is to provide grants and loans of public funds to technologies whose benefits are, in the medium term, inadequate and which might, for example, render businesses in rural areas less competitive than those located in urban areas. It is, in other words, not useful to fund the creation of infrastructure that will be obsolete in the near term or less useful than other technologies which provide greater speeds. That simply perpetuates the status quo, where there will still, going forward, be adequately served and underserved areas. The status quo is quite obviously unacceptable to Congress, and it should be.

==> LOOK FOR THE MAY ISSUE OF QST IN YOUR MAILBOX

The May issue of QST has left for the printer and is speeding toward your mailbox. This issue -- with its cover featuring the 2009 ARRL National Convention and the Dayton Hamvention -- is jam-packed with all sorts of things that today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

In the May issue, Dwight Merkley, N7KBC, shows a way to see what's happening at night on your mobile radio in his article "See Your Mobile Controls at Night with Superbright LEDs." Discover another way to talk on your radio in "A Cell Phone Headset Adapter for Amateur Radio" by Geoff Haines, N1GY. Is your antenna beam pointed at the best possible elevation for the contacts you want to make? Find out in the article "What's the Best Height for My HF Beam?" by Steve Hunt, G3TXQ.

If you're excited about the 2009 ARRL National Convention and the Dayton Hamvention, you're definitely not alone! Catch up on all the latest happenings at these events in S. Khrystyne Keane's, K1SFA, article, "Something for Everyone at the 2009 ARRL National Convention." ARRL ARISS Program Manager Rosalie White, K1STO, gives readers a glimpse into the life of Richard Garriott, W5KWQ, son of US astronaut Owen Garriott, W5LFL. Find out in the May QST how you can meet Richard in Dayton at the ARRL EXPO.

If you like the competitive spirit of radiosport, but you have a hankering for the big outdoors, why not try ARDF, or Amateur Radio Direction Finding? ARRL Contest Branch Manager Sean Kutzko, KX9X, explores the world of ARDF in "This Month in Contesting." According to Kutzko, all you need to get started in competitive ARDF is "your running shows, a set of headphones attached to a receiver, a map or compass and a small handheld directional receiver. Now run through a course in a forest or on a trail, and try to find several hidden transmitters as fast as possible." Kelly Taylor, VE4XT, reports on the results of the 2008 ARRL CW Sweepstakes in this issue.

ARRL Contributing Author Gary Pearce, KN4AQ, reviews Kenwood's RC-D710 Control Head/TNC. According to Pearce, the RC-D710 "upgrades the TM-V71A transceiver to add packet radio and APRS capabilities identical to Kenwood's

TM-D710A transceiver, and it can be used with other radios as a stand-alone TNC." Be sure to also check out the reviews by ARRL Technical Advisor Bruce Prior, N7RR, on portable dual-lever keyer paddles, also in the May issue.

Of course, there are the usual columns you know and love in the May QST: Hints & Kinks, The Doctor Is IN, How's DX, Vintage Radio, Hamspeak and more. Look for your May issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> CALIFORNIA TEEN IS 2009 GOLDFARB SCHOLARSHIP RECIPIENT

In April, the ARRL Foundation Board of Directors <http://www.arrlf.org> voted unanimously to award the prestigious William R. Goldfarb Memorial Scholarship to Dean LaBarba, KI6CUX, of Long Beach, California. LaBarba will graduate from Woodrow Wilson High School this year with a GPA of 4.0. According to ARRL Chief Development Officer Mary Hobart, K1MMH, upon graduation, LaBarba will more than meet the course requirements with 50 hours of honors and Advanced Placement credits.

LaBarba holds a Technician class license that in 2005 led him to participation in the Amateur Radio Emergency Communication (AREC) team at his high school; since 2007, he has served as president. The mobile Amateur Radio station at Wilson High School is the only high school emergency team in Long Beach. Hobart said that LaBarba took the "extra initiative" to display and demonstrate the mobile radio station at the district science fair, explaining to the public the role that Amateur Radio plays in community safety. LaBarba also spends considerable time coordinating Amateur Radio activities, including Field Day, with the local community.

In addition to his Amateur Radio activities, LaBarba is active in the Symphony and Symphonic Orchestra where he is seated as principal trombone. He also participates in the school speech and debate team. From an early age, LaBarba -- who will be attending Westmont College <http://www.westmont.edu/> in Santa Barbara, California -- has had a keen interest in medicine and intends to pursue a career in neurology.

The Goldfarb Scholarship is the result of a generous endowment from the late William Goldfarb, N2ITP. Before his death in 1997, Goldfarb set up a scholarship endowment of close to $1 million in memory of his parents, Albert and Dorothy Goldfarb. Awarded to one high school senior each year, the Goldfarb Scholarship assists the recipient to receive a four-year undergraduate degree in engineering or science or in the medical or business-related fields. The terms of reference of the generous Goldfarb scholarship award require that recipients demonstrate financial need and significant involvement with Amateur Radio, in addition to high academic performance. The seventh Goldfarb Scholarship winner, LaBarba continues the tradition of prior recipients, demonstrating superior academic performance, outstanding leadership and extraordinary Amateur Radio and community service.

More information on the Goldfarb Scholarship is available on the ARRL Web site <http://www.arrl.org/arrlf/>. Applications for the Goldfarb Scholarship and other ARRL Foundation Scholarships are accepted each year beginning October 1 and ending February 1 for the academic year that starts the following August/September.

==> HAMS IN SOUTHEASTERN US PROVIDE SPOTTING ASSISTANCE TO NWS

As tornados swept through the southeastern part of the country on April 10, hams in Alabama, Tennessee, Arkansas and Georgia were on the air providing assistance to the National Weather Service (NWS) <http://www.nws.noaa.gov/>.

In Alabama, hams in Madison, Shelby and Calhoun Counties activated SKYWARN Nets. According to Madison County Emergency Coordinator Rolf Goedhart, K4RGG storm spotters in that county were quite active on their Net. "At 12:37, at the request of the Madison County Emergency Operations Center and in response to a tornado watch, we formally activated the Madison County Emergency Net," Goedhart told the ARRL. "For about an hour and a half, there was virtually no dead air, either on the SKYWARN net or the Madison County Emergency Net. In fact, reports were flowing fast enough to make one pause, deciding when or even whether to call NCS with a report." Goedhart said that Hilton, at the Huntsville NWS amateur station, estimated handling more than 200 reports from the northern counties of the state in the nine hours that the Net was open.

In Tennessee, members of the Heart of Tennessee (HOT) ARES <http://www.hotares.com/> started an NWS SKYWARN Net at 12:18 PM as the storms approached. "Amateur operators relayed storm damage information to NWS for evaluation in determining tornado strength in the area," Rutherford County Emergency Coordinator Keith Miller, N9DGK, told the ARRL. "ARES members were monitoring the developing line of storms as watches and warnings were issued in the adjacent counties in the Middle Tennessee area."

Miller said that since primary communications for police departments, fire departments, Emergency Medical Service, County Sheriff or County Emergency Management Agency were not lost, backup communication was not required per the County EMA Director. His ARES group did not receive any requests to staff emergency shelters.

ARRL Georgia Section Emergency Coordinator Gene Clark, W4AYK, told the ARRL that hams in Gwinnett County activated a SKYWARN Net at 4:30 PM on April 10. "According to plan, a de-centralized Net Control function was used, with the Net Manager coordinating weather spotter reports to the NWS office in Peachtree City," he said. "Forty-one amateurs reported seven different reportable weather situations to the NWS."

In Newton County, Emergency Coordinator Charles Davis, WA4UJC, activated a weather Net at 8 PM. Ten operators from different areas of the county, as well as from adjacent counties, participated in the Net, reporting golf ball-sized hail and heavy rain. "When power went out for three hours due to a broken power pole on the west side of the county, the Net continued with hams using mobile transceivers and backup power," Clark explained. "The power outage caused us to lose repeater capabilities, so the hams relied on simplex. Using backup power, they contacted a linked repeater system and

maintained communication with the NWSï¿½until securing at 11:15 that night."

Arkansas hams were busy with the storm, too. At 7:24 PM CDT, the NWS issued a tornado warning for areas north of the Arkansas town of Mena in Polk County; at 8:01 PM CDT, the warning was extended into Mena. Nine minutes later, an EF-3 tornado struck the city, killing three people.

According to ARRL Arkansas Section Emergency Coordinator John Nordlund, AD5FU, members of the Central Arkansas UHF Group (CAUHF) <http://www.cauhf.org/weather/> provided real-time reports to the National Weather Service office in North Little Rock and to media outlets around the state. "The Group used the AR-Links SKYWARN net and the WarnIM system," Nordlund said. WarnIM is a SKYWARN instant messenger system serving to give those with or without ham radio access, or those who are in remote areas an additional means of communication in times of emergencies or severe weather events. Its features include live chat and access to updated radar data directly from the NWS.

"When the net closed at the end of the severe weather outbreak, NWS Warning Coordination Meteorologist John Robinson stated on the WarnIM system that the North Little Rock NWS office had never had so much timely storm report information before," Nordlund said.

Nordlund visited Mena on April 11 and noted that the local ham operators are participating in any emergency tasks that are assigned to them -- based on their training and certifications -- and are using simplex ham radio frequencies primarily to avoid additional loading of public safety frequencies as they carry out those assignments. "The damage path [of the tornado] is a striking example of the power of nature," he said. "The recovery effort of community volunteers is inspiring. This is another fine example of a local ham group that has their ducks lined up and on parade when it really counts."

==> FORUM SCHEDULE ANNOUNCED FOR 2009 DAYTON HAMVENTION

One of the many highlights at Dayton Hamvention is the myriad of educational and fun forums that take place the entire weekend at Hara Arena. The Dayton Amateur Radio Association has coordinated 45 unique programs that encompass nearly 80 hours of programs and activities for the thousands of people expected to attend these programs. Hamvention, the largest event of its kind, will be May 15-17 at Hara Arena in Dayton, Ohio. Please keep in mind that the schedule may change before Hamvention.

Friday, May 15
9:15-11:15 -- TAPR Digital Forum (Room 1)
9:15-10:15 -- Engineering Manuals (Room 2)
9:15-10:15 -- Kit Building (Room 3)
9:15-10:15 -- QRP (Room 5)
10:30-12 -- Drake Forum (Room 2)
10:30-12 - Teachers Workshop (Room 3)
10:30-11:30 -- ARRL Field Day (Room 5)
11:30-12:30 -- APRS Forum (Room 1)

11:45-12:45 -- QSL Cards (Room 5)
12:15-1:15 -- ARRL, The Doctor Is IN (Room 2)
12:15-2 -- Ham Radio and the Law (Room 3)
12:45-2:15 -- D-STAR Forum (Room 1)
1-2:15 -- Alternative Energy Forum (Room 5)
1:30-2:30 -- ARRL, Public Relations (Room 2)
2:15-3:30 -- Gordon West (Room 3)
2:30-5 -- Antenna Forum (Room 1)
2:30-5 -- Software defined Radio (Room 5)
2:45-3:45 -- Foxhunting Forum (Room 2)
3:45-5 -- Techniques of the Best Operators (Room 3)
4-5 -- County Hunting Forum (Room 2)

Saturday, May 16
9:15-11:15 -- Contesting Forum (Room 1)
9:15-10:15 -- SATERN Forum (Room 2)
9:15-10:15 - Lightning Grounding Forum (Room 3)
9:15-11:00 - VHF/UHF/Microwave Forum (Room 5)
10:30-11:30 -- ARRL Members Forum (Room 2)
10:30-11:45 -- Heil Sound (Room 3)
11:15-1:30 -- AMSAT Forum (Room 5)
11:30-1:15 -- Youth Forum (Room 1)
11:45-2 -- Newsline Town Meeting (Room 2)
12-1 -- RTTY Forum (Room 3)
1:15-2:15 -- ARRL, Digital Contesting (Room 3)
1:30-2:30 - ARRL Presents Richard Garriott, W5KWQ (Room 1)
1:45-3 -- SSTV Forum (Room 5)
2:15-3:15 -- FCC Forum (Room 2)
2:30-3:30 -- ARES Forum (Room 3)
2:45-5 -- DX Forum (Room 1)
3:15-5 -- MARS Forum (Room 5)
3:30-5 -- ATV Forum (Room 2)
3:45-5 -- Collins Forum (Room 3)

Sunday, May 17
9:15-10:15 -- Red Cross Forum (Room 1)
9:15-11 -- QCWA Forum (Room 2)
9:15-10:15 -- Volunteers and EmComm Forum (Room 3)
9:30-11:15 - Bicycle Mobile Forum (Room 5)
10:30-11:30 - When All Else Fails, South Carolina Is Ready (Room 1)

For more information on forums at the 2009 Dayton Hamvention, please visit
the Dayton Hamvention Web site <http://hamvention.org/forums.php>.

==>SOLAR UPDATE

Tad "The Sun is hot on my neck as I observe" Cook, K7RA, this week reports:
Still no sunspots, and again we saw a prediction for slightly higher solar
flux slip away. Sunspot numbers for April 9-15 were 0, 0, 0, 0, 0, 0 and 0
with a mean of 0. The 10.7 cm flux was 70.1, 69.4, 69.3, 69.3, 68.4, 69.4 and
69.4 with a mean of 69.3. The estimated planetary A indices were 12, 8, 9, 8,
4, 2 and 3 with a mean of 6.6. The estimated mid-latitude A indices were 9,

6, 7, 4, 3, 1 and 2 with a mean of 4.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Edna St Vincent Millay's "Spring" <http://www.poetryfoundation.org/archive/poem.html?id=173994>.

==>IN BRIEF:

* This Week on the Radio: This week, the NCCC Sprint Ladder is on April 17. Be sure to check out the Holyland DX Contest, the TARA Skirmish Digital Prefix Contest, the ES Open HF Championship and the Feld Hell Sprint on April 18. The Michigan QSO Party, the Ontario QSO Party and the YU DX Contest are April 18-19. The Run for the Bacon QRP Contest is April 20. The SKCC Sprint and the 432 MHz Spring Sprint are April 22 (the 432 MHz Sprint is local time). Look for another NCCC Sprint Ladder next week on April 24. The Florida QSO Party, the Nebraska QSO Party and the SP DX RTTY Contest are all on April 25-26. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 3, 2009 for these online course sessions beginning on Friday, May 15, 2009: Antenna Modeling and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News April 24: There will be no ARRL Audio News on Friday, April 24. The ARRL Letter will be distributed that day. The ARRL Audio News will return for May 1 and 8, but will be on hiatus on May 15 due to the Dayton Hamvention. The Audio News will resume regular distribution on May 22.

* Italy Discontinues HF Earthquake Net: On April 10, Italy's Dipartimento della Protezione Civile announced they had closed down all organized emergency communications support on HF frequencies that had been set up after the April 6 earthquake that struck the town of L'Aquila. The ARRL reported that two HF frequencies -- 7045 and 3640 kHz -- were being kept clear of regular traffic so that they could be utilized for any communications support needed in the aftermath of the quake <http://www.arrl.org/news/stories/2009/04/06/10757/?nc=1>. "There do not appear to be any other emergency groups using [7045 kHz]," said IARU Region 1 Emergency Communications Coordinator Greg Mossop, G0DUB, "so it is appropriate to return it to normal use and let normal amateur procedures apply: Listen before transmitting, and if you hear any station passing emergency traffic, leave the frequency clear and avoid causing interference." Mossop said that a large number of Amateur Radio responders are st ill present from the different emergency communications groups in the country.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>
==>ARRL Audio News: <http://www.arrl.org/arrlletter/audio/> or call 860-594-0384

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make

selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

134. BPSK software?

Newsgroup: rec.radio.amateur.moderated

I've been on the road since the first of the year, so no chance to chase the Triple Play award.

Now that I'm home, it looks like the best way to capture the "Digital" play is via BPSK31.

I have DigiPan Rev 2.0 installed, and the "operating" side of it seems excellent, but its "logging" facility is awkward.

What else is out there which has a little more seamless logging capability. (I need it to spit out an ADIF which TQSL will sign and send to LoTW.)

Try MixW. The test version is free; the non-expiring license is not very
much. It does a lot more than just BPSK31, and there are plug-ins
available for yet more modes. I quite like Olivia.

I think it will build an ADIF ready to be signed and sent to LotW.

Hello, Hans.

For Windows machines, my favorite is Ham Radio Deluxe (HRD) with its companion program Digital Master 780. I find the log does everything I need. For Linux machines, my preference is Fldigi. The log does not have all the features of Ham Radio Deluxe but it does create ADIF files. Fldigi is also available for Windows machines but I've selected HRD for those.

Both are free downloads and excellent digital mode performers with many capabilities beyond BPSK31.

Here's the URLs to download the software:

HRD http://www.ham-radio-deluxe.com/

Fldigi http://www.w1hkj.com/Fldigi.html

73, and good luck chasing the Triple Play!

Jim, KA9VHG

Amateur Radio Newsline(tm) Report 1654 - April 24 2009

Now, Amateur Radio Newsline report number 1654 with a release date of Friday, April 24th, 2009 to follow in 5-4-3-2-1. The following is a Q-S-T. South Africa proposes a major increase in the fee to get or renew a ham radio license, the 70 centimeter band now seems safe down-under. NASA says the sun is kind of spotless and a big fine against an unlicensed broadcaster in Milwaukee. All this and more on Amateur Radio Newsline(tm) report number 1654 coming your way right now.

(Billboard Cart Here)
**

WORLDBEAT: SOUTH AFRICA PROPOSES LARGE HAM LICENSE FEE INCREASE

The Independent Communications Authority of South Africa has published some far-reaching proposals to the restructure of license fees in that nation. A major increase for a ham license is included. Jim Davis, W2JKD, has the details:

--

The licensing authority better known by the acronym ICASA proposed that fees for an amateur radio license be increased to 120 South African Rand or $1 2.50 per year. This from the current fee of 27 Rand or $2.80.

Also, to reduce the administrative burden on the regulatory agency the fees would be payable for a period of 5 or 10 years in advance. This means that a South African ham renewing his or her license would have to pay about $ 52 for a five year license or about $85 for a ten year ticket.

In addition, the fees for beacons, change of callsign, guest and special event licenses, repeater stations including radio links, packet radio digipeaters and bulletin boards would all be increased to the new minimum yearly fee. This fee would also apply to experimental stations for weather reception and retransmission and listener only licenses as well.

Reaction has been swift from the South African Radio League. At a Strategic Council meeting the SARL reviewed the draft fees and new structure. It says that it will be filing in opposition well in time before the comment cutoff deadline. The Council's view is that while it understands that the current fee of $2.80 a year is due for revision, the proposed minimum fee represents an excessive increase

and that paying five years or ten in advance should be by choice and not compulsory.

--

For its part ICASA says the spectrum fees are not intended to raise extra revenue for the national treasury. However it notes that there is a general principle that the application and annual fees in total should at least cover the cost of spectrum management and monitoring. (SARL)

**

RESTRUCTURING: 70 CM APPEARS SAFE DOWN-UNDER

The threat to 70 centimeter ham radio operations down-under appear to have ceased. This as the Australian Communications Authority indicates that its current review of 400 MHz and above spectrum no longer includes the amateur band 430 to 450 MHz.

This time last year the ACMA was seeking comments on other users being given access to the sub-bands 430 to 440 and 440 to 450 MHz. Now the regulatory agency says that 430- to 440 MHz is used for defense radar and the amateur services including amateur satellites,. This the authority says is in line with internationally harmonized allocations. It also says that its analysis of 440 to 450 MHz has led it to conclude that there is no space for additional use of this band for the land mobile service. (WIA News)

**

THE SOLAR CYCLE: NASA CALLS IT A SPOTLESS SUN

The lack of High Frequency propagation could continue. This, as NASA has announced that the sun has plunged into the deepest solar minimum in nearly a century.

According to the space agency, Sunspots have all but vanished and consequently the sun has become very quiet. It notes that in 2008, the sun had no spots 73% of the time,. That was a 95-year low. Now, in 2009, sunspots are even more scarce, with the "spotless rate" jumping to 87%. How long this downward sunspot spiral will continue is unknown. (Spaceweather)

**

RADIO STATS: MORSE EXCEEDS SSB IN 2008 CQ WORLD WIDE DX CONTESTS

Even with the poor propagation, more than 10,000 logs have been submitted f or the 2008 running CQ World Wide DX Contest. This, according to Contest Director Bob Cox, K3EST, who says that's a new record for the event.

But here's the real surprise for those who think that Morse is dead or dying. Cox reports that the number of CW logs have exceeded the

number of phone logs for the first time in more than 20 years. A total of 5013 SSB logs and 5272 CW logs submitted.

SSB results of the 2008 CQWW Contest will be published in the August 2009 issue of CQ magazine with the CW results in the September issue. (CQ)

**

ENFORCEMENT: ALLEGED UNLICENSED BROADCASTER FINED $10000 BY THE FCC

Federal Communications Commission has affirmed a $10,000 fine issued against Steven A. Skalecki of Milwaukee, Wisconsin. This for allegedly operating an unlicensed broadcast station and failing to heed FCC warnings to take it off the air. Bruce Tennant, K6PZW, has the rest of the story:

--

The story goes back to March 25, 2006. That's when FCC agents observed a radio station broadcasting on 92.9 MHz and located that the station was operating from a single family residence in Milwaukee and that Skalecki lived there. The agents took field strength measurements and determined that the signals being broadcast exceeded the limits for operation under Part 15 of the Commission's Rules and therefore required a license. An agent searched Commission databases and found no evidence of a Commission authorization for this operation on 92.9 MHz in Milwaukee, Wisconsin. Later that day, the agents knocked on the front door but there was no response. Before leaving they wrote up a Notice of Unauthorized Operation and left it between the inner and outer doors. It directed Skalecki to terminate operation of the unlicensed station immediately. As a follow-up the FCC sent a registered letter to Skalecki with the same demand. The return receipt from the U.S. Postal Service shows that Skalecki signed for and received the notice on April 24, 2006.

Then on May 6th Commission agents again traced the broadcasts on 92.9 MHz to Skalecki's residence. They again tried to talk with those in the home but received no response.

On May 10th, the Chicago office received a response to the a Notice of Unauthorized Operation issued to Skalecki. In it he denied having any broadcast equipment and also stated that no local broadcasts can be heard on 92.9 MHz. Skalecki also acknowledged receipt of the notice left in the front storm door by Commission Agents on March 25th.

On March 1st, 14th, 24th as well as May 28th of 2007 Commission agents again traced the broadcasts on 92.9 MHz to Skalecki's home. On December 14, 2007, the Chicago Field Office issued a Notice of Apparent Liability for Forfeiture to Skalecki in the amount of $10,000 for operating radio transmitting equipment on the frequency 92.9 MHz without a license. In his response to the proposed fine Skalecki again denied operating an unlicensed station. He did admit that he

operated a weather monitoring station from that property, but claimed that the unlicensed broadcast station was operating from another nearby residence on which several antennas are located.

On March 13th, the FCC rendered its decision on Skalecki response. It said that it would not cancel the proposed forfeiture based on Skalecki's claim that he was not operating an unlicensed broadcast station from his home. It said that only evidence Skalecki provided in support of his claim is a list of nine dates on which he states he observed a station operating on 92.9 MHz from a nearby residence but the FCC countered that it had determined the signals were coming from Skalecki home on those dates.

The FCC also rejected Skalecki's claim that it could not assess a forfeiture because agents were unable to conduct an inspection. The FCC says that whether or not agents were able to inspect the station does not affect its determination here that Skalecki violated Section 301 of the Act based on the direction finding evidence collected by its agents. It said that even if he did not personally operate t e station that Skalecki is responsible for its unlicensed operation because he provided the facilities used in its operation. As such, he is required to pay the fine.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC gave Skalecki the customary 30 days from the date it issued its forfeiture order for him to pay the $10,000 fine. He also has the option of filing an appeal. (FCC)

RADIO LAW: COMMERCIAL RADIO OPERATOR LICENSE RENEWALS

The FCC says that holders of certain commercial radio operator licenses are no longer required to file renewal applications. Specifically, it extended the terms of GMDSS Radio Operator's Licenses, Restricted GMDSS Radio Operator's Licenses, GMDSS Radio Maintainer's Licenses and several other classes to the lifetime of the holder.

Unaffected by the change are holders of General Radiotelephone Operator Licenses, Restricted Radiotelephone Operator Permits, and

Restricted Radiotelephone Operator Permits for Limited Use. All of these are already valid for the lifetime of the license holder. More details are at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-658A1.doc (CGC, FCC)

**

ENFORCEMENT: FCC SUSPENDS THREE COMMERCIAL RADIOTELEGRAPH LICENSES

Three people the FCC says did not follow the rules in getting their commercial radiotelegraph licenses have had them suspended. Don Carlson, KQ6FM, has the details:

--

The FCC has suspended the Second Class Radiotelegraph Operator's Certificate held by Chicago residents Ahmaad D. Brunson, Todd C. Robinson and Jason C. Robinson. This after an investigation by the regulatory agency found that the three may have obtained their certificates by fraudulent means.

All three filed applications for a Second Class Radiotelegraph Operator's Certificate on February 24, 2004. The applications were returned because none were accompanied by a Proof of Passing Certificate. They then filed amended applications with what appeared to be a Proof of Passing Certificate signed by three examiners associated with National Radio Examiners. Each certificate documented the successful completion of Written Elements 5 and 6 and Telegraphy Elements 1 and 2 by each applicant. The FCC then granted each of the three a Second Class Radiotelegraph Operator's Certificate.

But based on subsequent developments, the FCC came to question the authenticity of the Proof of Passing Certificates. So the agency contacted National Radio Examiners and asked for clarification. After investigating the matter, National Radio Examiners informed the FCC that no examinations had been administered in Chicago by their examiners on March 27, 2004. They also confirmed that the signatures of the three examiners appearing in the Proof of Passing Certificates were inconsistent with the actual signatures on file. National Radio certificates also stated that the typeface used for serial numbers was different than theirs that the watermarks were missing. Based on what it had learned, the FCC wrote official Letters of Inquiry to Brunson and the two Robinsons asking that they explain the discrepancies. The letter to Brunson was returned marked undeliverable. Jason Robinson never responded. Only Todd Robinson filed a written response. In it he claimed never to have taken any radiotelegraphy exams proctored by the National Radio Examiners nor submitted an application to the FCC. After weighing the evidence the FCC has decided to suspend the Second Class Radiotelegraph Operator's Certificates of all three operators for the remainder of each license term unless each files a written request for a hearing within a fifteen-day period from receipt of the

Suspension Order. -- If any or all do file appeals the suspensions will be held in abeyance until the conclusion of the hearing.

(FCC) ** RADIO AND THE NET: BROADCAST RADIO HOLDING ITS OWN VS. THE WWW

According to a survey from American Media Services, Internet-only radio is gaining ground as a way to discover music. None the less, terrestrial broadcast radio is not loosing any audience to it.

In talking to 1,000 Americans by phone at the end of March, OmniTel personnel handling the survey found that 27 percent of those polled say they have listened to Internet-only radio on an Internet site. This includes 47 percent of young adults age 18 to 24 and about 34 percent of those under the age of 50.

But even as new media, such as Internet-only radio, continue to gain in popularity, regular radio is maintaining its audience. In the latest American Media Services survey, 73 percent said they are listening to broadcast radio about as much or more than they did five years ago. (RW)

**
TOWER ISSUE: A PROPOSED 1500 FOOT BROADCAST TOWER IN ILLINOIS

A proposed 1500 foot self supporting radio and television broadcast tower is polarizing some of the citizens of Clear Lake, Illinois.

BMB Communications Management is working to get approval to build the broadcast tower in the southeast corner of McHenry County College's main campus. The Oklahoma-based company says that it will pay $6 million dollars for the land at closing of the sale. It also would reward the college an additional $1 million dollars if the company manages to sell all five broadcast slots on the tower in the first five years of the agreement.

A local attorney who worked on getting zoning approval for a 405-foot FM radio tower, supports selling the land for the tower. He calls it a financial windfall for the college. On the other side is a commercial pilot who put five of his children through McHenry County College. He has expressed several safety concerns ranging from the safety of the students to the safety of local pilots.

John Maguire is the the co-owner of BMB Communications Management. He says that if its built, it would be one of the tallest towers of its kind in the world. (RW)

**

NAMES IN THE NEWS: VE5SF APPOINTED TO CAC

Radio Amateurs of Canada has then chosen Sam Ferris, VE5SF, to replace David Shipman, VE7CFD as its representative on the ARRL Contest Advisory Committee. Shipman had held that position for the past ten

years. Ferris is a well known Canadian contest enthusiast. (RAC)

**

NAMES IN THE NEWS: KI6CUX NAMED ARRL GOLDFARB SCHOLARSHIP WINNER

The ARRL Foundation Board of Directors selected Dean LaBarba, KI6CUX, of Long Beach, California, to be this year's recipient of its William R. Goldfarb Memorial Scholarship. LaBarba will graduate from Woodrow Wilson High School this year with a GPA of 4.0. He holds a Technician class license and since 2007 has served as president of his school's Amateur Radio Emergency Communication team. After graduating high school he plans to attend Westmont College in Santa Barbara, California. (ARRL)

**

With some words about Amateur Radio Newsline's finances here's our support fund administrator Andy Jaema, N6TCQ:

--

In the Merry Month of May of last year we heard via PayPal from Michael Scheliga, Daryl Stout, Scott Currier of Haverville, MA; Rory Shaffer-Roebling, NJ; Thomas Home- Takoma Park, MD; Murray Hunt-Odenton, MD; David Carter- Washington, D.C.; Jesse Lindley-Greensboro, NC; Robert McClintock, N3RZ I & KB3PHI in Franckville, PA; Robert Harlan- Mansfield, OH; Robert Mallory - KD8HXT, North Canton, OH; Paul Vinoski- Fisher, WV; Doug Papciak- Tucker, GA; James Drenthe in Galesburg, MI, who is a regular contributor and Wayne Strickland-W9BBB, Chicago.

Also from Illinois, John Leonard- W9JBL in De Kalb; Joseph Kratky-KA9KBU in Hickory Hills ; James Langsted- Golden, CO; Lee Dusbabek-WR7NV, Las Vegas; David Billeci- WA6UHA, San Francisco;

Also from California, Russell Williams- W6OHM in Latrobe; Matt Sturtz-Broomfield Roy Hepp-Carpinteria Frank Brand-Tujunga. And finally, and through the magic of PayPal, Mitchell Wolfson- DJ0QN, Unterschleissheim, Germany.

That was fun! Got to exercise my schprechen ze Deutch!

That's quite a list, but you have to remember that most of those contributions were on the order of $10-$20, and this was right after a major capital campaign.

It costs almost $1000 a month to gather the news and put these newscasts on the air. And right now, things are pretty grim. Please do what you can to keep these newscasts on the air by logging onto our website and going to our PayPal secure contribution link, or contacting us at our Arcadia support fund address given at the end of this newscast.

For now, I'm Andy Jarema, N6TCQ, and thank you.

--

Thank you Andy. (ARNewsline Support Fund)

HAMVENTION HAPPENINGS: FREE HIGH SCHOOL STUDENT TICKETS OFFERED

The Dayton Hamvention has announced that high schoolers will be welcome guests at this years event. According to a posting on the Hamvention website, high school students can obtain a free ticket by filling out a form that's downloadable from the website and present it at the will call window to receive their student ticket. Teachers may order student tickets by making their request on school letterhead.

All persons over 12 years of age attending the Hamvention are required to have an admission ticket. Age 12 years and under are admitted free without a ticket if accompanied by a paid ticket holder. Full information on this Hamvention educational assistance program is on line at www dot hamvention dot org slash tickets dot php. Scroll down to the bottom of the page to the words 2009 Student Tickets.

Hamvention 2009 is slated for the weekend of May 15, 16 and 17 at its traditional home at the Hara Arena in suburban Dayton, Ohio. Its theme this year is the word DREAM. That stands for Digital Radio Enabling Amateurs to do More. The Hamvention runs from May 15th to the 17th at the Hara Arena in suburban Dayton, Ohio. (Hamvention.org)

**

HAMVENTION HAPPENINGS: KIDS TO BE HONORED AT YOUTH FORUM

And another first for the Dayton Hamvention. Educator Carole Perry, WB2MGP, tells us that this year there will be a special ceremony to honor the speakers participating in her very popular Youth Forum. This ceremony is being made possible by ICOM America, MFJ Enterprises, the Radio Club of America , and the L'Anse Creuse Amateur Radio Club. Carole says that they will be donating some very special gifts to each of her nine young speakers. There will also be door prizes for kids in the audience as well. The Dayton Hamvention Youth Forum is Saturday, May 16th from 11:30 a.m. to 1:15 p.m. in Meeting Room 1. (WB2MGP)

**

HAMVENTION HAPPENINGS: ARRL AWARDS CARD CHECKING.

Still with Hamvention news, Bill Moore, NC1L, has announced that card checking will be done at the ARRL National Convention in Dayton during all operating hours of the convention Friday, Saturday and Sunday. Moore says that there are some important guidelines that will help make the card checking process run smoothly. You can find that information at www.arrl.org/blog/Century%20Club%20Awards (OPDX)

**

SOCIAL SCENE: SEVHFS CONFERENCE APRIL 24 - 25

And a reminder that the Southeastern VHF Society is again sponsoring its yearly conference which is this weekend April 24th and 25th in Charlotte, North Carolina. For more information about the conference and the fall sprints which the society also sponsors, go to www.svhfs.org on the World Wide Web. (SVHFS)

**

EMERGING TECHNOLOGY: COLLEGE RADIO TUNER FOR IPHONE

Now here's a new toy that might quickly be adapted for use in ham radio. Backbone Networks, a Web radio service provider, has developed software called the College Radio Tuner for use with the Apple iPhone and the iPod Touch. This is an application for streaming college-based radio stations that works in coordination with Backbone Networks and its partner, the Intercollegiate Broadcasting System and its IBS Student Radio Network.

The College Radio Tuner software is available for free from the Apple Store . The Intercollegiate Broadcasting System maintains the constantly updated station database. The player can provide information and art for currently playing stations, songs and provide a purchase link for the Apple iTunes store.

Now, if some enterprising ham could find a way to adapt this technology to monitor repeaters in a geographic area they too might be available to monitor from anywhere without the need to carry a separate H-T. (RW)

**

HAM RADIO IN SPACE: WORK CONTINUES ON SUITSAT

In ham radio space related news, word that a SuitSat-2 team recently met in Phoenix, Arizona. Reports are that the group primarily worked on software development matters as well as some final coordination on the cabling and hardware.

The software team was able to run some integration tests and achieved the first radio frequency (RF) output of the system. During the testing, the team demonstrated the CW and voice message

transmissions. Work continues on the solar panel mounting.

The Amateur Radio on the International Space Station or ARISS group plans to have the SuitSat-2 hardware ready for delivery by September. (ANS)

HAM HAPPENINGS: N6R - THE REAGAN FIELD DAY COMMEMORATIVE STATION

N6R commemorating the lives of President & Mrs. Ronald Reagan will again be operational for Field Day from the grounds of the President Ronald Reagan Presidential Library & Museum in Simi Valley, California. N6R will operate 1800 UTC on June 6th to 1900 UTC on June 28th using various modes on 80 meters through 10 Gigahertz. This will be the ninth year of Field Day operations from the Presidential Library. More is on-line at www.vcars.org (N6ZE)

**

DX

In DX, NK0S says that he is currently converting the paper logs of VQ9HB, to electronic format so they can be uploaded to Logbook to the World. After the logs are uploaded NK0S will act as the QSL Manager for card requests for VQ9HB's operation between December of 1989 and May of 1990.

KB4CRT will be active as from Monserrat as VP2MRT between June 12-19th. His operation will include CW, SSB, possibly PSK, and the June VHF Contest. Asian stations are suggested to look for him on 20 meters between 1200 and 1300 U-T-C. QSL via KB4CRT.

DU1UGZ has been in Dhaka Bangladesh since April 12th and will be there until about June 20th. His callsign is S21UGZ and is operating SSB and RTTY mainly on 80 and 40 meters with some activity on the other High Frequency bands including 12 and 17 meters. QSL as he directs on the air.

K7WZB, and K9WZB, will stay on from the Cayman Islands through May 6. They will sign ZF2ZB using SSB, CW, RTTY and PSK 31 on 160 through 6 meters. QSLs only direct to Garry Fisher, K9WZB.

Tunisian scout special event station TS1LYMC can be found working in CW, SSB, RTTY, PSK and SSTV 80 through 10 meters. It will be operational through April 30th. QSL only direct to TS1LYMC, 33 Rue Plaine Lune Borj Louzir, Ariana, 2073 Tunis, Tunisia.

DL2SBY and DF1SR will be active from Lichtenstein through May 4th on 80 through 10 meters using CW, SSB and RTTY. There will also be some operation on 13 and 23 centimeters for weak signal E-M-E experiments as well. Two separate callsigns for this operation with DL2SBY portable HB0 for the High Frequency bands and DF1SR stroke HB0 used for E-M-E. QSL via DL2SBY, either direct or via the bureau.

Lastly, CT1FBF reports that the Portuguese ham radio national society has just concluded the installation of station CS5BLA which is the first multi-band beacon cluster in Portugal. Transmitters operate on 50.076, 144.410, 432.425 MHz and 1.296.825 MHz. QSN reports go to cs1rla <dot>arla <at> gmail <dot>com.

(Above from various DX news sources)

**

THAT FINAL ITEM: IT THINKS IT'S A POLICE SCANNER

And finally this week the story of a toy broadcast band radio that thinks it's a VHF and UHF police scanner. Here's John Lego, VK3BUI.

--

The German powers that be are investigating a kids' miniature Mickey Mouse radio which apparently entertains nippers with police radio traffic.

The Chinese-made novelty came with issue 12 of Micky Maus magazine. Hamburg police confirmed: "We've received reports and detectives are finding out whether it's in violation of telecommunications law."

A representative of publisher insisted the radio had been "scrupulously tested at an institute for toy safety" and "should only be able to tune into normal radio stations".

The statement further offered a typically Teutonic solution to inadvertent Police snooping, ordering the magazine's readers: "The radio is exclusively designed for listening to music. Everything else is not allowed."

I'm John, VK3BUI.

--

Now, what was it that the late actor Brodrick Crawford used to say on the 1950's T-V series Highway Patrol? Oh yes: 2150, clear. (WIA News)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2009 Amateur Radio Newsline Young Ham of the Year Award is now open. Complete details are on our website at www.arnewsline.org. Just scroll down to the words "2009 YHOTY Nominations Now Open" and click for more information and an official nominating form.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

==> EMCOMM WORKSHOPS AT 2009 NATIONAL HURRICANE CONFERENCE FOCUS ON
AMATEUR RADIO

On April 6-10, Amateur Radio had its largest presence ever at the 2009
National Hurricane Conference in Austin, Texas
<http://www.hurricanemeeting.com/>. Representatives from the ARRL,
WX4NHC <http://www.wx4nhc.org/>, the Amateur Radio Station at the
National Hurricane Center (NHC) <http://www.nhc.noaa.gov/>, the
Hurricane Watch Net (HWN) <http://www.hwn.org/> and VoIP Hurricane Net
(VoIPWXNet) <http://www.voipwx.net/> completed several presentations at
the conference as well as a presentation at the local Austin Amateur
Radio Club. According to ARRL Emergency Preparedness and Response
Manager Dennis Dura, K2DCD, the workshops were very well attended with
more than triple the participation of prior conferences.
```

"The Austin Amateur Radio Club, along with ARRL Field Organization Section and Division officials did an outstanding job of promoting the various presentations at the conference," Dura said. "It is these coordinated efforts at the local club and ARRL Section, Division and National levels that will allow us to propel forward with our efforts in emergency communications and train people, allowing us to become a more valuable asset to served agencies."

Assistant WX4NHC Amateur Radio Coordinator Julio Ripoll, WD4R, thanked everyone who participated in the meeting "for making our NHC 2009 presentations and experience so successful and enjoyable. We had one of the largest attendances for the Amateur Radio workshop that I can remember."

Nearly 60 people attended the Amateur Radio Disaster Communications Workshop on the afternoon of April 7. WX4NHC Amateur Radio Coordinator John McHugh, K4AG, and Ripoll made the first presentation of the workshop. Explaining the 29 year history of their work at the NHC and the importance of measured surface data and damage reports, the pair told how this knowledge allows hurricane specialists to make better forecasts. They also told some stories and showed videos from several of the most critical activations over the past few years. They discussed the importance of the reporting from all stations, stressing that they will take reports by any means in support of the mission to help save lives.

Director of Operations of the VoIP Hurricane Net Rob Macedo, KD1CY, gave a presentation on the VoIP Hurricane Net and the role it plays in gathering data for WX4NHC. He also explained how it also can be used to connect various National Weather Service forecast offices, as well as local and regional Emergency Operation Centers during hurricanes. Macedo also explained how the net is looking for more contacts within the affected area to connect to the net and more amateurs to relay data from local and regional nets in the affected area of hurricanes. "The VoIP Hurricane Net relays info to WX4NHC using any and all means of reliable information from all sources to give WX4NHC the most information possible from the surface during a hurricane," Macedo explained.

Macedo also presented a session on the International Radio Emergency Support Coalition (IRESC) <http://www.iresc.org/> and its role in providing translators and additional contacts in the affected area during hurricanes and other disasters. "This includes monitoring and translation of international media broadcasts and press releases that the NHC may not normally receive," he said. "The IRESC EchoLink conference is often connected to the VoIP Hurricane Net during hurricanes to support both the net and listen-only activity for stations outside of the affected area that want to monitor the VoIP Hurricane Net during hurricanes."

Assistant Net Manager of the Hurricane Watch Net Brad Pioveson, W9FX, gave a presentation on the HWN's 44 year history. Explaining that the HWN has been around longer than operations at WX4NHC, Pioveson described how in the days before WX4NHC, HWN ham radio operators -- using phones

and faxes -- passed information on tropical advisories to the NHC. He also detailed some potential changes at the HWN that will include not just the monitoring of their traditional 14.325 MHz frequency, but also branching out onto other bands.

"Given the extremely poor propagation that we've seen lately," Pioveson said, "we see the need for the HWN to expand its reach to other HF bands. The Maximum Usable Frequency simply doesn't allow for 20 meters to propagate as it has in the past. We need to scale our operations to other HF bands when propagation is poor so we can support stations in the affected area of a hurricane."

ARRL Southeastern Division Director Greg Sarratt, W4OZK, explained how the Alabama section is preparing for an upcoming hurricane interoperability exercise, giving a breakdown of the Alabama Section by region. Sarratt explained that the focus of the exercise is a "worst case scenario hurricane" with cell phones rendered unusable during the hurricane exercise. He also gave a breakdown of the ARRL HQ disaster response mechanism, saying that all ARES members and leadership should recognize and observe the ARES Field Organization structure <http://www.arrl.org/FandES/field/org/>.

On the evening of April 7, the same presenters gave similar presentations to the Austin Amateur Radio Club meeting after a BBQ put on by the local club. West Gulf Division Director Dr David Woolweaver, K5RAV, was present for all the Tuesday workshops and the local club meeting. At the meeting, Woolweaver thanked everyone for their support of the conference workshops and for attending the club meeting. He also took the opportunity to announce that he was appointing Lee Cooper, W5LHC, president of the Austin Amateur Radio Club (AARC), as Assistant Director for Emergency Communications in the West Gulf Division. "This is a necessary appointment in our Division to address the importance of emergency communications," Woolweaver told the group.

On April 8, Dura and Macedo gave a workshop to emergency management officials and representatives of government agencies. The workshop focused on situational awareness and disaster intelligence, stressing its importance to Emergency Management and how it creates more opportunities to utilize Amateur Radio. The presentation was followed by a question-and-answer session relating to Amateur Radio Emergency Communications. "Collecting and gathering data and sharing information and reporting during disasters is another way Amateur Radio can assist beyond the typical message handling," Dura said. "Monitoring critical infrastructure -- such as in the case of the Red River in North Dakota -- is an example, and these examples can be applied to hurricanes."

Macedo gave the audience several disaster intelligence examples used during hurricanes, as well as from his ARES and SKYWARN work in the ARRL's Eastern Massachusetts section: "On several occasions, SKYWARN spotters gave information to emergency management. This information, along with other data, helped emergency management officials to escalate their response in several recent disaster-related incidents. This model

can also be utilized during hurricanes."

During the closing session, Director of Safety Operations and Emergency Management for the City of Houston Arcadio Avalos asked several questions, starting a discussion on coordination and credentialing. "Based upon his experiences from Hurricane Ike last year, he said he understood the importance of Amateur Radio and wanted to assist in easing logistical issues for the next time this work is needed in his area," Dura said. "He will be assisting to ease those issues on the public safety side of things. He also took copious notes on how he could improve things on the Amateur Radio side. He mentioned that he viewed Amateur Radio as a 'huge asset' in this task and wanted to ensure that no coordination issues arise for next time so Amateur Radio support can be utilized even further and more efficiently."

All sessions were videotaped through the efforts of professional videographer and VoIP Hurricane Net Control Scheduler Jim Palmer, KB1KQW. Macedo said that the videos should be available the first part of May on the North Shore Radio Association (NSRA) Web site <http://www.nsradio.org/video>.

The 2010 National Hurricane Conference is scheduled for March 29-April 2 in Orlando, Florida.

==> BOSTON AREA HAMS PROVIDE COMMUNICATIONS SUPPORT FOR ANNUAL MARATHON

More than 250 Amateur Radio operators provided communication support for the 113th running of the Boston Marathon <http://www.bostonmarathon.com> on Monday, April 20, also known as Patriots' Day <http://en.wikipedia.org/wiki/Patriots_Day>. With more than 26,000 official runners and 500,000 spectators along the 26 mile route, the marathon utilized amateurs at the starting line, along the course at each water and first aid station, and at the finish line.

"This is the largest public service event in New England in terms of the number of Amateur Radio operators required for a one-day event, and we can always use more hams to help us," said Marathon Amateur Radio Communications (MARC) <http://marc.mmra.org/marc/index.html> Course Coordinator Steve Schwarm, W3EVE. "We're glad that the weather was cool and the number of ambulance requests this year was lower than past years, where we had higher temperatures and more medical issues."

Even with the more temperate weather, MARC Finish Line Coordinator Paul Topolski, W1SEX, said the medical tents at the finish line were near capacity by mid-afternoon. "Hams provided communications, status and logistical issue updates between the medical tents to our finish line net control as needed," he said.

The Massachusetts Emergency Management Agency (MEMA) was active with operations at the State Emergency Operations Center in Framingham, with their operations room acting as a Unified Command Center (UCC) for the marathon. RACES members staffed the communications room at the SEOC, and ARRL Eastern Massachusetts Section Manager Mike Neilsen, W1MPN, staffed

the UCC. Neilson fed status reports on any issues along the marathon route into the operations room, as well as issues from the UCC to the operations room.

"This is the first time we've had an Amateur Radio Operator in the operations room of the UCC," said Massachusetts State RACES Radio Officer Tom Kinahan, N1CPE. "We have been coordinating with the Boston Marathon Net Control and the finish line communications in Boston to provide updates into our station and to our Amateur Radio operator in the UCC."

The Net Control center is located with a line-of-sight to the Boston area and to the entire 26 mile route in case simplex communication is required. More than a dozen repeaters were utilized to provide overlapping coverage to the marathon route. The Clay Center Amateur Radio Club, the Minuteman Repeater Association, the Framingham Amateur Radio Association and many other clubs in the New England area support the marathon operations.

With so many amateurs placed along the marathon route, ARRL Eastern Massachusetts Section Emergency Coordinator Rob Macedo, KD1CY, placed Eastern Massachusetts ARES on standby in case something went wrong along the marathon route, or a major incident occurred coincident with the marathon. "This is standard operating procedure for 'Marathon Monday'" he said. "We want our members to maintain a heightened state of awareness during the event."

Patriots' Day -- a state holiday in Massachusetts and Maine -- commemorates the anniversary of the Battles of Lexington and Concord, the first battles of the American Revolutionary War.

==> NWS AWARDS ARKANSAS HAM TOP HONOR

In late March, officials at the National Weather Service (NWS) office in Little Rock, Arkansas, awarded Brother Anselm Allen, WB5JLD, the prestigious Thomas Jefferson Award for his service as a Cooperative Weather Observer <http://www.nws.noaa.gov/om/coop/>. Named for the third President of the United States -- who kept an almost unbroken series of weather records from 1776 to 1816 -- the award is the highest and most prestigious award bestowed on Cooperative Weather Observers; only five Jefferson Awards are conferred each year. Cooperative observers are trained by the NWS to provide temperature (air and soil), precipitation and river data on a daily basis.

In addition to Allen's outstanding support of the National Weather Service, he is also an Amateur Radio operator and is active on local nets. Allen is only the second observer to receive the Jefferson Award in the Little Rock County Warning Area <http://www.srh.noaa.gov/lzk/html/imgviewer1.php?pic=x73>.

The NWS has trained more than 11,000 people to take weather observations on farms, in urban and suburban areas, National Parks, seashores and mountaintops, giving the NWS a true weather picture representative of

where people live, work and play. Formally created in 1890 under the Organic Act, the Cooperative Observer program has a twofold mission: To provide observational meteorological data, usually consisting of daily maximum and minimum temperatures, snowfall, and 24-hour precipitation totals, required to define the climate of the United States and to help measure long-term climate changes; and to provide observational meteorological data in near real-time to support forecast, warning and other public service programs of the NWS.

Volunteer weather observers provide data that are invaluable in learning more about the floods, droughts, heat and cold waves. The data are also used in agricultural planning and assessment, engineering, environmental-impact assessment, utilities planning and litigation. Information gathered by Cooperative Observers plays a critical role in efforts to recognize and evaluate the extent of human impacts on climate from local to global scales. -- Information provided by the National Weather Service, Little Rock

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the VE Newsletter, just to name a few.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service that lets them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "Twinkle like black stars in sunny skies" Cook, K7RA, this week reports: On Wednesday, April 22 we saw sunspot 1015 fade away, just as it was about to slip over our Sun's western limb. It emerged only briefly, late on April 21, and by Thursday it had disappeared. Sunspot numbers for April 16 through 22 were 0, 0, 0, 0, 0, 0, and 11 with a mean of 1.6. The 10.7 cm flux was 69.9, 69.8, 69.9, 70.1, 69.8, 71, and 71.1 with a mean of 70.2. The estimated planetary A indices were 6, 5, 8, 4, 4, 5 and 4 with a mean of 5.1. The estimated mid-latitude A indices were 3, 4, 8, 4, 3, 3 and 2 with a mean of 3.9. The outlook for the near term is more of the same, quiet conditions. Geophysical Institute Prague predicts quiet conditions for April 24-30. The US Air Force and NOAA predict a nice quiet planetary A index of 5 until May

6-9, when they expect to see a planetary A index of 15, 8, 8 and 8. Sunspot numbers for April 16 through 22 were 0, 0, 0, 0, 0, 0, and 11 with a mean of 1.6. 10.7 cm flux was 69.9, 69.8, 69.9, 70.1, 69.8, 71, and 71.1 with a mean of 70.2. Estimated planetary A indices were 6, 5, 8, 4, 4, 5 and 4 with a mean of 5.1. Estimated mid-latitude A indices were 3, 4, 8, 4, 3, 3 and 2 with a mean of 3.9.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Henry Davies' "April's Charms" <http://www.poemhunter.com/poem/april-s-charms/>.

==>IN BRIEF:

* This Week on the Radio: This week, the NCCC Sprint Ladder is April 24. The Florida QSO Party, the Nebraska QSO Party and the SP DX RTTY Contest are all on April 25-26. Look for another NCCC Sprint Ladder next week on May 1; the AGCW QRP/QRP Party is also May 1. The Microwave Spring Sprint is May 2 (local time), The MARAC QSO Party (both CW and SSB), the 10-10 International Spring Contest (both CW and digital), the 7th Call Area QSO Party, the Indiana QSO Party, the New England QSO Party and the ARI International DX Contest are all May 2-3. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 3, 2009, for these online course sessions beginning on Friday, May 15, 2009: Antenna Modeling and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News for April 24: There will be no ARRL Audio News on Friday, April 24. The ARRL Audio News will return for May 1 and 8, but will be on hiatus on May 15 due to the Dayton Hamvention. The Audio News will resume regular distribution on May 22.

* Thomas Dick, KF2GC, Returns as Northern New York SM: Thomas Dick, KF2GC, of Saranac Lake, has returned to the office of Section Manager of Northern New York. He has taken the reins of the Northern New York Field Organization from Tom Valosin, WB2KLD, who had been Section Manager since 2007. When Valosin decided not to run for another term of office, Dick submitted his nomination petition to run for Section Manager; the open position was re-solicited in the January 2009 issue of QST. Since Dick's nomination was the only one received by the receipt deadline, he was declared elected and his term of office extends through December 31, 2010. Dick has several years of prior experience as a Section leader: He served as the Northern New York Section Manager from 2000-2006 and as Section Emergency Coordinator from 1998-2000.

* "Hints and Kinks": Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint, you will receive $20. Send your hints via e-mail to <h&k@arrl.org>; or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address. Items in "Hints and Kinks" have not been tested by QST or ARRL unless otherwise stated. Although we can't guarantee that hints published will work for every situation, QST makes every effort to screen for harmful information.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Here in the U.S.A., our ham licenses are free of charge. (Except for
Vanity licenses.)

Do hams in most other countries pay yearly fees for their licenses?

Dick, AC7EL

It's been free here in the UK for a couple of years, previously it was ï¿½15
per year. I suspect it was costing them more to collect the fee than to
administer the system..!

Long-time USA hams please correct me on this if I'm wrong, but ...
I seem to remember that 20 or 30 years ago (long before I became a
ham), there was a fee for ham licenses. But Congress (our national
legislature) passed a law to make the FCC justify the fees charged for
all of their licenses. The FCC gave up figuring out what it could
legally charge us hams, and decided that our license would be free.

Yes, I remember paying a nominal fee at issue time and renewal time, but I no longer remember what it was. Contrary to the mantra of "you can find anything you want on the Internet," I couldn't locate any history on this issue. I suspect that it was a case of the fee being insufficient to cover the cost of collecting it because it didn't make an impression on a teenage payer.

For interest of our international readers, I will mention that the volunteer examiners who administer exams are authorized to charge a nominal fee to cover their expenses.

I was asked to forward this to hams in Nebraska. It looks like a great event.
****

Dear Friends,

The HamCon Colorado 2009 committee would be grateful if you would forward this to your club members, and other hams and non-yet-hams that might be interested.

After 18 months of planning and preparation, HamCon Colorado 2009, the ARRL Rocky Mountain Division Convention is almost upon us! The big event will happen May 29-31, 2009 in gorgeous Estes Park, CO. Many of you are already registered and have your accommodations booked.

If you've not already made your HamCon Colorado 2009 reservation, or your hotel room reservation, time is running out for your best opportunities!

On April 28th, our host hotel (The Holiday Inn in Estes Park) will release the remaining rooms blocked for HamCon Colorado to general public sales. Our amazing special rate of $89/night will still be good, but rooms will be on a space-available basis only. If you'd like to stay at the Holiday Inn, wait no longer! Call them today (Sunday, April 26th) or tomorrow (Monday, April 27th) to avoid disappointment. Call the hotel directly at (800) 803-7837 or (970) 586-2332, and mention that you're with HamCon Colorado to get our preferred rate.

Then, be sure to get your HamCon Colorado registration in too! You can register on-line at www.HamConColorado.org, or you can fill out a printed form and mail it in. But, our discounted $15 advanced registration ends on May 14th. After that, registration will be $20. Save some bucks, get your HamCon Colorado reservation in soon!

Here are some current highlights:

a. Here is our major speaker lineup!

Friday, May 29th Evening

Brian Mileshosky, N5ZGT, ARRL Rocky Mountain Division Director
Harold Kramer, W1JB, ARRL Chief Operating Officer and QST Publisher

Saturday, May 30th Daytime

Mike Gruber, W1MG, ARRL EMC Engineer and contributor to "The Doctor Is IN" QST column

Saturday, May 30th Luncheon

Cheryl Muhr, N&#65533;WBV, YL columnist for WorldRadio Online (formerly WorldRadio Magazine)
Saturday, May 30th BanquetRick Roderick, K5UR, ARRL Vice President

Sunday, May 31st Breakfast

Gordon Hardman, W&#65533;RUN, Desecheo Island 2009 DXpedition, Peter I DXpedition (3Y&#65533;X) and Alpha Radio Products

b. We've got more than 30 fantastic technical sessions and forums scheduled for Saturday (all day) and Sunday (morning). Check out the evolving schedule at the following URL: http://www.hamconcolorado.org/hamcon_conference_session_grid.htm.

c. You can take the mic or key in a massive W1AW/0 operation which includes 3 HF stations, a contest-suite station, VHF, D-Star and more!

d. Stop by our own "Doctor Is In" booth for some solid technical advice. You'll be "treated" by one of the contributors to QST's "The Doctor is In" column, Mike Gruber, W1MG, or by one of our skilled ARRL Colorado Section Technical Specialists.

e. Talk with manufacturers and exhibitors! Take advantage of some special HamCon Colorado deals from them too! Take a look at the rapidly growing list here: http://www.hamconcolorado.org/exhibitors.htm.

f. Place a bid in our silent auction on one of several factory refurbished and guaranteed radios from a top manufacturer! Prices like these, for a just-like-new radio will be super hard to beat.

g. We'll have lots of prizes, including a new HF radio grand prize, door-prizes at sessions, and hourly prize drawings. A quickly expanding list of prize donors can be found here: http://www.hamconcolorado.org/donors.htm. We'll announce our major prize radios soon! Watch www.HamConColorado.org for details!

h. We'll also have a VE session where you can test for your amateur radio license or an upgrade, a CW Pileup contest, an hilarious QLF contest, a transmitter foxhunt, a Wouff-Hong ceremony and much, much more.

You just don't want to miss this one, especially since the next HamCon Colorado won't happen until 2013!

Don't be disappointed! Sign up now, and let us know if you've got any questions or comments!

I seem to remember something like $14 in the 70's, administered by regular
staff at the field office. Same for commercial license tests. Novice was
free as it was administered by a volunteer Extra class holder so FCC just
handled the paper.

It was dropped as a "collateral effect" of Congress telling the
FCC to "charge according to worth."

Obviously a TV station license is worth a lot. Local broadcast
radios stations are worth a lot. Business band licenses such as
for tow trucks aren't as much.

Then there's Amateur Radio. How do you assign a value to something
that is specifically called out as having "no pecuniary interest"?

And they dropped the CB fees as well for similar reasons.

The maximum fee for the license itself was $4 from 1964 to 1970, $9
from 1970 to 1975, and $4 from 1975 to 1977.

> Novice was
> free as it was administered by a volunteer Extra class holder so FCC just

The volunteer examiner for the Novice and Technician license did not
have to be an Extra. Conditional, General, and Advanced amateurs could
administer the tests.

152. History of US Amateur License Fees

Newsgroup: rec.radio.amateur.moderated
Date: 2009-04-27 22:10:51 UTC
From: N2EY@AOL.COM
Message-ID: <8b9ffefe-c7b2-46c7-97e3-050d3123b6fb@p6g2000pre.googlegroups.com>
Source record: 2062

Here's the history before the VE system. The fees applied to all
licenses except Novice, which was free. IIRC, the fee was also
required to take the test, pass or fail.

On March 16, 1964, the FCC instituted the following fee schedule:

New/Renewed/Modified-and-renewed amateur licenses: $4
Modified without renewal: $2
Special call: $20

On July 1, 1970, the FCC raised prices:

New/Renewed/Modified-and-renewed amateur licenses: $9
Modified without renewal: $4
Special call: $25

On March 1, 1975, the FCC lowered prices:

New/Renewed/Modified-and-renewed amateur licenses: $4
Modified without renewal: $3
Duplicate license: $2
Special call: $25

On January 1, 1977, FCC suspended all fees for US amateur licenses.
They have been free ever since. (Note that a vanity call fee is a fee
for the callsign, not the license, and the VE fee is a fee for the
test, not the license).

$9 might not sound like a lot of money, but according to the Westegg
inflation calculator, $9 in 1970 equates to $49.37 in 2008 money. A
considerable sum to a teenage amateur like myself!

From: KC4UAI <kc4uai@gmail.com>
Message-ID: <5ec72bad-6516-4770-87d3-69a0cd3b68d2@w31g2000prd.googlegroups.com>
Source record: 2063

Hi,

Seems that the ARRL (or at least the local arm of it in Texas) has managed to get two bills introduced that would provide relief from CC&Rs (i.e. the Home Owners Association rules). Seems to me that it is very likely that these two bills will die in committee, but it is an interesting approach. They even have a web page:

http://www.westgulflegislation.org/

where they are keeping the status of things fairly up to date. But this is just the state of Texas.

Is there any other states who are trying this kind of thing? If so what is the status?

We had at least two attempts to do this at the Federal level in the past. Anybody know what the status is at the Federal level? I know the past bills died in committee, but is anybody trying to get another started with this congress?

Finally, given that the majority of FCC commissioners are changing, is there any hope of getting them to reverse their PRB-1 decision not to tamper with private contracts for ham radio antennas? They have soundly rejected past attempts to do this, but could the change in commissioners make a difference here?

Personally I find that I am extremely limited by my local HOA and their enforcement of the CC&R's. They are VERY picky (namely because the president of the board shares part of my back fence and can see almost my whole back yard) about any antennas or anything that could be used as an antenna, including flag poles, bird houses, clothes lines and things like that. They even specifically restrict TV antennas in their regulations although I'm pretty sure their rules are invalid due to the FCC OTARD regulations.

Arizona has a bill en route, instigated by a fellow who wants to put up a tower at his HOA restricted home. I think it made it through some committee, but haven't heard about it for a while now. I'm moving away, so I don't care anymore. ;-)

When ham radio antennas are mentioned, I suspect the thought that typically comes up is "a tower." Hams in HOA communities shouldn't get greedy. Yours is overly restrictive, yes, and of course they are not allowed to prevent tv antennas. There are many alternatives to towers and beams. Many dipoles are pretty invisible, and my MFJ Hi-Q loop antenna mounted vertically on a 5' mast looks more like a yard sculpture than an antenna. It is very effective, though the two available models are restricted to 10-30m or 15-40m. I live in an HOA community, and when I had it installed it was very visible from the incoming main street to the community.

In 2001 in Nevada, Assembly Bill AB 61, as introduced, incorporated PRB-1 and also overrode CC&R bans on amateur antennas. The CC&R portion was very controversial, and fought by many non-ham interests. It was decided to drop the CC&R part, so that the PRB-1 part could pass. I have not heard of any future attempts to override CC&R's in Nevada.

For a history of AB 61, see:
http://www.cvrc.net/ab61/

The 2009 7th-Area QSO Party will take place this Saturday, May 2,
from 1300 to 0700 UTC. Sponsored by the Central Oregon DX Club and
many others, the object is (of course) to work stations in the
eight 7th-district states, and for 7s to work the world. New this
year is digital mode.

For full information visit http://7qp.org.

We hope to have at least 200 of the 259 counties on the air. W7s
planning to be active are encouraged to register their operation
through the website.

I don't think towers are the issue at all.

IMHO, the problem is that, for a large number of situations, the anti-antenna restrictions are such that *no* amateur radio antennas are allowed. Even the inconspicuous vertical, the wire dipole or disguised antennas are simply not allowed. And the rules are enforced! While indoor/attic antennas are an option for some, many modern construction methods rule them out. Stucco over wire lath, metal framing, metal roofing and siding, metal ductwork, etc. can eliminate the indoor/attic option.

Antenna support structures (a better term than "tower", IMHO) are regulated by zoning, setbacks, and building codes, so eliminating HOA/CC&Rs will not remove reasonable regulation of them.

The underlying problem is that for almost 40 years no-antennas clauses have been pretty standard in new construction and in HOA rules. In many communities, particularly in parts of the USA that have experienced considerable growth in the past few decades, the availability of homes where you can put up a reasonable antenna system is not only very limited, but constantly shrinking. This wasn't done to keep hams out, but it's having that effect.

For proof of the pervasiveness of no-antennas clauses, consider that the OTARD ruling came about because the direct-broadcast satellite TV companies pushed the case all the way to the Supreme Court. They did so because they realized that their business was doomed if they were cut off from the many millions (tens of millions?) of Americans living in places where putting a small satellite dish on the side of the house was absolutely forbidden.

We hams need similar protection.

I do, and I'll clarify. And don't interrupt! ;-)

First of all, as I mentioned before, the issue presented to the Arizona legislature was regarding a certain ham's desire to erect a tower in the HOA community in which he lives. Second, I suspect (again) that the public perception of a "ham radio antenna" is not a relatively benign and somewhat invisible antenna (such as a dipole or small loop), but one of a giant beam on a tower. I'm speaking about public perception.

What I wasn't yet ready to say earlier, when I said that "hams shouldn't get greedy," is that HOA rules need to be changed to accommodate benign antennas (dipoles, small loops, flagpole verticals, etc.). Yes, most HOA rules do not allow any [radio] antennas, period. That's agreed as reality. The two HOA communities that I have lived in add(ed) the clause in the CC&R's "...without permission." That is, they'll allow an antenna if the "architectural committee" approves my request. I've been relatively lucky in that regard. (OK, I never asked, and no one complained!)

I'm afraid that a PRB-1 type victory would make some hams think they would then have a "right" to erect a big antenna system. I believe that PRB-1's language "reasonable accommodation" should mean just that. "OK, you can put up an antenna in our community, but let's be reasonable."

So rather than try to invoke and ram PRB-1 to override HOA rules and steamroll the majority of homeowners who might be opposed to [transmitting] antennas -- homeowners who live in these communities because, well, they want to! -- I think the better way is to engage HOA's to change the rules from within to accommodate/allow what I've referred to as benign (i.e., doesn't decrease the neighbors' home values, or is "unsightly") types of antennas. Just how that is done, I don't know. Maybe there should be a PRB-2 created that specifically addresses HOA CC&R's to allow antennas -- up to a point. How to define such an installation could be very difficult, however.

The reason for that is that host www.google.com resolves to different hosts depending on your geographic location. The original URL works fine in the US but I suspect they don't support /logos on every server.

I got quite a shock once when I accessed Google in Thailand and was presented with a page rendered in Thai script. I didn't even know that the browser I was using could render Thai script. Language preference information seems to be cookied, so I expect that if Google had ever been accessed using the browser I cranked up in Thailand that it would have remembered that I preferred English.

The problem is that we really don't know some important details, such
as the size of the proposed antenna vs. the size of the property, how
the appeal process works, etc.

> What I wasn't yet ready to say earlier, when I said that "hams shouldn't

Those antennas may be 'benign' to you and me, but not to everyone. And
the whole process still has the character of the amateur having to go
hat-in-hand before a committee and beg for permission to put up *any*
antenna, rather than having at least some rights in the matter.

> I'm afraid that a PRB-1 type victory would make some hams think they woul
d
> then have a "right" to erect a big antenna system.

What's wrong with that? Assuming an antenna can be put up in
compliance with applicable safety codes and good engineering practice,
and is not out-of-scale with the property, what's the problem? Sure, a
70 foot tower on a tenth-of-an-acre lot isn't a good idea, but when
someone has more than an acre, the picture becomes very different.

I think people *do* have a right to put up big antenna systems if they
meet safety standards. I think the test of what should be allowed has
to do with real, not imagined, harm to the neighbors.

It strikes me as somewhat illogical that utility companies can put up
poles 50 or more feet tall with wires, transformers, insulators and
all kinds of hardware on them, yet when a ham wants "a tower", it's

somehow going to ruin the neighborhood.

> I believe that PRB-1's
> language "reasonable accommodation" should mean just that.
> "OK, you can put
> up an antenna in our community, but let's be reasonable."

Of course. But who decides what is reasonable? To some folks, a G5RV
in the back yard of a half-acre lot isn't "reasonable". Remember,
we're talking folks who think a gray satellite dish the size of a
large pizza will ruin property values and community character.

I think that in many cases the rules are set up specifically to be
unreasonable. For example, deed covenants and restrictions can be
written in such a way that the HOA has no authority to override them,
and is required to enforce them. They "run with the land", and are
private contracts that the buyer agreed to. In such cases, the only
way around them is to declare them illegal.

Or an HOA can set things up so that rules can be changed in theory,
but not in practice, such as requiring 100% of property owners to
agree to any change (just try to get 100% response on anything!) high
filing fees, professional engineering studies, etc.

As for people choosing to live in such communities - if there were
really a choice, this problem wouldn't be so widespread.

Generally I agree that actively working with your HOA is your best (and only) approach in most cases, you are unlikely to get the rules changed. If the restriction is in the form of a deed restriction (and most are) it is nearly impossible to make any changes to them because it requires 100% buy in from all the homeowners to change them. I don't know about your HOA, but I dare say we'd be hard pressed to get 100% of lot owners to agree on ANYTHING. The term "herding cats" applies here if you ask me. Why CC&R's are written this way is beyond me, except that if you think about who actually writes and files these things doesn't really care about the long term impact. The developer just wants to get in, sell all the lots and get out as fast as they can. Personally, I think CC&R's should have a built in way where they automatically expire unless the majority of lot owners agree to keep them going, but that's a whole different issue.

In my case, I have to deal with two different "documents" the HOA has. One is the CC&R's, which I can pretty much assume will not change. And the other is a set of "guidelines" which have been used to refine and redefine some of the enforced rules of the HOA. Both restrict transmitting antennas in different ways and have present different problems. The "guidelines" are the most restrictive and clearly illegal because they violate the OTARD rules. However, they can be changed by the board of directors so there is a chance that one could sweet talk their way though that. The CC&R's rules on antennas are not obviously illegal, so if I where to go to the trouble of getting the "guidelines" declared illegal, I'd be stuck with the CC&R rules which where carefully written to not violate the OTARD rules and don't allow transmission antennas. This means I'm pretty much stuck from a legal perspective. Leaving me with what I can get the HOA board to agree to allow me to do. Given their past history, this may not be much.

We stand little chance of getting anything close to PRB-2 for a number of reasons. First, there are at best 700,000 hams in the USA last I looked. Even if you got all of us to actually turn out and vote we still are a tiny fraction of the total votes being cast out there. We have almost zero political power because we have very few votes. Second, we don't have a lot of money to spend on public relations and lawyers like the broadcast industry did. Third, the HOA management industry is going to oppose such a move and they DO have lots of $$ and lawyers to make their argument.

Best we can hope for is some kind of "natural made" case that makes it clear to the average non-ham why their interests are best served by allowing antennas to be built up the street. Over the last few years I've seen a number of hurricanes that should have made the case an easy argument, but even then we have not been effective enough in making our case.

I think our best hope of getting CC&R's preempted nationwide is to get the FCC to reverse their previous decisions to not extend their PRB-1 rules to cover them. The best hope we have of getting that done is to try and get commissioners appointed that understand the issue enough not to be taking in by the deep pockets of those who would oppose such a thing. Even then, I think it will take a bit of luck, some kind of dramatic event where ham radio could have helped and a really effective public relations campaign to get the FCC to reverse their standing decisions.

I've seen some pretty bad hurricanes in the past few years where ham radio was a valuable tool, but all this is lost on the public. We are seen as a bunch of old guys, locked in tiny rooms talking into glowing boxes attached to huge antennas systems that look horrible and bring property values down. Few folks know that the ï¿½trained weather spotterï¿½ who was responsible for that tornado warning that saved countless lives was the same guy who wants to expand his community service capacity (and enjoy his property in the mean time) is the same guy who wants to put up that modest antenna system down the street. Somehow this has to change.

Very good point! I've always wondered if the FCC could be "talked into" a bit more consideration given the fact that HOA's and CC&R's are now popping up almost everywhere.

In my area, I don't know of ANY new subdivisions that where built in the last 10 years that didn't come with CC&R's restricting antennas. I would venture to guess that more than 90% of houses less than 10 years old built withing 20 miles of my house would carry such restrictions.

The FCC did see a need to keep local governments from crushing ham radio though excessive zoning regulations, and saw that CC&R's rules where a problem for broadcast media... Why won't they do the right thing here? (I have my theory.. Follow the money..)

The FCC's position in refusing to use federal preemption to override these CC&Rs has been that amateurs voluntarily accepted these restrictions when they purchased their properties.

I would argue that in many cases, no suitable* alternative property exists that *doesn't* have anti-antenna CC&Rs -- and if no alternative exists to buying a CC&R property, then the CC&Rs were not voluntarily agreed to and should be unenforceable.

* Pretty much everywhere, you can find *some* properties without CC&Rs. Often, they are particularly undesirable properties -- huge (and expensive) plots of land; tiny lots in high-crime neighborhoods; places adjacent to industrial parks; places way out in the woods with long commutes(W9WI raises hand).

I would suggest that from a moral standpoint, a property buyer should be able to erect antennas regardless of CC&Rs if (s)he can show:

- No alternative property without anti-antenna CC&Rs exists that is within 5 miles of the distance between the property in question and the buyer's place of employment.

- Any alternative property within this range is unusually unsuitable for amateur radio. (due to overhead HV power lines, location adjacent to a large cliff, location adjacent to a noisy industrial park, location adjacent to an AM broadcast station, etc...)

- Any alternative property within this range is unusually undesirable. (is adjacent to a sewage plant, or a strip club; floods frequently; is in poor physical condition; etc.)

- Any alternative property within this range is significantly (say, 15%) more expensive than the property in question.

Mind you, such a scheme would be absolutely politically impossible.

Keeping in context here, Jim, the developments which restrict towers, etc.,
generally also have buried utilities.

While I sympathize with hams in CC&R/HOA developments, I don't anticipate
any legislative relief from private contracts willingly signed by
homebuyers.

The "way around" this is to simply live in a neighborhood without such
restrictions. Both my homes are in "nice" urban neighborhoods, and neither
has any private antenna structure restrictions beyond normal city zoning
laws. You just have to look a little harder.

Amateur Radio Newsline(tm) Report 1655 - May 1 2009

The following is a closed circuit advisory. Here's our Support Fund Administrator Andy Jarema, N6TCQ, who says that donations are needed right now:

--

Yep, it's me. A.J. And if I'm here you likely suspect that once again the
Amateur Radio Newsline is in desperate need of your financial support. And you would be right.

If you look back, you will notice that the last time you heard me soliciting donations was way back in 2008. Thanks to your generosity last year the need for me to make these announcements was minimal.

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we are with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase, so do our operating costs. The cost of telephone service. The cost of web access. The costs related to hosting our website and providing you with a downloadable FTP of the newscast. The cost of equipment repair and upgrade. In essence, all of the costs involved in bringing you 52 newscasts a year as we have done for almost 31 years.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff.

More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www.arnewsline.org. Then click on the words "Make a donation" and use your PayPal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, P.O. Box 660937, Arcadia CA 91066.

Either way, we thank you for your kindness. For your support and for your trust.

OK. Time for me to get back to my desk and back to balancing the books. For the support fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1655 with a release date of Friday, May 1st, 2009 to follow in 5-4-3-2-1.

The following is a QST. Police in Indianapolis discover ham radio is more than just a tactical channel and they like it as a hobby. Also, Amateur radio prepares for the Swine Flu, a new group in Europe is formed to Challenge the International Amateur Radio Union as the IARU thanks broadcasters for moving off of 40 meters, and hams in Honolulu get their first ever pro ham radio legislation. Find out the details on Amateur Radio Newsline(tm) report number 1655 coming your way right now.

**

NEWSLINE FOLLOW-UP: IMPD HOLD FIRST TEST SESSION

A growing number of police officers in Indianapolis have decided to get their ham radio licenses. This, after being told by their superiors in the department to remove all personal radio gear from patrol vehicles. Now they are discovering that there's more to the hobby than idle chit chat. Some are so impressed that they are even helping to organize training and testing sessions for their fellow officers. Amateur Radio Newsline's Jack Parker, W8ISH, has the latest:

--

As we first reported last February, the Indianapolis Metro Police Department has cracked down on road officers using Amateur Radios without a license. This comes following a complaint filed with the FCC by a local ham.

As a result, the Indianapolis Police Chief ordered all illegal radios removed from police cars until the officers became licensed hams. That forced dozens of Metro officers to race off to the nearest Amateur Radio book store.

Veteran police officer Dewey Runnels passed his test and helped organize a weekday test session for officers working Indy's eastside district. Over sixty officers signed up to take the Technician Class license test.

This called for a response from the ham radio SWAT team. That stands for Swift Working Amateur Testers. VE Dave Wendt-KA9OOH, recruited thirteen volunteer examiners from four Central Indiana counties to handle the overwhelming number of applicants. IMPD provided a training room, the officers lined up, produced an ID and put pen to paper to earn their Tech ticket. The centralized test session allowed officers from three different shifts an opportunity to work the exam into their work schedule.

Of those pre-registered only one third showed up to take the test. Sixty percent of the officers passed and now await their new amateur radio call signs.

Officer Dewey Runnels, KC9PIY, expects future test sessions to be better attended. He is excited about his new privileges and looks forward to a General Class upgrade.

KC9PIY: "I've talked to a couple of guys that have been able to talk
to
Canada, California and South America and I want to be part of that."

Future weekday test sessions are being scheduled to accommodate the growing number of IMPD officers wishing to earn their Technician Class license.

Reporting from Indianapolis, this is Jack Parker W8ISH.

--

This footnote: Don't look for these newly licensed police officer hams to be operating while on duty. Indianapolis Metro Police officials have renewed their original VHF radio license. They plan to give road officers at least 10 VHF channels. This, for point-to-point communications using department-approved radios. (W8ISH, ARNewsline(tm))

**

RESCUE RADIO: HAMS PREPARE FOR THE SWINE FLU PANDEMIC

Ham radio operators involved in emergency communications are making ready in case they are needed if the Swine Flu hits their area. We have more in this report:

--

During the past year, the Health Department in Nevada has discovered the power of amateur radio. This, according to Newsline's Don Carlson, KQ6FM, who says that Nevada hams involved in emergency communications have worked 2 major, statewide drills for pandemic point of dispensing of emergency supplies.

The hams passed traffic on how many citizens could be vaccinated over a given period of time. They also supplied information on how much vaccine was available.

Don says that officials were quite impressed with what hams did for them. Especially after their Satellite Phones failed and were unreliable. Simply said, ham radio had the ability to continue communications when the conventional methods of communicating shut down.

During the drills, the point of dispensing, better known by the acronym POD's were real, and open to the public, giving free flu shots.

Don says that it was quite amazing how the Nevada ham community did this only last year. Now, the real deal seems to be knocking on our door.

Carlson says that Nevada hams have already been asked to be on standby in case their services are needed should there be a major Swine Flu outbreak. He tells Newsline that they are well trained and prepared..

In addition to reporting for Newsline, Don Carlson, KQ6FM, also serves as the Nevada Section Emergency Coordinator and RACES Officer. The reason he is not here doing this report himself is that ironically, he is involved in this weekend's Emcommwest Pacificon gathering in Reno. Needless to say that preparing for the Swine Flu pandemic will be a hot button topic to be discussed at this year's gathering.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the studio in Los Angeles.

--

More on this in future Amateur Radio Newsline reports. (ARNewsline(tm))

**

HAM POLITICS: NEW EURAO ORGANIZATION SEEN AS CHALLENGE TO IARU

A world challenge to the political dominance International Amateur Radio Union has, has been established in Europe. The challenge is from a group calling itself EURAO. That's an acronym for the European Radio Amateurs' Organization. It's a group that seems to have taken aim at the IARU's strict policy of having only one national society represent any given nation's ham radio community to the rest of the world.

EURAO says that its prime goal is to unite all amateur radio associations in Europe and beyond. According to its website, the original idea, proposed by F5RCS in 2005, is to provide an opportunity to combine efforts of all those radio amateurs' associations that EURAO claims that the IARU does not support. This, due to what EURAO calls International Amateur Radio Union rigid structure that prevents admitting more than one association per country which EURAO says amounts to a true monopoly. One more concerned with their own income than promoting the interests of Amateur Radio.

Whether or not that claim has any validity is obviously open to debate. That said, it's well established that anyone or any group that has
tried to challenge any national ham radio society has quickly found out that it takes massive amounts of money to do so. In our lifetime here in the United States there have been many challenges to the American Radio Relay League's dominance as the single national society representing all U.S. radio amateurs whether or not they are dues paying members. This has included the abortive Institute of Amateur Radio founded in the early 1960's as an alternative to the ARRL by 73 Magazine Editor Wayne Green, W2NSD. It did not last very long nor have any other attempts to replace the ARRL with a different group. Every one of the challenges has failed, mainly due to lack of funding.

What quickly becomes apparent is that even with web exposure, it still costs tens of millions of dollars -- or Euro's in the case of EURAO's -- to mount and run the kind of campaign needed to reach the ham radio masses. It's the ham in the street whose support is required and simply establishing a website is not going to reach all that many.

You can read more about the European Radio Amateurs' Organization at www.eurao.org/en/node/54
(Southgate)

**

RESTRUCTURING: IARU THANKS BROADCASTERS FOR SWIFT MOVE OFF 40

Speaking about the International Amateur Radio Union, it has thanked shortwave broadcasters for achieving a high degree of migration away from the now-worldwide Amateur-exclusive band of 7100 to 7200 kHz. This, by the mandated March 29th date.

IARU Secretary Dave Sumner, K1ZZ, has been quick to acknowledge the compliance by most broadcasters to QSY out of that band, as required by a decision of the World Radio Conference in 2003. In a statement, Sumner thanked the international broadcast community for its compliance with the changeover schedule. He also noted that he is certain that the few remaining broadcast transmitters operating on 7200 kHz and below will be addressed in the coming weeks.

Sumner's letter of appreciation was sent to the High Frequency Coordination Conference. That group represents 60 organizations from more than 30 countries accounting for up to 80% of the global output of short wave broadcasting.

The departure of broadcasting from this spectrum has resulted in an enormous improvement in the usefulness of 40 meters for amateur radio communication. (VK3PC)

RADIO LAW: HONLOULU HAMS WIN MOBILE RADIO EXEMPTION

A major victory for hams in Honolulu, Hawaii. Bill 4, the pro-ham radio mobile cellular phone legislation for the City and County of Honolulu passed Third Reading on April 22nd, and has passed out of the Council.

The measure includes a full exemption for radio amateurs from the effects of this bill. This bill is significant because it addresses the issue of

traffic safety, but does not diminish the role of amateur radio in the course of the legislation. It's also believed to be the first legislation in Hawaii that fully supports amateur radio. The mayor will sign this bill into law shortly, with an effective date will be July 1st.

But the fight is not over yet. The Hawaii County Council is currently working with a draft equivalent to Bill 4, but so far lacks the exemption for amateur radio. According to Ron Hashiro, AH6RH, the next few weeks will be important for the Big Island for testimony and education of their Council members.

Updates will be posted on this web page: http://www.qsl. net/ah6rh/ am-radio/ cellular- phone-ordinance. html (AH6RH, KH6QX)

RADIO LAW: SUPREME COURT SAYS NO MORE FLEETING DIRTY WORDS CAN BE BROADCAST

Using dirty words in any broadcast is illegal. So says the Supreme Court in its Tuesday, April 28th narrow ruling in favor of a government policy. One that threatens broadcasters with fines over the use of even a single curse word on any broadcast.

By a 5 to 4 vote, the court threw out an earlier decision by the 2nd U.S. Circuit Court of Appeals that had found in favor of a Fox Television-led challenge to the FCC policy. That court returned the case to the agency for what it had termed as a reasoned analysis of its tougher line on indecency. Instead, the FCC took the matter to the Supreme Court.

By way of background, the FCC changed its long standing policy after it concluded that an unofficial one free expletive rule did not make sense. This, in the context of keeping the air waves free of indecency when children are likely to be watching television. This, based on a Supreme Court decision some ruled 31 years ago that determined that the FCC could ban curse words from the airwaves between 6 a.m. and 10 p.m. local time in any given broadcast market.

The events leading to this latest change involved a number of live broadcasts of awards shows in which celebrities let slip a few variations of certain dirty words. So-called fleeting expletives were not treated as indecent before then. The Fox Television Stations and other networks challenged the policy after the FCC singled out use of the words by entertainers Bono, Cher and Nicole Richie during awards programs that aired in 2002 and 2003.

What, if anything, this ruling might mean to personal radio users at this time is unclear. In the short term, likely nothing.

However, the FCC has been known to use legal findings in one service as basis to enforce rules in another. It has successfully denied license renewals in several services based on violations in others and has used cross service violations to successfully lift all licenses in some cases. That's even happened in ham radio.

Now, with so many scanner radios out there in households with young children, there is the possibility, albeit a remote one, that enough complaints reaching the FCC about a foul mouthed ham could bring some enforcement action based on this ruling regarding broadcast indecency into play. (Adapted from Media Network and various published reports.)

PUBLIC SERVICE: FDARA ASKED TO ASSIST WITH LOCAL AIRPORT DISASTER DRILL

Members of Iowa's The Fort Dodge Amateur Radio Association will be providing communications for an emergency drill on April 30th. This, after being invited by officials to assist the Fort Dodge Regional Airport by providing a back-up emergency response to the 2009 Fort Dodge Regional Airport Aircraft Disaster Drill.

During the two-hour exercise, all modes and methods of communications will be used. Following demobilization, there will be a meeting with airport, TSA, EMA and city emergency officials. This, to discuss their assessment of all aspects of this emergency preparedness event. (AC0LM)

**

PUBLIC SERVICE: HAM RADIO SUPPORTS THE 2009 TOUR DE ROUGE BIKE RIDE

Ham radio will be providing communications for the Tour de Rouge bike ride slated for May 3rd to the 8th. This will include groups communicating via the 444.500 WB5ITT Beaumont, Texas repeater, the 147.24 K5ET Crowley, Louisiana and the 145.23 W5GQ Baton Rouge, Louisiana repeaters. All bands from HF through 2 meter SSB will also be used for coordination of this massive, 512 mile event. The ride supports Red Cross chapters along the US Gulf Coast. (WB5ITT)

RADIO JUSTICE: NY MAN GETS 5 YEARS IN PRISON FOR SELLING HEZBOLLAH TV IN USA

Remember the case of Javed Iqbal we reported on more than two years ago? He's the 45year old Pakistani citizen living in New York City who was
charged back in 2006 with supporting Hezbollah by importing the signal of the Al Manar and selling it to US customers .

Well, Iqbal quietly plead guilty to the charges last December. Now, he has been sentenced to serve more than five and a half years in prison for the crime that he still says was noting more than a legal way to make a living.

The US Treasury branded Al Manar a terrorist organization in March, 2006, saying it supported Hezbollah's fund raising and recruitment activities. Prosecutors said Iqbal, who moved to the United States more than 26 years ago, provided transmission services to the Beirut-based channel in return for payment between 2005 and 2006. They termed him Hezbollah's "man" in New York City.

But Iqbal's defense lawyer, Joshua Dratel, said his client had no ideological support for Hezbollah. Dratel said that Iqbal sold the channel to make money as part of his satellite television business that also included Christian channels and even some adult entertainment. A second man who worked for the Iqbal's company has also pleaded guilty. (Media Network)

THE DTV TRANSITION: 3.8 MILLION STILL NOT READY FOR PRIME TIME

Not everyone is ready for the upcoming United States transition to all digital television and ham radio's assistance is still needed in the public awareness campaign. Jim Meachen, ZL2BHF, reports:

--

According to the A.C. Neilsen Company, some 3.8 million, or 3.4% of all United States households are still unprepared for the digital television transition slated to take place on June 12th. Geographically, Albuquerque, New Mexico, is the least prepared, with 9.4% having no over-the-air digital reception capability. It's followed by the Dallas-Fort Worth metroplex and
Houston, Texas, each with 6.3% of the citizenry not ready for the transition.

On the other side of the equation, the most digital ready cities appear to be New Haven and Hartford, Connecticut and the Providence to New Bedford region of Rhode Island. Each of these have less than one percent of their citizens unprepared for the digital TV change.

As previously reported, several months ago the FCC requested, through the ARRL, that ham radio operators assist their communities in preparing for the digital television rollout. Many radio clubs across the U.S. have reportedly become involved as advisors in this ongoing public service effort, nationwide.

I'm Jim Meachen. ZL2BHF.

--

Again, the date for the transition to digital television in the United States is June 12th. If your club wants to assist in helping the public to be prepared for the move, please contact the ARRL. (Adapted from a report in B&C and other sources.)

RADIO BUSINESS: ATTENDANCE AT BARCELONA MOBILE PHONE TRADE SHOW DOWN

The softness in the market for new mobile phones showed clearly in a thin array of new product rollouts at the recent Mobile World Congress trade show in Barcelona, Spain. In what little there was, Sony-Ericsson announced its first full touch-screen phone with a 12 megapixel camera running Symbian Foundation S60 software. This is the first non-Nokia phone to use that platform.

Sony-Ericsson also announced a new Walkman phone as well. Meantime, Samsung also renewed its promise to eventually release an Android phone, but wasn't ready to preview a model at the show.

Attendence was down to 49,000 from 55,000 last year with the reason likely the slumping world economy. (Radio News OnLine)

**

SPECIAL EVENT: VE7IYOA CELEBRATING THE INTERNATIONAL YEAR OF ASTRONOMY

The first amateur radio special event station for the International Year of Astronomy has been announced and it is VE7IYOA located in Victoria, British Columbia Canada. VE7IYOA will be active from June 1st to the 30th to celebrate the 400th Anniversary of Galileo Galilei's first look at the sky
through an optical instrument. This Italian physicist, mathematician, astronomer, and philosopher is acclaimed as the father of modern observational astronomy. VE7IYOA has a unique QSL card on offer. (VK3PC)

HAM RADIO IN SPACE: NEW APRS SATELLITES BEING PLANNED

The APRS satellite fleet will be expanded in the not to distant future. Writing from the US Naval Academy Satellite Development Lab, Bob Bruninga, WB4APR, the father of APRS, reports on new satellites with the same APRS packet relay capability as currently operated by PCSAT and the ISS that are now in their development stages.

Bruninga says that their design will use the new Byonics all-on-a-board Packet TNC/Radio/Telemetry system. This makes it possible to build a packet satellite out of a single 3.4" square board. 5 rechargeable batteries is all you need to power this tiny APRS satellite.

No launch dates have been announced at this time. (WB4APR)

**

HAM RADIO IN SPACE: CELEBRATING THE APOLLO 11 MOON LANDING

A group of radio amateurs are planning a commemorative event to mark this year's 40th anniversary of the Apollo 11 moon landing. Called 'Echoes of Apollo,' various activities are planned around June and July.

The organizers of the event are reportedly negotiating with some of the world's largest and most capable amateur radio moon-bounce stations, and also some radio deep space radio facilities. The idea is to hook-up people from various locations using moon-bounce and, if the antennas are large enough, possibly achieving near broadcast quality audio. You might say, a kind of ï¿½Back-to-the-Moon' day.

Also planned is an HF radio weekend, with HF stations set up near sites that took part in the original support for the Apollo 11 mission. The EME event is planned for the 27th of June and the HF event is planned for July 18th to the 20th. More on this as information becomes available. (WIA News)

**

WORLDBEAT: THE ANSWER IS "BLOWIN' IN THE UK WIND"

The UK telecommunications regulator Ofcom has published a report dealing with the effects of interference caused by power generating Wind Farms turbines to Ultra High Frequency and Super High Frequency communications. The report was compiled by ERA Technology and Aegis Systems Ltd. It describes a technical study in which a series of measurements were carried out with regard to the presence of wind turbines near to wireless services.

Some of their findings include the fact that a single turbine can produce measured fades as large as 3 dB for UHF scanning telemetry links and 2 dB for fixed links operating between 1.5 and 18 GHz. This, when the turbine is lying on the transmitter-receiver path. Also established is that a wind farm with seventeen turbines can produce measured fades as large as 10 to 15 dB for 1% of the time when the wind farm is lying on the transmitter-receiver path.

The purpose of the study was to enhance understanding of the effects of wind turbines near to wireless services. The full text of this propagation study and report in PDF Format is available at http://www.ofcom.org.uk/radiocomms/ifi/licensing/classes/fixed/Windfarms/rf_measurement/windfarm_report.pdf
(ANS)

WORLDBEAT: FRANCE FAILS TO PASS ENTERTAINMENT ANTI-PIRACY MEASURE

French lawmakers have rejected a bill that would have cut off the Internet connections of people who illegally download music or films. The measure would have also created the world's first government agency to track and punish those who steal music and film on the Internet.

The contested bill had initially passed the lower house of parliament two weeks ago and seemed destined for overwhelming approval by France's legislative body. But very few lawmakers were present for Thursday, April 9th vote to finalize the measure, which was rejected by a vote of 21 to 15.

The music and film industry had supported the bill, aimed at cracking down on illegal downloading. Its critics claimed that it encroached far too much on individual freedoms. (RW)

**

RADIOSPORTS: NEW CONTESTING COMPENDIUM WEBSITE

In radiosports news, Pete Smith, N4ZR, has announced that the new Contesting Compendium website is now up-and-running. The objective of this Web page is to make it a one-stop resource source for information on contesting. You can find it on-line at http://wiki.contesting.com (N4ZR)

**

RADIOSPORTS: 2008 JUNE VHF QSO PARTY CERTS MAILED OUT

Sean Kutzko, KX9X, the ARRL's Contest Branch Manager says that certificates for the 2008 June VHF QSO Party have been mailed out. Kutzko also reports that plaques have been ordered and will begin shipping in a few weeks. KX9X says that he will notify the ham community when the plaques go out the door. (KX9X)

DX

In DX, listen out for the Greek special event callsign SY2DDAY between June 4th and 7th. It will be on the air to celebrate the 65th anniversary of the greatest landing operation in history during WWII. That, of course, was the Allied-lead Normandy Beach invasion with the participation of seven countries. Greece supplied 2 warships and 4 commercial freighters. QSL this one only direct as instructed on the air.

And W5KDJ, will be active from Madagascar as 5R8KD between from July 1st to the 15th. He will be active on 160 through 6 meters using CW and RTTY. QSL via his home callsign. He is also accepting Logbook to the World and eQSL.

SM1TDE, is planning an operation from Gambia to take place between December 10-31st. More details on this one as they are announced.

The "DX World of Ham Radio" Web page is reporting that H44MY and H44T are once again in the Solomon Islands staying in Honiara. Mike has indicated that there are no plans to be immediately active so keep an ear open for both these calls to show up with little or no notice.

Lastly, JA1DOT, is now active from Bhutan as A52DT. He will be there until May 6th on 160 through 10 meters using CW, SSB and RTTY. QSL via his home callsign. Updates will be posted on the Nippon DX Association's web page.

(Above from various DX newsletters and news sources)

**

THAT FINAL ITEM: A TESTAMENT TO SAMUEL F.B. MORSE

Lastly, a belated 218th Happy Birthday to the inventor of telegraph communications, Samuel F.B. Morse.

Morse was born on April 27, 1791, in Charlestown, Massachusetts. 53 years later on May 24th 1844, it was Morse who sent the words "What hath God wrought" by telegraph from Washington, D.C to Baltimore, Maryland. That single transmission ushered in a new era in telecommunications and set the stage for the vast global data and voice networks that exist today.

But Morse's influence on communications appears to be in its sunset days. His vision of a vast wired community based on dots and dashes did emerge to some degree but has since given way to wireless communications, with the telegraph considered an anachronism of another century long past.

Most services have phased out the use of the Morse Code having replaced it with automated digital communications. Even the longtime distress monitoring for the three letters SOS is being phased out world-wide in favor of an automated, satellite-based search and rescue service.

Very soon it will only be the current generation of ham radio operators who will likely be using Morse's simple, but elegant communications system and it's not known if the next generation of ham radio operators will want to carry this nostalgia and legacy on. Let's hope they do because it would be
a shame to see the contributions of the great Samel F.B. Morse forgotten with the sands of time.

By the way, the Google search engine did its share in celebrating. On April 27th it featured some Morse Code right on its front page. (ARNewsline(tm) from various sources.)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). >

The argument make sense in some areas of the country, but in the faster growing areas CC&R's are almost always a part of buying a house. In the suburban areas of Dallas you will be hard pressed to find any subdivision built in the last 10 years that doesn't have CC&R's. I've done a fairly exhaustive survey in the town of Murphy (just to the northeast of Dallas) and I've not found ANY houses built after 1999 that are not subject to deed restrictions. (I assume that most CC&R's are going to restrict antennas.)

So the contention that you just have to look a little harder is true to a point, but you will need to be willing to drive further and spend more money on your house too.

==> HOUSTON REPRESENTATIVE INTRODUCES AMATEUR RADIO BILL IN CONGRESS

On Wednesday, April 29, Representative Sheila Jackson-Lee (D-TX)
introduced HR 2160 -- the "Amateur Radio Emergency Communications
Enhancement Act of 2009" -- in the US House of Representatives. This
bill, if passed, would "promote and encourage the valuable public
service, disaster relief, and emergency communications provided on a
volunteer basis by licensees of the Federal Communications Commission in
the Amateur Radio Service, by undertaking a study of the uses of Amateur
Radio for emergency and disaster relief communications, by identifying
```

unnecessary or unreasonable impediments to the deployment of Amateur Radio emergency and disaster relief communications, and by making recommendations for relief of such unreasonable restrictions so as to expand the uses of Amateur Radio communications in Homeland Security planning and response." The bill has been referred to the Committee on Energy and Commerce <http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&docid=f:h2160ih.txt.pdf>.

If enacted into law, HR 2160, would instruct the Secretary of Homeland Security to undertake a study and report its findings to Congress within 180 days. The study would spell out uses and capabilities of Amateur Radio communications in emergencies and disaster relief. The study shall:

* Include recommendations for enhancements in the voluntary deployment of Amateur Radio licensees in disaster and emergency communications and disaster relief efforts.
* Include recommendations for improved integration of Amateur Radio operators in planning and in furtherance of the Department of Homeland Security initiatives.
* Identify unreasonable or unnecessary impediments to enhanced Amateur Radio communications -- such as the effects of private land use regulations on residential antenna installations -- and make recommendations regarding such impediments.
* Include an evaluation of Section 207 of the Telecommunications Act of 1996 (Public Law 104-104, 110 Stat 56 [1996]).
* Recommend whether Section 207 should be modified to prevent unreasonable private land use restrictions that impair the ability of amateurs to conduct, or prepare to conduct, emergency communications by means of effective outdoor antennas and support structures at reasonable heights and dimensions for the purpose in residential areas.

The Secretary of Homeland Security shall utilize the expertise of the ARRL and shall seek information from private and public sectors for the study.

The bill currently has five co-sponsors: Madeleine Bordallo (Guam), Mary Jo Kilroy (D-OH), Zoe Lofgren (D-CA), Blaine Luetkemeyer (R-MO) and Bennie Thompson (D-MS). Representative Thompson currently serves as Chairman of the Committee on Homeland Security. Representatives Jackson-Lee, Lofgren and Kilroy are members of that committee.

"We understand that Representative Jackson-Lee was very impressed with the radio amateurs she encountered on a visit to an Emergency Operations Center in Houston during Hurricane Ike last September," said ARRL Chief Executive Officer David Sumner, K1ZZ. "We are grateful to her and to the five original co-sponsors for their support of Amateur Radio and the encouragement that their bill offers."

ARRL President Joel Harrison, W5ZN, concurred: "We are excited to have Representative Sheila Jackson-Lee introduce HR 2160. It is extremely

encouraging to have the support of a number of original co-sponsors -- including several members of the House Homeland Security Committee -- who recognize the importance of Amateur Radio's long history of public service."

==> PRESIDENT OBAMA NOMINATES NEW FCC COMMISSIONER

On Wednesday, April 29, President Barack Obama announced his intention to nominate Mignon L. Clyburn of South Carolina as an FCC Commissioner <http://www.whitehouse.gov/the_press_office/President-Obama-Announces-More-Key-Administration-Posts-4-29-09/>. If her nomination is approved by Congress, Clyburn will fill the seat of Democrat Jonathan Adelstein. Adelstein is leaving the FCC to head up the Department of Agriculture's Rural Utilities Service (RUS) <http://www.arrl.org/news/stories/2009/03/23/10716/?nc=1>.

Clyburn, the daughter of House Majority Whip Representative James Clyburn (D-SC), has served on the Public Service Commission of South Carolina <http://www.psc.sc.gov/> since 1998. The Public Service Commission regulates South Carolina's investor owned public utilities, including providers of telecommunications services. Before her election to that body, she spent 14 years as the publisher and general manager of "The Coastal Times," a weekly newspaper in Charleston, South Carolina.

In 1998, Clyburn was elected by the South Carolina General Assembly as a Commissioner to represent the Sixth Congressional District; she has been re-elected three times, chairing the Commission from 2002-2004. She is a past chair of the Southeastern Association of Regulatory Utility Commissioners, and is presently the chair of the Washington Action Committee of the National Association of Regulatory Utility Commissioners (NARUC) <http://www.naruc.org/>. Clyburn also serves on NARUC's Audit Committee and Utilities Market Access Partnership Board.

Calling Clyburn a "fine public servant," Obama said Clyburn was "a welcome addition to my team as we work to put America on a path towards prosperity and keep our nation safe. I am honored [Clyburn] will be joining my administration and look forward to working with [her] in the months and years ahead."

Acting FCC Chairman Michael Copps congratulated Clyburn, saying, "She is an excellent choice, and the experience she brings from her service on South Carolina's Public Service Commission will be an invaluable asset as we address the many challenges and opportunities that are before us. I wish her a successful Senate confirmation and look forward to working with her over the coming months and years in serving consumers and the public interest."

Clyburn graduated from the University of South Carolina with a Bachelor of Science degree in Banking, Finance & Economics in 1984.

==> THE 2009 ARRL NATIONAL CONVENTION AND DAYTON HAMVENTION: TWO WEEKS AND COUNTING!

On May 15-17, hams from all over the world will make their way to the Hara Arena, located in Trotwood, Ohio for the 2009 ARRL National Convention <http://www.arrl.org/announce/nc/2009/dayton.html> and Dayton Hamvention <http://www.hamvention.org/>. Held annually since 1952, Hamvention is one of the largest Amateur Radio gatherings in the world.

Following the tradition of Dayton natives Wilber and Orville Wright, the ARRL National Convention will be a "hands-on" paradise. New, interactive exhibits at the ARRL EXPO, the centerpiece of the National Convention, will provide engaging, real-life experiences that encourage hams and non-hams alike to get more active in Amateur Radio. At the ARRL Project Building Booth, attendees can try their hand at assembling a kit as they handle electronic components and circuit boards -- even a little soldering!
"If you have never built a project before, we hope you will consider this a 'Soldering 101' basic course," said ARRL Laboratory Engineer Bob Allison, WB1GCM. Allison will lead a team of instructors who will mentor visitors throughout the activity. "We want to encourage hams who have not built something in a long time to get back in the saddle. Project building is fun, and it's a great way to build low cost gear and accessories. We want everyone to unlock their inner do-it-yourselfer." Pre-registration is required -- sign up at the ARRL EXPO.

You can also explore the many facets of ARRL Field Day <http://www.arrl.org/fieldday> at the ARRL EXPO. "Field Day is the largest operating event in the world and represents the very best of the Amateur Radio Service," said ARRL Field Day Manager Dan Henderson, N1ND. The annual event draws tens of thousands of radio amateurs to the airwaves over a single weekend. Henderson said that Field Day is part emergency preparedness exercise, part public demonstration and part radio club social event: "It's really just a lot of fun and gives us a chance to get out there and show what we can do on many fronts."

ARRL Forum Schedule

Several ARRL staff members will be on hand at Dayton, presenting forums on several exciting topics. On Friday, May 15 at 10:30 AM in Room 5, Henderson and a group of other Field Day aficionados will share some helpful hints they have garnered from decades of Field Day operations. Special Field Day 2009 posters will be available to participants (while they last), as well as some special Field Day surprises. Come learn more about some of the unique and fulfilling ways groups across the US and Canada get on the air to celebrate ARRL Field Day.

ARRL Volunteer Counsel (VC) Jim O'Connell, W9WU, along with "Antenna Zoning for the Radio Amateur" author Fred Hopengarten, K1VR, ARRL Technical Relations Manager Brennan Price, N4QX, and ARRL VC Paula Uscian, K9IR, will present "Ham Radio and the Law -- Getting It Up and Keeping It Up" on May 15 at 12:15 PM in Room 3. Join this discussion by Amateur Radio attorneys on legal issues of interest to hams on topics that include how to avoid restrictive covenants, how to present your case for a tower permit and how to defend against nuisance claims. Hear about the latest court rulings on RFI, PRB-1 and towers, as well as

updates on the ARRL's Legal Defense and Assistance Committee.

Come ask QST's very own "Doctor" your technical Amateur Radio questions in person on May 15 at 12:15 PM in Room 2. QST Technical Editor Joel Hallas, W1ZR, will provide his best answer on the spot, or get back to you shortly after the National Convention. Some questions and answers may end up in QST if they seem likely to be helpful to readers. This will be an informal sleeves-rolled-up chalk talk environment. Be sure to bring your questions!
Reaching out to the public is the life blood of Amateur Radio! From land- and property-use restrictions to recruiting, our ability to enjoy the service depends on keeping a positive image. Join ARRL Media and Public Relations Manager Allen Pitts, W1AGP, on May 15 at 1:30 PM in Room 2 as he introduces ARRL's PR-101 course <http://www.arrl.org/news/stories/2009/01/22/10578/?nc=1>. This is a course to teach hams the basics of making -- and keeping -- a good relationship with your town and the media. If "every ham is a Public Information Officer," then every ham needs to have these skills.

Join the ARRL on Saturday, May 16 at 10:30 AM in Room 2 for an interactive session with ARRL national and regional leadership. ARRL is a membership organization -- we are here for you. Come share your ideas and ask questions.

If you've ever wanted to try digital contesting but weren't sure how to get started, we definitely have a forum for you! Join ARRL Publications Manager and digital guru Steve Ford, WB8IMY and learn how to get started in digital contesting. This forum, offered on May 16 at 1:15 PM in Room 3, will show you that you don't need to be a big-gun station with a kilowatt and a tower to have hours of on-the-air fun. All you need is a radio, a computer, an antenna -- and some helpful advice that you'll pick up at this forum! Join the thousands of hams who are already experiencing the joys of digital contesting.

Get up close and personal with Richard Garriott, W5KWQ, on Saturday, May 16 at 1:30 PM in Room 1. In October 2008, Garriott -- son of Owen Garriott, W5LFL -- fulfilled a lifelong dream to experience spaceflight and traveled to the International Space Station (ISS) aboard a Russian Soyuz spacecraft. While living on the ISS, he conducted scientific experiments and environmental research, but he also had a chance to do quite a bit of Amateur Radio operating, including sending slow-scan TV (SSTV) images. Owen Garriott, W5LFL, initiated the first ham radio contacts from space 26 years ago aboard the shuttle Columbia on STS-9. Richard Garriott will also be on hand at the ARRL EXPO throughout the weekend signing autographs and meeting amateurs.

At the EXPO -- and Beyond!
There is so much to do at the ARRL EXPO. Visit the huge ARRL bookstore to purchase popular ARRL publications, join or renew your ARRL membership and pick up official ARRL merchandise. Get a free gift when you join ARRL or renew your membership at ARRL EXPO and everyone gets a free ARRL Dayton 2009 button (while supplies last).

Whether you're 10 or 110, the EXPO has something just for you. Join young (and young-at-heart) amateurs at the ARRL Youth Lounge. Drop by the ARRL Youth Lounge to meet and socialize with other young hams. Come chat with other hams, listen to music, grab a snack or participate in one of the many activities, such as fox-hunts, scavenger hunts, Morse code fun, a QSL card designing contest, crafts, prizes and more. Whether or not you're licensed, you're welcome to come by and join the fun! If you're looking for other youth during the convention, try calling them on the youth calling frequencies: 145.540 MHz (107.2 Hz CTCSS) primary and 146.430 (233.6 Hz CTCSS) secondary. Not licensed yet? Soon-to-be hams can check-in using FRS channel one.

If you enjoy waxing nostalgic over the gear of yesteryear, drop by the exhibit area to meet vintage equipment photographer Joe Veras, K9OCO. He will be autographing his book, "50 Years of Amateur Radio Innovation" -- filled with photographs of classic and legendary transmitters -- that was recently published by ARRL <http://www.arrl.org/catalog/?item=0228>. You can also tour a 1964 Collins Radio Company communications van -- a Ford Econoline van that traveled as a mobile demonstration center for Collins equipment. The van, decked out with vintage gear from the S-Line period, will be there for you to explore.

Bring your license and get on the air from W1AW/8 at the ARRL National Convention. Operating times and frequencies will be posted at the station. Meet W1AW Station Manager Joe Carcia, NJ1Q, from the famed Hiram Percy Maxim Memorial Station at ARRL Headquarters.

Personnel from the ARRL DXCC Branch will be on hand to check your DX cards and applications. All cards will be eligible for checking, including old cards, cards for deleted countries and cards for 160 meters. Applications will be limited to 120 cards (more cards will be checked as time and volunteer Card Checkers are available). See the DXCC Web site for the latest program information and current forms <http://www.arrl.org/awards/dxcc>. Representatives from Logbook of the World (LoTW) will also be on hand, giving demonstrations and answering your questions <http://www.arrl.org/lotw>.

Be sure to stop by the EXPO to meet new IARU <http://www.iaru.org/> President Tim Ellam, VE6SH, and Vice President Ole Garpestad, LA2RR, at the IARU booth. Special exhibits in the area will be hosted by the three different IARU Regions: Deutscher Amateur Radio Club (DARC) from Germany will represent Region 1, the ARRL will represent Region 2 and the Japan Amateur Radio League (JARL) will represent Region 3.

Besides the myriad of activities taking place off-site such as Contest University <http://www.contestuniversity.com/> and the QRP event Four Days in May <http://www.fdim.qrparci.org/>, there will be a Wouff Hong Ceremony <http://www.arrl.org/tis/info/history.html> on Saturday, May 16 at 10:45 PM at the Crowne Plaza Hotel in downtown Dayton. Sponsored by the NE Ohio Ham Radio Players, any licensed ARRL member can participate in this lively ARRL tradition that is steeped in mystery! Attendees will receive a special keepsake at this fun activity, appropriate for all ages.

Keeping Up in Dayton

If you can't make it to Dayton -- or even if you make the trek -- you can still catch all the latest news on the Convention's Weblog <http://www.arrl.org/blog>. QST Editor Steve Ford, WB8IMY, will once again be blogging about Hamvention. Proving you can indeed go home again, Steve will regale readers with the adventures of staying with his mother at his childhood home in Dayton. For the past few years, thousands of readers have been entertained as Steve has related stories about new gear making its debut at Hamvention, the weather in Dayton and the overall feel of the event -- as well as the ever-popular antics at "Casa de Mi Madre."

The ARRL will introduce a new blog at this year's National Convention: ARRL Youth Editor Duncan MacLachlan, KU0DM, will blog from a young ham's perspective. MacLachlan, who will be assisting former Youth Editor Andrea Hartlage, KG4IUM, and her father Scott, KF4PWI, in the ARRL Youth Lounge, will explore the Hamvention exhibits, forums and events, giving his first-time take on the Hamvention experience. MacLachlan's perspective is a welcome addition to the ARRL National Convention team. Explore all of Hamvention's nooks and crannies through his blog and Twitter updates <http://twitter.com/arrlyouth>.

ARRL staff are getting ready for all the excitement that a National Convention brings. Teaming up with the Dayton Hamvention is sure to bring everything to a fever pitch, so why not make plans to join in on the fun? Travel and lodging information is available on the Hamvention Web site <http://www.hamvention.org/travel.php>.

==> ARRL FOUNDATION ANNOUNCES 2009 SCHOLARSHIP RECIPIENTS

The ARRL Foundation <http://www.arrlf.org/> Board of Directors is pleased to announce that they have awarded 52 scholarships to students in 21 states. Of these awards, 48 are annual scholarships with a total value of $54,700. In addition there are currently four holders of the William R. Goldfarb Memorial scholarship for whom the awards vary based on the college or university they attend, other awards they receive and other financial factors.

Last month, the ARRL Foundation announced that they had awarded the William R. Goldfarb Memorial Scholarship <http://www.arrlf.org/programs/scholarships> to Dean LaBarba, KI6CUX, of Long Beach, California. He will graduate from Woodrow Wilson High School this year with a GPA of 4.0. LaBarba holds a Technician class license that in 2005 led him to participation in the Amateur Radio Emergency Communication (AREC) team at his high school; since 2007, he has served as president. LaBarba also spends considerable time coordinating Amateur Radio activities, including Field Day, with the local community. LaBarba -- who will be attending Westmont College in Santa Barbara, California <http://www.westmont.edu/> -- has had a keen interest in medicine and intends to pursue a career in neurology.

The Goldfarb Scholarship is the result of a generous endowment from the late William Goldfarb, N2ITP. Goldfarb, who died in 1997, set up a scholarship endowment of close to $1 million in memory of his parents, Albert and Dorothy Goldfarb. Awarded to one high school senior each year, the Goldfarb Scholarship assists the recipient to receive a four-year undergraduate degree in engineering or science or in the medical or business-related fields. The terms of reference of the generous Goldfarb scholarship award require that recipients demonstrate financial need and significant involvement with Amateur Radio, in addition to high academic performance. The seventh Goldfarb Scholarship winner, LaBarba continues the tradition of prior recipients, demonstrating superior academic performance, outstanding leadership and extraordinary Amateur Radio and community service.

The ARRL Foundation administers scholarships for post-secondary education students holding a valid FCC-granted Amateur Radio license. Scholarship awards range from $500 to $5000 or more and are available to high school seniors (or equivalent) or students currently enrolled in a college or university. Scholarships are funded by generous individuals and Amateur Radio organizations to encourage radio amateurs to pursue their educational goals. All ARRL Foundation-administered scholarships are intended exclusively for educational use, to provide assistance with costs of tuition, room, board, books and/or other fees essential to the education of the recipient.

For a complete list of scholarship recipients for 2009, please visit the ARRL Web site <http://www.arrl.org/news/stories/2009/04/28/10787/?nc=1>.

==> ARRL'S TECHNICAL INFORMATION SERVICE PROVIDES MEMBERS WITH ANSWERS

Have you ever had a technical question that you weren't able to figure out? Even after checking with publications such as The ARRL Handbook or the ARRL Antenna Book, you're still stumped. Have you exhausted every resource you can think of, including your Section's Technical Coordinator (TC) <http://www.arrl.org/FandES/field/org/tc.html>? Just when you think you're at the end of your rope, you remember the ARRL Technical Information Service <http://www.arrl.org/tis/>.

The TIS is staffed by members of the ARRL Lab and is here to provide technical assistance at no cost to ARRL members. Many members seem to be using the service: In a six week period (October 20-November 30, 2008), ARRL Lab staff fielded almost 1300 requests for information from the TIS. These ranged from questions on how to choose the best radio, propagation and BPL to questions concerning antennas, feed lines and towers.

ARRL TCs and Technical Specialists (TS) <http://www.arrl.org/FandES/field/org/ts.html> in the field and at ARRL Headquarters can answer your questions on topics ranging from A (ampere) to Z (impedance) -- and just about anything in between. Our technical staff will help you over the phone, refer you to a volunteer ARRL TS in your area or send you the needed information from a growing collection of information packages. For really difficult questions, an ARRL Lab

Engineer will research the League's technical library and send you an answer by postal or electronic mail.

ARRL Lab Engineer Mike Gruber, W1MG, remembers a question that a member sent in recently via e-mail: "I have a 250 foot run of Buryflex 213 from the shack to the switchbox at the top of the tower. I know that results in significant loss at, say, 14 and 18 MHz (I seldom work 10 or 15 and the tower antennas are only for HF), but here is the question: Is it ENOUGH of a loss (for the receiver) to warrant running hardline (it would be free) between the shack and tower switchbox with a tail of about 10 feet of 213 inside the shack, and another tail of about 10 feet at the tower end, running from the switchbox to the TA-33, considering the insertion loss of two additional connectors (to connect the hardline to the 213 on each end) and the impedance difference of the hardline compared with the 213?"

Gruber answered the ham, providing a chart he developed, showing "some losses shown for 250 feet of RG-213 vs half-inch hardline. I selected 50, 100 and 150 ohm resistive loads for this analysis. Any rate, if you consider the case with the highest loss -- 29 MHz with a 150 ohm load -- will only improve by 3.9 - 1.544 = 2.4 dB. If you consider that a typical S-unit is 6 dB, the most dramatic improvement in the example cases I selected is still less than half of an S-unit. It's not a homerun by any stretch of the imagination. Of course, that extra 2.311 dB may be significant in some cases. If you ran 1500 W, you would only have 881 W at the antenna feed point. The rest would be lost in the feed line."

ARRL Senior Lab Engineer Zack Lau, W1VT, recalls an interesting question he received from a member: "How can I make a simple circularly polarized antenna out of linear elements?" Lau referred him to an article he wrote, "A Simple 10-Meter Satellite Turnstile Antenna," that appeared in the November/December 2001 issue of QEX.

The TIS, as one of the many services it offers, maintains a database of more than 2000 suppliers that provide goods and services of interest to radio amateurs <http://www.arrl.org/tis/tisfind.html>. These include manufacturers, dealers, publications, clubs and museums, just to name a few. The TIS also keeps what they call an "expanding list" of technical pages that include articles from QST, QEX and The ARRL Handbook, as well as original articles on a variety of subjects including theory, tutorials and projects <http://www.arrl.org/tis/tismenu.html>. Many pages also contain additional sources for materials and information and Web links of particular interest.

If you need a copy of the QST Product Review from May 1985 that featured the ICOM IC-271A 2 meter multimode transceiver, look no further. The TIS also keeps a list of every QST Product Review published since 1970 <http://www.arrl.org/tis/info/prodrev.html>. ARRL members can also download any QST Product review published after 1980 <http://www.arrl.org/members-only/prodrev/bymfg.html>. If you need a quick summary of any HF transceiver featured in a QST Product Review,

you can also find it on the TIS Web site.

The TIS also maintains the ARRL Periodicals Archive and Search <http://www.arrl.org/members-only/qqnsearch.html>. This feature provides ARRL members with PDF copies of all QST articles from December 1915 through December 2005, enabling members to view and print their favorite article, project and more. The ARRL Periodicals Archive and Search lists every article for QST from 1915 to the present, QEX from 1981 to the present, Ham Radio Magazine from 1968 to 1990 and NCJ from 1973 to the present (please note that beginning in 1998, each issue of QEX covers two months).

"Having access to every issue of QST through 2005 is absolutely incredible!" said ARRL Lab Manager Ed Hare, W1RFI. "The best of the best of QST from every era is now at the fingertips of every ARRL member with a keyboard and an Internet connection. Members can research articles on any subject that interests them, or just browse the past issues. This valuable content will help radio amateurs who use QST as a technical resource -- for projects, equipment 'hints and kinks' -- and for other research contributing to the advancement of the radio art."

For those needing a higher quality reprint, a reprint from QEX or NCJ, or for hams who are not members of the ARRL, the TIS also provides photocopies of articles for a nominal fee <http://www.arrl.org/members-only/artcopies.html>. You can reach the TIS via e-mail <mailto:tis@arrl.org> or by phone at 860-594-0214.

The TIS is just one of the many benefits available to ARRL members. To learn about all the benefits of ARRL membership, including QST, e-mail forwarding service, the outgoing QSL service and more, please visit the ARRL Membership Web page <http://www.arrl.org/join>.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members. This installment covers the month of April.

The ARRL worked with Representative Sheila Jackson Lee (D-TX) as she sponsored HR 2160, the Amateur Radio Emergency Communications Enhancement Act of 2009, in the US House of Representatives <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1>.

Upon request from the FCC, the ARRL submitted comments to the Commission defining "broadband" <http://www.arrl.org/news/stories/2009/04/15/10768/?nc=1>.

The ARRL Foundation awarded scholarships, including the prestigious William R. Goldfarb Memorial Scholarship, to 49 outstanding young radio amateurs for the 2009-2010 academic year <http://www.arrl.org/news/stories/2009/04/28/10787/?nc=1>.

Santa Cruz area ARES members provided communications support after vandals disrupted communications infrastructure on April 9 <http://www.arrl.org/news/stories/2009/04/15/10771/?nc=1>.

Amateurs in North Dakota and Minnesota provided communications support to various served agencies when the Red River overflowed in late March and early April <http://www.arrl.org/news/stories/2009/04/06/10752/?nc=1>.

Hams in the Southeastern US, through the use of weather spotting networks, kept the National Weather Service apprised when deadly tornadoes struck that area on April 10 <http://www.arrl.org/news/stories/2009/04/14/10766/?nc=1>.

The ARRL announced that it was in the process of developing a new Emergency Communications course <http://www.arrl.org/news/stories/2009/04/07/10756/?nc=1>.

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, attended the 2009 National Hurricane Conference, held April 6-10 in Austin, Texas. ARRL Media and Public Relations Manager Allen Pitts, W1AGP, represented the ARRL at the National Association of Broadcasters event in Las Vegas <http://www.arrl.org/news/stories/2009/04/22/10779/?nc=1>.

Thomas Dick, KF2GC, of Saranac Lake, returns as Section Manager of the ARRL Northern New York Section <http://www.arrl.org/?artid=8903>. Scott Rausch, WA0VKC, of Piedmont, was appointed Section Manager of the ARRL South Dakota Section as of April 7 <http://www.arrl.org/?artid=8882>.

The winner of the QST Cover Plaque Award for April is Byron Black, W4SSY, for his article "The W4SSY Spudgun."

The June 2009 issue of QST and the May/June issues of QEX and NCJ were released to the printer.

==>SOLAR UPDATE

Tad "He smiles upon their sunny faces" Cook, K7RA, this week reports: The data at the end of last week's bulletin showed daily sunspot numbers from April 16-22 as six zeros, then 11. In fact, every day was at zero until April 21, when it was 11; it moved again to zero the next day, April 22. We had just as many zero sunspot days -- and only one day with a sunspot -- but we saw the sunspot on Tuesday, April 21, not April 22. We had two additional days with a sunspot this week, Wednesday and Thursday, April 29-30. The sunspot number was 15 and 12, respectively, on those days. But this was another old Solar Cycle 23 sunspot, and it appeared near the western limb. By today, it may have either faded away completely or rotated out of view, May 1. The data at the bottom of our bulletin shows seven days, Thursday through Wednesday for the reporting week, so the sunspot number of 12 for Thursday will appear in next week's data. Sunspot numbers for April 23-29 were 0, 0, 0, 0, 0, 0 and 15 with a mean of 2.1. The 10.7 cm flux was 70.6, 69.7, 69.4, 69.2, 67.7, 68.8 and 69.5 with a mean of 69.3. The estimated planetary A

indices were 3, 5, 4, 5, 4, 2 and 3 with a mean of 3.7. The estimated mid-latitude A indices were 0, 5, 2, 3, 3, 2 and 3 with a mean of 2.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Clare's "May" <http://www.poemhunter.com/poem/may-2/>.

==>IN BRIEF:

* This Week on the Radio: This week, the NCCC Sprint Ladder and the AGCW QRP/QRP Party are May 1. The Microwave Spring Sprint is May 2 (local time). The MARAC QSO Party (both CW and SSB), the 10-10 International Spring Contest (both CW and digital), the 7th Call Area QSO Party, the Indiana QSO Party, the New England QSO Party and the ARI International DX Contest are all May 2-3. Next week is another running of the NCCC Sprint Ladder on May 8. The FISTS Spring Sprint is May 9. On May 9-10, look for the SBMS 2 GHz and Up WW Club Contest (local time), the CQ-M International DX Contest, the VOLTA WW RTTY Contest, the Nevada Mustang Roundup and the 50 MHz Spring Sprint. The SKCC Weekend Sprint is May 10. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 24, 2009, for these online course sessions beginning on Friday, June 5, 2009: Amateur Radio Emergency Communications Level 1; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News on May 15: Due to staff attendance at the ARRL National Convention and Dayton Hamvention, there will be no ARRL Audio News on May 15. The ARRL Letter will be distributed that day. ARRL Audio News will resume regular distribution on May 22.

* Larry Banks, W1DYJ, Wins April QST Cover Plaque Award: The winner of the QST Cover Plaque Award for April is Larry Banks, W1DYJ, for his article "A 20 Meter Moxon Antenna." Congratulations, Larry! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the May issue by Sunday, May 31.

* ARRL Sweepstakes Awards Sent: The ARRL Contest Branch reports that all special items for the 2008 November Sweepstakes have been sent. This includes a Clean Sweep Broom and Medallion for all entrants who worked a confirmed Clean Sweep and a magnet for all stations that worked a confirmed 75 ARRL Sections. These items were sent free of charge to all stations that qualified; no order was necessary. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, all Clean Sweep mugs and Participation Pin orders have also been shipped. If you have not received your Sweepstakes items yet, please let Kutzko know via e-mail <kx9x@arrl.org>.

* ARRL DXCC Desk Approves Two 2009 Operations: ARRL DXCC Manager Bill Moore, NC1L, reports that two 2009 operations have been approved for DXCC credit: Western Sahara (S04R) and North Cook Island (E51QQQ). "If you had cards that were recently rejected for this operation, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org> and you will be placed on the list for update," Moore said.

* Internet Search Engine Celebrates Birthday of Samuel F. B. Morse: Internet search engine Google <http://www.google.com/> reconfigured their home page for April 27 to honor the 218th birthday of Morse code creator Samuel F. B. Morse (April 27, 1791-April 2, 1872). Morse, a native of Charlestown, Massachusetts, conceived the basic idea of an electromagnetic telegraph in 1832. Experiments with various kinds of electrical instruments and codes resulted in a demonstration of a working telegraph set in 1836 and introduction of the circuit relay, making transmission possible over any distance. With his creation with Alfred Vail of the American Morse code, the historic message "What hath God wrought?" was successfully sent from Washington to Baltimore. For more information Amateur Radio and Morse code, please visit the ARRL Web site <http://www.arrl.org/FandES/ead/learncw/>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA,
k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Not necessarily, Hans. I've seen more than a few developments with aerial utilities that have no-antenna restrictions. In much of the country, anti-antenna rules have been the norm for new construction for 30-odd years; just part of the boilerplate. There's a development just down the road from me that is at least 35 years old, aerial utilities, lots of nice trees - and no antennas allowed.

That's great for where you live, but things vary widely across the country. The rules are often completely unreasonable, forbidding not just towers but simple wire and vertical antennas that are not offensive at all. IMHO, such unreasonable restrictions are a prime cause of lack of growth in our numbers, particularly among young people who don't get to choose where they live.

I think you've hit on one of the real difficulties with these blasted things, Jim. Many of us entered amateur radio when we were kids. Not many of us put up towers or beam antennas. We used wires or aluminum verticals. We lived where our parents lived. We didn't necessarily live at the top of some hill and we didn't necessarily have high trees, spaced just right. We happened to become interested in amateur radio and our situations were not of our making. The same situation applies

to an adult who has already bought in a subdivision which is encumbered with antenna restrictions in the CC&R's.

The boilerplate language of the CC&R's looks like something which is just there, without particular reasoning behind it.

I've never lived in such a development and I never will.

You had aluminum? Luxury....

(google "Four Yorkshiremen" for the rest).

The main point is that we were able to get some sort of usable HF
antenna up and working in short order without major expense and it was
no big deal for anyone.

That no-big-deal environment was a critical factor in our success as
hams. With a simple dipole or random wire, we could work the world
with very simple, low-powered equipment on bands such as 80 and 40
meters. Many beginners, young and old, started out with homebrew,
converted surplus, used or kit rigs, and worked their way up,
learning
as they went.

Today we often have the tail-wagging-the-dog scenario of an expensive
multiband multimode transceiver connected to an antenna that is, at
best, an extreme compromise.

Or no usable antenna at all.

> The boilerplate language of the CC&R's looks like something which is
> just there, without particular reasoning behind it.

It's simpler and less expensive to use proven, stock documents than to
write special ones for each property.

> I've never lived in such a development and I never will.

I have, but only as a renter, which is a whole different situation. Being
limited in what you can do to someone else's property is very different
from being limited in what you can do with your own.

I hope I never have to live in a restricted place. But who knows what the future could bring?

One trend I find particularly alarming is the expansion of no-antenna and other restrictions to existing, well-established neighborhoods and homes. For example, until recently it was common in my area for developers to buy "older" homes (from the 1950s or so) on good-sized lots, tear them down, and put up large 'McMansion' style houses loaded with restrictions. Or, they would do a major addition and renovation to an existing house, and tack on lots of restrictions before selling. Unless the first buyer objected and had them removed, those restrictions would exist essentially forever.

I'm not talking about townhomes and condos, either, but about single-family houses on lots of three quarters of an acre or more, costing $600K and up when renovated/replaced.

As that process went on, the supply of unrestricted homes that an average person could even dream of buying shrank dramatically, because it was the most-affordable homes that were torn down first. And in a good established neighborhood, the number of homes on the market in a given amount of time is often quite small.

Note that anti-CC&R and anti-HOA movements are popping up in various parts of the USA over other issues, so it's not as if we hams are the only ones with the problem.

But the HOA lobby has a lot of money behind it too. Some of the anti-HOA groups are out on the fringe of this and don't have the resources that all the management companies have. (You know, all those companies that "manage" the HOA's money, send out the bills, keep the accounts and cash the checks while charging pretty high fees.) Personally, I don't see the movement being very successful and I don't think that the ham radio community needs to hitch their wagon to the movement yet. Folks are inclined to think we are a bit strange to start with.

Did anybody see the ARRL's announcement late last week about the bill that got introduced at the federal level? I hope I'm wrong, but I don't think the bill will see the light of day and die in committee, but I think that this is the approach we should be taking. We are a free of cost backup emergency communication system that operates locally, nationally as well as world wide and forcing some "reasonable" rules would be a cheap way to support this system.

I've never understood why CC&R clauses are so popular in some areas. I can't imagine that my neighbors care about what antennas I put up: if I want to erect a tower, there are local zoning ordinances to assure their safety, and I'd have to have insurance (or post a bond) anyway.

I must be missing something. Are CC&R's placed on deeds for a purpose I don't understand?

Yes, those bills are a good thing.

However, I'm a bit concerned about all the emphasis on emergency
communications.

With all due respect to those amateurs who provide public service
communications, particularly in emergencies, not all hams are set up
for it. I think that overselling the emergency angle could backfire,
in that the community could easily have unrealistic expectations of
what the ham in their neighborhood could do in an emergency
situation.

I think the emphasis should be that Amateur Radio is a unique and
perfectly normal spare-time activity pursued by over half a million
Americans, with many different interests and activities. And that it's
not unreasonable to have antennas on or near your house.

> I've never understood why CC&R clauses are so popular in some areas.

They've been around for a very long time; my 1950 house has a page and a half of them. Nothing about antennas.

In many cases, they were originally created to deal with situations that zoning did not address, or where zoning did not exist at all. Many parts of the USA are still unzoned, or the zoning is very basic, without a lot of rules and specifications.

The big reason for the no-antennas rules is cable TV. Starting in the 1970s, it became common for developers to work out a deal with cable-TV providers to prewire all the homes for cable during construction, and to include no-antennas clauses. This resulted in a lot of customers for cable TV in places where rabbit ears wouldn't work well. And like many things, they gradually became accepted as part of the general background.

In some parts of the USA, there has been a lot of growth in the past couple of decades, with lots of homes built by developers who routinely included all sorts of restrictions. In such places it can be very difficult to find an unrestricted home for sale.

> I
> can't imagine that my neighbors care about what antennas I put up: if I

In many places, the neighbors DO care. People have all kinds of ideas about what affects property values, what their neighborhoods should look like, health hazards of "radiation" and so forth. You and I are used to seeing antennas and towers, but many people aren't, and as more and more places become "no visible antenna" zones, more and more people consider *any* antennas unacceptable, let alone towers.

> I must be missing something. Are CC&R's placed on deeds for a purpose I
> don't understand?

See above. New home developments often take the form of large houses on small lots with no trees, shrubs or other visual screening, so a tower is visible to many neighbors, and really sticks out.

IMHO one of the big things is fear. Fear that people won't behave in reasonable ways - what we used to call "being a good neighbor". So all

sorts of rules and restrictions are put in place in an attempt to force good-neighbor behavior.

> don't understand?

There are lots of reasons for CC&R's and even a few reasons for having HOA's. They do provide some useful services and can be helpful in keeping things looking nice. The problems they cause can be worse than the ones they solve.

Builders generally don't care about their developments beyond the point where they've sold the last house or lot. In the case of my CC&R's which run nearly 60 pages, nearly 40 pages deal with what the HOA is empowered to do (fees, fines and the like) and how the builder is in total control of the HOA until they have sold nearly all the lots. There are no provisions for changes and the CC&R's live forever, which will eventually be a problem. But the builders just have boilerplate documents that they use for this stuff. I know my builder used the same general deed restrictions in at least 3 different subdivisions that where all filed in the same year as mine. Except for some legal property descriptions, they are essentially exactly the same.

I think what got the antenna restrictions put into the boiler plate deed restrictions was two things. First, the craze to watch TV before cable required some pretty nasty looking antennas to be put up. Add to that all the 2 Meter dishes that where popping up for TV. Somebody figured that with the advent of cable TV, who needed that unsightly mess so somebody had the bright idea of restricting them using deed restrictions. Second, there was the huge and popular CB craze of the 70's. Some folks took the "let's defy authority" part of all that a bit too far and pushed up some pretty ugly antenna systems to handle all that extra power. Of course it looked bad and could make a mess of TV's for miles but on 11 Meters you could talk "skip" to some far away places if you had enough signal. Few cared if it was legal because almost everybody got away with it. Some ham radio operators pushed up some nasty looking things that could mess up TV's too so we all got dumped into the same group.

Somebody figured that all this stuff in the air looked bad and because this stuff messed up TV reception it was worthy of being banished. After all, it obviously lowered land values, just like that house up the street with the yard of dandi-lions nearly 6 inches high around the rusting 75 AMC Pacer sans the engine on blocks in the driveway of

the house that got half a coat of purple paint applied over the bright yellow that nobody liked before the owner ran out of energy nearly 7 years ago.

Problem was that the "no antenna" restrictions pretty much made the business model of companies like "Dish Network" unworkable and the advent of "high speed" data services so they went to the FCC and got the OTARD rules.

I think HOA's have their purpose.. (Grin)

>don't understand?

I believe that the basic underlying idea of CC&Rs is to establish a neighborhood having a consistent character, and ensure that property owners maintain that character. It's sort of a private extension to zoning rules.

To some people (perhaps many people) the overall "look and feel" of a residential neighborhood is a big part of its value, and contributes to both the pleasure of living there, and to making sure that the resale values of the homes/properties in the neighborhood aren't dragged down by a handful of careless/sloppy/eccentric homeowners.

At the milder end of the spectrum, it's just about ensuring reasonable maintenance of the properties (e.g. paint in good condition, lawn not allowed to go to seeds&weeds, absence of fourteen stripped-down cars parked at odd angles in the driveway), no loud or street parties without prior approval by the HOA, etc.

At the more extreme end of the spectrum, it sometimes feels as if the HOA wants everybody to live in a fascist Stepford-looking pseudo-Disneyland, with every house painted in one of four approved detail color schemes and every lawn hand-trimmed on Thursday to an approved length. Put an unapproved lawn ornament anywhere in view, and end up with a visit by the local HOA brownshirts...

At the really nasty end, there are still a lot of properties which carry a title restriction which forbids their sale to anyone who is not of Caucasian "race", or specifically forbid their sale to blacks, Hispanics, Chinese, etc. Back in The Day, these restrictions were seen as a way of "preserving the character of the neighborhood."

These particular restrictions haven't been enforceable in around 50 years, but they're still carried in the CC&R on the title, because it's difficult and expensive to have them formally (and individually) declared null-and-void by a court and removed from the title.

I understand that these days, it has become difficult for a developer to get commercial financing to build a new development unless a fairly strong set of CC&Rs are written into the deeds. The banks which provide the funding apparently feel that having a responsible HOA and a strong set of CC&Rs makes the homes easier to sell, and thus helps ensure that the developer won't go bust before selling the properties

and leave the bank stuck with dozens of un-sold homes as collateral.

I suspect that the actual set of CC&Rs used in these cases are pulled out of a binder of standardized examples, rather than being discussed intelligently... and things like the "no antennas" rule have become part of the standard (even if this particular rule is nearly unenforceable due to the OTARD law and the implementing regulations).

Well, that's an interesting thought. "Equal protection under the law."
If I they won't enforce the race clause, why should the antenna clause
have any more weight?

I am reminded of a political cartoon from back in the early '70s.
The set up was a "do it yourself US Constitution Kit" which comprised
a copy of the constitution and pair of scissors. The idea being you
could just cut out the parts you didn't like.

I don't think that's generally the case. At least around here, builders are interested in their reputation, and view completed developments as free advertising. The last thing they want is for a development that went sour to be associated with their name! (And the media doesn't forget who built what, even years later).

> There are no provisions for changes and the CC&R's live

Such things take the burden off local governments - which IMHO is wrong, because zoning and nuisance ordinances are one of the prime functions of local government.

I disagree on both counts.

What pushed no-antennas CC&Rs was cable TV, plain and simple. At least all the info I have points to that. TV antennas aren't that big!

However, the secondary effect was to create communities where the no-antennas look was considered normal.

Because the laws are different.

In the case of racially-oriented covenants: it's forbidden under the
Constitution to discriminate against people on the basis of their race
or national origin, and the courts have ruled that enforcing such a
covenant is thus contrary to law.

In the case of TV antennas, Congress passed a law which specifically
overrides zoning rules and private contracts (including CC&Rs) which
might forbid certain types of TV antenna installation.

Neither of these situations apply to ham antennas.

It is *not* forbidden to discriminate against certain types of
antennas (antennas are not people).

It is *not* forbidden to discriminate against a person's use of a
specific type of antenna (since the use of specific types of antenna
doesn't define a "protected class" in the Constitution).

>I am reminded of a political cartoon from back in the early '70s.
>The set up was a "do it yourself US Constitution Kit" which comprised
>a copy of the constitution and pair of scissors. The idea being you
>could just cut out the parts you didn't like.

In this case, though, the part that we might *want* to have present
in the Constitution, simply isn't there to begin with. It isn't
necessary for anyone to "cut it out" if they don't like it.

Congress *could* add reasonable protection for the use of ham antennas to Federal law (just as they did for TV, satellite, and "fixed wireless services" antennas.). To date, Congress has declined to do so... and in the absence of a Congressional mandate, the FCC has declined to extend the existing protections beyond what Congress had clearly indicated ought to be protected.

I imagine that the FCC expects that if they were to do so, their regulations would be challenged in Federal court, and that the FCC would lose the court fight.

I-am-not-a-lawyer, but AFAIK:

They can't enforce the race clause because it's been declared illegal and/or judged unconstitutional. Except for broadcast-TV reception antennas, the same does not apply to antennas.

CC&Rs and such come under the heading of "private contracts". A fundamental US legal principle is that you can't have a legally enforceable contract to do something illegal or unconstitutional.

For example, if A contracts with B to paint A's house, and pays in advance, but B doesn't do the job, A can sue to get his money back, and the courts will enforce the contract.

But if A contracts with B to commit arson at A's house, (say, for insurance fraud purposes) and pays in advance, but B doesn't do the job, A cannot sue to get his money back. The courts will not enforce the contract because it's for something illegal.

If you ever saw some of the "Frank Lloyd Wrong" monstrosities around my
QTH, you'd question that doctrine in a great many cases!

Well, the courts _are_ enforcing the "race" claus, but I won't debate
semantics.

The question is if the private contract which prevents me from erecting
an antenna interferes with a legitimate function of government, i.e.,
the obligation to ensure that all citizens have access to the
information, debates, opinions, and court rulings they need to perform
their civic duty: in the case of TV antennas or Internet access
antennas, my obligation to be a well-informed voter overrides the
contract. In the case of Amateur antennas, my hobby doesn't (in the
court's view) merit protection.

There is a larger issue, and the more I think about the whole CC&R
problem, the less comfortable I am with the concept: sooner or later,
the "unencumbered" housing stock dwindles to the point where ham
operators who want to erect an exterior antenna are confined to
less-desirable older neighborhoods, which affects their social status
and economic well-being.

I-am-not-a-lawyer, but I don't think that's the basis of the
OTARD ruling. Cable TV almost universally carries local
TV stations.

AFAIK, the reason the Supremes ruled the way they did was
that the no-antennas clauses could in many cases create
a de-facto monopoly for the cable TV companies by excluding
the pizza-dish satellite and free-broadcast-TV folks. Interstate
commerce, free market and all that.

But amateur radio is by definition noncommercial, so we're not
included. FCC could only do what the Court told them to do.

I agree with the concern but disagree that older housing is
less-desirable. In my area, unrestricted houses consistently
sell for *higher* prices, and sell faster, than restricted ones
of comparable size.

The problem is that, as you say, the supply will continue to
dwindle as more and more of the housing stock is restricted.
And you can only buy houses that are for sale in a given
area.

If that's the case (pun intended), I'm even more scared. Although
the Supreme Court may have wanted to prevent a monopoly in
distribution of TV signals, I would be much more comfortable if
their ruling was to prevent a monopoly in the _choice_ of TV
programs.

That might be a distinction that makes no difference. Any lawyers
on the list?

>
> But amateur radio is by definition noncommercial, so we're not

Well, yes, we're devoid of pecuniary interest, but not of political
interest. If I choose to discuss politics on ham radio, why isn't
that sufficiently important to merit protection from arbitrary restrictio
n?

Before r.r.a.m. readers kneejerk and say "But CC&R's are contracts!",
I'll explain that CC&R's awaken a monster called "Social Contract" that
has been sleeping for a long time. Sufficient to say, AFAICT the idea is
that a free man is entitled to bargain away his freedom, and that's

not something our society has chosen to allow.

If the OTARD rules applied only to TV antennas or one-way satellite
dishes, I'd be able to make an argument that hams, as a class, were
being denied the chance to debate the issues of the day. However,
the rules also prohibit CC&R restrictions on wireless Internet
access (presumably WiMAX, although there may be others), so I'm left
with the argument that a restriction on _any_ means of expressing
my political opinion should be prevented.

Point taken, but we're saying the same thing with different words.
I meant "lacking CC&R restrictions", not "aged". The problem is
that the supply of available land around major cities is at or
near to exhaustion , and developers have been buying up and
leveling old factories, warehouse, and even older housing
stock in order to keep the supply of McMansions constant.
If they're adding deed restrictions as a matter of routine,
then it's only a matter of time before that's all that's
available.

73,

Bill, W1AC

P.S. I wonder if M.A.R.S. has (or could get) the authority to
override CC&R restrictions. If that's so, then they're sitting
on the proverbial gold mine ...

Source record: 2097

All,

I need some advice.

I've been given the opportunity to draft a architectural guideline for my HOA and I was planning to "adjust" the antenna policy because it is unenforceable as written in the current guideline document because of the OTARD rules. The Architectural guidelines are authorized by the deed restrictions, which contain a restriction on antennas but seems to be drafted to not conflict with the OTARD rules.

I am asking for a way to word a guideline that is within the OTARD guidelines for TV and Data services but also allows some kind of reasonable antenna support structures for ham radio use.

What is reasonable? Personally, I'm not thinking I could get them to agree to allow a 30' tower with a beam, but I'd like to get some kind of support structure I could put a vertical on top of and hang wire antennas from. Something like 10' above the roof would be nice... But I'm sure they won't go for that, perhaps we could get them to agree to 3' of structure (excluding the antenna) visible from the street?

Is there a way to make it apply only to amateur radio operators that doesn't draw too much attention to the policy?

I suspect that they might go for it if I can demonstrate that there won't be a bunch of towers going up and if most of the things they allow are nearly unseen. Currently there are only two licensed hams in the subdivision.

Anybody have any suggestions for this?

Why wouldn't they agree to a ten or fifteen foot mast to hold a wire antenna or small beam?

It seems to me that the absolute minimum that should be accepted is what the OTARD ruling allows. But you don't start there; you start with more in order to have some room to negotiate. Ask for the sun, accept the moon.

Let *them* defend their requirements - don't do it for them. Consider what you would put up if all the restrictions were removed, and propose that.

Wire antennas and masts, if done right, do not stick out visually. I've had TV mast holding the center of an 80/40 inverted V at two different QTHs, and no non-ham has even noticed them until they were pointed out. Of course the masts are painted gray, the coax is gray and so is all the hardware, while the halyard and insulators are white. The antenna wire is #12 but a dull color.

Verticals can be done similarly.

I would not use the word "tower" anywhere - spoken or written. "Antenna support structure" is much better IMHO.

Also, I'd make a big differentiation between antennas mounted to the building and antennas with their own free-standing support structure. I'd also make special provisions for wire antennas, exempting them from setbacks and such.

> Is there a way to make it apply only to amateur radio operators that
> doesn't draw too much attention to the policy?

You could include a clause that specifies antennas "used by FCC-
licensed radio operators" or some such. Also that all such antennas
"must be used in compliance with all applicable FCC regulations".

> I suspect that they might go for it if I can demonstrate that there
> won't be a bunch of towers going up and if most of the things they

Get them on the team so you all agree.

One good tool is to collect photos of amateur antenna installations
that you consider acceptable, so they know what you mean. Of course you
only want installations that are well-engineered and installed in a
highly workmanlike manner. Another tool is to take a picture of your
house and photoshop in an antenna that you'd like to have.

All of the above is IMHO

Why not delete the policy in its entirety? Your justification would be for non-compliance with the FCC's rules and decisions. Anything not forbidden is permitted! ;-)

Amateur Radio Newsline(tm) Report 1656 - May 8 2009

ATTENTION: DUE TO BREAKING NEWS THIS IS AN EXTENDED LENGTH NEWSCAST RUNNING 34MINUTES AND 55 SECONDS AND CONTAINING 3 BREAKS

The following is a closed circuit advisory. Ladies and gentlemen, Amateur Radio Newsline's Support Fund Administrator Andy Jarema, N6TCQ:

--

OK, you all know why I am here. Its spring and all the bills from last winter have been mounting up. And, as usual, there is really not very much left in the treasury to pay them. Eventually they have got to get paid or these news reports will cease. That time is now.

So we ask that you take a few moments to send a donation to the Amateur Radio Newsline support fund so that we can keep these newscasts coming your way. Making a contribution is only a mouse click away if you have Pay Pal. Just go to www.arnewsline.org and click on the button at the top of the page marked "Make Donation." Or you can send in a donation to the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Whichever way you choose, the all volunteer crew at the Amateur Radio Newsline will be eternally grateful and these newscasts will be here for you..

Once again that's the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066. Or by Pay Pal at www.arnewsline.org

For the Support Fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1656 with a release date of Friday, May 8th, 2009 to follow in 54321.

The following is a Q-S-T. Congress says its time for the FCC to change and two congressmen introduce legislation to begin the process. Also, another conspirator in the murder at sea of two hams is sentenced to death, the FCC sides with a deceased hams son in reassigning a call and a preview of Hamvention 2009's forums that tell us all to dream. Find out the details on Amateur Radio Newsline(tm) report number 1656 coming your way right now.

(Billboard Cart Here)

RADIO LAW: CONGRESSIONAL BILL TO REFORM FCC INTRODUCED IN THE HOUSE

Congress is taking a hard look at the way in which the FCC operates with an eye at changing the way the regulatory agency does business. Bill Pasternak, WA6ITF, is in the Newsroom with the rest of the story:

--

A bill to change the way that the FCC approaches all regulatory matters has been introduced in the United States House of Representatives. Sponsored by representatives Joe Barton of Texas and Cliff Stearns of Florida, H.R. 2183 seeks to reform some of the Federal Communications Commission's regulatory processes.

Among the matters that H.R. 2183 addresses is a requirement that would force the FCC to let the public see any and all proposed rules and rules changes before it adopts them. Also, that the agency would be forced to provide everyone with a realistic amount of time to comment. In this area, the measure would require the FCC to provide at least 30 days for comments and an additional 30 days for replies on the published language of proposed rules.

The measure would also give the FCC only 30 days from adoption of a policy to release the actual text of the decision.

For the Amateur Radio Newsline, I'm Bill Pasternak, Wa6ITF, in the studio in Los Angeles

--

According to the wording of the bill Representatives Barton and Stearns want to require the agency to publish weekly the items being circulated among the Commissioners for a vote,. They also want to name any commissioner who has not voted on a given item. For ham radio it would mean knowing more about what the FCC is thinking in regard to changes in our service instead of having to second guess what the future might bring. (RW)

**

RADIO LAW: CONGRESS LOOKS AT HAM RADIO EMCOMM RESPONSE MEASURE

Congress is taking a look at the valuable role that ham radio plays in times of natural or man made disasters. This, after U.S Representative Sheila Jackson-Lee of Texas has introduces HR 2160 in the US House of Representatives.

Better known as the Amateur Radio Emergency Communications Enhancement Act of 2009, HR 2160 would promote and encourage the valuable public service, disaster relief, and emergency communications provided on a volunteer basis by licensees in the Amateur Radio Service. This, by undertaking a study of the uses of Amateur Radio for emergency and disaster relief communications.

The study would also identify unnecessary or unreasonable impediments to the deployment of Amateur Radio emergency and disaster relief communications. It would also make recommendations for relief of any such unreasonable restrictions so as to expand the uses of Amateur Radio communications in Homeland Security planning and response.

HR 2160 has been referred to the Committee on Energy and Commerce. If enacted into law, the measure would instruct the Secretary of Homeland Security to undertake its own study and report its findings to Congress within 180 days. That study would also spell out the capabilities and specific uses of amateur radio communications in emergencies and disaster relief situations. (ARRL)

**

RADIO JUSTICE: THIRD DEFENDANT IN HAM RADIO MURDER CASE SENTENCED TO DEATH

Another death sentence in the murder of two hams at sea. Bruce Tennant, K6PZW, reports:

--

A Southern California man has become the second person sentenced to die for the murders of a retired ham radio couple who were tied to an anchor and thrown off their yacht. This as Orange County California Superior Court Judge Frank Fasel condemns 43-year-old John Fitzgerald Kennedy to die by lethal injection for his part in the murders at sea of Thomas and Jackie Hawks, KD7VWJ and KD7VWK.

The supreme penalty was handed down by Judge Fasel on Friday, May 1st. This, after the same jury that had convicted Kennedy in February of two counts of special-circumstances murder had recommended death.

As previously reported, Kennedy's co-defendant, Skylar Deleon, was sentenced to death in the same two murders. Automatic appeals will likely delay the sentences to be carried out for some time. In California its currently an average of 8 to 13 years or longer between a judge sentencing a convicted felon to death and carrying out of a death sentence no matter how heinous the crime.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Deleon's ex-wife Jennifer Henderson was convicted in the murders in 2006 and sentenced to life in prison. A fourth co-defendant still faces trial in this case. (Published news reports)

**

RADIO LAW: THAT CALL BELONGS TO THE SON

The FCC has denied a petition for reconsideration filed by Mr. Richard E. Essen, N6CX, of Silver Spring, Maryland, to be awarded the vanity

call sign W3ZD. This, after a relative of the calls original holder exercised his right of survivorship and the FCC agreed. Heres the back story.

On December 22, 2006, Winfield C. Brantley surrendered amateur call sign W3ZD upon the grant of his application for a different call. A surrendered call sign generally is not available to the vanity call sign system for two years, but the Commission's Rules provides an exception for certain relatives of a deceased former holder of the call sign.

On December 10, 2008, Allan B. Corderman filed an application for call sign W3ZD. In his application, he stated that he is the son of a deceased former holder of the call sign. Commission staff has verified that call sign W3ZD was previously held by Roy C. Corderman, now deceased. Because of this Allan B. Corderman's application was granted on December 30, 2008.

On January 8, 2009, Essen requested reconsideration of the grant. He argued that the application should not have been granted because the exception in the FCC rules applies only to close survivors of the most recent person to hold the call sign, and not to close relatives of any deceased prior holder.

But the FCC says that's not the case. It says that when the agency adopted its rules dealing with call sign survivorship it stated that it was granting priority to close relatives of any and all deceased holders. That it did not say that the priority applied only to close relatives of certain deceased holders.

The FCC says that its rule has always been interpreted to afford priority to close relatives of any deceased former holder. Consequently, it concludes that Allan B. Corderman's application was properly granted, and has now dismissed Essen's petition for reconsideration. (FCC)

(5 sec pause here)

**

RADIO LAW: FCC RETURNS W8WX TO MICHIGAN SKYWARN GROUP

The FCC says that the callsign W8WX has been the property of a Michigan Skywarn group since 1999 and it has now returned to that group. This, after another ham tried to get it for a similar named group in Ohio. Burt Hicks, WB6MQV, is here with the rest of the story:

--

Way back on January 28, 1999, the Commission granted the W8WX call sign and club station license to the Lucas County Skywarn in Temperance, Michigan. Hermon R. Kibler, WD8ABZ, was identified as the club station trustee.

About 9 years later on March 19, 2008, Becky Eby, KC8ZNX, filed an application requesting that the license be amended to show her as the calls trustee and that the club's mailing address of the club be changed to one in Toledo, Ohio.

The FCC granted that application on March 19, 2008. After learning about the change on June 2nd 2008, WD8ABZ filed objections claiming that he was still the trustee for W8WX. He asked that the license be restored to him.

So, on June 30th, 2008, the FCC asked Eby to prove that she had been designated as the new trustee of W8WX. Eby replied on July 12th, 2008, that she was asked to be the trustee of the call by an officer of the club on January 29, 2008 at a meting of the Lucas County Skywarn. She also provided the meeting minutes and other documentation. Eby also told the FCC that she had been a member of Lucas County Ohio Skywarn since 2005, but the documents submitted show that the Lucas County Skywarn in Ohio was established on January 29, 2008.

On August 4, 2008, Kibler told the FCC that the Lucas County Ohio Skywarn did not and has not ever had anything to do with the Lucas County Michigan Skywarn. This past January Kibler filed an application to renew the license for W8WX and restore it to his name and address. On March 6, 2009, Eby amended that application to show her name and address. Kibler objected to the amendment on March 18th.

Now the FCC has found that Eby was not authorized to change the club trustee and address of W8WX. As a result, W8WX was restored to the Lucas County Michigan Skywarn radio club with Kibler as trustee. At airtime its unknown if Eby plans to file an sort of an appeal.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV.

--

And there is a rather interesting sidebar to this story. It seems that there is no Lucas County in Michigan. Temperance Michigan, to where the W8WX call is assigned, is just across the state line from Lucas County Ohio. The town of Temperance in Monroe County, Michigan. Confusing, isn't it? (FCC Order on Petition for Reconsideration, adopted April 15, 2009.)

**

HAMVENTION NEWS: A PREWIEW OF FORUMS TO DREAM ABOUT

The Dayton Hamvention is less than a week away its time to take a peak at what attendees will be able to expect. Of coarse all of the big

names in ham radio manufacturing will be there to show the latest and greatest gear. And those in the massive Flea Market will have the oldest and boldest of ham radios historical equipment up for sale.

But a good number of attendees consider Hamvention a learning experience and for 2009 they will not be disappointed. Michael Kalter, W8CI, is a Hamvention spokesman who recently was interviewed by Hap Holly, KC9RP, of RAIN:

--

Kalter: (Audio report only. Please download the MP3 version of this weeks newscast at www.arnewsline.org to hear it.)

--

In all, Kalter says that there will be some 45 different forums for those who come to Hamvention to learn. All they have to do is get there and dream. More with Michael Kalter, W8CI is on line at www. Therainreport.com. (RAIN, ARNewsline(tm))

**

HAMVENTION NEWS: ARNEWSLINE AT HAMVENTION 2009

And less we forget to mention, we of Amateur Radio Newsline will also be at Hamvention 2009. In addition to gathering news for upcoming reports we will again be hosting the annual Ham Radio Town Meeting. This year's topic is titled "A Lifetime of Careers." It will show how becoming a ham as a teen or pre-teen affected the lives and adult careers of several well known radio amateurs. In reality, its really a story of how ham radio can open up doors to success that no other hobby can.

We will be holding this years Ham radio Town Meeting on Saturday, May 16th from 11:45 a.m. to 2 p.m. in Hamvention Meeting Room 2 at the Hara Arena. Among this years speakers is the broadcast engineer who brought frequency coordination to major league sports. Also, with us will be the ham who helped the movie character "ET" to "phone home" and a career aviator who has operated around the globe.

There will also be a special appearance by ham radio's own Mr. Audio, Bob Heil, K9EID. Bob will explain why he is kind of the poster child for amateur radio and how the hobby made him the successful inventor and businessman he is today.

So come and enjoy a few hours with us learning how being a kid ham can lead to a life of success as an adult. Also, if you have children of your own, bring them along to hear some inspiring words on how their lives might benefit as well.

Again, that's on Saturday, May 16th from 11:45 a.m. to 2 p.m. in Hamvention Meeting Room 2 at the Hara Arena for this years Ham Radio Town Meeting. We hope to see many of you there. (ARNewsline(tm))

**

RESCUE RADIO: PACKETEERS TO HOLD GOLDEN PACKET EVENT

Packet operators and VHF rover stations will attempt the first ever Appalachian Trail Golden Packet event on Sunday, July 26th. The goal is to relay packet text messages the full 2000 mile length of the Appalachian Trail using 14 packet relay stations carried to the tops of some of the highest peaks in the Eastern United States.

This long linear demonstration will hopefully show the power of packet radio to re-constitute emergency communications into an area where normal communications capabilities can easily be lost. It will also demonstrate how easily a ham radio data network can be established using nothing more than a typical APRS mobile radio installation that's driven to the highest available spot in any given area.

More information about the Appalachian Trail Golden Packet event is on line at www.aprs.org. (WB4APR)

**

RADIO POLITICS: MIGNON CLYBURN TO BE NOMINATED AS FCC COMISSIONER

President Barack Obama has announced he intends to nominate Mignon Clyburn to the commission. The daughter of one of the most powerful members of Congress, House Majority Whip James Clyburn, Mignon Clyburn is in her 11th year serving as a South Carolina public service commissioner..

According to the commissions Web site, it has regulatory jurisdiction over investor-owned electric and gas utility companies; water and wastewater companies, telecommunications companies, motor carriers of household goods, hazardous waste disposal, and taxicabs. She is a 1984 graduate of the University of South Carolina with a Bachelor of Science degree in Banking, Finance and Economics.

Prior to coming to the South Carolina Public Service Commission she was publisher and general manager of the now-defunct "The Coastal Times," This was an African-American weekly newspaper in Charleston, South Carolina.

If confirmed by the Senate, she would fill the Democratic seat being vacated by Jonathan Adelstein, who's headed to the Rural Utilities Service in the Agriculture Department to help roll out broadband in areas away from major metropolitan areas. (Published reports, FCC web)

RADIO LICENSING: HAM TRAINING AT RIVERSIDE COUNTY CA HOMELESS SHELTER

Ham radio will be taught in a California homeless shelter beginning on June 4th. This according to Chris Kahn, KG6KZP, who will be the instructor for the course with assistance from Radio School's Gordon West, WB6NOA.

Chris tells Newsline that it all began when some of the shelter staff members approached him about getting their Amateur service tickets. The shelter, which is in Riverside County, California, also serves as an Emergency Operations Center serving several communities including the region surrounding Palm Springs.

Chris says that while the class is primarily for those volunteering and working at the shelter, he is opening it up to anyone who wants to get their entry level license. This includes those living at the shelter.

If you live in or near the area and want to take part in this training or know someone who wants to get a ham license, feel free to call Chris Kahn at (760) 327-8577. Or you can contact him by e-mail to chriskahnkg6kzp (at) yahoo (dot) com. (KG6KZP)

THE CHANGING OF THE GUARD: SANDY DONAHUE, W4RU - S.K.

A longtime friend of the Amateur Radio Newsline and an ex-officio member of our Young Ham of the Year Award team has become a silent key. This with word that Nelson Sandy Donahue, W4RU, passed away in his sleep early on May 4th.

We first met Sandy in the mid 1980's. He was still WA4ABY back then and called asking if someone from Newsline could come and speak at a ham radio convention in Atlanta. One that he was spearheading for the Georgia Tech Radio Club.

Our Producer Bill Pasternak, WA6ITF, flew in and the two quickly became close friends. And so it was that when the Young Ham of the Year Award presentation ceremony moved to its permanent home at the Huntsville Hamfest, Sandy offered to get there early to make sure all was ready for the arrival of each years young ham award winner. As such he became the unofficial greater for the award program and more than once footed the entire cost for all attending the dinner for the years young honoree.

But Sandy's service to ham radio was not limited to assisting us. First licensed at age 15, Sandy Donahue served as ARRL Georgia Section Manager from 1997 to 2001. He became the League's Southeastern Division Vice Director in 2002 and has held that position ever since. In fact, Sandy spent the last weekend of his life manning the ARRL booth and representing the ARRL at the Birmingham, Alabama hamfest. It

was a labor of love that W4RU was devoted to.

A few years ago after retiring form his job at an Atlanta TV station and suffering some health issues, Sandy relocated to the town of Dothan, Alabama. It was a place that he once described to WA6ITF as being the exact opposite of what Atlanta was. He said that Dolthan was a nice, quiet, peaceful and a good place to live. And it was in his adopted hometown of Dolthan that Sandy became a Silent Key at age 63.

Sandy Donahue, W4RU, was a very special friend to many of us here at the Amateur Radio Newsline. Because of this, his memory will live on with us, and with all of those whose lives he touched with his positive outlook on life.

Graveside services for Sandy Donahue, W4RU, were to be held at 4 PM at Sunset Memorial Park, 1700 Barrington Road, Midland City, Alabama. An special memorial service will be held in conjunction with the Atlanta Hamfest on June 6, 2009 at 1 PM. (ARNewsline with information also provided by the ARRL and WA4AW)

HAM RADIO IN SPACE: ARISS AT 25 CERTIFICATE

Turning to ham radio space related news, if you heard or contacted the ham radio station on board the I-S-S using any of its modes, between November 30, 2008 to January 15, 2009 you qualify to receive an ARISS 25th Year Commemorative Certificate. To get one, please send a QSL with all of the normal information and note the ARISS mode of operation. Also, whether the contact with you was receive only or two-way. On the outside of the QSL envelope, please include the words "25th Anniversary Certificate" and include a self addressed stamped envelope large enough to accept an 8.5 by 11 inch certificate and includes the proper postage. Please refer to www.ariss.org for addresses where to send your QSL and for additional details. (ARISS)

**

THE SOCIAL SCENE: MARYLAND FM ASSN MEMORIAL DAY HAMFEST

Turning to the ham radio social scene, word that the Maryland F.M. Association will be holding its annual Memorial Day Hamfest on Sunday, May 24th. The venue is the Howard County Fairgrounds, in West Friendship, Maryland from 8 am to 1 p.m. with setup beginning at 6 am. All times are local Eastern U-S. More is on-line at www.marylandfm.org (WA3MNN)

**

EMERGING TECHNOLOGY: NEILSEN SAYS TWITTER HAS MORE QUITTERS THAN JOINERS

Ham radio has nothing to fear from the Twitter instant messaging social network. The Chicago Tribune reported on May 1st reported on a recent

Neilsen Online survey that found the number of people leaving Twitter after just one month outnumber the new arrivals by a margin of 3 to 2.

David Martin is Nielsen's vice president of primary research. He says that if Twitter's user retention rates don't do better than the current 40 percent, the service simply won't be able to grow into the Internet social networking giants such as MySpace and Facebook.

According to Neilsen, in March, Facebook saw 69.2 million unique users, representing 41 percent of the U.S. Web audience. MySpace had 55.9 million, or 33 percent. But despite its initial rapid growth Twitter, lagged far behind, at 13.9 million users and 8.2 percent.

No reason was given to explain the massive defection from Twitter but Neilsen's Martin says that if 60 percent continue to quit from one month to the next, the inability to replace defectors suggests a natural limit to growth with Twitter. He expects for it to max out at about 10 percent of the U.S. Internet audience.

As to ham radio, while nobody does regular research on the retention rate in the hobby, it appears to be well above 85 to 90 percent, month to month. (RW, Chicago Tribune, others)

NAMES IN THE NEWS: W0CP INDUCTED INTO CE HALL OF FAME

Some names in the news. First up is former ARRL Rocky Mountain Division Director Walt Stinson, W0CPP. He is among industry leaders receiving honors this year from the consumer electronics industry. This as he is named as an inductee into the 2009 Consumer Electronics Hall of Fame.

In addition to his years of service to ham radio, W0CP is president and co-founder of the Denver Colorado based Listen Up audio/video specialty chain and also co-founded the Professional Audio Video Retailer's Association in 1979. ListenUp Corporation employs over 100 people and operates three consumer electronics stores in Colorado, an e-commerce website, a design center, a professional showroom, and a repair center. In addition the company designs, installs, and services everything from simple stereo systems to home theaters, large scale public address systems, board room multi-media systems, networks, automation, lighting control, telephones, and security.

Also being inducted this year is Dr. Irwin M. Jacobs. He was the co-founder of Qualcomm Corporation and the man who led the commercialization of CDMA technology. Also recognized for their contributions to communications and consumer electronics are the team of Karl Hassel and Ralph Mathews. They were the founders of the Chicago Radio Laboratory, which later became Zenith Radio.

They and the other inductees will be honored at a ceremony during CEA's Industry Forum in Phoenix, Arizona, this fall. (EIA)

**

NAMES IN THE NEWS: VK5ZAI RECEIVES CHRIS JONES AWARD FOR DEDICATION TO ARISS

And congratulations to Tony Hutchison, VK5ZAI on his selection as this years recipient of the Chris Jones Award. This Australia based prize honors the memory of the late Chris Jones VK2ZDD whom the Wireless Institute of Australia describes as a radio amateur who was dedicated to the advancement of the service and whose unfailing courtesy and genuine friendliness is fondly remembered by all who knew him.

Tony Hutchinson was chosen based on his eight years of dedication to providing ground to space communications to the International Space Station for contacts with children in classrooms around the world. VK5ZAI serves as both the ARISS Coordinator for the Asia Pacific Region and Wireless Institute of Australia's ARISS Coordinator as well. (WIA)

**

WORLDBEAT: FOUR YOUNG HAMS NAMED WINNERS OF RADIO ARCALA ESSAY CONTEST

Last February that the team at Radio Arcala, OH8X, launched an essay contest. One aimed at getting some fresh ideas from today's youth, and their elders o boost recruitment into to the ranks of amateur radio.

There were numerous entries and now the multinational jury has picked the winners with first place going to a 19-year-old from the U-K named Mark Dumpleton, 2-E-Zero-N-C-G.

Two US hams, John Scott Anderson, KC9OQO, and Brian Wood, W0DZ, finished in second and third place respectively. Argentinean Diego Salom, LU8DX was recognized for his submission of the best Spanish language piece.

You can read Dumpleton's article and his interview at www.radioarcala.com. It can be found at the screen button marked "Young People Terms." (GB2RS, Southgate)

**

WORLDBEAT: MALAYSIA KEEN ON HAM RADIO AS TEACHING TOOL

Malaysia's Star On Line newspaper has just published a story on how students are improving their English skills using Amateur radio. According to the news article, students were introduced to the world of ham radio when they were given the opportunity to listen to a live conversation between astronauts from the International Space Satellite. One 15 year old student commented that she was amazed to hear the astronauts talking to each other through such a small radio. (Malaysia Star)

RADIO EXPERIMENTS: UK TO VE MARCONI DAY SUCCESS

A big success for Marconi Day 2009. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

This year, on Marconi Day, a Marconi official station using Marconi equipment completed a radio contact that was similar to those Marconi himself achieved many years ago.

During the late hours of Friday 24th and the early hours of Saturday 25th April, GB4FPR was operated from the Fort Perch Rock Marine Radio Museum in the Wirral. Using a newly obtained 501kHz to 504kHz Notice of Variation license, they managed a transatlantic QSO on 502kHz with a station in St. John's, Newfoundland. The operators used Marconi marine equipment and Morse and received a 539 report from V01MRC.

It was a crossband QSO with GB4FPR transmitting 1 watt ERP on 502kHz and receiving the Canadian station on 3566kHz.

--

And this historic note: Fort Perch Rock from there the U-K Marconi station operated for this event was first built as a coastal defense battery during the Napoleonic era. This, to protect the Port of Liverpool. G-4-N-J-H says that it is open all year round and features museums, exhibitions and of coarse a tea-room. Definitely a nice place from where to call a CQ. (GB2RS)

**

DX

In DX word that JA1NLX, will be active as 3D2YA from Mana Island in Mamanuca Group between June 29th and July 3rd. Listen out for him on 80 through 10 meters using CW and RTTY. QSL via his home callsign, by the Bureau or direct with an SASE.

AH2Y and WX8C will be active from Guam as AH2Y during the CQWW WPX CW Contest that takes place May 30th to the 31st. QSL via Logbook to the World or direct to HL1IWD.

K8AQM, reports that the QSL route for the V63TR 2008 operation is no longer K5ZM. From this point on, QSL V63TR only to K8AQM.

LA9QNA will be active as JW9QNAfrom the JW5E club station in Svalbard between July 17th to the 22nd. Activity will include entries in the

North American RTTY QSO Party and the CQ World Wide VHF Contest. QSL via LA9QNA.

Members of the Scandinavian YL Radio Amateurs report that they are planning an expedition to a part of remote but still accessible part of Norway. The operation will take place after the groups meeting near Oslo slated September 3d to the 6th. More information is on-line at www dot slyra dot is.

Herbert Aeby, HB9BOU, is now the single, official, coordinated source for 4U1UN QSL cards. He has all available log books, both the old paper and more recent computer logs. He and his team are reported to provide a very conscientious QSL service. His address is good in the Callbook and on most on-line call directories.

Their plans are to get a group of YL operators (and possibly their OM) to activate the Longyearbyen radio station from Svalbard between September 6-13th. They have already received the callsign JW1SYL for the operation.

Lastly IW0HEX has told the Ohio Penn DX newsletter that his callsign appears to have been pirated. He says that that he has been receiving QSL cards via the bureau for portable 5Z4 operation from August 2008 on 30 meter CW. He tells the O-P-D-X that he has never been in Kenya and this is someone abusing his callsign. He wont be returning QSL cards to anyone who sends them to him for that non-existent operation.

(Above from various DX news sources)

**

THAT FINAL ITEM: THE OLD VS NEW IRC

And finally this week, for those who like to stockpile International Reply Coupons or IRC's for QSL'ing purposes, listen up. This information is for you. Graham Kemp, VK4BB, of the WIA News, has the details:

--

The current IRC will expire at the end of year. Unlike the old style coupons, the current types all have an expiration date giving them a maximum life of 3 years. Even if you purchased a current IRC today, they will still expire on December 31, 2009.

Ken, ZL2HU, advises us on the following information from the International Postal Union in Geneva:

"The current issue (Beijing 2) IRC may be exchanged up to 31 December 2009 (date printed on coupon). In principle, Beijing 2 coupons will no longer be sold from 31 August 2009.

"The new international reply coupon (Nairobi model) is due to go on sale from 1 July 2009, and will be valid for exchange until 31 December

2013."

Ken states, "So make sure you aren't holding any of the Beijing 2 coupons at the end of this year."

For the Amateur Radio Newsline, I'm GFraham Kemp, VK4BB, in Australia.

--

To see what the new International Reply Coupon looks like, go to the U-R-L found at http://www.upu.int/news_centre/2008/en/2008-08-08_irc.shtml (WIA News)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2009 Amateur Radio Newsline Young Ham of the Year Award is now open. Complete details are on our website at www.arnewsline.org Just scroll down to the words "2009 YHOTY Nominations Now Open" and click for more information and an official nominating form.

Also, due to travel by Newsline's volunteers to Dayton, next weeks newscast will be released one day early on Thursday, May 14th. Look for it on line and on the phone then.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening.

I am very happy to forward this email for your information. Thanks to
the Ak-Sar-Ben Amateur Radio Club for doing this!

73,
Art
****

The Ak-Sar-Ben ARC will participate in the Annual Museum Ships on the
Air event from Freedom Park and will activate not one, but two ships
for the event. On June 6th, the USS Hazard will be activated as K&#65533;USA
and the USS Marlin will be heard as K&#65533;M. Operations on the Hazard
will take place from the deck. The ship will not be open to the
public, only amateurs participating in the event will be allowed on
board. All amateur radio operators are invited to attend and
participate. Make sure you bring your amateur radio license with you.

The station for the Marlin will operate from the ground next to the
submarine. Setup will start on Saturday morning at 8:00 with
operations starting at 9:00. We will operate until 7:00 p.m. with tear
down at the time.

Operations for both ships will take place in the General portion of the
amateur radio bands. Actually operating bands and frequencies are
not known at this time as it depends on band conditions and the final
antenna configuration and will probably change throughout the day.
Part of the fun of this event is that you don't know where the various
ships will be operating. At this point 44 ships have signed up, and it
looks like we are the most inland of any of them (at least in the US)
and we will be giving them two options!

Watch the club's web site for details http://www.aksarbenarc.org/main

==> ARRL GRASSROOTS LEGISLATIVE ACTION COMMITTEE SOLICITS MEMBER SUPPORT
FOR HR 2160

One of the biggest challenges that amateurs face is antenna
restrictions
-- those implemented by local governments and those originating from
deed restrictions and building development covenants. As many hams
know,
the FCC's PRB-1 limited preemption order
<http://www.arrl.org/FandES/field/regulations/PRB-1_Pkg/prb-1.pdf>
offers amateurs some relief when facing zoning and building
restrictions; however, PRB-1 does not extend to include covenants,
```

conditions and restrictions (known as CC&Rs). These deed and property use restrictions strongly and negatively affect the ability of Amateur Radio Service licensees to perform valuable emergency and disaster communications. Finding a method to extend the PRB-1 protections is a key component of the ARRL Legislative Action Program <http://www.arrl.org/govrelations/laprog-faq.html>.

On April 29, Congresswoman Sheila Jackson-Lee (D-TX) introduced House Bill HR 2160 -- the Amateur Radio Emergency Communications Enhancement Act of 2009 <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1>. If enacted into law, HR 2160 would instruct the Secretary of Homeland Security to undertake a study and report its findings to Congress within
180 days. The study would spell out uses and capabilities of Amateur Radio communications in emergencies and disaster relief. The study shall:
* Include recommendations for enhancements in the voluntary deployment of Amateur Radio licensees in disaster and emergency communications and disaster relief efforts.
* Include recommendations for improved integration of Amateur Radio operators in planning and in furtherance of the Department of Homeland Security initiatives.
* Identify unreasonable or unnecessary impediments to enhanced Amateur Radio communications -- such as the effects of private land use regulations on residential antenna installations -- and make recommendations regarding such impediments.
* Include an evaluation of Section 207 of the Telecommunications Act of 1996 (Public Law 104-104, 110 Stat 56 [1996]).
* Recommend whether Section 207 should be modified to prevent unreasonable private land use restrictions that impair the ability of amateurs to conduct, or prepare to conduct, emergency communications by means of effective outdoor antennas and support structures at reasonable
heights and dimensions for the purpose in residential areas.

The bill does not automatically extend PRB-1 to include CC&Rs, but it takes a first big step in that direction by determining the extent that things such as CC&Rs impede the Amateur Service in performing public and
emergency service communications.

HR 2160 has been assigned to the House Committee on Energy and Commerce.
Getting the bill out of committee is the first major hurdle to overcome -- and that is where ARRL members play an essential role. As part of a phased campaign, members of the ARRL's Legislative Action Committee and Division Directors sent letters to some ARRL members earlier this week; these members reside in a congressional district whose Member of Congress serves on that committee. The next phase will include all ARRL members.

This first set of members was encouraged to send letters expressing their support of HR 2160 to their congressional representative via Chwat
& Company, the League's Washington legislative consultant. Due to security measures imposed on mail sent to congressional personnel, representatives from Chwat will hand deliver the letters to the respective Member of Congress.

"Getting HR 2160 passed is going to be a challenging process -- and every ARRL member needs to be involved," said ARRL Regulatory Information Manager Dan Henderson, N1ND. "The actions this week by the Grassroots Legislative Action volunteers are just the first step in our journey into getting the bill signed into law."

Amateur Radio operators across the US repeatedly demonstrate their commitment to public service and emergency communications. Through their
work with Homeland Security activities, state and local Emergency Management offices, as well as with numerous private agencies, Amateur Radio operators make a difference. HR 2160 can go a long way toward assisting thousands of amateurs who are restrained unreasonably by CC&Rs, but it will take a concerted effort by all amateurs for this effort to be successful.

For more information on HR 2160 or the Legislation Action Program, please contact Henderson via e-mail <reginfo@arrl.org>.

==> FCC RELEASES REDACTED BPL CASE STUDIES AFTER ARRL FOIA REQUEST

Earlier this month, the FCC released the redacted portions of the studies on which they relied with regard to its Broadband over Powerline
(BPL) rulemaking in 2004 after ARRL filed an Freedom of Information Act request <http://www.arrl.org/news/files/BPL_FOIA_Request033109.pdf> on March 31 for the studies. In October 2007, the US Court of Appeals for the District of Columbia Circuit heard ARRL's case against the Commission <http://www.arrl.org/news/stories/2007/10/25/102/>, stating, among other things, that the FCC not only withheld the internal studies until it was too late to comment, but had yet to release portions of studies that may not support its own conclusions regarding BPL. The FCC claimed that the studies were "internal communications" that it did not rely upon in reaching its decision to adopt the BPL rules. In its April 2008 ruling, the Court ordered the FCC to release the studies <http://www.arrl.org/news/stories/2008/04/25/10064/>.

In its decision, the Court agreed with the ARRL that the FCC had failed to comply with the Administrative Procedure Act (APA) <http://biotech.law.lsu.edu/Courses/study_aids/adlaw/> by not fully disclosing for public comment the staff studies on which it relied and that "there is no APA precedent allowing an agency to cherry-pick a study on which it has chosen to rely in part." Writing for the three-judge panel of Circuit Judges Rogers, Tatel and Kavanaugh, Judge Rogers summarized in the Court's decision that "The Commission failed

to
satisfy the notice and comment requirements of the Administrative Procedure Act ('APA') by redacting studies on which it relied in promulgating the rule and failed to provide a reasoned explanation for its choice of the extrapolation factor for measuring Access BPL emissions." The Court concluded that "no precedent sanctions such a 'hide and seek' application of the APA's notice and comment requirements."

Judge Tatel agreed with Judge Rogers, saying, "[I]n this very case the Commission redacted individual lines from certain pages on which it otherwise relied...there is little doubt that the Commission deliberately attempted to 'exclude [ ] from the record evidence adverse to its position'"

After almost a year after the Court's decision, the FCC had done "literally nothing" about releasing the complete studies <http://www.arrl.org/news/stories/2009/03/04/10685/>. When President Obama came into office in January 2009, new Freedom of Information Act (FOIA) guidelines <http://www.state.gov/m/a/ips/> were put in place. Using these new guidelines, the ARRL filed an FOIA request on March 31 for the studies. The FCC responded to the FOIA request and released the unredacted studies the last week of April.

A look at the unredacted studies show that the FCC knew BPL was not a point source, but these same studies in redacted form show just the opposite -- information proving BPL was not a point source was deleted. In one study concerning Main.net's BPL system, the FCC clearly disregarded information provided by a BPL provider's Chief Technical Officer, considering the point -- "[i]f distance scaling were based on distance to the pole ground wire rather than the nearest part of the BPL
system, measurements would have passed with 1 dB margin at the selected quasi-peak measurement location" -- as "invalid" <http://www.arrl.org/news/files/Redacted1.pdf>.

Another unredacted study from 2003 in Allentown, Pennsylvania, plainly showed that BPL was not a point source, noting: "NOT A POINT SOURCE. Emissions exhibit no noticeable decay 230 m down from the coupler." In the redacted version, this information was deleted, but all other information, including a graph, was left intact <http://www.arrl.org/news/files/Redacted2.pdf>.

A study regarding Access BPL showed the same thing, but all information had been redacted from the file, leaving just a blank page. The unredacted study concluded that "The tested overhead PLC devices do not act as point sources. Emission from line shows virtually no decay 230 m from coupler. Differential two-wire signal injection affects the polarization of radiated emissions from overhead devices" <http://www.arrl.org/news/files/Redacted3.pdf>.

"Comparing the redacted and unredacted documents will take some time," ARRL Chief Executive Officer David Sumner, K1ZZ, said, "but these three sets of pages...show exactly what prompted Judge Tatel to say what he did. We are continuing to analyze all the documents and we'll see just what has been going on."

==> ARRL SOUTHEASTERN DIVISION VICE DIRECTOR SANDY DONAHUE, W4RU (SK)

The ARRL is sad to report that Southeastern Division Vice Director Sandy
Donahue, W4RU, of Dothan, Alabama, passed away on May 4. He was 63. Donahue, an ARRL Life Member, served as Vice Director since January 2002
and as Georgia Section Manager from 1997-2001. In his professional life,
Donahue worked at a television station in Atlanta for almost 25 years before retiring.

Licensed for almost 50 years, Donahue received his first call sign -- WA4ABY -- at age 15. Exhibiting a lifelong commitment to public service throughout his amateur career, he always supported the ARRL and the Amateur Radio Service. Donahue was a fixture at every major hamfest in Southeastern Division -- and many across the country -- as well as many of the smaller ones in his area, promoting the ARRL. He spent the weekend of May 2-3 at the BirmingHamfest 2009
<http://www.w4cue.com/fest.html>.
Former Southeastern Division Director and current ARRL Honorary Vice President Frank Butler, W4RH, appointed Donahue as an Assistant Director
in 1982. "We spent hours and hours together at the ARRL table at so many
hamfests and conventions," Butler recalled. "Sandy became my Vice Director in 2002, and in the next six years, I got to really know him. Over the past 26 years, we must have sold more a ton of ARRL books, study guides, operating aids, pins, patches and stickers. Sandy was always promoting the League to hams, encouraging them to become active members of the ARRL. He took great pride in the number of people who joined the ARRL through him."

Butler said that after a hard day's work at the ARRL booth, "all Sandy ever wanted was a good dinner! He loved to eat, and he showed me many fine places to do that, from Atlanta to Birmingham, to Orlando to Miami!I'm glad we got to do that again the last weekend of his life -- at the
BirmingHamfest 2009."

Current Southeastern Division Director Greg Sarratt, W4OZK, fondly remembered Donahue: "I was happy to say that I spent this past weekend with Sandy where he spent the last day of his life doing what he loved -- in the ARRL booth, representing the ARRL at the Birmingham, Alabama hamfest, catching up with old friends. Sandy was, as usual, in rare form
all weekend, joking and having a good time."

Sarratt said that on Sunday, May 3, "Breakfast began with Sandy surrounded by a group of friends, where he, as usual, did his dead level
best to get the best of me with a joke. On this occasion, he managed to succeed, and, in fact, he continued to enjoy this until we parted ways at the conclusion of the hamfest. Sandy could relate to all hams, both old and young. He -- and his sense of humor -- will be sorely missed."

ARRL Chief Executive Officer David Sumner, K1ZZ, said that even before Donahue sought elective office in the ARRL, "Sandy was a fixture at conventions and hamfests, promoting the League and supporting the association in any way he could. Sandy thought of the ARRL as his family, and he was an important part of it."

Jeff Beals, WA4AW, was a long-time friend of Donahue's. "I've known Sandy for more than 25 years," he told the ARRL. "He was very, very devoted to Amateur Radio, especially the public service side: Emergency Communications, traffic handling and helping out wherever and whenever he could. We had a lot in common." Beals currently serves as an Assistant Section Manager and Affiliated Club Coordinator in the ARRL's Southern Florida Section.

"Sandy had developed an interest in community theatre these past couple of years," Beals said. "He had been involved in a few productions with The Featured Players group <http://www.freewebs.com/featuredplayers/> in
Dothan."

ARRL Technical Relations Manager Brennan Price, N4QX, said that Donahue was one of the three ARRL Volunteer Examiners who administered his first
license exam back in 1997: "He was helpful after the exam as well, always eager to share his experience with a variety of Amateur Radio activities with me and other impressionable young hams at the Georgia Tech Amateur Radio Club. While I suspect that his stories were sometimes
accompanied by a degree of exaggeration for dramatic effect, I enjoyed them and will miss them."

According to Beals, a graveside service will be held at 4 PM on Saturday, May 9 at Sunset Memorial Park, 1700 Barrington Rd, Midland City, Alabama. An additional service will be held on June 6 at 1 PM in conjunction with the Atlanta Hamfest at Jim Miller Park in Marietta, Georgia. For more information, please contact Beals via e-mail <wa4aw@arrl.net>.

==> DX ACTIVITIES ABOUND AT ARRL EXPO AND NATIONAL CONVENTION

ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, reports that plans for a plethora of DX activities at the ARRL EXPO -- part of the 2009 ARRL National Convention at the Dayton Hamvention -- are wrapping up <http://www.arrl.org/expo>. "We are excited about the activities that will be taking place," he said. "Visitors to the EXPO

will see a lot of activities relating to DX, including an expanded International Amateur Radio Union (IARU) <http://www.iaru.org/> area." The National Convention will take place May 15-17 at Hara Arena, located
near Dayton, Ohio.

The IARU area, led by incoming IARU President Tim Ellam, VE6SH, will feature each of the three IARU Regions. The Deutscher Amateur Radio Club
(DARC) <http://www.darc.de/>, representing Region 1, will be running a world flag identification contest throughout the show. ARRL, representing Region 2, will sponsor a RUFZ <http://www.rufzxp.net/> CW copying competition throughout the event. The Japan Amateur Radio League
(JARL) <http://www.jarl.or.jp/English/0-2.htm>, representing Region 3, will be on hand to check applications for the IARU's Worked All Continent (WAC) and 5-Band WAC awards <http://www.iaru.org/wac/>. According to Patton, they will check QSL cards and issue the award certificates on the spot.

"The 2009 ARRL National Convention marks the first time we have offered the WAC and 5-Band WAC awards on the spot," Ellam said. "It is definitely exciting to be able to walk away with your award certificate in hand." To be eligible for WAC, applicants must submit QSL cards (no photocopies, please) confirming contacts with at least one other amateur
in each of six continents: North America, South America, Asia, Europe, Oceania and Africa. The 5-Band WAC award recognizes amateurs who have made confirmed contacts with these continents on 80, 40, 20, 15 and 10 meters.

JARL representatives will also check applications for certain JARL awards (AJD, WAJA, JCC, JCG, ADXA and ADXA-Half) and issue them at the convention. JARL staff members Masa Ebisawa, JA1DM, and Hiro Tamama, JA1SLS, will check applications for other JARL awards at the JARL corner; certificates for these awards will be mailed from JARL headquarters. Ebisawa and Tamama will be glad to answer questions about JARL activities, as well as the reciprocal licensing procedures.

Applicants for JARL awards do not need to have the QSL cards present; a list showing the call signs of stations worked, date, band and mode (or other data required by each award) of the contacts is sufficient. A statement making an oath that the QSL cards of the contacts listed are in the possession and that the items are correctly listed should be attached to the application. Applicants may use a DXCC Record Sheet for their QSL card list. The JARL award fee is $16. Check out the JARL Web site for more information about JARL awards
<http://www.jarl.or.jp/English/4_Library/A-4-2_Awards/Award_Main.htm>.

ARRL staff and DXCC Card Checkers will offer full DXCC card checking and
award applications as always, and will also be able to check

applications and QSLs for the Worked All States (WAS)
<http://www.arrl.org/awards/was/> and the VHF/UHF Century Club (VUCC)
<http://www.arrl.org/awards/vucc/> awards.

Visitors to the ARRL EXPO will be able to check out the Logbook of the
World (LoTW) "Call Sign Lookup." This nifty program will allow anyone
to
see how many times LoTW users have submitted their call sign to the 222
million QSO log database! ARRL staff will also be able to assist with
LoTW signup and problems throughout the weekend. For those who have not
yet signed up to use LoTW, bring a copy of your license to show to
staff
and they will be able to help expedite the sign-up process
<http://www.arrl.org/lotw>.

For the first time ever, ARRL members will be able to drop off their
QSL
cards to be sent through the ARRL Outgoing QSL Bureau
<http://www.arrl.org/qsl/qslout.html>. If you have QSLs that you would
like to send through the ARRL Outgoing QSL Bureau (your QSLs going to
foreign stations --no US-US QSLs please), you can save the shipping
cost
to ARRL by bringing them to Dayton and the League will transport your
cards to the Bureau in Newington.

In order to take advantage of this exciting benefit, all of the
standard
QSL Bureau rules must be followed: Cards must be sorted by DXCC
country;
they must go to countries where a bureau exists, and you must be an
ARRL
member to use the Outgoing QSL Bureau. Patton said that hams utilizing
this service do not need to box the cards, but they should be wrapped
with rubber bands; ARRL will weigh the cards on-site in the ARRL EXPO
area.

The rates are $5 for the first .5 pounds of cards or portion thereof.
Keep in mind that approximately 75 cards weigh .5 pounds. The rates
increase to $10 for one pound, and then $5 for each additional
half-pound. For example, a package containing 1.5 pounds of cards
should
include the fee of $15. A package of only 10 cards or fewer costs only
$1.50, 11-20 cards are $2.50 and 21-30 cards are $3.75. Members can pay
for this service via check, cash or credit card.

Why not make 2009 your year to go to Dayton? Where else can you
experience all the fun and excitement of the ARRL EXPO, the 2009 ARRL
National Convention and the Dayton Hamvention under one roof? It's not
too late to make plans to join us in Dayton May 15-17.

==> OREGON HAMS PARTICIPATE IN STATEWIDE DISASTER DRILL

The State of Oregon conducted a full-scale week long exercise April 24-30, simulating a 9.2 magnitude earthquake on the Cascadia Subduction Zone <http://www.pnsn.org/HAZARDS/CASCADIA/cascadia_zone.html>. According to Tillamook County Emergency Management Director Gordon McCraw, WX7EM, if an earthquake struck the zone, it would cause "major destruction" from the Cascade Mountains all the way to the West Coast. Instead of focusing on the actual disaster, the exercise instead concentrated on the 72 hours after the event. This, officials said, would put the primary focus on life-saving response and debris removal, as well as mass-casualty and short-term recovery.

The Cascadia Subduction Zone -- a very long sloping fault that stretches
from mid-Vancouver Island to Northern California -- separates and connects the Juan de Fuca Plate and North American Plate. The Zone is creating new ocean floor off the Washington and Oregon coasts; as more material wells up along the ocean ridge, the ocean floor is pushed toward and beneath the continent.

"The simulation -- codenamed Cascade Peril -- included a major tsunami striking the coastline," McCraw said. "Such an event would result in a severe disruption to local utilities, including electricity and phone services, so local Amateur Radio operators were called upon to relay message traffic from the Tillamook County Sheriff's Office Command Center to the Incident Command Team. From there, officials evaluated the
needs request and forwarded the traffic on to the Regional Facility that
had been set up at a National Guard Base near Cannon Beach, Oregon. Emergency Management officials then consolidated these requests and sent
them to the State Emergency Management Office in Salem."

McCraw said that officials participating in Cascade Peril expected that if this were an actual event, roads would be affected, so as part of the
simulation, the US Coast Guard dispatched a helicopter to the Tillamook Airport. There it picked up three Tillamook area Amateur Radio operators
and flew them to Camp Rilea National Guard Base in Warrenton, about 65 miles north of Tillamook.

At Camp Rilea, the hams established communications on 2 meters and Winlink between all facilities. "Amateurs relayed message traffic on voice, and many new hams used Winlink for the first time, having received their license only a couple months prior to the exercise," McCraw said. "In Tillamook County, we used 11 hams at two locations. Four Tillamook hams at Camp Rilea participated with hams from neighboring Clatsop County. These hams sent and received a total of 37 messages on Friday and 32 messages on Saturday before the exercise was terminated around noon."

In the months leading up to the exercise, McCraw said Tillamook County installed amateur stations at the Tillamook County Sheriff's Office -- home of the Emergency Operations Center and the back-up 911 center -- and at the primary regional 911 center in downtown Tillamook, where the Incident Command Team operates during disasters. "Because of the excellent service the Amateur Radio community provided during the December 2007 storm events that saw a severe disruption of landline and cell phone service in many coastal communities, including Tillamook County, Emergency Management officials installed the Amateur Radio stations at these facilities," McCraw said. "Both the county and the state recognized the capabilities Amateur Radio offered and they provided some of the equipment needed to install these stations."

McCraw said that Tillamook County has been called the most "disaster rich" county in Oregon: "This past November, December and January, Tillamook County experienced three floods and a severe snow event that resulted in Oregon Governor Ted Kulongoski declaring these areas disaster zones. As has now become standard practice during activation of
the Incident Command Team, Amateur Radio operators were on the scene, attending all briefings and manning the stations until the event was terminated."

ARRL District Emergency Coordinator for Oregon's District One David Kidd, KZ7OZO, told the ARRL that Tillamook County is "very lucky" to have Gordon McCraw, WX7EM: "Not only is Gordon the Emergency Coordinator
(EC) for the County ARES unit, but he is now the County Emergency Management Director after serving as a Senior Deputy since his arrival in Oregon. Gordon brings his vast experience in law enforcement and emergency management to the county from his time spent working in both fields during Hurricane Katrina in New Orleans. This is important since Tillamook County has been the focal point for several severe weather events in the recent past. Gordon takes is job very seriously and has his people train hard so they are ready for the real thing."

Kidd said that McCraw -- appointed as EC in April 2007 -- has helped to build a very effective unit "from scratch" -- the county had not had an ARES unit for more than 10 years before McCraw's appointment.

"Tillamook County is a rural county and volunteers are an absolute necessity to get the mission accomplished here," McCraw concluded, "and Amateur Radio operators are at the top of that list. I consider them amateurs in name alone."

==> NOTED QST AUTHOR, DXPEDITIONER LEE BERGREN, W0AR (SK)

Albert "Lee" Bergren, W0AR (ex-W9AIW, W0AIW), of Kansas City, Missouri, passed away May 1 after a brief illness. He was 93. An electronics engineer, author, designer and advisor with special accomplishments in the field of antenna and radio amplifier design, Bergren led or participated in many of the first Amateur Radio DXpeditions.

In 1956, Bergren and a team of five amateurs activated Socorro Island, XE4A, in 1956 <http://p1k.arrl.org/cgi-bin/topdf.cgi?id=38695&pub=qst>. Prior to this activation, the island had only seen Amateur Radio activity when a Spanish-speaking radio operator with a temporary Mexican
weather station had a limited number of contacts on 40 meters phone. In 1959, Bergren also activated the Seychelles Islands as VQ9AIW in 1959. In 2002, he was inducted into the CQ DX Hall of Fame as Member #41 <http://www.cq-amateur-radio.com/dxhof.html>. Other than keeping up with
his friends on the air, DX was always Bergren's focus in Amateur Radio. After the bands opened up after World War II, he received DXCC #191 for Mixed Mode and DXCC #124 for voice in 1948. According to the June 1965 issue of QST, Bergren earned DXCC Honor Roll with 313 countries.

In 1963, Bergren developed the multi-element cubical quad antenna, and later that year, QST published his article "The Multielement Quad" <http://www.arrl.org/members-only/tis/info/pdf/6305011.pdf>. The antenna
had a driven element, reflector and two directors. Horizontal crossarms were broken by insulators to minimize coupling to the antenna. Continuous wire loops with no stubs were used for each element. In a June 2002 QST article, Bergren recalled "The First Field Day" in 1933 <http://p1k.arrl.org/cgi-bin/topdf.cgi?id=102850&pub=qst>, remembering that back then, only portable stations were allowed to participate.

Together with Bill Bishop, W0UF (SK), Bergren owned and served as President of Radio Industries, a company that manufactured the Loudenboomer linear amplifier and antenna rotator in the early 1960s <http://www.qsl.net/la5ki/louden.htm>. The company was also known for two-way 30 mc radios used for village communication during the Vietnam War and two-way 160 mc communication radios for railroads and pipeline controls that they designed and manufactured. Bergren and Bishop sold the company to Hallicrafters in the mid-1960s.

ARRL Youth Editor Duncan MacLachlan, KU0DM, knew Bergren well. "Lee was an amazing man with an amazing story," MacLachlan said. "He taught me much in the two years I knew him, and even at 93 he left too soon. Lee spent 78 years in ham radio, dedicating his time, talent and treasure to
the hobby. He will be sincerely missed in the Kansas City amateur community, especially among QCWA Chapter 35 and Kansas City DX Club. Lee
was the greatest man one could be, and he now belongs to the ether."

Bergren was a Life Member of the ARRL and the Quarter Century Wireless Association (QCWA). He co-founded the Kansas City DX Club in 1952 and the Mid-Continent Chapter 35 of QCWA in 1967. Bergren is survived by his
wife Betty. A memorial service is planned for 10:30 AM Tuesday, May 5 at
the Lutheran Church of the Resurrection, 9100 Mission Rd, Leawood,

Kansas. Donations may be made to the American Heart Association.

==> FCC AFFIRMS VANITY CALL SIGN RULES

The FCC dismissed a petition filed by Richard Essen, N6CX (ex-AB3IQ), of
Silver Spring, Maryland, regarding the issuance of a vanity call sign to
Allan Corderman
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-997A1.pdf >. In
its decision, the FCC said that Corderman's application for his new call
sign was valid and the call sign was "properly granted" by the FCC.

On December 22, 2006, Winfield Brantley of Myrtle Beach, South Carolina,
surrendered his call sign -- W3ZD -- when the FCC approved his
application for a new call sign. On December 10, 2008, Allan Corderman,
WB1EFN, of New Orleans, Louisiana, applied for W3ZD, stating he was a
close relative of a former holder of the call sign. Section 97.19(c)(3)
of the FCC rules regarding vanity call signs state that while a
surrendered call sign is not available to the vanity call sign system
for two years, certain relatives of the deceased former holder or clubs
(in certain circumstances) may apply for the call sign in the two year
"grace period"
<http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr97.19.pdf>.
Corderman stated in his application that he was the son of Roy C.
Corderman, now deceased, and a former holder of W3ZD.

In January 2009, Richard Essen, N6CX (ex-AB3IQ), of Silver Spring,
Maryland, petitioned the FCC, asking that the Commission reconsider
Corderman's application for W3ZD, saying that the application should not
have been granted because the exception in the vanity call sign system's
rules apply only to close survivors of the most recent person to hold
the call sign, and not to close relatives of any deceased prior holder.

The FCC disagreed with Essen's petition, saying that "[w]hen the
Commission adopted Section 97.19(c)(3), it stated that it was granting
priority to 'close relatives of deceased holders,' and did not say that
the priority applied only to close relatives of certain deceased
holders. The rule has always been interpreted to afford priority to
close relatives of any deceased former holder."

According to Section 97.19(c)(3), "Except for an applicant who is the
spouse, child, grandchild, stepchild, parent, grandparent, stepparent,
brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or
in-law, and except for an applicant who is a club station license
trustee acting with the written consent of at least one relative, as

listed above, of a person now deceased, the call sign shown on the license of [a] person now deceased is not available to the vanity call sign system for 2 years following the person's death, or for 2 years following the expiration of the license grant, whichever is sooner."

==>SOLAR UPDATE

Tad "Sunshine trickles on the floor" Cook, K7RA, this week reports: A Solar Cycle 23 spot appeared for two days -- April 29-30 -- in an area that soon rotated out of view. Sunspot numbers were 15 and 12, but for the last seven days, we haven't seen any spots. This may end soon -- we get the advance word because of the STEREO mission <http://stereo.gsfc.nasa.gov/where.shtml>, which is gradually able to see more and more of the sun not visible from Earth. On May 5-6, the STEREO B satellite was able to see an eruption from an active region around the eastern edge of the Sun, outside of our view. If sunspots emerge, they will be Solar Cycle 24 spots, due to their relatively high latitude. Sunspot numbers for April 30-May 6 were 12, 0, 0, 0, 0, 0 and 0 with a mean of 1.7. The 10.7 cm flux was 69.4, 68.5, 68.3, 68.6, 68, 68 and 68.7 with a mean of 68.5. The estimated planetary A indices were 3, 5, 5, 5, 4, 2 and 6 with a mean of 4.3. The estimated mid-latitude A indices were 2, 2, 3, 2, 2, 2 and 6 with a mean of 2.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought
to you by John Clare's "May" <http://www.poemhunter.com/poem/may-2/>.

==>IN BRIEF:

* This Week on the Radio: This week, look for another running of the NCCC Sprint Ladder on May 8. The FISTS Spring Sprint is May 9. On May 9-10, look for the SBMS 2 GHz and Up WW Club Contest (local time), the CQ-M International DX Contest, the VOLTA WW RTTY Contest, the Nevada Mustang Roundup and the 50 MHz Spring Sprint. The SKCC Weekend Sprint is
May 10. Next week is the Feld Hell Sprint on May 16. The EU PSK DX Contest, His Majesty King of Spain Contest (CW) and the Manchester Mineira All America CW Contest are May 16-17. The Run for the Bacon QRP Contest is May 18 and the NAQCC Straight Key/Bug Sprint and QRP Minimal Art Session are May 21. All dates, unless otherwise stated, are UTC. See
the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the
ARRL Special Event Station Web page

<http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 24, 2009, for these online course sessions beginning on Friday, June 5, 2009: Amateur Radio Emergency Communications Level 1; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News on May 15: Due to staff attendance at the ARRL National Convention and Dayton Hamvention, there will be no ARRL Audio News on May 15. The ARRL Letter will be distributed that day. ARRL Audio News will resume regular distribution on May 22.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole
or in part in any form without additional permission. Credit must be
given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter
will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

I'm not sure what you mean, Bill.

In most parts of the country, a viewer can get at least five different broadcast TV networks (ABC, CBS, NBC, FOX, PBS). While there's a lot of similarities in the programming, (many sitcoms are rehashes of "The Honeymooners"), there's still a lot of choice.

(insert non-lawyer disclaimer HERE)

AFAIK, it's because the govt. doesn't see it as their job to protect your ability to discuss politics via radio. It's not even protected in broadcasting (remember the demise of the fairness doctrine?) so I don't think they'd see amateur radio as needing protection.

It is an interesting point, though.

I'd like to hear more about this idea. Particularly "social contract".

It seems to me that many forms of contract consist of bargaining away one's freedom for some benefit or other. The benefits of being married require that one give up the freedoms of being single. The benefits of being employed require bargaining for pay, benefits, etc., and if an employee invents something worth millions, it will almost certainly be the property of the employer unless there's a specific contract otherwise.

Perhaps what you're saying is that a person cannot be required to bargain away everything; that there are some rights which cannot be sold. For example, if an employment contract required that all employees vote a certain way and no other as a condition of employment, the contract probably wouldn't stand up to a legal challenge, because buying/selling votes is illegal.

Is that what you mean?

Interesting point but I don't know if it would apply. AFAIK, the preemption of restrictions on internet antennas could be based on the same anti-monopoly argument: if you allow wires and fibers but not antennas, the wired-internet-access folks would have a monopoly on internet access, at least in some places. (In my neighborhood, one can get highspeed internet by DSL, cable, and fiber-optic, but in other areas the choices may be fewer.)

Agreed. Worse, the restrictions are being applied to homes with lots of land and good visual screening (trees), so that the "tower next to a townhome" scenario isn't the problem.

> P.S. I wonder if M.A.R.S. has (or could get) the authority to
> override CC&R restrictions. If that's so, then they're sitting
> on the proverbial gold mine ...

I don't know that anyone has tried that angle. Interesting! Perhaps the argument could be that anti-antenna rules discourage both the existence of MARS and having participants in certain areas.

I think that challenges to CC&Rs have to proceed carefully, though. A poorly-mounted challenge that loses in court sets a bad precedent for future ones.

I think the real issue comes down to: What is a reasonable use of one's home and property, and what is an unreasonable restriction to that use?

For example, building codes are reasonable because they're based on safety, even if they mean I cannot build anything I want anywhere on my land. A prohibition on my running a car-repair business in my residential driveway is similarly reasonable because it's a home, not a commercial property.

OTOH, requiring that homes be painted a certain color is unreasonable, as is prohibiting simple auto repairs and maintenance on one's own vehicles, because those things are part of what you do with a home.

In the same way, having an amateur radio station in one's home is a completely reasonable use of the property. The noncommercial nature of Amateur Radio supports that idea as well.

Single family homes, few mature trees, lot size a bit bigger than
normal for the area but usually under 2/10 of an acre. My lot is
about 65' deep and 100' wide.

>
> Why wouldn't they agree to a ten or fifteen foot mast to hold a wire
> antenna or small beam?

I'm hoping they will agree to something like that. My single story
house is about 18' at the top and I was hoping that they would allow a
mast with the top few feet visable from the street to hold up some
wire. I'd also like to put up a low visiual impact verticle that might
extend 30' above the mast (with the radials hidden by the roof line.)

> It seems to me that the absolute minimum that should be accepted is
> what the OTARD ruling allows. But you don't start there; you start with

> the moon.

I'm considering asking for "antenna support structures" not to exceed
10' visable from the street (when not in use) in front of the house,
no setback restrictions on wire antennas and an antenna height above
that not to exceed 30' for verticals. All subject to local zoning
rules and building codes. This would allow both wire, beam and
vertical antennas with pretty reasonable performance.

> Let *them* defend their requirements - don't do it for them. Consider
> what you would put up if all the restrictions were removed, and propose

I was planning to present them with a rewritten guideline that allowed
antennas then show up to the meeting and let them discuss the
changes. I figure they will question the antenna rule changes and
I'll show up prepaired to encourage them to allow antennas for ham
radio purposes.

Who knows, they may assume that all this is OTARD forced and not ask
any questions... I just don't know if I really want them to get upset
with me should they later figure I tricked them.

>

This is an excellent aproach. Where I don't want to trick anybody, I
don't want to make this obvious either. Your approach accomplishes
the task in a way consistant with the pretext I'm using to justify
makeing the changes in the first place. I like it.

The photo shop idea had crossed my mind. I was thinking of taking
pictures of various houses including mine and adding in various
comerical antennas that are scaled properly for the proposed rules.

Here's a couple of other high-speed internet options: In my town, DSL
and cable internet is available only in the central part of town. In
the outlying area, the only options for high-speed internet are:
(a) Satellite (hughesnet, Wild Blue, etc.)
(b) Neighborhood versions of a wireless LAN, esentially an IEEE 802.11
system with small dish antennas on each subscriber's premises pointing
to one of several towers, each covering a few square miles. They
operate in the same bands (e.g., 2.4 GHz) as the wireless bridges made
by Linksys and others for use in your home.

> [snip]

The restrictions that apply in my area are less specific, requiring only
"historically accurate" colors.

Since there were only a few dyes available in pioneer days, paints had
only a few colors available to them, and one or two of those are so
awful that they can be used to frighten young children.

People are funny: if you order them to use "historically accurate"
colors, they get really busy finding the most putrescent hue of orange
that meets the letter of the law.

Tell a ham that he can't have an antenna, and ...

Yes, you get to choose between Tall White Guy #315 and Tall White Guy #316 mouthing . But, that's not the point.

The choice of channels is unimportant, since all the programs are the same. What _is_ important is who gets paid. While they're all knockoffs of Aeschylus or Euripides or Sophocles or Aristophanes (or ...), the point is that someone collects money for them, and that if viewers can only choose Tall White Guy #315 instead of Tall White Guy #316, sooner or later someone is going to arrange for Tall White Guy #315 to stop mouthing and start preaching .

We could debate for hours about whether TV is _already_ a propaganda machine: the Tall White Guy makes all the decisions, everybody has new clothes, and new cars, and power over their lives, and all the problems are always solved in 60 minutes with time out for commercials. Suffice to say that it's sad, but necessary, for the Great American Public to have a choice, even if only between Tall White Guys: without that choice, TV becomes an instrument of the corporate state propaganda machine instead of only a cultural cesspool.

> Is that what you mean?

What I mean is that "we" should not attempt be able to abrogate by
contract those things which are the legitimate purposes of government.
Contracts, after all, require consideration by their very nature:
IANALB, no consideration, no contract[1]; ergo, either of the
contracting parties may offer consideration which the society as a whole
can't tolerate. If I'm a developer, and I think that "those" people
shouldn't live next to "my" people, it used to be something I could put

into the deed. The society has an interest in making sure that "those" people are the _same_ as "my" people, because time has proven that that sort of bias is dangerous and leads to persecution and even to war.

Just as Caesar's wife must be above reproach, so Caesar's courtyard must be open to all. Private contracts are inherently discriminatory, since they are agreements between individuals, each of whom is seeking the maximum benefit for _himself_, and not considering that of the _society_. A group of McMansions may "look better" to a buyer if there are no antennas present - unless most of them already have one, and then it's a status symbol - but it's dangerous to let the populace think that it could look better if there are none of "those people" present.

As I said before, CC&R's can be used to discriminate against potential buyers according to their economic class, which is another way of keeping "those people" away, and that's not something the government can allow. In other words, CC&R's may be used to discriminate against "people who ask too many questons" about where the management fees go and just exactly what they're getting in return, or "people who are too intelligent to believe that a well clipped and groomed and fertilized lawn for only $69.95 a month" is important, or "that &*)(*& radio ham who told everyone that the rumor I planted to convince them to buy freeze dried food is bunk because he actually talks to the froggy little native boys I want everyone to be afraid of".

This is, of course, an oversimplification. Information is, and always will be, the enemy of ignorance: CC&R's can be used to keep people ignorant, even if only of the minority view expressed by Type 4 Personalities who have Amateur Radio antennas on their roof.

Bill, W1AC

[1] Consideration in the sense of value changing hands, in the form of currency, precious metals or gems, services performed or promised, etc. The list is endless, but their _has_ to be _something_ of value transferred.

With all due respect, I think you may be presuming your conclusion a
bit there. While there are many similarities, I don't think all the
programs are the same, or even similar.

Ah, now I see the point. It's not the program itself that matters as much as the extreme similarity of the underlying messages, and the centralized control of those messages. Programming that does not fit the mold winds up never being produced, or being cancelled quickly, or being relegated to venues with tiny audiences.

None of which is new, really A classic case of was what happened to the original "WKRP", which in its time was quite original and groundbreaking in many ways. Despite being the #7 prime-time show, and costing almost nothing to produce, it was cancelled after 3 seasons. It was too far out of the mold of the time, its characters were definitely not variations of the Tall White Guy, and the messages of the shows were very different. And it was just a half-hour sitcom!

If nothing else, American TV presents a very distorted view of what most people do for a living. Almost all "real-life" dramas, and many comedies, center on the fields of law enforcement or health care, and ignore the far wider range of things Americans do at work.

> What I mean is that "we" should not attempt be able to
> abrogate by

That is an excellent point. I think it nails down what bothers so many of us about CC&Rs.

> Contracts, after all, require consideration by their very nature:
> IANALB, no consideration, no contract[1]; ergo, either of the
> contracting parties may offer consideration which the society
> as a whole can't tolerate.

AGREED!

Another angle is that the process lacks the checks and balances of government, as well as the ability to be changed. Also, it can tend to make government neglect its rightful functions.

For example, zoning is a legitimate function of government. Zoning creates and enforces regulations for things like permitted uses, lot and building sizes, environmental protection, etc. But there are defined limits on what zoning can and regulate.

For example, a zoning ordinance about signage can limit the number and size of political signs visible from the street that you can put on your property, but cannot ban them outright (freedom of speech). Any such ordinance is subject to variance, change or abolition, too. If a person buys a property and doesn't like the signage ordinances, they can apply for a variance or try to get the ordinance changed, and there are procedures and methods to do so. The argument that "you bought a property subject to those ordinances, so you have no right to ask for a change" doesn't hold any water; every citizen has the right to petition their government for a change.

But a no-signs CC&R avoids all that, and can be written to be virtually eternal and unchangeable. And the argument that "you signed the contract" is used as the trump card.

> If I'm a developer, and I think that "those" people
> shouldn't live next to "my" people, it used to be something
> I could put

Yup. It's also unconstitutional.

I think private contracts have their place; many forms of business could not exist without them.

However, there is a world of difference between a private contract where A agrees to supply a certain number of Type X widgets to B according to an agreed-upon payment and delivery schedule, and a private contract where, as a condition of sale, B agrees to do or not do something with whatever it was that was bought from A.

> A group of McMansions may "look better" to a buyer if there
> are no antennas present - unless most of them already have
> one, and then
> it's a status symbol - but it's dangerous to let the populace
> think that
> it could look better if there are none of "those people" present.

And of course the danger is that if we allow discrimination against "those people", the time may come when *we* are "those people", and won't be able to protest because the principle is so well established.

> As I said before, CC&R's can be used to discriminate

> froggy little
> native boys I want everyone to be afraid of".

Exactly. There are many variations but they're all the same theme.

I don't know if I've posted the following analogy here before, but I think it illustrates the problem.

Suppose CC&Rs applied to cars.

We already have government regulations for cars about safety, pollution and fuel economy. Many states require periodic inspections, too. Whether they are good regs or bad is another issue, but they are a legitimate function of government because of the public-safety interest and the use of a public resource (the roads).

Automakers have partial control over what carbuyers can do with their vehicles through the warranty process. However their only power is the ability to have it so that doing certain things (such as neglecting maintenance) voids the warranty contract.

But suppose automakers could apply CC&Rs to cars. Suppose they could require that all cars be brought back on schedule to an authorized dealer for all maintenance and repairs. And that owners could not fix, maintain or modify their cars in any way, under penalty of a fine up to and including having the car repossessed. Such CC&Rs could include things like having to keep the car clean, not allowing bumper stickers, bike racks or aftermarket stereos, no "Baby On Board" signs, etc. And of course no ham radios!

The automakers could claim that such rules would insure that the cars would be safer, more efficient, less polluting and longer lasting. Such

rules would also protect the reputation of the automaker.

They would also make life easier for state governments, because inspections would be redundant. Theft of CC&R'd cars would be low because the only source of parts and maintenance would be dealers, and they'd know instantly if a stolen car were brought in. Insurance rates would be lower too.

Of course very few people would buy a car with CC&Rs, because they'd balk at the limitations and the high price of always having to go to the dealer for everything. Plus the constant threat of fines and repo of a car that was paid for and in good shape for its age.

But what if most automakers did it? Your choice of cars would be limited to the few automakers who didn't, plus old cars from the pre-CC&R era. Eventually you'd find it almost impossible to have a non-CC&R car.

The above example may sound ridiculous, but there was a time, not too long ago, when suggesting that a homeowner not be allowed to put an antenna on his house would have been considered ridiculous, too.

> This is, of course, an oversimplification. Information is, and
> always
> will be, the enemy of ignorance: CC&R's can be used to
> keep people
> ignorant, even if only of the minority view expressed by Type 4
> Personalities who have Amateur Radio antennas on their roof.

It's even worse than that. What's needed is *good* information, not just information. A person who believes bad information can be worse than someone who is ignorant, because the ignorant person (if s/he has basic rationality) knows s/he is ignorant, but the person with bad information believes it is good information.

> [1} Consideration in the sense of value changing hands, in
> the form of
> currency, precious metals or gems, services performed or
> promised, etc.
> The list is endless, but their _has_ to be _something_ of value

Agreed, but there has to be a limit; some things cannot be bargained away.

Good points - thanks!

Hi,

I wonder if I could trouble one of you for a little advice. My father-in-law was a ham radio guy for many years, did radio during WWII, has a 50ft (?) tower in his back yard, etc. I unfortunately missed out on all of this, since I only met him a few years ago. He's in his 80s now and I think has been out of the radio thing for a decade or so.

More recently, he's bed-ridden with some health problems, which needless to say is pretty boring, and I got the thought that maybe he'd enjoy having a portable shortwave radio to play with. Do you have any thoughts about whether an old ham might find one of these $50-150 portable units engaging? Any suggestions, particularly with respect to something that would be tolerant of limited manual dexterity and seem reasonably familiar to and old-timer?

Thanks,
Mike

> he'd enjoy having a portable shortwave radio to play with.

My immediate reaction when I read this was, "Ask him."

Individuals will react to this opportunity in different ways. For one thing, ham radio is a very diverse hobby. Being able to listen to the ham bands might appeal to someone who was active in the aspects of the hobby that involve talking to people, but your father-in-law might not have been involved in that aspect -- he might have more enjoyed building equipment. He might have had ham radio buddies locally, or far away, and the type of radio you would get would be different for these. Finally, for someone who was active on the bands, being able to hear but not transmit might be more frustrating than interesting.

Bottom line -- ham radio is a big hobby and people are very different, so it would not be appropriate for anyone else to speak to what a specific individual would prefer.

Mike,

Your Father-in-law will probably be dissatisfied with a consumer-grade radio, particularly the "shortwave" ones that run on batteries, since they don't have the features of a typical Amateur-grade receiver. I was in the hospital for an extended interval some years ago, and my father-in-law (yes, really) got me one of the "portable" units. Trying to use it for anything other than the BBC was an exercise in frustration.

First things first, though: you need to answer these questions -

1. Be sure he's an Amateur Radio operator, and not a Citizens Band operator: CB'ers will have very different needs in radio gear. This is a delicate question to some hams, so I suggest you check the FCC database and find out from there. The FCC database is at http://fjallfoss.fcc.gov/General_Menu_Reports/license_search.cfm - you'll need to chose "Amateur [AM]" under "Service".

2. Check with his physician, and make sure that he isn't using any medical devices which could be affected by radio-frequency energy. There _is_ a reason that visitors to hospitals are told to turn off their cellphones! If he can't have a transmitter near him, then you'll have to explain to him that he is only able to use a receiver, because once he hears his old friends, he'll want to crank up his transmitter again, and it's best to break that news gently, and in advance.

3. Find out if he speaks any language other than English. He may enjoy shortwave broadcasts in other languages.

For someone with limited mobility, I'd recommend a handi-talkie that he can use on the local Amateur repeaters (provided that he can use _any_ kind of transmitter): if he has limited use of his hands, you can get him a headset with a voice-activated transmit-receive switch (it's

called "VOX"), or he can simply use a detachable microphone, which weights a lot less than the actual radio. Most HT's will also offer "scanner" features so that he can listen to police, fire, and industrial radio channels if the ham bands are idle.

If he's unable to use a transmitter, then the members of your local amateur radio club (see http://www.arrl.org/ for their contact info) will be able to advise you on the best receiver and antenna setup. Be sure to talk to the local club(s), since their members will probably know him already, and once of them might have a "loaner" that your father-in-law can use instead of buying a new unit.

I hope this helps.

Best regards,

Bill, W1AC
P.S. You didn't say if you would expect emails sent to you directly, so I'll cc: this to your email address.

Mike,

If he IS a ham radio operator and has a computer close at hand,
perhaps he'd enjoy Echolink (http://www.echolink.org) or getting on
one of the remote bases using W4MQ software (http://www.w4mq.com). In
the latter, one of the stations in FL makes special dispensation for
those shutins, if I remember right.

It might take some hand-holding for a day or two but I bet he'd catch
on quick.

Source record: 2013

Hey Hans, long time...

The issue I have with these CC&R's is the point of "willingly signed". In a majority of cases I've coem across while I was *the* Arcitectural Control Comittee is that the homeowner may have signed willingly, but had zero clue as to what they were signing.

I remember when I first encountered these restrictions, I wrote an antenna clause into the sale contract, the response...when the houses areound me are sold (new development) ask again, which I did and they approved.

But the real estate industry thinks these things are protectiong values. I disagree, they have become the same as zoning, and need to be treated as such.If we are at the point where it is impossible to find a home without restrictions (and around her that IS the case) it needs to be dealt with.

Here in Texas its been rolled in with legislation that would preserve the right to place political lawn signs and another regarding flags and flag poles.

Who knows, it may pass. Good press here for amateurs after hurricanes, etc.

Hello,

Because of our travel to the Dayton Hamvention there will be no prefeed to you of this weeks upcoming newscast #1657.

Don Wilbanks, AE5DW, is producing and will be posting it to our website http://www.arnewsline.org sometime late Thursday and you are welcome to download the files from there. Don does not have this distribution list as it exists only on my PC and a backup flash drive.

I will do a feed to this list when I return late Sunday night (actually early Monday Morning May 18th.)

Note: If you do decide to download the files from our website, please wait until you see the newscast number 1657 at the top of our home page.

RE: Dayton: We will be hosting the Ham Radio Town Meeting beginning at 11:45 a.m. EDT in Meeting Room 2 at the Hara Arena. Hope to see some of you in Dayton at Hamvention 2009.

73 de Bill Pasternak, WA6ITF Editor, etc. ARNewsline, Inc.

That's a fairly small lot for amateur radio purposes. That it is wide
and shallow means lots of street visibility and not much back yard.

> > Why wouldn't they agree to a ten or fifteen foot mast to hold a wire

> wire. I'd also like to put up a low visiual impact verticle that might
> extend 30' above the mast (with the radials hidden by the roof line.)

Two suggestions:

1) Don't mention "visible from the street" - that's too vague. Focus on
measurable things like maximum height, maximum height above the roof,
etc.

2) Look up what OTARD allows and add to it. If OTARD allows 30 feet, go
for 40. If OTARD allows 35 feet, go for 45.

> > It seems to me that the absolute minimum that should be accepted is

> rules and building codes. This would allow both wire, beam and
> vertical antennas with pretty reasonable performance.

I think you're being too restrictive on heights and the visible-from-
the-street thing. OTOH, the "when not in use" is good because it allows
crank-up and fold-over antennas.

> I was planning to present them with a rewritten guideline that allowed
> antennas then show up to the meeting and let them discuss the
> changes. I figure they will question the antenna rule changes and

> I'll show up prepaired to encourage them to allow antennas for ham

Good plan. The thing is, you have to give yourself some bargaining
room.

> Who knows, they may assume that all this is OTARD forced and not ask
> any questions... I just don't know if I really want them to get upset
> with me should they later figure I tricked them.

Don't try to trick anyone! Just present your case and don't help them
shoot it down.

206. Time to write Congress... HR2160

Newsgroup: rec.radio.amateur.moderated
Date: 2009-05-13 13:03:49 UTC
From: ARRL NE Section <memberlist@www.arrl.org>
Message-ID: <20090513125003.6555030491@www.arrl.org>
Source record: 2016
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.misc,rec.radio.info

HR 2160 is important legislation for Amateur Radio. It is proposed: To promote and encourage the valuable public service, disaster relief, and emergency communications provided on a volunteer basis by licensees of the Federal Communications Commission in the Amateur Radio Service, by undertaking a study of the uses of amateur radio for emergency and disaster relief communications, by identifying unnecessary or unreasonable impediments to the deployment of Amateur Radio emergency and disaster relief communications, and by making recommendations for relief of such unreasonable restrictions so as to expand the uses of amateur radio communications in Homeland Security planning and response.

ARRL Seeks Member Support for HR 2160

To support HR 2160 -- The Amateur Radio Emergency Communications Enhancement Act of 2009 -- the ARRL is asking its membership to contact their members of the US House of Representatives with a request to become co-sponsors of this significant piece of legislation.

"Getting a bill successfully through Congress is a formidable task -- one that is going to require the involvement of every ARRL member," said ARRL Regulatory Information Manager Dan Henderson, N1ND. "Working with our Washington consulting firm Chwat & Co, we are laying a dynamic approach that will allow us to make our case most effectively. We have developed a strategy to maximize our impact when dealing with each member of Congress."

Since the anthrax scare that followed the 9-11 attacks, all incoming mail to Congress is delayed anywhere from four to six weeks while it is screened. This means using normal US Mail is no longer an effective method of letting Congress hear your voice. While e-mail is convenient, it is not effective, due to the large volume of e-mail that each Congressional office receives.

"To ensure that ARRL members' letters are quickly and expediently received by Congress, our strategy is to ask ARRL members send their letters directly to Chwat & Co," said Henderson. "Chwat's staff will sort the letters by Congressional district and hand-deliver them to the appropriate House offices, providing a direct point of contact with the Congressman and their staff. This personal contact gives us the chance to provide not only letters from constituents, but information from the ARRL on why this legislation is important."

The ARRL has provided a sample letter for League members to personalize and send to their Congressional representative. "Personalized letters

make a better impression than a standard form letter or petition," Henderson explained. You can find the name and address for your Congressman on the ARRL Members Only Web page.

Once personalized, ARRL members should send their letter to Chwat & Co using one of three methods:

As a signed attachment to an e-mail

As a signed fax to 703-684-7594

As a regular letter to:

John Chwat,

Chwat & Co

625 Slaters Lane

Suite 103

Alexandria, VA 22314.

If you choose to e-mail your letter, please send it as an attachment to the e-mail instead of it being the text of the e-mail. This allows the letter to be easily printed and delivered. Should you decide to draft your own letter supporting HR 2160 instead of editing the sample, Henderson asked that you please remember a couple of things:

- Identify the bill by number and title: HR 2160 -- The Amateur Radio Emergency Communications Enhancement Act of 2009

- Keep the letter brief and on topic -- one page at the most

- Ask them to consider becoming a cosponsor

- Thank them for their consideration

"Simple is better when making this kind of request to a representative," said Henderson. "They and their staff are looking to gauge interest and support for the Bill. A lengthy letter that strays off-topic can detract from the focus of asking for support for the legislation."

Should you decide not to send your letter to Chwat & Co but directly to your Representative, it is still important that you send a copy of your correspondence to Chwat & Co. This allows them to discuss accurately with the Congressman and their staff the amount of support for the bill in each individual district. "There is strength in numbers," Henderson added.

Besides bill sponsor Representative Sheila Jackson-Lee (TX-18), the ARRL is fortunate to already have six additional members of Congress who have signed on as co-sponsors of HR 2160 -- Madeleine Bordallo (Guam), Brett Guthrie (KY-02), Mary Jo Kilroy (OH-15), Zoe Lofgren

(CA-16), Blaine Luetkemeyer, (MO-9) and Bennie Thompson (MS-02).

"We congratulate ARRL Division Director Jim Weaver, K8JE, and his grassroots legislative action team in Kentucky for securing the support of Representative Guthrie -- the first new co-sponsor of the bill," Henderson said. "It shows that our grassroots effort can work!"

You may be asking yourself "What should I do if my Representative has already signed on as a co-sponsor for HR 2160?" The answer is simple: Thank them for their support. If your Congressman is one of those listed as a co-sponsor, please send them a letter thanking them for their support. Use the same contact information for Chwat & Co. "It is important to convey your appreciation to your Representative when they sign on as a co-sponsor or support the bill," Henderson explained. "That simple 'thank you' may help open the door the next time their help is needed."

Once you have prepared and sent your letter supporting HR 2160, your job is not over: Feedback is an important part of the process. "What your Congressman has to say in regards to your contact can provide the ARRL with important information as we try to push our bill forward," Henderson noted. "This feedback can possibly help us identify potential new support for the bill or a weakness in the legislation we may need to address."

When you receive a response from your Congressman, please forward a copy to the Regulatory Information Office at ARRL Headquarters via e-mail or hard copy to Regulatory Information, ARRL, 225 Main St, Newington, CT 06111.

"HR 2160 presents the Amateur Radio Service with a unique opportunity -- but also carries with it the important responsibility of making your voice heard," Henderson summarized. "HR 2160 stands as the first step in trying to address the long standing problem of extending the protections afforded Amateur Radio operators under PRB-1 to deed restrictions and covenants. To be clear, passing HR 2160 is not going to achieve that goal right away. But it will help lay the ground work by assessing the impact such restrictions have on our ability to train for and respond to disasters and other emergencies."

Your consideration and support are solicited.

Thanks!

Art

207. Connector source

Newsgroup: rec.radio.amateur.moderated
Date: 2009-05-13 18:56:44 UTC
From: K0HB <kzerohb@gmail.com>
Message-ID: <1A2AF6E1950545BBAD3CFDA636D909BD@BigGuyII>
Source record: 2017

I need a matching pair of cable connectors for a marine radio application.

The connectors need to be 9-pin (male and female pair), carry small signals levels and 12VDC power/gnd. Wire gauge 18 or 20 is fine for all circuits, signal circuits could be smaller. Must be able to field terminate with common hand tools/solder, and most important MUST be waterproof (not submersed, but in a "splashy" environment). Form factor not overly important -- I'd like round "twist together" form, but a waterproof DB9 would be perfectly acceptable.

Any ideas?

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. |

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader |
opinions in March of 2009: |

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326 |

the rec.radio.amateur.moderated Moderation Team has decided to consider |
amending its charter, and permit limited simultaneous crossposting to |
rec.radio.amateur.moderated and one other unmoderated |
amateur-radio-related discussion newsgroup. We are currently trying |
this on a temporary basis (90 days, through early July 2009), and adopt |
it permanently if successful. |

Approved rec.radio.amateur.* newsgroups are those that are currently |
listed in the latest version of the "List of Big Eight Newsgroups" which |
is crossposted monthly to news.announce.newgroups, news.groups, and |
news.lists.misc. |

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those |
that have been created consistent with the suggestions in "So You Want |
to Create an Alt Newsgroup" at: |

http://www.faqs.org/faqs/alt-creation-guide/ |

Approved regional hierarchy newsgroups are those that contain either |
"radio.amateur" or "ham-radio" in their names, including |
uk.radio.amateur and aus.radio.amateur.misc. |

We will make every reasonable effort to keep our list of approved |
newsgroups up-to-date. In case we have overlooked any, and a submission |
is rejected in error as a result, the rejected submitter can E-mail us |
at our administrative contact address (in the signature at the bottom of |
this article, and the default Reply-To for the rejection message) |
requesting that it be added, and that the article be approved. We may |
still choose to reject articles crossposted to any alt.* newsgroup with |
an inappropriate name, including obscene language, embedded |
name-calling, or encouragement of unlawful conduct. |

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and | equipment, for giveaway will be permitted on an occasional basis from | casual, non-commercial owners, and at the discretion of the moderators. | The items should be free except for reasonable direct costs such as | shipping, must be directly amateur-radio-related, must be in serviceable | condition, and be practical to ship to a distant recipient. This is | intended as a common-sense exception to our ban on forsale postings, | provided that it doesn't overwhelm the basic character of our discussion | newsgroup with classified ads or requests to haul off scrap or junk in | salvage condition. |

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be

more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

==> ARRL SEEKS MEMBER SUPPORT FOR HR 2160

To support HR 2160 -- The Amateur Radio Emergency Communications
Enhancement Act of 2009 -- the ARRL is asking its membership to contact
their members of the US House of Representatives with a request to
become co-sponsors of this significant piece of legislation
<http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bil
l
s&docid=f:h2160ih.txt.pdf>.

"Getting a bill successfully through Congress is a formidable task --
one that is going to require the involvement of every ARRL member,"
```

said
ARRL Regulatory Information Manager Dan Henderson, N1ND. "Working with our Washington consulting firm Chwat & Co, we are laying a dynamic approach that will allow us to make our case most effectively. We have developed a strategy to maximize our impact when dealing with each member of Congress."

Since the anthrax scare that followed the 9/11 attacks, all incoming mail to Congress is delayed anywhere from four to six weeks while it is screened. This means using normal US Mail is no longer an effective method of letting Congress hear your voice. While e-mail is convenient, it is also not effective, due to the large volume of e-mail that each Congressional office receives.

"To ensure that ARRL members' letters are quickly and expediently received by Congress, our strategy is to ask ARRL members send their letters directly to Chwat & Co," said Henderson. "Chwat's staff will sort the letters by Congressional district and hand-deliver them to the appropriate House offices, providing a direct point of contact with the Congressman and their staff. This personal contact gives us the chance to provide not only letters from constituents, but information from the ARRL on why this legislation is important."

The ARRL has provided a sample letter for League members to personalize and send to their Congressional representative <http://www.arrl.org/news/files/DearMemberOfCongressHR2160.doc>. "Personalized letters make a better impression than a standard form letter or petition," Henderson explained. You can find the name and address for your member of Congress on the ARRL Members Only Web page <http://www.arrl.org/members-only/>.

Once it has been personalized, ARRL members should send their letter to Chwat & Co using one of three methods:
* As a signed attachment to an e-mail <arrl@chwatco.com>
* As a signed fax to 703-684-7594
* As a regular letter to John Chwat, Chwat & Co, 625 Slaters Ln, Suite 103, Alexandria, VA 22314

If you choose to e-mail your letter, please send it as an attachment to the e-mail instead of having it be the text of the e-mail. This allows the letter to be easily printed and delivered. Should you decide to draft your own letter supporting HR 2160 instead of editing the sample, Henderson asked that you please remember a couple of things:
* Identify the bill by number and title: HR 2160 -- The Amateur Radio Emergency Communications Enhancement Act of 2009
* Keep the letter brief and on topic -- one page at the most
* Ask your congressional representative to consider becoming a cosponsor
* Thank them for their consideration

"Simple is better when making this kind of request to a representative,"

said Henderson. "They and their staff are looking to gauge interest and support for the bill. A lengthy letter that strays off-topic can detract
from the focus of asking for support for the legislation."

Should you decide not to send your letter to Chwat & Co but directly to your Representative, it is still important to send a copy of your correspondence to Chwat & Co. This allows Chwat to discuss accurately with the Congressman and their staff the amount of support for the bill in each individual district. "There is strength in numbers," Henderson added.

Aside from bill sponsor Representative Sheila Jackson-Lee (TX-18), the ARRL is fortunate to already have six additional members of Congress who
have signed on as co-sponsors of HR 2160 -- Madeleine Bordallo (Guam), Brett Guthrie (KY-2), Mary Jo Kilroy (OH-15), Zoe Lofgren (CA-16), Blaine Luetkemeyer, (MO-9) and Bennie Thompson (MS-2).

"We congratulate ARRL Great Lakes Division Director Jim Weaver, K8JE, and his grassroots legislative action team in Kentucky for securing the support of Representative Guthrie -- the first new co-sponsor of the bill," Henderson said. "It shows that our grassroots effort can work!"

You may be asking yourself "What should I do if my Representative has already signed on as a co-sponsor for HR 2160?" The answer is simple: Thank them for their support. If your Congressman is one of those listed
as a co-sponsor, please send them a letter thanking them for their support. Use the same contact information for Chwat & Co. "It is important to convey your appreciation to your Representative when they sign on as a co-sponsor or support the bill," Henderson explained. "That
simple 'thank you' may help open the door the next time their help is needed."

Once you have prepared and sent your letter supporting HR 2160, your job
is not over: Feedback is an important part of the process. "What your Congressman has to say in regards to your contact can provide the ARRL with important information as we try to push our bill forward," Henderson noted. "This feedback can possibly help us identify potential new support for the bill or a weakness in the legislation we may need to
address."

When you receive a response from your Congressman, please forward a copy
to the Regulatory Information Office at ARRL Headquarters via e-mail <reginfo@arrl.org> or hard copy to Regulatory Information, ARRL, 225 Main St, Newington, CT 06111.

"HR 2160 presents the Amateur Radio Service with a unique opportunity
--
but also carries with it the important responsibility of making your
voice heard," Henderson summarized. "HR 2160 stands as the first step
in
trying to address the long standing problem of extending the
protections
afforded Amateur Radio operators under PRB-1 to deed restrictions and
covenants
<http://www.arrl.org/FandES/field/regulations/PRB-1_Pkg/prb-1.pdf>. To
be clear, passing HR 2160 is not going to achieve that goal right away.
But it will help lay the ground work by assessing the impact such
restrictions have on our ability to train for and respond to disasters
and other emergencies."

==> FCC RESUMES ENFORCEMENT ACTIONS

On May 13, the FCC posted the first list of enforcement actions
<http://www.fcc.gov/eb/AmateurActions/Welcome.html> since Laura Smith
took over as FCC Special Counsel. The 11 RFI-related letters to energy
providers were sent between February 18 and April 1, 2009, and the 7
warning letters to individuals were sent between February 18 and March
30, 2009.

==> SCIENTISTS PREDICT SOLAR CYCLE 24 TO PEAK IN 2013

At the annual Space Weather Workshop held in Boulder, Colorado last
month <http://www.swpc.noaa.gov/sww/index.html>, an international panel
of experts led by NOAA's Space Weather Prediction Center (SWPC)
predicted that Solar Cycle 24 will peak in May 2013 with 90 sunspots
per
day on average. If the prediction proves true, Solar Cycle 24 will be
the weakest cycle since Solar Cycle 16, which peaked with 78 daily
sunspots in 1928, and ninth weakest since the 1750s, when numbered
cycles began.

The panel predicted that the lowest sunspot number between cycles --
the
solar minimum -- occurred in December 2008, marking the end of Solar
Cycle 23 and the start of Solar Cycle 24. If December's prediction
holds
up <http://www.arrl.org/news/stories/2008/01/07/100/>, at 12 years and
seven months Solar Cycle 23 will be the longest since 1823 and the
third
longest since 1755. Solar cycles span 11 years on average, from minimum
to minimum.

An unusually long, deep lull in sunspots led the panel to revise its
2007 prediction that the next cycle of solar storms would start in
March
2008 and peak in late 2011 or mid-2012. The persistence of a quiet sun
also led the panel to a consensus that Solar Cycle 24 will be what they
called "moderately weak."

Although the peak is still four years away, a new active period of Earth-threatening solar storms will be the weakest since 1928. Despite the prediction, the scientists said that Earth is still vulnerable to a severe solar storm. Solar storms are eruptions of energy and matter that
escape from the Sun and may head toward Earth, where even a weak storm can damage satellites and power grids, disrupting communications, the electric power supply and GPS. A single strong blast of "solar wind" can
threaten national security, transportation, financial services and other
essential functions.

The most common measure of a solar cycle's intensity is the number of sunspots -- Earth-sized blotches on the sun marking areas of heightened magnetic activity. The more sunspots there are, the more likely it is that solar storms will occur, but a major storm can occur at any time.

"As with hurricanes, whether a cycle is active or weak refers to the number of storms, but everyone needs to remember it only takes one powerful storm to cause huge problems," said NOAA scientist Doug Biesecker, who chaired the panel. "The strongest solar storm on record occurred in 1859 during another below-average cycle." The 1859 storm shorted out telegraph wires, causing fires in North America and Europe and sent readings of Earth's magnetic field soaring. It also produced northern lights so bright that people read newspapers by their light, he
said.

Biesecker cited a recent report by the National Academy of Sciences that
found if a storm that severe occurred today, it could cause $1-2 trillion in damages the first year and require four to 10 years for recovery, compared to the $80-125 billion of damage that resulted from Hurricane Katrina
<http://www.nap.edu/nap-cgi/report.cgi?record_id=12507&type=pdfxsum>.

The Space Weather Prediction Center is part of the National Weather Service and is one of the nine National Centers for Environmental Prediction. It is the nation's official source of space weather alerts, watches and warnings. SWPC provides real-time monitoring and forecasting
of solar and geophysical events that impact satellites, power grids, communications, navigation and many other technological systems.

==> PR-101 COURSE INTRODUCED AT ARRL NATIONAL CONVENTION

The ARRL Public Relations Committee unveiled the new ARRL's PR-101 <http://www.arrl.org/catalog/?item=0133> course today at the 2009 ARRL National Convention at the Dayton Hamvention. The course -- designed to give hams a quick course in public relations activities -- was quickly snapped up by ARRL Section Managers, Public Information Coordinators (PIC) and Public Information Officers (PIO) to bring back to their home

sections.

According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP,
the ARRL Public Relations Committee conducted a formal survey in December 2008 that confirmed what had long been suspected: Almost half of the people acting as PIOs have no training at all; others had "some training" or "very little training." Because of the importance of public
relations to the future of Amateur Radio, Pitts said that the PR Committee felt it needed to do something to raise the level of skills and training of these volunteers.

Using the skills of experts in various aspects of public relations, Pitts, assembled a team to create a basic course that will provide volunteer PIOs with the basic skills and expectations that a PIO needs to know. While remaining a basic level course, PR-101 covers everything from the basic news release to Web sites and video work.

"This course is geared toward PIOs and others interested in Public Relations," Pitts said. "While the course is voluntary, all ARRL PIOs are strongly encouraged to take the course."

Overall goals for the course are:
* To clarify the role of the PIO in the Field Organization.
* To establish a base set of expectations (job description) for a PIO to
fulfill, and peer pressure to do the job well.
* To establish, teach and verify that course graduates have the common basic skill set needed to accomplish expectations set forth in the PIO job description.
* To create a pool of trained PIOs who can be confidently called upon to
represent Amateur Radio in their region during breaking news events.
* To create a spirit of pride in being a trained and active PIO.
* To increase the productivity of PIOs and resultant positive media coverage.

"There is a critical need to offer public relations training that addresses the 21st century media landscape," said ARRL Public Relations Committee Chairman Bill Morine, N2COP. "Since the last revision of the "ARRL PIO Handbook" in the mid 1990s
<http://www.arrl.org/pio/handbook/>, domination of coverage has shifted from newspapers, magazines and broadcast stations to cable, satellite and Internet media outlets. The decentralization of media means there are many more ways and formats from which the public can access information. The PR-101 course will point ARRL PIOs in the direction where they can best take advantage of opportunities in both traditional and emerging media."

The course is available on CD-ROM. People can complete it on their own schedule; when finished, it guides them to the Web for the final exam.

"Participants who successfully complete the exam will be directed to a special area where they can create, print and save a certificate of completion," Pitts said. "It also automatically notifies ARRL staff with
the name and call sign of the graduating student, allowing a list to be kept of PIOs with known skills."

PR-101 course contributors include Bill Morine, N2COP; Don Carlson, KQ6FM; Walt Palmer, W4ALT; Kevin O'Dell, N0IRW; Jim McDonald, KB9LEI; Ted Randall, WB8PUM; Harold Kramer, WJ1B; Jeff Beiermann, WB0M; Brennan Price, N4QX; Pat Mullet, KC8RTW; Mike Langner, K5MGR, and Kent Sievers.

PR-101 <http://www.arrl.org/catalog/?item=0133> is available on the ARRL
Web site for a cost of $19.95.

==> LOOK FOR THE JUNE ISSUE OF QST IN YOUR MAILBOX

The June issue of QST -- our annual Field Day issue -- is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Go ahead and experience the great outdoors this Field Day, June 27-28. Make your Field Day a success -- have you registered with the Online Field Day Locater Service yet? This great feature allows you to promote your site so others looking for a Field Day site near them can find you!Check it out on the ARRL Field Day Web page <http://www.arrl.org/fieldday>. You might also want to take a look at five tips that will let you get the most out of your Field Day. From logging to safety to fun, make this your best Field Day ever!
Howard "Skip" Teller, KH6TY, says that digital modes aren't only for SSB. He encourages readers to try one on FM in his article "A Sound Card
Interface for FM Transceivers." Check out the article by Alan Bloom, N1AL "A Lightweight Homemade Keyer Paddle," and make some Morse magic with this light and easy-to build paddle. If you're looking to "hear" the stars, why not "Build a Homebrew Radio Telescope" using instructions
by ARRL Education and Technology Program Coordinator Mark Spencer, WA8SME.

June is a great month for radiosport, with both the ARRL June VHF QSO Party and Field Day. While Field Day is more of an operating event than a contest, it is modeled after a contest in that points are earned for making contacts. ARRL Contest Branch Manager Sean Kutzko, KX9X, takes a look at Field Day and points out that the annual event is a great training ground for contesters. In "This Month in Contesting," Kutzko gives pointers on how to maximize fun for both operators and clubs. The results of the 2008 ARRL 160 Meter Contest and the 2008 ARRL November Phone Sweepstakes are in. Did you top your score from last year? How did

your closest rival do? Also, find out about upcoming contests in Contest
Corral.

QST Assistant Editor Steve Sant Andrea, AG1YK, reviews the ICOM IC-7200 HF and 6 meter transceiver. According to Sant Andrea, "The IC-7200 is a compact, easy-to-operate HF and 6 meter transceiver that offers many features for voice, CW and digital mode operating. Rugged, water-resistant packaging makes it attractive for portable and emergency
stations." Check out the review on the Micro-Node International IRLP/EchoLink node, also in the June issue.

Of course, there are the usual columns you expect in the June QST: Hints
& Kinks, The Doctor Is IN, How's DX, Vintage Radio, Hamspeak and more. This month also features Amateur Radio World and the ARRL VEC Volunteer Examiner Honor Roll. Look for your June issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> ARRL PUBLIC RELATIONS COMMITTEE HONORS PIOS

When the ARRL Public Relations Committee, led by Bill Morine, N2COP, met
in April 2009, they discussed the recognizing those ARRL Public Information Officers (PIO) and Public Information Coordinators (PIC) whose actions are exemplary. From that meeting, The PIO Excellence Award
came into being. This award is given when the committee believes an ARRL
PIO has gone above and beyond in ensuring that the role of Amateur Radio
is explained to media and the public, especially in unanticipated situations in the field.

"While not of the same level as other PIO awards such as the Leonard or McGan Awards," said ARRL Media and Public Relations Manager Allen Pitts,
W1AGP, "these recognitions are a way to say 'thank you' to people who put in the extra effort to make us all look good in a bad situation."

Public Information Officer Joe Gadus, KD5KTX, of Porter, Texas, was commended for taking the lead to ensure that the media knew about the efforts of ARES and local amateurs who helped at Points of Distribution (PODs) in the Houston area following Hurricane Ike last year <http://www.arrl.org/news/stories/2008/09/16/10338/?nc=1>. Hams in Harris County supported at least six PODs who provided communications between the National Guard units at the PODs and the Harris County Office of Emergency Management to coordinate the delivery and resupply

of food, water and MREs (meals ready to eat) to the victims of Hurricane
Ike. Most of the participating amateurs were also victims of the storm],
having suffered property losses and power outages.

ARRL Santa Clara Valley Section Public Information Coordinator Bill Moffitt, AE6GS, of San Jose, California, was recognized for reporting to
the Emergency Operations Center in Santa Cruz <http://www.arrl.org/news/stories/2008/06/18/10166/>. While there, he worked with the Santa Cruz County PIO to clarify the role of Amateur Radio. Volunteers from Santa Cruz ARES provided a vital layer of communications to support firefighters, law enforcement, Red Cross and even animal control during the Martin fire in the hills above Santa Cruz
over Father's Day weekend in 2008. Pitts said that the committee took into account that Moffitt took time away from his job to handle this situation.

Public Information Officer Steve Sanders, KE7JSS, of Hillsboro, Oregon, was praised for taking the lead to ensure that media in the Pacific Northwest knew about the vital role Amateur Radio played in supplying emergency communications
<http://www.arrl.org/news/stories/2007/12/05/100/>. After other forms of
communications were compromised in December 2007 by fierce storms, flooding and mudslides ravaged the area and shut down roads and highways, including Interstate 5. Other infrastructure, such as telephone lines and electricity, were obliterated.

Pitts said that due to the actions of these amateurs, many media outlets
ran stories about the response of Amateur Radio operators in each situation. "The role of the PIO is far more than club newsletters, or even press releases. Being at the right place at the right time, presenting our story to the media, is critical to the future of Amateur Radio. These three hams went above and beyond to ensure that our story was told in a way that was easy to understand in a critical situation."

==> EXPLORE RADIO SCOUTING AT THE 2009 ARRL NATIONAL CONVENTION

Of the many exciting displays in the ARRL EXPO <http://www.arrl.org/expo> at the 2009 ARRL National Convention at the Dayton Hamvention <http://www.hamvention.org/>, the Scout Radio Outpost is eagerly anticipated by youth and adults alike. According to Brian Walker, K9BKW, Scout Leaders will again be reaching out to ham radio operators to encourage them to provide Amateur Radio opportunities to Boy Scouts back in their home towns. Walker and a team of Scouters will host the Outpost, answering questions and provide amateurs with resources about Radio Scouting.

"Ham Radio has such a huge impact on the quality of a Scouting program. >From bringing Scouts around the world together, to providing event communications and safety, to building a Scout's foundation to become America's future technicians, engineers and scientists. You, the local elmer willing to help out, can really make a difference by getting involved with your local Scout organizations," said Walker, an Eagle Scout, past Scoutmaster, District Commissioner and currently Venturing Crew 272 Advisor (WB9SA).

At the Outpost, amateurs can learn how to teach the Radio merit badge <http://www.scouting.org/boyscouts/advancementandawards/meritbadges/mb-R
ADO.aspx> and help their local Scouts participate in Scouting's largest annual event, the Jamboree on the Air (JOTA) <http://www.arrl.org/scouts/jota/>. "Each October, more than half a million Scouts around the world talk to each other via Amateur Radio," Walker said. "We will show hams Tips on how they can let Scouts in their
hometowns participate in this exciting on-the-air event."

Matthew Murphy, KC8BEW, of BSA's Muskingum Valley Council said that hams
visiting the Outpost can also learn about a new program being developed for 2010's 100th birthday of the Boy Scouts of America: "Scout Camps on the Air (SCOTA) promises to be a fun way for hams to help encourage Amateur Radio operations at Scout camps and other large Scouting events.
Murphy is coordinating the SCOTA program <http://kc8bew.net/scota.html>.

Walker said that last year's Radio Scouting booth was well received. "Scouts and Scouters from around the world stopped by to share experiences and exchange ideas," he said. "Ham Scouters involved in the 2008 effort are excited to be sharing space with the ARRL and are hoping
to make this year's activity an even greater success. So stop by the ARRL display area and visit the Scout Radio outpost to learn how you can
help interested Scouts to become the next generation of hams."

==>NATIONAL HUURICANE CENTER's WX4NHC SETS ON-THE-AIR STATION TEST

The annual WX4NHC On-the-Air Station Test from the National Hurricane Center (NHC) in Miami will take place Saturday, May 30, from 1300-2100 UTC. "The purpose of this annual Station Test is to test all of our radio equipment, computers and antennas using as many modes and frequencies as possible. This is not a contest or simulated hurricane exercise. New equipment and software will be tested, and we will also conduct some operator training," said WX4NHC Assistant Amateur Radio Volunteer Coordinator Julio Ripoll, WD4R.

Ripoll said that WX4NHC also will be testing new computers and software,

as well as conducting operator training. "NHC Director Bill Read, KB5FYA, will be at WX4NHC, making contacts," he said. WX4NHC will be on the air on HF, VHF and UHF, plus 2 and 30 meter APRS. Suggested SSB frequencies are 3.950, 7.268, 14.325, 21.325 and 28.525 MHz, +/-QRM; WX4NHC reports that they will mostly be on 14.325 MHz and will make announcements when they change frequencies. WX4NHC also will be on the VoIP Hurricane Net 1700-1900 UTC (IRLP node 9219/EchoLink WX-TALK Conference) and on South Florida area VHF/UHF repeaters and simplex; APRS and e-mail will also be monitored.

Stations working WX4NHC exchange call sign, signal report, location and name plus a brief weather report, such as "sunny," "rain" or "cloudy." Non-hams may submit their actual weather using the On-Line Hurricane Report Form. QSL to WD4R and include a self-addressed, stamped envelope.
Do not send cards to the NHC. Due to security measures, no visitors will
be allowed at NHC during the test.

==>SOLAR UPDATE

Tad "The new leaves laugh in the Sun" Cook, K7RA, this week reports: After weeks of little or no sunspots, it is nice to have something to report. Following multiple false starts, quick-fading spots and knots of
magnetic activity which never progressed into actual darkened sunspots, new sunspot group 1017 emerged on Wednesday, May 13. The daily sunspot number was 12, and the next day the size of the group approximately doubled, raising the sunspot number to 18. This is a Cycle 24 sunspot group. Sunspot numbers for May 7 through 13 were 0, 0, 0, 0, 0, 0, and 12 with a mean of 1.7. 10.7 cm flux was 69.5, 70.8, 72.3, 71.8, 71.9, 73.9, and 73.8 with a mean of 72. Estimated planetary A indices were 10,
13, 6, 4, 4, 2 and 3 with a mean of 6. Estimated mid-latitude A indices were 7, 12, 6, 3, 2, 0 and 2 with a mean of 4.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page
<http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought
to you by Sara Teasdale's "May"
<http://www.poetry.com/LovePoems/lovepoem.asp?id=206>.

==>IN BRIEF:

* This Week on the Radio: This week, the Feld Hell Sprint is on May 16. The EU PSK DX Contest, His Majesty King of Spain Contest (CW) and the Manchester Mineira All America CW Contest are May 16-17. The Run for the

Bacon QRP Contest is May 18 and the NAQCC Straight Key/Bug Sprint and QRP Minimal Art Session are May 21. Next week is the NCCC Sprint on May 22. The MI QRP Memorial Day CW Sprint is May 25-May 26 and the SKCC Sprint is May 27. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the
ARRL Special Event Station Web page
<http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 24, 2009, for these online course sessions beginning on Friday, June 5, 2009: Amateur Radio Emergency Communications Level 1; Radio Frequency Interference; Antenna Design and
Construction; Ham Radio (Technician) License Course; Analog Electronics,
and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct
communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for
their personal schedule. Mentors assist students by answering questions,
reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is
no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page
<http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News on May 15: Due to staff attendance at the ARRL National Convention and Dayton Hamvention, there will be no ARRL Audio News on May 15. ARRL Audio News will resume regular distribution on May 22.

* Former Kentucky Section Manager Dave Vest, KZ4G (SK): Former Kentucky Section Manager Dave Vest, KZ4G, of Ashland, passed away April 27, 2009.
He was 75. Vest served as Section Communications Manager/Section Manager
from April 1981-March 1983. He also served as the first ARRL Section Traffic Manager in Kentucky prior to serving as Section Manager.

According to current Kentucky Section Manager Jim Brooks, KY4Z, Vest supported numerous Amateur Radio groups in the Kentucky-Virginia-West Virginia area. He was a past president of the River Cities Amateur Radio
Association and the Tri-State Amateur Radio Association and a founding member of the Bluegrass Chapter of the Quarter Century Wireless Association. "Dave promoted Amateur Radio throughout his life and elmered countless newcomers into the hobby," Brooks said.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast"
compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective.

(NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1657 - May 15 2009

The following is a closed circuit advisory. Ladies and gentlemen here's Amateur Radio Newsline Support Fund Administrator Andy Jarema, N6TCQ.

--

The great thing about Amateur Radio is that your level of involvement can be anything you choose- you can be an avid DX'er or just a casual repeater user. Run your fingers to the bone on packet or RTTY, be heavily involved with emergency work, or not even get on the air for a while. The hobby will still be there.

That's why we, the volunteer staff at Amateur Radio Newsline, love what we do- it's ever changing, ever evolving. Unfortunately, the realities of bringing you these weekly newscasts don't change that much.

We've done our best to try to shave down the fixed expenses- what it costs for internet service, how we can best use a combination of land- and wireless-based phone services, to hold these to a minimum. We've even done away with tape in our newsgathering and editing- everything's software and solid-state.

My backup solution to try would be to instruct our Producer, Bill Pasternak, WA6ITF, to only report on the news that automatically comes into our news bureau, as other news services do. But that defeats why it is that so many of you tell us that you love our service- that we bring you the voices of the newsmakers, and those special stories that just don't get reported. That's what makes us unique in Amateur Radio reporting.

Please help us keep these newscasts on the air, doing what we do best. You can contribute via PayPal on our website, arnewsline.org, or at our Arcadia California address given at the end of the newscast. We thank you for your support.

I'm Andy Jarema, N6TCQ, and now on to the news.

--

Thank you Andy. That ends the closed circuit advisory with Amateur Radio Newsline report number 1657 with a release date of Friday, May 15th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams take a break from the rotten economy and head to Hamvention 2009, a NASA research panel says that Solar

Cycle 24 will be low on sunspots, a ham will be the first ever European commander of the International Space Station and find out how to float your tower problems away on this Hamvention weekend Amateur Radio Newsline(tm) report number 1657 coming your way right now.

BREAKING NEWS: HAMVENTION(r) 2009 IS HERE

Motion pictures have the Oscars. Broadway has its Tony awards and Television its Emmys. And for ham radio the big event is Dayton:

--

W8CI: "Its an absolutely fantastic event. It has so many fleas market spaces that it would take you an entire day to go through everything in the Flea Market. And the entire six building complex is completely filled with inside exhibits. We have forums based on all the different types of amateur radio and what a great place to get eyeball to eyeball with people you have not seen all year. So it's a pretty exciting event for amateur radio."

--

That's spokesman Michael Kalter, W8CI, who recently was interviewed by Hap Holly, KC9RP, of RAIN regarding what to expect at this years Dayton Hamvention. And as the doors of the Hara Arena open on Friday, May 15th, upward of 25,000 hams from around the world are expected to be there for what's become known as the Show of Shows in amateur radio. And why not. This year Dayton offers just about everything, especially if only you are a ham who is willing to dream digital. Again, Michael Kalter, W8CI:

--

W8CI: "Our theme is DREAM. That stands for 'Digital Radio Enabling Amateurs to do More.' So the focus this year in our forums will be more on digital forms of communications.

"We are excited about that. We think that part of amateur radio is continuing to grow and become more interesting. We have a lot of people within the amateur radio community who are involved in it."

--

And how is the nations faltering economy affecting ham radio? Kalter says that the forces that have caused banks to fail and at least one auto maker to go under have not affected pre opening sales. In fact, 2009 looks like it could beat out 2008:

--

W8CI: "This year we have more inside exhibitors and Flea Market exhibitors signed up than we did last year. Our ticket sales are stronger than they were last year and that's always a concern, especially when you hear all the doom and gloom about the economy. But we are truly pleased that people are going to come and we want to put on a great show for them."

--

Hamvention 2009 closes on Sunday, May 17th. We will have a complete roundup of all the highlights on next weeks Amateur Radio Newsline report. (ARNewsline(tm) with audio supplied by RAIN)

**

FUTURE PROPAGATION: EXPERT PANEL EXPECTS WEAK SOLAR CYCLE 24

An international panel of experts led by NOAA's Space Weather Prediction Center anticipates that a new active period of solar storms reaching Earth will be the weakest since 1928 and its peak is still four years away. This, after a very slow start to Solar Cycle 24 last December.

According to a report posted to the VHF Reflector, the panel predicts Cycle 24 will peak in May of 2013 with a daily sunspot number of only 90. If this forecast proves true, Solar Cycle 24 will be the weakest since number 16, which peaked at 78 daily sunspots in 1928. It will also be the ninth weakest since the 1750s, when counting the numbered cycles began.

But that's not all. The panel also believes that the lowest sunspot number between cycles occurred in December 2008. It says that period marked the end of Cycle 23 and the start of Cycle 24. If the prediction holds up, at 12 years and seven months Solar Cycle 23 will have been the longest since 1823 and the third longest since 1755. Solar cycles span 11 years on average, from minimum to minimum.

The most common measure of a solar cycle's intensity is the number of Earth-sized blotches on the suns surface. These are the so-called sunspots and they mark areas of heightened magnetic activity. The more sunspots there are, the more likely it is that solar storms will occur.

The persistence of a quiet sun has since led the panel to a consensus that the next cycle will be "moderately weak." As a rule of thumb, fewer sunspots mean a lot less DX for hams to work. NASA funds the prediction panel. (VHF Reflector via K0SQ)

**

HAM RADIO IN SPACE: EUROPEAN HAM TO BECOME ISS COMMANDER

Frank De Winne, ON1DWN, is set to become the first European Space Agency astronaut to oversee the International Space Station.

De Winne is currently at Russia's cosmonaut training center outside of Moscow. He will leave there later this week and fly to neighboring Kazakhstan, where a Soyuz rocket is being prepared to carry him, Russian cosmonaut Roman Romanenko and Canadian Space Agency astronaut Robert Thirsk, VA3CSA, to the orbiting space outpost. That launch is currently scheduled for May 27 .

The arrival of these three space adventurers which will bring the total number of crew on the I-S-S to six for the first time. For the first four months De Winne, who is from Belgium, will be a Flight Engineer as a member of the Expedition 20 Crew. With the next crew rotation ON1DWN will take over as Commander of Expedition 21 and will serve in that position until his return to Earth in November. This will mark the first time that someone other than a Russian or an American has held that post. More is on-line at http://news.bbc.co.uk/1/hi/sci/tech/8037431.stm and at http://www.southgatearc.org/news/november2008/frank_de_winne.htm (Southgate)

**

ENFORCEMENT: UNLICENSED BROADCAST BUST IN WYOMING

An unlicensed broadcaster in Cheyenne, Wyoming, is off the air. This after the FCC issues an order for it to cease and desist operation or face prosecution that could put its operator behind prison bars. Jim Davis, W2JKD, has more:

--

Michael Stugelmayer said agents from the Denver FCC Enforcement Bureau ordered him to turn off his 95.5 MHz FM signal because it was in violation of the agencies rules. Federal agents, acting on an anonymous tip, issued Stugelmayer a "Notice of Violation" for broadcasting without a license. It also said that it took the action because Stugelmayer transmitter was emitting spurious signals that could present a safety hazard to the operation of aircraft in the area.

Stugelmayer told a local newspaper that he started broadcasting in 2003 after growing tired of listening to commercial radio while cruising downtown Cheyenne. He still could face a fine up to $100,000 and spend a year in jail for the violation. The FCC might also place a set-aside on his ham radio license when it comes time to renew in a few weeks on May 26th.

Stugelmayer told the newspaper that the buildings owner gave him permission to erect a waterproof antenna on the rooftop and set up his gear inside an unfinished attic space. If this proves true, then that owner could also face charges for aiding an unlicensed station to operate from his premises.

--

As previously reported, assessing fines from property owners who make space available for unlicensed transmitters is another enforcement tool in the FCC's growing arsenal. This, to take unlicensed broadcasters off the air and make it harder for them ever to return. (Billings Gazette, FCC)

**

RADIO LAW: FCC ADMITS VANITY CALL MISTAKE AND REASSIGNS W9CQ CALL

The FCC has modified the amateur service club station license for the QRQ CW and Contest Group by changing the call sign from W9CQ to KC9MWH and the call of the Falls Amateur Radio Club from K9RHH to W9CQ. This as the agency admits that it made a mistake in the way the call was assigned under the vanity call program. Sound confusing? Here's the back story.

According to an FCC news release when a call sign associated with an amateur service station license that expires, is canceled due to the licensee's death, or is surrendered, revoked, set aside, or voided, is not available to the vanity call sign system for reassignment to another amateur station for two years. Certain licensees, including close relatives of a deceased former holder of the call sign and club station trustees acting with the written consent of such a relative, are exempt from the two-year waiting period.

Paul Kent,W9CQ, died on January 1, 2006, so the call sign was due to become available to the vanity call sign system on January 2, 2008. The application of Robert C. Moldenhauer for call sign W9CQ was granted in 2007 because Moldenhauer stated that he was Kent's in-law. Later that year, the Commission granted an application from Moldenhauer to modify his license to show a different call sign. This resulted in his license for call sign W9CQ being surrendered and canceled. Moldenhauer also informed the Commission's Enforcement Bureau that he had surrendered call sign W9CQ after realizing that he was related to a different Paul Kent and therefore was not eligible for the call sign prior to the end of the two-year waiting period.

Falls, now known as the Wisconsin Amateur Radio Club filed an application for W9CQ on January 2, 2008. It was dismissed by the FCC on the grounds that the call sign was not available because it was less than two years since Moldenhauer had surrendered it. Falls filed a petition for reconsideration, arguing that the call sign should have been made available to the vanity call sign system on January 2, 2008 because Moldenhauer had not been eligible to hold it in the first place.

While the petition was pending, the QRQ group submitted its application to modify its license by changing the call sign from KC9MWH to W9CQ. That action was granted on June 10, 2008 and Falls filed an appeal.

Now after weighing all of the information and evidence before it, the FCC has concluded that it made a mistake in assigning W9CQ to the QRQ CW and Contest Group. The agency says that had the procedures of the vanity call sign system been followed, W9CQ would not have been available when QRQ submitted its application. As such the FCC says that it would be in the public interest to modify the QRQ's amateur station club license by replacing call sign W9CQ with its prior KC9MWH call. It also says that the Falls application should be granted, and call sign W9CQ assigned to it. The FCC adds that it regrets any inconvenience that this error has caused the QRQ CW and Contest Group. (FCC)

**

RADIO LAW: SUPREME COURT SIDES WITH FCC IN CBS WARDROBE MALFUNCTION CASE

The U.S. Supreme Court has ordered a federal appeals court to re-examine its ruling in favor of CBS Corporation in a legal fight over entertainer Janet Jackson's so-called on the air wardrobe malfunction. This, with an eye at having the lower court re-institute a fine against the broadcast entity.

On Monday, May 4th the high court on directed the 3rd U.S. Circuit Court of Appeals in Philadelphia to consider reinstating the $550,000 fine that the Federal Communications Commission imposed on CBS. This over Jackson's breast-baring performance at the 2004 Super Bowl football championship.

Last year, the appeals court threw out the fine against CBS, saying the FCC strayed from its long-held approach of applying identical standards to words and images when reviewing complaints of indecency. The FCC appealed that decision to the Supreme Court.

The order follows the high courts earlier that narrowly upheld the FCC's policy threatening fines against even one-time uses of curse words during live broadcasts. (Published news reports)

**

RESCUE COMMUNICATIONS: WHITE HOUSE TO JOIN SOCIAL NETWORKING SITES

The White House is going broadband and joining the popular social network sites of Facebook, MySpace and Twitter. This, as a part of its campaign to obtain more insight from the citizenry on matters of national urgency like the current swine flu outbreak.

A spokesman says that access to these sites will be added the features to its main Web page, whitehouse.gov. Initially, the materials placid on the social networking sites will contain information about combating swine flu, but they will be updated with information on other topics as

time goes by.

White House New Media Director Macon Phillips explained that the administration will not be able to reply individually to those who send messages via Facebook, MySpace or Twitter. However, people who join these groups can speak to one another, and the White House staff can see what they're saying. (RW)

**

HAM RADIO ON THE NET: QRZ.COM BANS INTERNET TROLLS

The giant QRZ.COM ham radio website has banned Internet trolls from its cyberspace location.

According to Wikipedia.com, an Internet troll, or simply a troll is someone who posts controversial, inflammatory, irrelevant or off-topic messages in an online community. This, with the primary intent of provoking other users into an emotional response or to generally disrupt normal on-topic discussion.

According to QRZ owner Fred Lloyd, AA7BQ, until now the site has dealt with trolling on a case-by-case basis. However Lloyd says that it has become apparent that a concrete policy statement is needed. Therefore, effective immediately, QRZ's policy on trolling will be to ban first time offenders for 90 days, and repeat offenders permanently.

Lloyd notes that an policy of intolerance towards trolling is common in major online communities like MySpace, and others. He then asks rhetorically as to why QRZ should be any different? In his front pager posting he answers by saying that it wont be any different on QRZ. He also advises readers to prepare to say goodbye to a few of what he terms as the wise-guys who have contributed nothing but misery and discord to an otherwise enjoyable web experience. (AA7BQ via QRZ.COM)

**

NAMES IN THE NEWS: TWO FROM UP NORTH

Some names in the news from up North. First is Derek Hay, VE4HAY, who has been appointed as Radio Amateurs of Canada's Midwest Region Director. This, to fill the position left vacant by the resignation of former director Devon Racicot, VE5DWR.

According to RAC President Bob Cooke, VE3BDB, Hay brings a wealth of experience to the directors seat. He will serve in the position until a formal election can be conducted in the region.

Also from Radio Amateurs of Canada President is the announcement that Jim Fisher, VE1JF, had been appointed as Chairman of the Low, Medium and High Frequency Band Planning Committee. Fisher takes over from Bob Nash, VE3KZ, who resigned after holding the position for the last several years. (RAC)

**

NAMES IN THE NEWS: ZS2ACP AND ZS6NK HONORED FOR METEOR SCATTER WORK

Andre Botes, ZS2ACP and Paul Smit, ZS6NK, have been given the prestigious Icom Excellence Award for their work on VHF meteor scatter. The pair is credited with holding the first 4 meter Meteor Scatter contact made outside of Europe as well as setting the meteor scatter record and distance record in South Africa. This is the premier award of the South African Radio League. It 2009 recipients were announced at the society's recently held annual general meeting. (Southgate)

**

RADIO HONORS: ATLANTA HAMFEST MEMORIAL TO HONOR MEMORY W4RU

And a special memorial service celebrating the life of Sandy Donahue, W4RU, will be held in conjunction with the Atlanta Hamfest on Saturday, June 6th.

As reported last week, the 63 year old Donahue who served as ARRL Southeastern Division Vice Director since 2002 passed away in his sleep early on May 4th. He was buried on May 9th in Midland City, Alabama not far from his adopted hometown of Dolthan.

One of the best liked and most respected hams in our lifetime, Donahue was best known for his lifelong commitment to public service through ham radio and promoting the service to anyone who would show even the slightest interest. A ham since he was 15, he also supported many ham radio youth related activities including serving as an unofficial liaison and greater for the Newsline sponsored Young Ham of the Year Award.

W4RU spent most of his life in Atlanta, Georgia, before retiring to Dolthan, Alabama. His many lifelong friends in the Atlanta area wanted their own chance to say a final farewell to him.

For additional information and directions to the memorial and the hamfest please contact Jeff Beals, WA4AW. His e-mail is wa4aw (at) arrl (dot) net. (WA4AW)

**

BREAK 2

Celebrating Hamvention 2009, from the United States of America we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: INSTANT CHARGE BATTERY

Well, you wont find it at Dayton, at least not yet but a new form of battery is being developed with what's being called instant charging. Jeff Clark, K8JAC, reports:

--

Materials researchers at the Massachusetts Institute of Technology have announced that they have developed a new form of LiON battery. One could discharge and recharge in seconds rather than hours.

Gerbrand Ceder is a Professor of Materials Science and Engineering at MIT. Along with his graduate student he discovered a way to build LiON batteries with a performance level more like that of Ultra Capacitors. These are caps that store less energy but can store and release it very quickly.

If commercialized, this new breed of LiON battery would allow future hybrid cars to rapidly recharge. It could also lead to improvements in portable two way radio as well as new consumer and industrial products.

--

It will be some time before a battery like this is available commercially. (Science Daily)

**

THE SOCIAL SCENE: MARYLAND FM ASSN MEMORIAL DAY HAMFEST

Turning to the ham radio social scene, the Maryland F.M. Association will be holding its annual Memorial Day Hamfest on Sunday, May 24th. The venue is the Howard County Fairgrounds, in West Friendship, Maryland from 8am to 1pm with setup beginning at 6am. All times are local Eastern U-S. More is on-line at www.marylandfm.org (WA3MNN)

**

WORLDBEAT: UK HAM TO LEAD DISCUSSION OF 500 kHz PROPOSAL AT ARC 2011

In news from around the world, the Radio Society of Great Britain's President, Colin Thomas, G3PSM, will lead key discussions at the 2011 World Radio Conference. Thomas has been appointed C-E-P-T Lead Coordinator for the 500kHz proposal, which is Agenda Item 1.23, at the conference. His appointment is rather unusual in that agenda item coordinators are normally selected from regulatory agencies or governing administrations. (GB2RS)

**

WORLDBEAT: INDIA SEEKS 40 METER EXTENSION AND PERMANENT FREQS ON 30 AND 6

The Amateur Radio Society of India, on behalf of all of that nations hams has made a formal application to India's Department of Telecommunications for the new 40 Meter band segment to be allocated to

the amateur community. Requests have also been made for permanent allocation of frequencies in the 6 meter and 30 meter bands. These spectrum parcels were previously given to India's ham community on a short term basis, but later withdrawn.

**

WORLDBEAT: MELBOURNE AND PERTH GO DULL TIME DAB+

Commercial radio stations in Melbourne made history on Monday, May 11th. That's when they begin broadcasting the first permanent DAB+ digital radio services on the east coast of Australia.

Joan Warner is the chief executive officer of Commercial Radio Australia the industry body that has driven the move to digital radio. He is quoted as saying that the 11th was another milestone for the industry in Australia following the switch on of DAB+ digital radio in Perth about two weeks ago.

(CRA, WIA)

**

DX

In DX, word that DM2BBN, will be living in Ethiopia for the next years and is operational on 80 through 6 with the exception of 160 or 40 meters. QSL direct to Dr. Peter Haferkorn, PO Box 150194, Addis Ababa, Ethiopia.

And the United Kingdom's Barry Amateur Radio Society will be active as GB-100-BP from Sully, Wales on until May 31st. The special callsign celebrates 100 years of British Petroleum. QSL via GW0ANA.

YS1G will be on the air from El Salvador through May 23rd operating mainly on CW. QSL via G3TXF. The log entries will be electronically uploaded to Logbook to the World.

5H1HP and 5H1MS will be active from Zanzibar Island from May 16th to June 2nd. The pair will operate 2 meter EME and meteor scatter with some additional activity on the HF bands and 6 meters. QSL this operation via DL2NUD and DL9MS respectively.

OT4R, is going to spend his vacation operating portable HI7 from the Dominican Republic. He will be there through May 30th on 20, 15 and 10 meters with a preference for 14 point 300 MHz. QSL as directed by the operator

Lastly, listen out for ZL1CT who will be operating as ZK2V from Niue Island through June 20th. Activity will be mainly on the 80, 40, 20 and 15 meter bands using CW and SSB. There may be some WARC band and RTTY activity as well. QSL via N3SL

**

THAT FINAL ITEM: FLOAT IT AWAY

And finally this week, the story of a tower that needed a new home but no way to get it there. Well no way until a couple of hams came along. Jim Linton, VK3PC, has the rest of the story:

--

An amateur radio tower stood in the backyard of a suburban home long after the resident radio amateur became a silent key. His widow wanted it removed but with house extensions over the years it seemed to be a very expensive proposition indeed.

It could lifted out by a crane that would require the cutting of power lines, permits, insurance and other hassles, or maybe a helicopter was an option. Either way it was going to be far too costly.

Along come a couple of radio amateurs who used their ingenuity to solve the problem. The tower was put on the ground, fitted with brackets on to which were mounted empty 44-gallon drums. Through an opening in the rear fence and then slid into a creek.

Just like Davie Crockett and Daniel Boone the radio amateurs paddled the floating tower downstream to a location accessible by vehicle and loaded it onto a trailer. A win-in situation for the widow who was pleased to see the tower gone and for a ham who acquired it for transplanting in a new location.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

The bottom line to all of this? That's simple. When you have a problem that seems insurmountable, simply call on a ham. (WIA News)

Amateur Radio Newsline(tm) Report 1658 - May 22 2009

--

READERS OF TEXT VERSION ONLY - PLEASE NOTE

As you should be aware, Amateur Radio Newsline is prepared for the "spoken" rather than the "written / printed" word. Because of our on-scene coverage of the 2009 Dayton Hamvention, this weeks newscast is very audio intensive. From experience we know that there is no way that a literal transcript of the words of those we have interviewed can bring to you the emotion in their voices and that of their presentations. (The only direct quotes are those of our reporters and FCC officials on regulatory issues.)

For that reason, we are providing only one-line summaries of what many speakers at Hamvention 2009 had to offer. Instead of just reading this weeks newscast, we urge you to go to our website at www.arnewsline.org, download the mp3 file, sit back and enjoy a vicarious trip to the concluded 2009 Dayton Hamvention. We believe that it will be a far more enjoyable experience than merely scanning across printed words.

Thank you, ARNewsline, Inc.

--

Amateur Radio Newsline report number 1658 with a release date of Friday, May 22nd, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Dayton calls and thousands enjoy the ham holiday weekend. Also, the FCC says the price of a vanity call has to go up, the WB6X tower case in California has a happy ending, a pro amateur radio antenna measure proceeds in Arizona and we all get to meet Laura Smith, the new ham radio rules enforcer at the FCC. All this on an extended four section Amateur Radio Newsline(tm) report number 1658 coming your way right now.

(Billboard Cart Here)

**

Sound: (Gary Johnston, KI4LA, talks about the opening of Hamvention and the bargains he has already found.)

--

That's Gary Johnston, KI4LA, who is not only the ARRL Great Lakes Division Vice Director but also one of thousands of hams from around the world elated at being at Hamvention 2009 as the doors opened at the Hara Arena on Friday, May 15th. And in a reversal from what's usually the case, just about every seasoned observer that we got the chance to interview believed that Hamvention Friday was the best opening day ever and also the best business day of the three day ham radio holiday weekend. Chip Margelli, K7JA of Heil Sound is a longtime attendee at Dayton. We caught up with Chip midday through opening day:

--

Sound: (Chip Margelli, K7JA, describes opening day at the Heil Sound booth.)

--

A similar view was given us by Joe Schroeder, W9JUV. Joe, now with Radio Bookstore is the former editor of the old H-R Report and has seen and reported on many ham radio shows. We spoke to him just before closing of the exhibit hall on Saturday afternoon:

--

Sound: (Joe Schroeder, W9JUV, talks about Friday vs Saturday traffic at the Radio Bookstore booth.)

--

Its no secret that many hams travel to Dayton to see what the big three manufacturers of ham radio gear will be offering for sale and nobody was disappointed. We spoke with representatives of Icom, Kenwood and Vertex Standard Yaesu and let each one extol a bit about their latest goodies:

--

Sound: (Representatives of Icom, Kenwood and Yaesu / Vertex Standard describe the gear that they are featuring this year.)

--

Icom, Kenwood, Vertex Standard Yaesu seemed to have good foot traffic. The same can be said for Ten-Tec and Elecraft which appeared to always have a crowd of people playing with radios and keeping the company representatives peppered with questions. Bob Heil, K9EID, of Heil sound says that business in audio alley was also quite brisk:

--

Sound: (Bob Heil, K9EID, talks about business at his booth.)

--

This years Hamvention also served as the 2009 ARRL National Convention and it also reported good foot traffic through its Expo area. Great

Lakes Division Vice Director Gary Johnson, KI4LA tells us what the League had in place to welcome members and non-members alike:

--

Sound: (Gary Johnston, KI4LA, describes ARRL Expo area.)

--

The ARRL will likely be happy to know that the pundits and bloggers are saying that the League did a very good job with its Expo area this year.

As to the outdoor flea market? What can you say. It's a world unto itself where with a little work and a lot of walking an attendee can find just about everything under the sun and then some. One only had to stand in front of the Hara Arena by and watch the gate to the Flea Market area to get an idea of what people were buying. One convention go'er seemed to be very happy dragging out a rather old Hallicrafters SX-28 receiver made in the 1930's followed by a guy holing what appeared to be a potted plant. Amateur Radio Newsline's Henry Feinberg, K2SSQ, was able to stroll through the Flea Market and has some thoughts:

--

Feinberg: "They lucked out on the weather. With only very brief periods of showers on Friday and Saturday mornings the flea-marketeers were out in style.

"The outside vendors are people who usually bring their own merchandise. There's the '- get this stuff out of the closet and don't come back with it' group. Then there are the flea-market gypsies who you find at every swap-meet with neat displays of radio shack needed items.

"And there are the commercial vendors. Of course Mendelson's was the biggest as usual."

"Of course there are the club tables with groups of hams who pool their items on a group table. The pickings were all out there and you just had to go and find what you wanted.

"The crowds were a little bit thinner this year, but it was (still) an interesting meander."

--

And for those not aware, Henry Feinberg is a bit of an expert on the Dayton Hamvention Flea Market. Back in 1982 he was commissioned by Hollywood producer Steven Spielberg to design the umbrella communicator used in the movie E T The Extraterrestrial. Henry found many of the parts used in that device in the Hamvention Flea Market, so you might say that Dayton helped E-T to phone home.

We will have more Hamvention related news later on in this weeks Amateur Radio Newsline report. (ARNewsline(tm))

**

RADIO LAW: FCC WANTS VANITY CALL FEE INCREASE

Turning to other news, the cost of getting a vanity callsign will likely be going up. This as the FCC releases a Notice of Proposed Rulemaking and Order in MD Docket 08-65 on May 14th. It seeks to raise fees for Amateur Radio vanity call signs.

Currently, a vanity call sign costs $12.30 and is good for 10 years. The new fee, if the FCC plan goes through, will be $13.40 for 10 years. That' s an increase of $1.10 for the license period. The FCC is authorized by the Communications Act to collect vanity call sign fees to recover the costs associated with the vanity call sign program. (ARRL)

**

RESTRUCTURING: NEW LOW FREQUENCY ALLOCATION IN JAPAN

Meantime, across the Pacific word that amateurs in Japan have been given access to a 3.1 kHz wide band segment between 135.7 and 137.8 kHz. Only CW or narrow bandwidth data transmission less than 100Hz may be used in the new band. (Southgate)

**

HAMVENTION 2009 - THE FCC FORUM AND AN INTRODUCTION TO LAURA SMITH

Back to news from Hamvention 2009, the FCC made news at its forum. This as FCC rules man Bill Cross, W3TN, of the Wireless Mobility Division and the new Special Counsel enforcing Amateur Radio rules, Laura Smith, fielded some rather interesting questions. These ranged from the repeater owners responsibility of keeping unruly hams off of their systems to the legality of transmitting music on the ham radio bands as digital files.

Dealing with the issue of purging unwanted users from a repeater where the user won't obey the licensee's rules, Bill Cross says its all a matter of the licensee adhering to the Commissions regulations pertaining to repeater operation that's first and foremost:

--

Cross: "When the repeater rules were written many years ago, one of the things the Commission was asked to do was to specifically put in the rules authority to limit stations to using the repeater. And, in Section 97.205 where we have the rules on repeaters it says limiting the repeater to certain users is allowed.

"That certainly is a way that you can control a repeater. And it doesn't matter what the station is, the licensee is responsible for it.

"If it's a club trustee or an individual that has (holds) the license on the repeater, we certainly can contact them because of what's going on with one of the users. We can also contact the user. But you do have an absolute obligation to control that machine, and if it means limiting the use to certain users, the Commission's rules provide for that. And I'm not particularly surprised when someone (a user) gets a notice (from a repeater licensee) that says '-we don't want you to use the machine anymore."

--

Cross also reiterated what many of his predecessors have said in the past. That being no repeater license holder is under any obligation to repeat user stations that he does not wish to retransmit:

--

Cross: "One of the common misunderstandings is that amateur radio repeaters are not common carrier systems. There is no duty to serve on a non-discriminatory basis.

"If you want to limit it (access to a repeater) to people in a DX club, that's fine. If you want to limit it rush hour messages that are going to be traffic related or mobiles get priority, that's fine.

"You put the repeater up. Its yours to run and (its) your obligation to control it and limiting it is allowed."

--

As to the question on whether or not music in data format can be transmitted on the ham bands, well the question was long but Laura Smith's answer was short:

--

Questioner: "We have just been talking about what's allowed-does that mean for example that it is OK and that the FCC would not hinder say MP3 music traffic over a repeater. The digital world opens up a whole new world. It's a hornets nest in terms of what can you do or what can you not do.

"I would argue that the MP3 file as transmitted across a repeater is not music. Its is simply bits that when sequenced properly turn into music."

Smith: "We'll let you be the test case." (Laughter from audience.)

Questioner: "I'm frequently the test case."

--

And speaking about Laura Smith, to say that she has been well received by the ham radio community might be the understatement of Hamvention 2009. Even though she's not a licensed amateur the crowd in meeting room 2 took to her as if she not only already held an Extra class license but also had just completed DXCC. One of the reasons may have been her opening hear heart about who she was and about the values of life in which she believes:

--

Laura Smith tells story about her dad, as a police officer having to arrest her then teenage uncle for prank.

--

The general consensus among those who attended the FCC forum was that Laura Smith is more than an asset to the FCC. More important is that she is a truly welcome addition to the amateur radio community even if she's not yet a ham.

The FCC forum ran just a bit over an hour and many topics were covered. Hap Holly, KC9RP, will be airing excerpts from the FCC forum for the next several weeks on his RAIN Report. Its on-line at www.therainreport.com and by phone at 773-358-7845. (ARNewsline(tm))

**

RADIO LAW: A BIG WIN IN PALMDALE CA

Some good news in the ham radio legal arena. This with word that the court decision in the long-running Alec Zubarau, WB6X, tower case is now final. This, after the City of Palmdale, California, allowed the appeal period to expire without challenging the ruling. Bruce Tennant, K6PZW, reports:

--

A judge hearing the case ordered the city to reinstate an improperly revoked building permit for a crank-up tower that had been issued to WB6X. Zubarau, who was represented by ARRL Volunteer Counsel Leonard Shaffer, WA6QHD, may now request a permit for an antenna to go on the tower.

Notable in the ruling is the court's description of Palmdale's actions as an abuse of discretion by the City Council. It says that the city's decision to eliminate the tower directly violates the express requirements of California's PRB-1 equivalent statute. It also said that WB6X neighbors' various unsubstantiated complaints do not constitute substantial evidence.

And in a related item, local hams in the Palmdale area have also noted that, since the WB6X legal victory, city personnel have made no further

mention of the harsh, controversial proposed antenna ordinance amendment that the city threatened to impose late last year. One that would have effectively outlawed ham radio within that city.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Most believe that if Palmdale had proceeded that such a law would have been ruled illegal and in violation of both state law and PRB-1 and likely would have cost the city millions of dollars in taxpayer revenues to fight in court. (SW Div. Communicator, others)

**

RADIO LAW: ARIZONA PRB-1 LIKE MEASURE PASSES HOUSE VOTE

Meantime, in neighboring Arizona, ARRL Section Manager Tom Fagan, K7DF, reports that Assembly Bill 2514 has passed that states lower house after a procedural final vote and is on its way to the state senate. Unlike other PRB-1 equivalent measures signed into law in 26 other states, this one includes limited preemption of private deed restrictions commonly known as Conditions, Covenants and Restrictions or CC&R's.

Opposition to the measure is already mounting. As expected it is primarily from a coalition of home owners' associations and their lobbyists. Thankfully, the Arizona ham community has a long and very well documented record of public service through ARES, RACES and other organizations to bolster its argument for passage of the bill

It should be noted that a similar bill has made it this far in each of the past several years, only to be killed in a senate committee. But the chairmanship of that committee has changed hands, so it is uncertain how it will fare this year. (SW Div Communicator)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAMVENTION 2009: THE HAM RADIO TOWN MEETING

Back to our coverage of Hamvention 2009, one of the most welcomed visitors this year was space adventurer and entrepreneur Richard Garriott, W6KWQ. Richard is the son of Astronaut Owen Garriott, W5LFL,

who back in the early 1980's was the first ham radio operator to come on the air from Earth orbit. Richard stopped by the Newsline sponsored Ham Radio Town Meeting to share some thoughts on his recent trip to the International Space Station and the part ham radio played while he was on-orbit:

--

Richard Garriott, W5KWQ, describes being surprised by the number of stations wanting to talk to him while he was on-orbit on the ISS.

--

This years Town Meeting was about careers that came about because of ham radio. Another speaker was Steve Mendelsohn, W2ML, who explained how being a radio amateur put him in a limousine with the president of the United States:

--

Steve Mendelsohn, W2ML, describes being out on a motorcade radio remote for CBS radio and having to repair a microphone for then U.S. President Gerald Ford.

--

That incident lead Steve to a long and successful career with CBS radio and later with the ABC Television network. Steve was also a pioneer in repeaters and repeater coordination. That knowledge gained from ham radio lead him to bring frequency coordination to major televised sporting events nationwide.

And then there's the story of Mitch Wolfson, DJ0QN, from Munich, Germany. In his case the career has been lifelong because the Dayton Hamvention is where he met the lady who became his wife:

--

Mitch Wolfson tells the story of coming to Dayton for Hamvention and by chance meeting the woman who would become his wife.

--

Its amazing where becoming a ham as a teen or pre-teen can lead you and those attending this years Ham Radio Town Meeting got to hear some of the most interesting. More on Hamvention 2009 at the end of this weeks newscast. (ARNewsline(tm))

**

ENFORCEMENT: UNCERTIFIED WIRELESS MICS BRING $7000 NAL TO SENNHEISER ELECTRIC

The FCC has issued a Notice of Apparent Liability for Forfeiture and Order to Sennheiser Electronic Corporation in the amount of seven

thousand dollars. This for what the Commission says was the company's willful and repeated violation of Section 302(b) of the Communications Act and Section 2.803(a) of the Commission's rules by marketing of unauthorized radio frequency devices.

In July 2008, the Enforcement Bureau Spectrum Enforcement Division began an investigation into Sennheiser's marketing of wireless microphones. In a letter of inquiry dated August 15, 2008, the Division instructed Sennheiser to provide specific information regarding the manufacture, marketing, and the certification status of the wireless microphone systems it sells. In its September 15, 2008, response Sennheiser indicated that, while preparing its response, it discovered that one of its wireless microphones did not have a valid certification.

By another letter of inquiry dated February 9, 2009, the FCC sought further information regarding the uncertified wireless microphone that Sennheiser referenced in its first response. Sennheiser responded by telling the FCC that within the past year, it manufactured and sold units of an uncertified wireless microphone in the United States. It also stated that it has discontinued marketing the device in the United States. Sennheiser noted that the device was assigned several model numbers according to the frequencies on which it operates and claimed that the company inadvertently allowed a pending application for certification to lapse. This, while its marketing department assumed the application had been granted.

But the FCC says that a violation has occurred and that Sennheiser must be penalized for it. It notes that Sennheiser admits that it manufactured and sold units of the non certified wireless microphone in the United States within the past year. As such it is issuing the $7000 Notice of Apparent Liability for Forfeiture to Sennheiser. The company is expected to file an appeal. (FCC)

**

RADIO LAW: DTV TRANSLATORS APPROVED

The FCC has released its order establishing a new class of translators that will help stations fill in Digital TV coverage gaps in their current service areas. The FCC says that a total of 14 stations have submitted 20 applications for the translators, and eight requests for temporary translators. As expected, the commission will not allow the translators on channels 52 to 59. This is spectrum that is being cleared for use by advanced wireless services. (FCC)

**

BREAK 3

Celebrating Hamvention 2009, this is the Amateur Radio Newsline, heard on bulletin stations around the world through the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE SOCIAL SCENE: MARITIME DX FORUM IN NOVA SCOTIA IN AUGUST

The 6th Annual Maritime DX Forum sponsored by the Halifax Amateur Radio Club takes place the weekend of August 7th . The venue is the Rosaria Centre of Mount St. Vincent University in Halifax, Nova Scotia. Speaker include such DX notables as Marti Laine, OH2BH, Joe Taylor K1JT, George Nicholson N4GRN, and others. Registration materials can be downloaded from the HARC Web site at www.halifax-arc.org or by e-mail to ve1qd (at) rac (dot) ca. (HARC)

**

NAMES IN THE NEWS: CQ INDUCTS NEW MEMBERS TO ITS HALLS OF FAME

CQ magazine today announced its 2009 Hall of Fame inductees, welcoming 15 new members into the CQ Amateur Radio Hall of Fame, two new members of the CQ DX Hall of Fame and one new member of the CQ Contest Hall of Fame.

The CQ Amateur Radio Hall of Fame honors those individuals, whether licensed hams or not, who have made significant contributions to amateur radio. The CQ Contest and DX Halls of Fame honor those amateurs who not only excel in personal performance in these major areas of amateur radio but who also "give back" to the hobby in outstanding ways.

A full list of the inductees has been published at www.cq-amateur-radio.com and several other ham radio news websites. Formal induction's to the CQ Halls of Fame took place at the contest and DX dinners at last weeks Dayton Hamvention. (CQ)

**

NAMES IN THE NEWS: KA3HDO GIVEN ARRL PRESIDENT'S AWARD

American Radio Relay League President Joel Harrison, W5ZN, presented former Amateur Radio on the International Space Station Chairman Frank Bauer, KA3HDO with the ARRL President's Award. This award is voted on by the Board of Directors and given out every 7 or 8 years to honor someone's outstanding work. Bauer was recognized for his dedication to ham radio space related operations including his long tenure with the ARISS program. (ARISS)

**

RADIO SCIENCE: DTV CONVERTERS MAKE FOR BETTER ANALOG RECEPTION

A study conducted by Smith Geiger shows that seventy-five percent of over-the-air analog viewers polled said they received a better quality picture across all their channels after getting a digital converter box.

The survey of households about 2000 households that rely on converter boxes to make digital television signals available on their older analog sets. It was commissioned by the National Association of Broadcasters which says that the study found 47% of respondents said they had seen a major improvement in off-air TV reception. In addition, 54% said they were receiving more channels. Only 8% said they were receiving fewer.

No technical parameters of the consumer receiver and converter boxes were included in the press release. However it is very likely that the converter boxes are far newer technology and have more sensitive front end RF amplifiers and lower noise 1st mixers than those built into the television receivers.

And a reminder that all viewers without cable or satellite or a digital ready television receiver will need a converter box to watch full-power TV stations after the June 12 digital conversion date. Many radio clubs nationwide are assisting the FCC in educating the public on the digital conversion process. (RW, ARNewsline(tm))

**

ON THE AIR: THE 2009 WX4NHC ON THE AIR STATION TEST

The annual WX4NHC On-the-Air Station Test from the National Hurricane Center in Miami takes place Saturday, May 30th from 1300 to 2100 UTC. The purpose of this annual Station Test is to test all of the National Hurricane Center radio equipment, computers and antennas using as many modes and frequencies as possible. This is not a contest or simulated hurricane exercise. New equipment and software will be tested, and the centers staff will also conduct some operator training.

Stations working WX4NHC should exchange call sign, signal report, location and name plus a brief weather report, such as "sunny," "rain" or "cloudy." Non-hams may submit their actual weather using the On-Line Hurricane Report Form. If you want a commemorative card, please QSL to WD4R and include a self-addressed, stamped envelope. (ARRL)

**

DX

In DX, word that DL6NDK, with DL6LI, and DL9GTI will activate the Aland Islands from May 23rd to the 29th. They plan to work mainly in CW on 80 through 2 meters using several wire and vertical antennas. Also listen out for DL6LI using in PSK31. QSL's go via bureau or direct.

AH2Y and WX8C will be active from Guam as AH2Y during the CQWW WPX CW Contest that takes place on the 30th and 31st of May. QSL via Logbook to the World or direct to HL1IWD.

And G0TSM will operate portable SV5 from Dodcanese until June 3rd. He will be using CW and SSB and wants to focus mainly on 6 and 12 meters QSL to his home call.

Lastly, A team of Greek operators will be active as C4SV from Cyprus through May 29th. QSLs direct or via bureau to SV2DGH.

(From various DX news sources)

**

THAT FINAL ITEM: A LAST LOOK AT HAMVENTION 2009

We end this weeks newscast with a retrospective look at Hamvention 2009. With it, here's Jack Parker, W8ISH:

--

Once you get past the glitz of the new antennas, the radiant radio dials and the latest in ham radio software a world of wonderful and weird artifacts greet you in the outdoor flea market. There you will find acres of classic amateur radio equipment and other special items.

One enterprising seller was pushing the latest in used cattle prods. Drop in a couple new batteries and you are all set to zap your way through life. Just past the shirt, jacket and hat tent you could pick up some mighty fine perfume for the lady. They even had deodorant for men.

Saturday afternoon rain showers forced hundreds of hams back inside Hara Arena. People stood shoulder to shoulder and wheel to wheel to make their new equipment purchases. Many mobile hams in wheel chairs and on scooters found it difficult to cruise the arena floor. It would have taken a cattle prod to move through the crowd.

After standing in line a while to view a new piece of equipment, the crowds continued to grow. Right along with the heat and humidity. Thoughts of returning to the perfume table outside became a good idea after all.

Whether you were after an old part for your radio project, something digital and high tech for the ham shack or even taking in new found knowledge in one of the many forums, you will have to agree, there's nothing in the world like the Dayton Hamvention. We hope to see you there again.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH.

--

To which we add our sincere thanks to the Dayton Hamvention for its ongoing support of amateur radio and to past General Chairman Noel Mc Kewon, WB8QQC, and his wife Marilyn, KA8OVD, for the hospitality that they afforded the visiting Amateur Radio Newsline staff.

We will see all of you again at Hamvention 2010. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News, Australia's WIA News and the 2009 Dayton Hamvention, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

And this before we go. With only one week to go until its May 30th closing date so far there have been very few valid nominations submitted for this years Newsline Young Ham of the Year Award. As such, the likelihood is that the 2009 award will not be presented because there is no basis by which our judging committee can formulate a decision.

>From our own collective backgrounds we know that there is one and only one hope for the future survival of amateur radio and that future lies with the youngest members of our community. That's the reason that we created the Young Ham of the Year Award back in 1986. But only you can spend the precious few minutes it takes to nominate a worthy young ham for an award that has come to signify the best of the best among the younger members of our hobby

The rules are simple. A nominee for Young Ham of the Year must be age 18 or younger and a resident of the United States, its possessions States or any of the Canadian provinces. He or she must hold a valid Amateur service license issued by the United States FCC or Canadian telecommunications regulator Industry Canada.

Also, a candidate should be someone who has done something outstanding as an Amateur Radio operator. Perhaps it was something special he or she did for his community through the Amateur service. Maybe it was some outstanding achievement that led to an improvement in amateur radio in his or her area. Or perhaps he or she was successful in recruiting a lot of new hams. Whatever it was or is, we want to hear about it.

To make a nomination, go to www.arnewsline.org and scroll down to the words 2009 YHOTY Nominations Now open, download the form, fill it in, attach data proving the claims made in the nomination and sent it regular U.S. mail to us at Amateur Radio Newsline, Young Ham of the Year, 28197 Robin Avenue, Saugus California 91350. And do not under any circumstances send your nomination certified, registered or by any other method that requires a receipt signature, There is nobody to sign for it and it will be returned to you. Just send it regular U-S mail and pray that the postal Gods deliver it.

As an alternative, you can scan and e-mail it to us at our regular electronic address of newsline at arnewsline dot org. Either way, the nominating period closes at midnight on Saturday, May 30th and we hope that we can report next week that the judging and 2009 YHOTY award will be able to proceed. We will let you know.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening.

==> THE 2009 ARRL NATIONAL CONVENTION AND DAYTON HAMVENTION: THREE DAYS
OF FUN, FELLOWSHIP AND FESTIVITIES

When Hara Arena closed its doors on Sunday, May 17 after three days as
the 57th annual Dayton Hamvention <http://www.hamvention.org/> came to
an
end, many agreed that this was one of the best Hamventions in recent
memory. With so much to do -- including close to 50 hours of forums and
the world-renowned flea market, as well as vendor tables that seemed to
stretch for miles -- the arena floor was filled with excitement.

Held in conjunction with Hamvention, the 2009 ARRL National Convention
was the largest exhibit at the event <http://www.arrl.org/expo>. At the
```

ARRL EXPO, hams had the opportunity to do some kit building, pick up the latest League publications and Field Day T shirts, get a little competitive at the IARU table and drop off DXCC cards, as well as meet ARRL Officers, Directors and staff members.

One of the highlights of both the National Convention and the Hamvention was private astronaut Richard Garriott, W5KWQ <http://www.arrl.org/news/stories/2009/02/21/10660/?nc=1>, son of Owen Garriott, W5LFL. In 1983, Owen Garriott was the first ham to make QSOs from space while aboard the space shuttle Columbia. Richard, a guest of the ARRL and AMSAT <http://www.amsat.org/> at Dayton, told convention crowds about his journey to the International Space Station (ISS) <http://www.nasa.gov/mission_pages/station/main/index.html>. Ever gracious, he spent time with ARRL Youth Editor Duncan MacLachlan, KU0DM <http://www.arrl.org/news/stories/2008/10/21/10395/>, in addition to speaking and signing autographs at the ARRL EXPO area, the ARRL Youth Lounge, and ARRL and AMSAT forums. Garriott also spoke at a Saturday afternoon forum, telling how he fulfilled his lifelong dream of experiencing space travel. Combining Amateur Radio and spaceflight, he had QSOs with more than 200 hams while on the ISS.

The busiest place in the ARRL EXPO was definitely the kit building area. Led by ARRL Test Engineer Bob Allison, WB1GCM, with assistance from QEX Editor Larry Wolfgang, WR1B, and ARRL Instructors, hams (and non-hams, too!) sat down in front of a circuit board and soldering iron to build either a 24 hour clock or electronic keyer. "We saw a lot of people of all ages -- including a large number of kids -- coming over to build," Allison said. "A large majority had never built a kit before. They were so excited to be able to build something that they can use immediately." He pointed out that ham parents brought in their non-licensed children to build kits: "The little ones had a blast, and the parents were so proud that their kids are getting interested in Amateur Radio through the kit building projects."

The ARRL National Convention offered an expanded IARU exhibit area this year. Led by new IARU President Tim Ellam, VE6SH, and Vice President Ole Garpestad, LA2RR, the booth was staffed by representatives from the three IARU Regions: The Deutscher Amateur Radio Club (DARC) <http://www.darc.de/> from Germany represented Region 1 <http://www.iaru-r1.org/>, the ARRL represented Region 2 <http://www.iaru-r2.org/> and the Japan Amateur Radio League (JARL) <http://www.jarl.or.jp/English/0-2.htm> represented Region 3 <http://www.iaru-r3.org/>.

"It was exciting to see how many people came over to visit with us," Ellam said. "With the JARL processing applications for the IARU's Worked All Continent (WAC) <http://www.iaru.org/wac/> and 5-Band WAC awards, there was a steady flow of amateurs here." In addition to the WAC awards, the DARC sponsored a world flag identification contest and the ARRL offered a RUFZ <http://www.rufzxp.net/> CW copying competition throughout the event.

"It's certainly well known that hams from all over the world come to Dayton for the Hamvention," said ARRL International Vice President Rod Stafford, W6ROD. "We truly had an international flavor in the ARRL EXPO, though, as this was the first time that we had representatives from all three IARU regions in the IARU booth. We were glad to see many hams stop by and visit with IARU representatives from all corners of the globe."

A massive forum schedule was one of the key features of the Dayton Hamvention. In keeping with this year's theme -- DREAM: Digital Radio Enabling Amateurs to do More -- there were numerous forums featuring digital radio. ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, presented a forum on digital contesting. Tying in with this, Shelby Sommerville, K4WW, led a forum on RTTY, both from the operations side and from the contesting side. ARRL Southeastern Division Director Greg Sarratt, W4OZK, piloted a multi-level forum on D-STAR.

According to ARRL Technical Editor Joel Hallas, W1ZR, there were close to 35 new products featured at Hamvention. From a 2 meter transverter module for the Elecraft K3 to a traditional hexagonal five band Yagi from DX Engineering to antenna tuners from Ten-Tec and Palstar, there was definitely a wide variety of the latest in ham radio gear to satisfy even the most hard-to-please ham.

For more on the 2009 ARRL National Convention and Dayton Hamvention -- including a look at some of the new and exciting products -- check out the July issue of QST. The 2010 Dayton Hamvention is scheduled for May 14-16.

==> FCC LOOKS TO RAISE VANITY CALL SIGN FEES FOR SECOND CONSECUTIVE YEAR

The FCC released a Notice of Proposed Rulemaking and Order (NPRM) on May 14 seeking to raise fees for Amateur Radio vanity call signs <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-08-126A1.pdf>. Currently, a vanity call sign costs $12.30 and is good for 10 years; the new fee, if the FCC plan goes through, will go up to $13.40 for 10 years, an increase of $1.10. The FCC is authorized by the Communications Act of 1934 (as amended) to collect vanity call sign fees to recover the costs associated with that program. The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new term. Instructions on how to comment on this NPRM are available on the FCC Web site <http://www.fcc.gov/cgb/consumerfacts/howtocomment.html>.

The vanity call sign fee has fluctuated over the 12 years of the current program -- from a low of $11.70 in 2007 <http://www.arrl.org/news/stories/2007/08/31/105/> to a high of $70 (as first proposed in the FCC's 1994 Report and Order). In 2007, the Commission lowered the fee from $20.80 to $11.70. The FCC said it anticipates some 15,000 Amateur Radio vanity call sign "payment units" or applications during the next fiscal year, collecting $201,000 in fees from the program.

The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new term. The first vanity call sign licenses issued under the current Amateur Radio vanity call sign program that began in 1996 came up for renewal three years ago.

Those holding vanity call signs issued prior to 1996 are exempt from having to pay the vanity call sign regulatory fee at renewal, however. That's because Congress did not authorize the FCC to collect regulatory fees until 1993. Such "heritage" vanity call sign holders do not appear as vanity licensees in the FCC Amateur Radio database.

Amateur Radio licensees may file for renewal only within 90 days of their license expiration date. All radio amateurs must have an FCC Registration Number (FRN) before filing any application with the Commission. Applicants can obtain an FRN by going to the ULS <http://wireless.fcc.gov/uls/> and clicking on the "New Users Register" link. You must supply your Social Security Number to obtain an FRN.

The ARRL VEC <http://www.arrl.org/arrlvec/> will process license renewals for vanity call sign holders for a modest fee. The service is available to ARRL members and nonmembers, although League members pay less. Routine, non-vanity renewals continue to be free for ARRL members. Trustees of club stations with vanity call signs may renew either via the ULS or through a Club Station Call Sign Administrator, such as ARRL VEC.

League members should visit the "ARRL Member Instructions for License Renewals or Changes" page <http://www.arrl.org/fcc/memberlicenseinstructions.html>, while the "Instructions for License Renewals or Changes" page covers general renewal procedures for nonmembers <http://www.arrl.org/fcc/licenseinstructions.html >. There is additional information on the ARRL VEC's "FCC License Renewals and ARRL License Expiration Notices" page <http://www.arrl.org/arrlvec/renewals.html>.

License application and renewal information and links to the required forms are available on the ARRL Amateur Application Filing FAQ Web page <http://www.arrl.org/FandES/field/regulations/application-filing-faq.html>. The FCC's forms page also offers the required forms <http://www.fcc.gov/formpage.html>.

==> TAKE AN INSIDE LOOK AT THE ARRL REGULATORY INFORMATION DEPARTMENT

Hams always seem to have questions on how to interpret FCC rules and regulations. The ARRL's Regulatory Information Department (RID) -- led by Dan Henderson, N1ND -- is the first point of contact at ARRL Headquarters for such situations. The ARRL does not maintain its own legal department, so the RID provides answers to these types of questions, providing ARRL members with accurate information about the rules and regulations that govern the Amateur Radio Service. Its goal is to provide radio amateurs with the information they need to operate their stations safely, legally and appropriately.

RID handles hundred of e-mails and phone calls each month that ask for information on correctly interpreting Part 97, as well as other federal, state and local regulatory matters. According to Henderson, the most frequently asked questions concern FCC frequency allocations, the ARRL Band Plan and whether a particular activity is permitted on the amateur bands. "The most frequent areas of concern to members are antenna and tower issues, including questions about CC&Rs (deed covenants, conditions and restrictions) and PRB-1," Henderson said. PRB-1 is the FCC ruling that states that local and state governments must make reasonable accommodation when an amateur wishes to erect antennas and towers.

The RID is responsible for a wide range of regulatory related areas and activities at ARRL Headquarters. It maintains a close working relationship with other departments at HQ, particularly the Membership and Volunteer Programs Department concerning issues related to the ARRL Field Organization and emergency communications. The RID acts as a liaison to ARRL Official Observer (OO) Coordinator Chuck Skolaut, K0BOG, on matters related to interference and on-the-air operating abuses. The office also works with the ARRL Volunteer Examiner Coordinator (VEC) staff on issues such as international operating requirements, the vanity call sign program and license renewals. It also maintains regular contact with FCC staff on Amateur Radio enforcement issues, rule interpretations and questions. The RID also administers the Division-level Legislative Action Programs list server and serves as a resource for list members.

For amateurs who need the services of an attorney in their area to deal with Amateur Radio issues, the RID manages the Volunteer Counsel (VC) program <http://www.arrl.org/FandES/field/regulations/local/vci.html>. The VC program maintains an up-to-date list of attorneys capable of representing amateurs involved in antenna or RFI disputes. These attorneys provide members with an initial consultation when they need to address legal issues. The RID also maintains the Volunteer Consulting Engineer (VCE) database <http://www.arrl.org/FandES/field/regulations/local/vcei.html> that refers members to ARRL VCEs in their area. VCEs provide assistance to amateurs who may need to meet structural requirements set forth by local zoning authorities.

Henderson, along with his staff of colleagues, volunteers and professional associates, provides expertise, knowledge and outstanding service to League members and to Amateur Radio. Find out more about the ARRL's Regulatory Information Department on the RID Web site <http://www.arrl.org/FandES/field/regulations/index.html>.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Mario Bedard, VE2FZH, of St-Andre de Kamouraska, Quebec, Canada, asks: Is an antenna tuner of any use in a receiving system with a long wire or dipole antenna? If not, should I disable it while strictly receiving?

The Doctor Answers -- This is one of those "that depends" kind of questions. A mismatched receive antenna will result in a reduction of both signal and atmospheric noise reaching your radio. If the atmospheric noise is much stronger than the internal noise in your radio, the resulting signal-to-noise ratio will be almost the same, even though the signal will be weaker. It is often the case -- especially on 20 meters and above -- that the external noise may not dominate and you won't hear weak signals that you might have heard with the tuner properly tuned.

It is somewhat more complicated with a transceiver with an internal automatic tuner. There may be no way to adjust it without transmitting, especially a problem if listening outside the amateur bands. That means that in listening mode -- unless it remembers the settings for each band -- you may have a mistuned tuner. That can be much worse than no tuner. If it's easy to bypass the tuner, try it each time and see which is better.

Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org>;; or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST, the official journal of the ARRL.

==> W1AW, W1HQ RECEIVE INSPECTIONS, NEW ANTENNAS

The antennas and towers at the Hiram Percy Maxim Memorial Station, W1AW <http://www.arrl.org/w1aw.html>, and W1HQ, the Laird Campbell Memorial HQ Operators Club <http://www.arrl.org/news/stories/2008/02/13/101/?nc=1>, received their semi-annual inspection on May 12. In addition to the inspections, new equipment was also installed on the W1AW antenna farm.

"Each year, W1AW and W1HQ get two antenna and tower inspections, one in the spring and one in the fall," explained ARRL Test Engineer Bob Allison, WB1GCM. "Sometimes Matt Strelow, KC1XX, and Andrew Toth of XX Towers will also do some antenna work during the inspections."

Strelow and Toth replaced the az-el rotators located on the satellite tower -- originally installed back in 1997 -- with a newer model. According to W1AW Station Manager Joe Carcia, NJ1Q, the older rotators were replaced due to signs of wear and fatigue after many years of use.

"The North tower received a new satellite turnstile antenna," Carcia said. "This turnstile antenna will be used in conjunction with our satellite weather fax receiver. This receiver is in use in the main area of W1AW and will allow visitors to see real-time pictures received from various weather satellites. XX Towers also replaced a coaxial pigtail on the 23 cm satellite antenna."

A new side-arm atop the 120 foot tower will allow vertical wire antennas to be hoisted to the top when the antennas are in use, accommodating the hoisting of W1AW's new 160 meter vertical antenna. Carcia said that this will come in handy during contests or other operating events.

In addition to 160, verticals for 80 and 40 meters may also be supported by the new halyard. "We will soon be installing an extensive ground radial system for the new antenna," Carcia said. "Look for W1AW during the next 160 meter contest!"

Strelow and Toth also inspected the W1HQ antennas that reside on top of the ARRL Headquarters building <http://www.arrl.org/news/stories/2008/08/19/10267/?nc=1>. According to Allison, the SteppIR antenna <http://www.steppir.com/> made it through the winter in good shape and all mounting bolts were checked and tightened.

==> MAY SECTION MANAGER ELECTION RESULTS ANNOUNCED

In the only contested Section Manager race this spring, Mel Parkes, NM7P, of Layton, was re-elected as the Utah Section Manager with 480 votes. His opponent, Lauri "Mac" McCreary, KG7C, of Lehi, received 147 votes. Parkes, who has held the Section Manager's post since 1999, begins his sixth consecutive two-year term of office on July 1. Election ballots were counted on May 19 at ARRL Headquarters.

In the San Joaquin Valley Section, Dan Pruitt, AE6SX, becomes Section Manager on July 1 when he takes the reins from Charles McConnell, W6DPD. Both live in Fresno. Pruitt was the only nominee for this upcoming new term of office. He has held Public Information Officer and Emergency Coordinator appointments since 2005.

McConnell decided not to run for another term of office after having served seven years as Section Manager. Prior to his term as Section Manager, he served as ARRL Pacific Division Director for four years, from 1990-1993; he was also Pacific Division Vice Director in 1989. In 1976, McConnell became the Section Communications Manager, serving for 13 years.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning on July 1: Bob Beaudet, W1YRC (Rhode Island); Jim Cross, WI3N (Maryland-DC); John Dyer, AE5B (West Texas); Joe Giraudo, N7JEH (Nevada); Richard Krohn, N2SMV (Northern New Jersey), and Al Shuman, K1AKS (New Hampshire).

==>SOLAR UPDATE

Tad "How bright the sunbeams" Cook, K7RA, this week reports: Do sunspots matter? Many of us are surprised at how good conditions can be with zero sunspots; the weak solar wind and lack of flares and geomagnetic events likely have something to do with it. Many times during the more active solar periods, sunspots were welcomed, but then some event associated with the higher solar activity would make conditions difficult, disrupt

the ionosphere and increase absorption. For example, look back to the fall of 2003 bulletins via the index <http://www.arrl.org/w1aw/prop/2003-index.html>. In addition to the text, note the sunspot numbers and A index listings at the end of each bulletin. There were plenty of sunspots, but if you look at bulletin ARLP038 in September, or ARLP044 through ARLP049 around November, there were huge events that drove the planetary A index to 189 during one week and 162 the next. This is hard to imagine today. Over the near term, it looks like more quiet conditions. We had a nice seven day run of sunspots, but do not know when they will return. Sunspot numbers for May 14-20 were 18, 12, 15, 13, 14, 11 and 0 with a mean of 11.9. The 10.7 cm flux was 73.9, 73.7, 74.2, 74, 72.9, 72.3 and 71.5 with a mean of 73.2. The estimated planetary A indices were 8, 2, 5, 3, 4, 5 and 4 with a mean of 4.4. The estimated mid-latitude A indices were 8, 2, 3, 2, 2, 2 and 4 with a mean of 3.3. Geophysical Institute Prague reports quiet conditions should prevail May 22-28. NOAA and the US Air Force predict solar flux settling back to 70, then rising again June 5-17. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Johann Wolfgang von Goethe's "May Song" <http://www.online-literature.com/goethe/2653/>.

==>IN BRIEF:

* This Week on the Radio: This week, the NCCC Sprint is on May 22. The MI QRP Memorial Day CW Sprint is May 25-May 26 and the SKCC Sprint is May 27. Next week is the CQ WW WPX Contest (CW) and Kids Roundup on May 30-31. Look for the ARCI Hootowl Sprint on May 31 (local time). All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 7, 2009 for these online course sessions that begin on Friday, June 19, 2009: Antenna Modeling and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing

assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>;.

* League Headquarters Closed Monday, May 25: ARRL Headquarters will be closed Monday, May 25 in observance of the Memorial Day holiday. There will be no W1AW code practice or bulletin transmissions that day. ARRL Headquarters will reopen Tuesday, May 26 at 8 AM EDT. We wish everyone a safe and enjoyable holiday weekend!

* W1AW/8 QSL Cards: W1AW Station Manager Joe Carcia, NJ1Q, reports that the QSL card for the W1AW/8 Special Event station at the 2009 ARRL National Convention at the Dayton Hamvention has yet to be designed and printed. "Once we have the cards in hand, all W1AW/8 QSL requests received at W1AW will be processed," Carcia said. "It just might take a few months, so please be patient." QSL via W1AW, 225 Main St, Newington, CT 06111.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org/>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org/> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for

e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

==> THE 2009 ARRL NATIONAL CONVENTION AND DAYTON HAMVENTION: THREE DAYS
OF FUN, FELLOWSHIP AND FESTIVITIES

When Hara Arena closed its doors on Sunday, May 17 after three days as
the 57th annual Dayton Hamvention <http://www.hamvention.org> came to an
end, many agreed that this was one of the best Hamventions in recent
memory. With so much to do -- including close to 50 hours of forums and
the world-renowned flea market, as well as vendor tables that seemed to
stretch for miles -- the arena floor was filled with excitement.

Held in conjunction with Hamvention, the 2009 ARRL National Convention
was the largest exhibit at the event <http://www.arrl.org/expo>. At the
ARRL EXPO, hams had the opportunity to do some kit building, pick up the
```

latest League publications and Field Day T shirts, get a little competitive at the IARU table and drop off DXCC cards, as well as meet ARRL Officers, Directors and staff members.

One of the highlights of both the National Convention and the Hamvention was private astronaut Richard Garriott, W5KWQ <http://www.arrl.org/news/stories/2009/02/21/10660/?nc=1>, son of Owen Garriott, W5LFL. In 1983, Owen Garriott was the first ham to make QSOs from space while aboard the space shuttle Columbia. Richard, a guest of the ARRL and AMSAT <http://www.amsat.org/> at Dayton, told convention crowds about his journey to the International Space Station (ISS) <http://www.nasa.gov/mission_pages/station/main/index.html>. Ever gracious, he spent time with ARRL Youth Editor Duncan MacLachlan, KU0DM <http://www.arrl.org/news/stories/2008/10/21/10395/>, in addition to speaking and signing autographs at the ARRL EXPO area, the ARRL Youth Lounge, and ARRL and AMSAT forums. Garriott also spoke at a Saturday afternoon forum, telling how he fulfilled his lifelong dream of experiencing space travel. Combining Amateur Radio and spaceflight, he had QSOs with more than 200 hams while on the ISS.

The busiest place in the ARRL EXPO was definitely the kit building area. Led by ARRL Test Engineer Bob Allison, WB1GCM, with assistance from QEX Editor Larry Wolfgang, WR1B, and ARRL Instructors, hams (and non-hams, too!) sat down in front of a circuit board and soldering iron to build either a 24 hour clock or electronic keyer. "We saw a lot of people of all ages -- including a large number of kids -- coming over to build," Allison said. "A large majority had never built a kit before. They were so excited to be able to build something that they can use immediately." He pointed out that ham parents brought in their non-licensed children to build kits: "The little ones had a blast, and the parents were so proud that their kids are getting interested in Amateur Radio through the kit building projects."

The ARRL National Convention offered an expanded IARU exhibit area this year. Led by new IARU President Tim Ellam, VE6SH, and Vice President Ole Garpestad, LA2RR, the booth was staffed by representatives from the three IARU Regions: The Deutscher Amateur Radio Club (DARC) <http://www.darc.de/> from Germany represented Region 1 <http://www.iaru-r1.org/>, the ARRL represented Region 2 <http://www.iaru-r2.org/> and the Japan Amateur Radio League (JARL) <http://www.jarl.or.jp/English/0-2.htm> represented Region 3 <http://www.iaru-r3.org/>.

"It was exciting to see how many people came over to visit with us," Ellam said. "With the JARL processing applications for the IARU's Worked All Continent (WAC) <http://www.iaru.org/wac/> and 5-Band WAC awards, there was a steady flow of amateurs here." In addition to the WAC awards, the DARC sponsored a world flag identification contest and the ARRL offered a RUFZ <http://www.rufzxp.net/> CW copying competition throughout the event.

"It's certainly well known that hams from all over the world come to Dayton for the Hamvention," said ARRL International Vice President Rod Stafford, W6ROD. "We truly had an international flavor in the ARRL EXPO, though, as this was the first time that we had representatives from all three IARU regions in the IARU booth. We were glad to see many hams stop by and visit with IARU representatives from all corners of the globe."

A massive forum schedule was one of the key features of the Dayton Hamvention. In keeping with this year's theme -- DREAM: Digital Radio Enabling Amateurs to do More -- there were numerous forums featuring digital radio. ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, presented a forum on digital contesting. Tying in with this, Shelby Sommerville, K4WW, led a forum on RTTY, both from the operations side and from the contesting side. ARRL Southeastern Division Director Greg Sarratt, W4OZK, piloted a multi-level forum on D-STAR.

According to ARRL Technical Editor Joel Hallas, W1ZR, there were close to 35 new products featured at Hamvention. From a 2 meter transverter module for the Elecraft K3 to a traditional hexagonal five band Yagi from DX Engineering to antenna tuners from Ten-Tec and Palstar, there was definitely a wide variety of the latest in ham radio gear to satisfy even the most hard-to-please ham.

For more on the 2009 ARRL National Convention and Dayton Hamvention -- including a look at some of the new and exciting products -- check out the July issue of QST. The 2010 Dayton Hamvention is scheduled for May 14-16.

==> FCC LOOKS TO RAISE VANITY CALL SIGN FEES FOR SECOND CONSECUTIVE YEAR

The FCC released a Notice of Proposed Rulemaking and Order (NPRM) on May 14 seeking to raise fees for Amateur Radio vanity call signs <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-08-126A1.pdf>. Currently, a vanity call sign costs $12.30 and is good for 10 years; the new fee, if the FCC plan goes through, will go up to $13.40 for 10 years, an increase of $1.10. The FCC is authorized by the Communications Act of 1934 (as amended) to collect vanity call sign fees to recover the costs associated with that program. The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new term. Instructions on how to comment on this NPRM are available on the FCC Web site <http://www.fcc.gov/cgb/consumerfacts/howtocomment.html>.

The vanity call sign fee has fluctuated over the 12 years of the current program -- from a low of $11.70 in 2007 <http://www.arrl.org/news/stories/2007/08/31/105/> to a high of $70 (as first proposed in the FCC's 1994 Report and Order). In 2007, the Commission lowered the fee from $20.80 to $11.70. The FCC said it anticipates some 15,000 Amateur Radio vanity call sign "payment units" or applications during the next fiscal year, collecting $201,000 in fees from the program.

The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new term. The first vanity call sign licenses issued under the current Amateur Radio vanity call sign program that began in 1996 came up for renewal three years ago.

Those holding vanity call signs issued prior to 1996 are exempt from having to pay the vanity call sign regulatory fee at renewal, however. That's because Congress did not authorize the FCC to collect regulatory fees until 1993. Such "heritage" vanity call sign holders do not appear as vanity licensees in the FCC Amateur Radio database.

Amateur Radio licensees may file for renewal only within 90 days of their license expiration date. All radio amateurs must have an FCC Registration Number (FRN) before filing any application with the Commission. Applicants can obtain an FRN by going to the ULS <http://wireless.fcc.gov/uls/> and clicking on the "New Users Register" link. You must supply your Social Security Number to obtain an FRN.

The ARRL VEC <http://www.arrl.org/arrlvec/> will process license renewals for vanity call sign holders for a modest fee. The service is available to ARRL members and nonmembers, although League members pay less. Routine, non-vanity renewals continue to be free for ARRL members. Trustees of club stations with vanity call signs may renew either via the ULS or through a Club Station Call Sign Administrator, such as ARRL VEC.

League members should visit the "ARRL Member Instructions for License Renewals or Changes" page <http://www.arrl.org/fcc/memberlicenseinstructions.html>, while the "Instructions for License Renewals or Changes" page covers general renewal procedures for nonmembers <http://www.arrl.org/fcc/licenseinstructions.html >. There is additional information on the ARRL VEC's "FCC License Renewals and ARRL License Expiration Notices" page <http://www.arrl.org/arrlvec/renewals.html>.

License application and renewal information and links to the required forms are available on the ARRL Amateur Application Filing FAQ Web page <http://www.arrl.org/FandES/field/regulations/application-filing-faq.html>. The FCC's forms page also offers the required forms <http://www.fcc.gov/formpage.html>.

==> TAKE AN INSIDE LOOK AT THE ARRL REGULATORY INFORMATION DEPARTMENT

Hams always seem to have questions on how to interpret FCC rules and regulations. The ARRL's Regulatory Information Department (RID) -- led by Dan Henderson, N1ND -- is the first point of contact at ARRL Headquarters for such situations. The ARRL does not maintain its own legal department, so the RID provides answers to these types of questions, providing ARRL members with accurate information about the rules and regulations that govern the Amateur Radio Service. Its goal is to provide radio amateurs with the information they need to operate their stations safely, legally and appropriately.

RID handles hundred of e-mails and phone calls each month that ask for information on correctly interpreting Part 97, as well as other federal, state and local regulatory matters. According to Henderson, the most frequently asked questions concern FCC frequency allocations, the ARRL Band Plan and whether a particular activity is permitted on the amateur bands. "The most frequent areas of concern to members are antenna and tower issues, including questions about CC&Rs (deed covenants, conditions and restrictions) and PRB-1," Henderson said. PRB-1 is the FCC ruling that states that local and state governments must make reasonable accommodation when an amateur wishes to erect antennas and towers.

The RID is responsible for a wide range of regulatory related areas and activities at ARRL Headquarters. It maintains a close working relationship with other departments at HQ, particularly the Membership and Volunteer Programs Department concerning issues related to the ARRL Field Organization and emergency communications. The RID acts as a liaison to ARRL Official Observer (OO) Coordinator Chuck Skolaut, K0BOG, on matters related to interference and on-the-air operating abuses. The office also works with the ARRL Volunteer Examiner Coordinator (VEC) staff on issues such as international operating requirements, the vanity call sign program and license renewals. It also maintains regular contact with FCC staff on Amateur Radio enforcement issues, rule interpretations and questions. The RID also administers the Division-level Legislative Action Programs list server and serves as a resource for list members.

For amateurs who need the services of an attorney in their area to deal with Amateur Radio issues, the RID manages the Volunteer Counsel (VC) program <http://www.arrl.org/FandES/field/regulations/local/vci.html>. The VC program maintains an up-to-date list of attorneys capable of representing amateurs involved in antenna or RFI disputes. These attorneys provide members with an initial consultation when they need to address legal issues. The RID also maintains the Volunteer Consulting Engineer (VCE) database <http://www.arrl.org/FandES/field/regulations/local/vcei.html> that refers members to ARRL VCEs in their area. VCEs provide assistance to amateurs who may need to meet structural requirements set forth by local zoning authorities.

Henderson, along with his staff of colleagues, volunteers and professional associates, provides expertise, knowledge and outstanding service to League members and to Amateur Radio. Find out more about the ARRL's Regulatory Information Department on the RID Web site <http://www.arrl.org/FandES/field/regulations/index.html>.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Mario Bedard, VE2FZH, of St-Andre de Kamouraska, Quebec, Canada, asks: Is an antenna tuner of any use in a receiving system with a long wire or dipole antenna? If not, should I disable it while strictly receiving?

The Doctor Answers -- This is one of those "that depends" kind of questions. A mismatched receive antenna will result in a reduction of both signal and atmospheric noise reaching your radio. If the atmospheric noise is much stronger than the internal noise in your radio, the resulting signal-to-noise ratio will be almost the same, even though the signal will be weaker. It is often the case -- especially on 20 meters and above -- that the external noise may not dominate and you won't hear weak signals that you might have heard with the tuner properly tuned.

It is somewhat more complicated with a transceiver with an internal automatic tuner. There may be no way to adjust it without transmitting, especially a problem if listening outside the amateur bands. That means that in listening mode -- unless it remembers the settings for each band -- you may have a mistuned tuner. That can be much worse than no tuner. If it's easy to bypass the tuner, try it each time and see which is better.

Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org>; or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST, the official journal of the ARRL.

==> W1AW, W1HQ RECEIVE INSPECTIONS, NEW ANTENNAS

The antennas and towers at the Hiram Percy Maxim Memorial Station, W1AW <http://www.arrl.org/w1aw.html>, and W1HQ, the Laird Campbell Memorial HQ Operators Club <http://www.arrl.org/news/stories/2008/02/13/101/?nc=1>, received their semi-annual inspection on May 12. In addition to the inspections, new equipment was also installed on the W1AW antenna farm.

"Each year, W1AW and W1HQ get two antenna and tower inspections, one in the spring and one in the fall," explained ARRL Test Engineer Bob Allison, WB1GCM. "Sometimes Matt Strelow, KC1XX, and Andrew Toth of XX Towers will also do some antenna work during the inspections."

Strelow and Toth replaced the az-el rotators located on the satellite tower -- originally installed back in 1997 -- with a newer model. According to W1AW Station Manager Joe Carcia, NJ1Q, the older rotators were replaced due to signs of wear and fatigue after many years of use.

"The North tower received a new satellite turnstile antenna," Carcia said. "This turnstile antenna will be used in conjunction with our satellite weather fax receiver. This receiver is in use in the main area of W1AW and will allow visitors to see real-time pictures received from various weather satellites. XX Towers also replaced a coaxial pigtail on the 23 cm satellite antenna."

A new side-arm atop the 120 foot tower will allow vertical wire antennas to be hoisted to the top when the antennas are in use, accommodating the hoisting of W1AW's new 160 meter vertical antenna. Carcia said that this will come in handy during contests or other operating events.

In addition to 160, verticals for 80 and 40 meters may also be supported by the new halyard. "We will soon be installing an extensive ground radial system for the new antenna," Carcia said. "Look for W1AW during the next 160 meter contest!"

Strelow and Toth also inspected the W1HQ antennas that reside on top of the ARRL Headquarters building <http://www.arrl.org/news/stories/2008/08/19/10267/?nc=1>. According to Allison, the SteppIR antenna <http://www.steppir.com/> made it through the winter in good shape and all mounting bolts were checked and tightened.

==> MAY SECTION MANAGER ELECTION RESULTS ANNOUNCED

In the only contested Section Manager race this spring, Mel Parkes, NM7P, of Layton, was re-elected as the Utah Section Manager with 480 votes. His opponent, Lauri "Mac" McCreary, KG7C, of Lehi, received 147 votes. Parkes, who has held the Section Manager's post since 1999, begins his sixth consecutive two-year term of office on July 1. Election ballots were counted on May 19 at ARRL Headquarters.

In the San Joaquin Valley Section, Dan Pruitt, AE6SX, becomes Section Manager on July 1 when he takes the reins from Charles McConnell, W6DPD. Both live in Fresno. Pruitt was the only nominee for this upcoming new term of office. He has held Public Information Officer and Emergency Coordinator appointments since 2005.

McConnell decided not to run for another term of office after having served seven years as Section Manager. Prior to his term as Section Manager, he served as ARRL Pacific Division Director for four years, from 1990-1993; he was also Pacific Division Vice Director in 1989. In 1976, McConnell became the Section Communications Manager, serving for 13 years.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning on July 1: Bob Beaudet, W1YRC (Rhode Island); Jim Cross, WI3N (Maryland-DC); John Dyer, AE5B (West Texas); Joe Giraudo, N7JEH (Nevada); Richard Krohn, N2SMV (Northern New Jersey), and Al Shuman, K1AKS (New Hampshire).

==>SOLAR UPDATE

Tad "How bright the sunbeams" Cook, K7RA, this week reports: Do sunspots matter? Many of us are surprised at how good conditions can be with zero sunspots; the weak solar wind and lack of flares and geomagnetic events likely have something to do with it. Many times during the more active solar periods, sunspots were welcomed, but then some event associated with the higher solar activity would make conditions difficult, disrupt

the ionosphere and increase absorption. For example, look back to the fall of 2003 bulletins via the index <http://www.arrl.org/w1aw/prop/2003-index.html>. In addition to the text, note the sunspot numbers and A index listings at the end of each bulletin. There were plenty of sunspots, but if you look at bulletin ARLP038 in September, or ARLP044 through ARLP049 around November, there were huge events that drove the planetary A index to 189 during one week and 162 the next. This is hard to imagine today. Over the near term, it looks like more quiet conditions. We had a nice seven day run of sunspots, but do not know when they will return. Sunspot numbers for May 14-20 were 18, 12, 15, 13, 14, 11 and 0 with a mean of 11.9. The 10.7 cm flux was 73.9, 73.7, 74.2, 74, 72.9, 72.3 and 71.5 with a mean of 73.2. The estimated planetary A indices were 8, 2, 5, 3, 4, 5 and 4 with a mean of 4.4. The estimated mid-latitude A indices were 8, 2, 3, 2, 2, 2 and 4 with a mean of 3.3. Geophysical Institute Prague reports quiet conditions should prevail May 22-28. NOAA and the US Air Force predict solar flux settling back to 70, then rising again June 5-17. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Johann Wolfgang von Goethe's "May Song" <http://www.online-literature.com/goethe/2653/>.

==>IN BRIEF:

* This Week on the Radio: This week, the NCCC Sprint is on May 22. The MI QRP Memorial Day CW Sprint is May 25-May 26 and the SKCC Sprint is May 27. Next week is the CQ WW WPX Contest (CW) and Kids Roundup on May 30-31. Look for the ARCI Hootowl Sprint on May 31 (local time). All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 7, 2009 for these online course sessions that begin on Friday, June 19, 2009: Antenna Modeling and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing

assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* League Headquarters Closed Monday, May 25: ARRL Headquarters will be closed Monday, May 25 in observance of the Memorial Day holiday. There will be no W1AW code practice or bulletin transmissions that day. ARRL Headquarters will reopen Tuesday, May 26 at 8 AM EDT. We wish everyone a safe and enjoyable holiday weekend!

* W1AW/8 QSL Cards: W1AW Station Manager Joe Carcia, NJ1Q, reports that the QSL card for the W1AW/8 Special Event station at the 2009 ARRL National Convention at the Dayton Hamvention has yet to be designed and printed. "Once we have the cards in hand, all W1AW/8 QSL requests received at W1AW will be processed," Carcia said. "It just might take a few months, so please be patient." QSL via W1AW, 225 Main St, Newington, CT 06111.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for

e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Following sent on behalf of Pete, N4ZR, and the Contesting Wiki crew.

The Contest Compendium's Table of Contents
<http://wiki.contesting.com/index.php/Table_of_Contents> has just undergone
a wholesale makeover, which will make it much easier for you to find topic
areas where you would like to read or contribute, either in the form of new
articles or by editing what is already there.

Eric, K3NA, did the work on this, and he has also come up with a new concept
(for the ham radio world, anyway) called Open Notebooks
<http://wiki.contesting.com/index.php/Category:Open_Notebooks>. These are
are wiki pages that record information about ongoing projects by contesters.
The term "projects" covers a wide range of territory, from day-to-day
details about constructing and maintaining a specific contest station to
complex research & development projects that aim to advance the state of the
art. Comments and suggestions are not only invited, but actively sought.
If you would like to share your current projects, or encourage others to
help you solve problems or find new solutions, this can be a very convenient
way, because the format can include graphics, audio recordings, and other
multimedia files.

Meanwhile, a growing number of articles is being added every day every day.
Today's crop includes revisions to the section on search and pounce
techniques, a new section on pileup techniques from the calling station's
perspective, and a new section on the use of older transceivers for
contesting, with what we hope is some good advice on good contest rigs that
won't break the bank. Have ideas in these or other areas? Join us and give
back your knowledge to ham radio contesters everywhere!

I can't begin to summarize all the information that is being added daily by
contesters world-wide - come check out the Table of Contents and see what I
mean.

Each year at Dayton the KCDXC runs a "pile up competition" in which contestants attempt to copy as many calls as possible out of a simulated pile up.

This year the competition was won by software. The winner over some world class Radiomen, by a margin of 20%, was "Skimmer".

Detail at http://www.kcdxclub.com/pileup2009.html

So much for those of us who routinely dismiss computers as not
approaching humans in its ability to copy CW in poor conditions.
Technology rolls on.

Amateur Radio Newsline(tm) Report 1659 - May 29 2009

Ladies and gentlemen, with some thank-you's to our generous listeners who support these weekly newscasts here's our Support Fund Administrator Andy Jarema, N6TCQ:

--

In the Merry Month of May of last year we heard via PayPal from Michael Scheliga, Daryl Stout; Scott Currier- Haverville, MA; Rory Shaffer- Roebling, NJ; Thomas Home- Takoma Park, MD; Murray Hunt- Odenton, MD, David Carter- Washington, D.C.; Jesse Lindley- Greensboro, NC; Robert McClintock, N3RZI & KB3PHI in Franckville, PA; Robert Harlan- Mansfield, OH; Robert Mallory- KD8HXT, North Canton, OH; Paul Vinoski- Fisher, WV; Doug Papciak- Tucker, GA; James Drenthe in Galesburg, MI, who is a regular contributor; Wayne Strickland- W9BBB, Chicago.

Also from Illinois, John Leonard- W9JBL in De Kalb; Joseph Kratky- KA9KBU in Hickory Hills; James Langsted- Golden, CO; Lee Dusbabek- WR7NV, Las Vegas, NV; David Billeci- WA6UHA, San Francisco.

Also from California, Russell Williams- W6OHM in Latrobe; Matt Sturtz- Broomfield ; Roy Hepp- Carpinteria; Frank Brand- Tujunga.

And finally, and through the magic of PayPal, Mitchell Wolfson- DJ0QN, Unterschleissheim, Germany. That was fun! Got to exercise my schprechen ze Deutch!

That's quite a list, but you have to remember that most of those contributions were on the order of $10-$20, and this was right after a major capital campaign.

It costs almost $1000 a month to gather the news and put these newscasts on the air. And right now, things are pretty grim. Please do what you can to keep these newscasts on the air by logging onto our website and going to our PayPal secure contribution link, or contacting us at our Arcadia support fund address given at the end of this newscast.

For now, I'm Andy Jarema, N6TCQ, and thank you.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1659 with a release date of Friday, May 29th, 2009 to follow in 5-4-3-2-1.

The following is a QST. The FCC tells AB2PP that it will not invoke PRB-1 to save his tower, three new ham radio cubesats are on-orbit and FCC rules enforcer Laura Smith speaks out on malicious interference. Find out the details on Amateur Radio Newsline(tm) report number 1659 coming your way right now.

(Billboard Cart Here)

** RADIO LAW: FCC AGAIN REFUSES TO INVOKE PRB-1 TO ASSIST YONKERS NY HAM

There has been another setback for Thomas R. Morrison, AB2PP. This, in his fight with the city of Yonkers, New York, to keep his tower and antenna. A tower that the city wants torn down. Henry Feinberg, K2SSQ, is here with the latest:

--

This is the third time Thomas Morrison, AB2PP, has sought assistance from the FCC in this matter. In 2006, he filed a request with the Commission, asking for a declaratory ruling regarding the tower but the FCC denied his request in January 2007. At that time the agency told Morrison that it would not intervene. It noted that PRB-1 permits the local authority to determine what constitutes a reasonable accommodation to a radio amateur based on what the city sees as its legitimate purposes, policies and concerns.

Morrison appealed again ib December 2008. On March 27 of this year the FCC notified him that it was again denying his reconsideration request concerning his antenna support. In that petition, Morrison again requested the Commission rule that the City of Yonkers did not provide reasonable accommodation in its building permit requirements as defined in PRB-1. But the FCC simply did not agree.

So Morrison tried again. In an e-mail dated this past April 15th he asked the FCC for reconsideration of its letter dated March 27th letter which declined to act on his request. This time Morrison asked the FCC find that the building permit requirements of the City of Yonkers do not comply with the Commission's policy regarding local regulation of amateur radio facilities.

But the FCC says it will not do that. It stated that it has already once said that PRB 1 does not cover his situation. Also that the fact that Yonkers had subsequently denied Morrison's request for a special use is not an appropriate matter for Commission involvement.

In this appeal Morreison had also claimed that he agreed that he would not to use the antenna until the City Planning Board has approved the structure. This, in order to settle the criminal case against him without incarceration, But he also said that that local authorities overstepped their jurisdiction by demanding this stipulation. As such he claimed that the city encroached upon the sole authority of the FCC to act in matters regarding radio transmission. Morrison claimed that this development warranted Commission action.

But the FCC appears to want no part of this case. Its reply to Morrison is short and quite to the point. We quote:

"The stipulation recites that it was agreed to by the parties. You indicate in your petition for reconsideration that you did not agree to this condition. If in fact you did not agree to it, you should raise the matter with the criminal court."

The bottom line is that the FCC will not will not come to Morrison's assistance because the agency does not see its intervention as a relevant issue in his particular case. This is because Yonkers is not depriving him of having an antenna and getting on the air, but just telling him that he cannot have the kind of tower and antenna system that he wants.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New Jersey.

--

The FCC's unofficial advice to AB2PP appears to at least suggest that he either fully comply with the city of Yonkers demands or to settle it in court. The complete text of the FCC dismissal order on Morisson's request is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-1123A1.txt (FCC)

HAM RADIO IN SPACE: THREE NEW MICRO CUBSATS LAUNCHED

Three new ham radio microsats have been launched and are now on-orbit. The three tiny birds are identified as PHARMASAT-1, HAWKSAT-I and POLYSAT CP6. All three were launched on Tuesday, May 19th from the NASA Wallops Flight Facility in Virginia.

PHARMASAT-1 is from Santa Clara University. Its transmitting on 437.465 MHz in AX.25 data protocol at 1200 bits per second. HAWKSAT-I was the work of the Hawk Institute for Space Sciences. Its on 437.345 MHz. Last but by no means least is POLYSAT CP6 sponsored by the California Polytechnic State University. Its on 437.365 MHz with 1200 bit per second data in AX.25.

Web reports indicate that good signals have been received from Pharmasat-1 and from Polysat CP6. (ANS)

**

RESTRUCTURING: NEW RADO REGS FOR HAMS IN PORTUGAL

Portugal has some new rules that its ham radio community must follow. For example, while establishing a communication an amateur must identify both station's call signs at the beginning and at the end of any transmission and at the end of a SQO session.

But that's not all. If the station is a mobile or out in the field, the amateur in control must identify each transmission with the station's call sign, followed by the word "mobile" or "portable." He also must transmit the present geographic location of the station in each transmission.

Visiting hams also have new rules to follow. Anytime a foreign amateur establish communications within the Portuguese territory under a "CEPT" license, the original station's call sign must be preceded by the proper regional prefix.

Approval of the new rules by Portugal's telecommunications regulator ANACOM took place on March 2nd but only became effective on June 1st. (CT1ETL)

**

RESTRUCTURING: SLOVAK STATIONS GAIN 4 METERS

Slovak stations have access to the pan-European or 70 MHz band. As of May first Slovak stations have privileges in the band segment from 70.250 to 70.350MHz with a maximum of 10 watts E-R-P. Only one caveat: Each Slovak station must apply for special permission to operate in the new 70 MHz. ham radio spectrum. (Southgate)

ENFORCEMENT: SOCAL HAM WARNED TO STAY OFF SAN DIEGO REPEATER

A California ham has been ordered by the FCC to stay off of a San Diego area repeater or face some harsh penalties from the FCC. Bruce Tennant, K6PZW, reports:

--

In her March 30th letter to Cory M. Herttua, N6HHT, of La Mesa, California, new FCC Special Counsel Laura Smith noted that the owner and trustee of the K6JSI system had requested, by letter dated February 25, 2009, that Herttua refrain from use of this repeater. Smith's letter claims that the written request was issued as a result of Herttua failure to follow operational rules set forth by the licensee and control operator of the repeater that he was obliged as a user to obey.

Smith's letter to N6HHT did not stipulate what licensee imposed rules Herttua was accused of violating. Only that that the Commission

expects him to abide by the license holders request that he stay off of the K6JSI repeater. Also that he obey any similar demands to cease operations on any other repeaters by any other repeater licensees, control operators or trustees.

Herttua was also told that his use of K6JSI repeater after receipt of the FCC letter could subject him to some severe penalties. This could include a fine or a modification proceeding to restrict the frequencies upon which he may operate. It could even lead an outright revocation proceeding initiated against his amateur radio license.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

You might remember our report last week from the Dayton Hamvention where FCC rules man Bill Cross, W3TN, said that a repeater licensee has an absolute obligation to control his machine even if it means limiting the use to certain operators. As such banning unwanted users is an accepted practice for a licensee to use to meet the requirements for positive system control. The full text of the FCC letter to Herttua can be read at http://www.fcc.gov/eb/AmateurActions/files/Hertt09_05_07_5109.html (FCC)

**

ENFORCEMENT: LAURA SMITH ON MALICIOUS INTERFERENCE

Now that FCC Special Counsel Laura Smith has settled into her new job, a lot of hams are wondering how she views the problem of malicious interference and how it will be handled under her aegis. At the recent Dayton Hamvention FCC Forum, she tackled that question:

--

Smith: "We get a lot of malicious interference complaints. In fact that' s the bulk of the complaints that I get.

"Unfortunately these are a little more difficult to handle because malicious interference is a gray area, meaning what is it? What does it mean? And its based on the facts of the case.

"What I have to do is to take the information from you and determine if those facts of those circumstances at that given time was malicious interference.

"If it was, we can do a phone call for a one-time deal. Or we can do e-mail or some kind of letter in each one of these.

"Remember, enforcement is all about facts and when you give me the facts, then I can go forward and work out what we are going to do about the problem."

--

Smith believes that most malicious interference complaints can be resolved. For the more egregious ones there are far more severe penalties that she can and will invoke. (ARNewsline(tm))

ENFORCEMENT: BRAZIL CRACKS DOWN ON SATELLITE PIRATES

Brazil, working with the U.S. intelligence has begun a crack down on pirate operators who have been using an abandoned United States military satellite system for their own personal use.

The FLTSATCOM which is an acronym for the Fleet Satellite Communications System was a constellation eight non-encrypted communications satellites launched between 1978 and 1989. These were replaced in the 1990's by a newer and more secure satellite system, but two of the old birds remain operational. This was discovered by pirate radio operators in Brazil about a half decade ago, but no action was taken until the U-S discovered the illegal operators and filed complaints to Brazil.

Now, Brazil has undertaken an enforcement campaign called "Operation Satellite" In it, Brazilian police use coordinates provided by the U.S. Department of Defense and confirmed by Brazil's telecommunications authority to raid locations of suspected satellite pirates.

Among those already caught and charged have been university professors, electricians, truckers and farmers. The suspects face up to four years and jail, but are more likely to be fined if convicted.

According to one article the abandoned birds were left operational in case they were needed in emergency situations. The growing amount of pirate activity from Brazil has made them unusable for that purpose. Its not known if the United States might simply de-orbit the remaining birds to put an end to the pirate operations. (Published reports)

** SAFETY: HAM KILLED IN TRAFFIC MISHAP A United Kingdom ham has been killed and another injured in a tragic road accident. On Sunday, May 24th, Ian Firby G7VCG and Peter Rushton G7PMZ, were involved in an collision that clamed Rushton's life and caused Firby to be rushed to a hospital by air ambulance. The accident took place on the M 61 motorway near the town of Bolton. A 28 year old man was arrested at the scene. He is currently in police custody on a charge of dangerous driving. Firby and Rushton are both members of the Oldham Amateur Radio Club. In a statement, club president Geoff Oliver, G0BJR, said that Rushton's death is a huge loss not only to the club but to him on a personal level as well. (Southgate) **

LISTENING NEWS: HISTORIC STATION LEAVES THE AIR

An AM-radio station synonymous with Northeastern Pennsylvania, is off the air and likely will not be back.

WARM spent the last 50 years broadcasting news, music and sports to the community most recently on 590 KHz. According to published reports. the station went dark in mid-April and has been silent ever since.

Sam Liguori who hosted a Saturday polka show. He said the station's transmitter had failed, describing it as a major technical problem that would cost a lot of money to repair. According to FCC rules, if the station fails to broadcast for 12 consecutive months, its license will be cancelled. (RW)

RADIO GEAR: NEW FIRMWARE FOR IV-7800 AVAILABLE FOR DOWNLOAD

IC-7800 owners, this one is for you. Revision 2.20 is a new firmware update for the IC-7800 on the English homepage of the Icom Inc. website. The firmware update will improved transmit function in sending transmit memory contents in operation in the RTTY and PSK mode when using an external keypad, an improvement in sending voice memory in SSB mode and CW memory keyer contents in the CW mode using external USB keyboard and programmable custom band-edge frequencies.

With the latter update installed, a user of the IC-7800 will hear a beep when tuning out of, or into the programmed Amateur Radio band. This is especially important to sight impaired or blind hams who will be able to be certain that they are transmitting inside on an appropriate frequency or band.

The firmware update is available to IC-7800 owners at www.icom.co.jp/world/support/download/firm/IC-7800/2_20/index.html (Icom, Southgate)

HAM TECHNOLOGY: VK3RTV ATV REPEATER GOING DIGITAL

An ambitious project to convert the Australian VK3RTV amateur television repeater to all digital operation is underway down-under. This to bring one of the worlds longest running fast scan amateur television relay devices into the digital age.

The VK3RTV A-T-V analog system was established in 1977 to service Melbourne area. The new and improved digital VK3RTV will soon be on air using the DVB-T transmission standard. DVB-T is a terrestrial version of the digital broadcasting standard and can be received on commonly used household Set Top Boxes and digital television sets in many parts of the world.

The transition of VK3RTV from analog to digital is being primarily funded by Amateur Radio Victoria. It has spent $3,300 on the project so far. The Wireless Institute of Australia has now donated $1000 to aid in the conversion process. (WIA)

**

RESTRUCTURING: UHF CB MAY EXPAND IN AUSTRALIA

The Australian Communications and Media Authority is raising the possibility that the nations current 40 channel UHF Citizens Band may be increased accommodate up to 60 channels. An expansion would require a reduction in the simplex channel bandwidth from 25kHz to 12.5kHz and a lifting slightly of the band's upper frequency limit.

The proposals require new transceivers programmed to automatically switch between 12.5kHz and 25kHz as required. However some 25 kHz channels would be retained for the existing eight repeater pairs , emergency pair as well as the 22 and 23 telemetry and tele-command channels.

The Australian UHF Citizens Band band began in the late 1970s. Ast that time the government's plan that it would be the only CB band in Australia and everyone would switch from 27MHz AM and SSB to UHF FM. Because of the popularity of 27 MHz C[-B worldwide and the low cost of A-M transceivers that conversion did not happen. (WIA News)

HAM RADIO IN SPACE: NEW VENUE FOR AMSAT UK SPACE COLLOQUIUM

AMSAT-UK has announced a change of venue for the 2009 Colloquium. The annual gathering will now take place at the Holiday Inn Hotel at Guildford, which is close to the University of Surrey.

The Colloquium will take place July 25th and 26th. Planners say that there will be presentations on all the latest amateur satellite happenings and developments.

Also on site will be the RSGB's demonstration vehicle GB4FUN. It will also be there to show its satellite operations capability.

Full details of booking arrangements can be found on the AMSAT UK web site. That's in cyberspace at www.uk.amsat.org. (AMSAT-UK)

**

HAM HAPPENINGS: INTERNATIONAL LIGHTSHIP AND LIGHTHOUSE WEEKEND

A total of 135 registrations have been received from 18 countries have already been received by the organizers of International Lightship & Lighthouse Weekend. Many more are expected before the event takes place on the weekend of August 15th and 16th.

Now in its 11th year this annual activation event run by the Ayr Radio Group of Scotland. It says that there was a record 406 registrations last year with the top countries being Australia and Germany.

For more information including guidelines, an online entry form and a list of entrants, visit the International Lightship & Lighthouse Weekend update website. Its on-line at www.illw.net. (VK3PC)

THAT FINAL ITEM: THANK YOU DARA

And finally this week, a very special thank you to those wonderful folks at the Dayton amateur Radio Association and the Dayton Hamvention for their ongoing support of these newscasts. And sometimes their support comes in a rather unexpected way. Our producer Bill Pasternak, WA6ITF, was just about to begin last Saturday's Ham Radio Town Meeting when he received a big surprise from DARA President Steve Coy, K8UD and past-President, Jim Simpson, WB8QZZ. Here's Steve Coy:

--

K8UD: "We want to recognize the fine work that Bill has been doing on Newsline. As President of the Dayton Amateur Radio Association it is my pleasure to offer you a $500 check to help keep Newsline going and continue on the excellent presentation that you have with that program.

"We try to give back to the ham radio community and we do appreciate your attendance today and we hope you will continue on for many many years in the future. And again, have a great Hamvention-"

WA6ITF: "Just let me say to DARA, to Steve and to Mr. Simpson over here -thank you and it will go to a worthy cause because this is what keeps the newscasts coming your way. Thank you very much. Thank you."

--

Our thanks to DARA and the Dayton Amateur Radio Association for their ongoing and generous support of Amateur Radio Newsline. And our thanks to all of you who also support our all volunteer efforts to bring you the news of ham radio each week. It's because of you that we feel what we do as volunteers is worthwhile. (ARNewsline)

==> FCC'S BILL CROSS: "BEHAVE YOURSELVES!"

Bill Cross, W3TN, a staff member in the FCC's Mobility Division
<http://wireless.fcc.gov/index.htm?job=md>, and Laura Smith, FCC Special
Counsel for Amateur Enforcement, spoke at the FCC Forum on Saturday, May 16
at the 2009 Dayton Hamvention. Cross opened by explaining just where Amateur
Radio falls in the FCC's bureaucracy: "In the Mobility Division [part of the
Wireless Telecommunications Bureau <http://wireless.fcc.gov/>], we handle the
day-to-day administration of the Amateur Service and some of the rulemaking
activities that affect Amateur Radio. The Division also has staff members in
our Gettysburg, Pennsylvania office. Our Gettysburg staff handles most of
your applications and the licensing matters and deals with the Universal
Licensing System, or ULS" <http://wireless.fcc.gov/uls/index.htm?job=home>.

Cross offered some general comments on the Commission and its priorities,
then went on to discuss topics that he said "keep coming up in questions we
```

receive in articles that appear on Web sites and in columns in newsletters and the like. I'm not going to spend a lot of time talking about Commission decisions that have been issued, because most of these have been reported on the ARRL or other Web sites."

Cross went on to say that he does hear from Riley Hollingsworth, who retired as Special Counsel for the Spectrum Enforcement Division in July 2008; Smith replaced Hollingsworth earlier this year. Saying he received an e-mail from Hollingsworth that asked his opinion whether he should get an amplifier or 260 feet of hardline, Cross said that was an easy question to answer: "Get both! Two hundred and sixty feet of hardline. Okay. Thirty feet through the house, 30 feet out to the tower and 200 feet straight up. That sounded pretty reasonable. But then I found out that what he was thinking about was 230 feet across the back yard and 30 feet up. So, I've still got some work to do there."

As for the FCC Administration, Cross said that "the relationships between the Commissioners are very collegial." Cross pointed out that earlier this year, President Obama nominated two people to fill Commissioner vacancies: Julius Genachowski for Chairman <http://www.arrl.org/news/stories/2009/03/03/10684/?nc=1> and Mignon Clyburn <http://www.arrl.org/news/stories/2009/04/30/10795/> to fill the seat held by Jonathan Adelstein. Adelstein has been nominated to head up the Rural Utilities Service, of the United States Department of Agriculture <http://www.arrl.org/news/stories/2009/03/23/10716/?nc=1>. "The last I read was that their confirmation hearings would be held after Memorial Day, and beyond that, we really don't know what's planned," Cross told the crowd. "So maybe by the end of the summer, sometime during the summer, the Commission will be back up to its complement of five Commissioners and we will have a new Chairman, too."

RACES

Cross said that he has been getting questions concerning RACES <http://en.wikipedia.org/wiki/RACES>, asking what plans the FCC has to rejuvenate the organization. "The questions have been from a couple of FEMA guys who also happen to be hams," he said. "Now, in RACES, stations are certified by a civil defense organization and persons who hold an FCC-issued Amateur Radio operators license are certified by that civil defense organization as enrolled in it. I know that the term 'civil defense organization' is way out-of-date -- 'emergency management agencies' is probably a more current term. But the terminology used in the rules reflects that RACES was created in the Cold War era when there was a concern that everyone would be ordered off the air."

Cross pointed out that RACES "seems to be used for local, state and regional events and it is administered by FEMA. The rules require that communications transmitted in RACES be approved by the organization that certified people and that they're enrolled with. Fundamentally, RACES is there to serve whatever purpose that the emergency management agency has for it. Because the emergency management agency decides whether it has a use for a RACES group, the rejuvenation, if it is even necessary, will have to come from the local

or state organizations. They will have to get people interested in joining their groups if they have a use for them. Some of the people I have talked to in different government agencies wonder why we still have this service, given the way that emergency communications are run and managed today."

Amateur Radio and Pecuniary Interests

A topic that keeps popping up, Cross said, is business use of Amateur Radio, specifically transmitting messages on behalf of an employer. "Section 97.113 <http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr97.113.pdf> answers this question straight on: 'No amateur station shall transmit communications for hire or for material compensation, direct or indirect, paid or promised, except as otherwise provided in these rules.' There are two exceptions. There are exceptions for teachers who are using Amateur Radio as the control operator of a station in an educational institution as part of a classroom thing and control operators of club stations in certain cases. A station is also not allowed to transmit communication in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. There is an exception to that rule that allows you to transmit communications that are commonly referred to as "swap nets," but eBay see
ms to have reduced the need for these nets. And you're not allowed to transmit communications on a regular basis which could reasonably be furnished through other radio services."

Cross said that Section 97.113 is in the rules for two reasons: It meets a statutory requirement and it is there to protect your frequencies from becoming the business radio alternative voice overflow, or "'BRAVO Service.' Because your spectrum is so valuable, if you let users such as businesses, TV stations, the National Weather Service or other users -- be they for-profit or non-profit -- use your frequencies to meet their communications needs, your frequencies will become their frequencies. All it takes is an allocation proceeding with the FCC, and your spectrum is gone. And you will be left whining about it in Internet chat rooms."

Cross pointed out the ARRL Chief Executive Officer David Sumner, K1ZZ, "had an editorial on this on April 1, 2009 [on the ARRL Web site and in the April 2009 edition of QST] ["It Seems to Us: Keeping the 'Amateur' in Amateur Radio," page 9]. That's probably not the best day to date something, but you should read it. And I have plagiarized from that greatly because it is very elegant and spot on" <http://www.arrl.org/news/features/2009/04/01/10668/>.

The bottom line, Cross said, is "that when any of us are on the air as amateurs in the ham bands, we are not pursuing financial gain for ourselves or our employers. The 'no pecuniary principle' has been reflected in the FCC regulations since 1928. It distinguishes us from commercial services. In 1993, the Commission, at your request, dropped the 'no business communications' language and simply prohibited communications on behalf of an amateur's employer or in which the amateur has a pecuniary interest. The Commission stated that any amateur-to-amateur communications is permitted unless specifically prohibited or unless transmitted for compensation or done for the pecuniary benefit for the station control operator or his or her

employer."

Cross said that it does not matter what type of technology -- be it SSB, digital, slow scan TV or CW -- is used to transmit that communications: "It boils down to a simple four part test that you, as the control operator of the station, must ask yourself before you cause the station to transmit a message. One, is the communications expressly prohibited in the rules? For instance, is it music, is it obscenity, something like that. Two, is the communications transmitted for compensation? Whether it's paid or compensation in some other way, such as, 'If you get this message to a friend of mine who's on a sailboat in the middle of nowhere, I'll pay your light bill.' Or, 'Get this message to someplace and I'll buy you a new radio.' That's indirect compensation. Three, does the control operator have a pecuniary interest in the communications? That is, could he or she benefit financially? Stock trades on ham radio benefit you financially. And four, does the control operator's employ
er have an interest in the communications? If the answer to each of these questions is 'no,' then the communications is acceptable with the caveat that it is not on a regular basis, one which could be furnished alternatively through other radio services."

There are limits to what an amateur can do on behalf of his or her employer, Cross said, as well as limits to the extent that Amateur Radio can be used for the purpose for which other radio services were created. "'No communications on behalf of an employer' means just that," he said. "There's no exception for the 15 minutes you're on break. There's no exception for 'Gee, it's the weekend,' or there's no exception because you want to do it. If it's your employer, you cannot transmit communications on their behalf. That is a commercial communications."

Public Service Communications

The last topic Cross addressed concerned public service communications. "There's no rule about public service communications as such in Part 97, because most of the messages you transmit that you think of as public service communications are allowed by Section 97.111 <http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr97.111.pdf>. Paragraph (a) authorizes an amateur station to transmit two-way communications including, among other things, exchanging messages with other stations in the Amateur Service and communications necessary to meet essential communications needs and to facilitate relief actions." Cross noted that most of these transmissions -- the essential communications needs and facilitating relief actions -- are two-way exchanges with messages with other amateur stations. "The rule also authorizes you to transmit one-way communications, such as transmissions necessary to make adjustments to the station -- these are your tests, your tones, tossing the carrier to s
ee what the SWR is, that sort of thing -- and brief transmissions necessary to establish two-way communications with other stations."

Cross said that the rules cover everything we do as Amateur Radio operators: "Ragchewing, DX, contests, DXpeditions, county hunting, tuning up, everything. Ninety-nine percent of our communications fall under the rules that are there."

Emergency communications, by their nature, involve an element of immediacy, immediate safety of property and life. "Reporting where damage is, what happened after a tornado goes through or where power lines are down, is certainly public service communications and it's allowed under 97.111, but it may not involve an immediate safety of life and property," Cross explained. "A bridge washed out, for example, may need a more immediate response than downed trees, and reporting that is already allowed as just two-way communications between stations. A car with occupants floating down a river is clearly an emergency situation. In cases like that, the rules already provide that at all times and on all frequencies, each control operator must give priority to stations providing emergency communications. I have never heard of a case where a ham station has come on a repeater or a frequency and said, 'I have an emergency message,' and someone said, 'Wait your turn.' That's not your style
."

Laura Smith

The Dayton Hamvention was one of the first events Smith has attended in her role as Special Counsel. Cross introduced Smith, explaining that he used to work for her and that she was "one of the best people that we possibly could get for this job, because before she came to the Wireless Bureau, she had worked in mass media. After she had been in the Wireless Bureau, Laura had been the president of a trade association in Washington. Many of the issues that come up with other entities using amateur spectrum are entities that are either in mass media services or in land-mobile services and they are basically lusting after your bands. So we are fortunate now that when someone calls up, Laura has this breadth of knowledge of not only what the amateur stuff is, but where [land-mobile and mass media services] actually really should belong. And she can counsel them very gently that they need to get licensed here and not, you know, where they think they are. This is something you don't
see. Believe it or not, this is a tremendous help to you."

He mentioned that Smith plans to stay in this position for the long haul: "So if you have any ideas about a short-timer or think you're going to get away with it, plan on about 15 years down the road. In the meantime, behave yourselves!"

Smith explained that when she took over the amateur enforcement position earlier this year, the job had changed a bit from when Hollingsworth was in the office. "This job used to be in the Spectrum Enforcement Division down in DC; it was a remote position in a DC office," she explained. "It is no longer in that Division. I am actually a Field Agent. I'm attached to the FCC Field Office, I'm in the Northeast Region and my supervisor is the Regional Director for the Northeast Region." She told the crowd that she has spent a large portion of her time going through all the files that had accumulated, about 430 cases, while the position was vacant.

She explained the different types of complaints her office receives, such as complaints dealing with criminal investigations, technical violations, harassment and language complaints, malicious interference complaints and unlicensed users.

Smith also handles RFI complaints. Saying that these complaints are "ultimately going to be the most troublesome," she explained that there are two kinds of RFI complaints. "The first type of RFI complaint I get are the ones where your neighbors are complaining about you. You guys are causing interference to their television or to their radios or their telephone. The Commission generally tells them if you are a licensed amateur operator operating in the parameters of your license, then the Part 15 device that you are causing interference to is subject to that interference, and the rules state that very clearly. We suggest that they either work with you or they get a filter; those are the two suggestions."

Smith, in cooperation with the ARRL Lab, also handles utility line interference complaints. "This one, you would think, would be easy to resolve -- the power line is causing interference, the utility will come out and fix it and everything will be fine. Not quite so easy," she explained. "Those of you that have been experiencing it for 3, 4, 5, 10, 12 years know that in fact, that is not what happens. What I am discovering is that the utilities quite simply don't know how to fix the problem. They can't identify the noise. What they will do is they will go out and will find 15 sources of noise. They will fix these 15 sources of noise and then they will come back to me with this detailed list of these 15 sources of noise that they have fixed. Yea! We're all done. No -- they haven't fixed your noise. So they don't quite understand the concept of 'Don't just run out and fix everything you see, that's irrelevant to the amateur.' The amateur wants you to fix their noise."

Smith described that the first step the utilities need to do is to go to the amateur's house and listen to the noise and determine exactly what they're hearing. "This way, when they fix it, you can ultimately figure out if you have in fact fixed their noise. I'm trying to figure out a way with the Lab as to how we can best tell the utilities that they really need to think about how their processes work and what we can do to educate them so they can get out and fix this."

Smith has also given utility companies time limits to fix the noise complaints. "I am telling them, 'If you go out and you can't fix it, every two weeks you have to report back to me in writing why you can't fix it.' Utilities are, generally speaking publicly traded companies, so what happens is that they have a Board of Directors that they answer to. Those people are not going to want them to waste time and energy writing this crazy woman in Gettysburg every two weeks a detailed report. And believe you me, if they miss their deadline, I call them and tell them 'You've missed your deadline. I need your report.' I have spoken to more heads of utilities in the last three weeks than I ever care to speak to again. They have no qualms about calling me, saying 'We can't meet the deadline.' And I explain to them that's fine, I'll just write up this nice little letter [saying] you can write your check to the federal government."

Smith suggested to the amateur community "that we as a collective -- you guys and me -- we can have a great relationship, we can do this the easy way. You guys can, in fact, follow the rules and remember that when you signed up to become an amateur, you actually committed to adhere to the Commission's

rules. I'm going to strongly suggest that you hold to that. If you don't we can do this the difficult way, and I am more than willing to do that if it comes down to it."

Questions and Answers

Cross and Smith then took questions from the audience. They concerned grandfathering Advanced class license holders to Extra class, enforcing Amateur Radio rules on stations originating outside the US, what type of internal review is required before a Notice of Apparent Liability is issued, keeping undesired hams off a repeater system, issues with D-STAR repeaters allowing Internet content to be carried on amateur frequencies and establishments that sell 10 meter radios disguised as 11 meter radios.

Smith also told the crowd why she has not yet become a licensed Amateur Radio operator: "My father-in-law is Richard Smith. He is the former Chief of the Field Operations Bureau. The Field Operations Bureau was the precursor to the Enforcement Bureau. When Dick started his career at the FCC, he worked in the LA Field Office as an engineer; one of the duties that he had while he was out there was to administer the Amateur Radio tests. His expertise just so happened to be in the Code. He is an incredible operator. And so when I decided to take this job, I did not want to run out and get my license before I took the job for a lot of reasons. Not the least of which is I felt it would be a sham -- I wasn't an amateur before I took the job, I didn't want you to think that I was selling you so short that I was going to run out and get my license to try and validate myself for this industry. Instead, I said that I would wait and take the exam later and become an amateur as I got to k

now the community. When I told the story to Dick and I said I was thinking about getting my license, he said to me, 'You will not get your license until you can pass the code part of the test.' Unfortunately, he followed that up with a caveat, which was 'I will be there to oversee the administration of the test to determine whether or not you are competent and qualified to be an amateur.' So I have to learn code -- I obviously do not know it." Smith said she plans on learning CW this summer, along with her six year old daughter.

Cross closed the forum, quipping, "For those of you who are concerned, I made sure she went by the Vibroplex booth, and we also stopped by the Begali booth. So she got to see what the minimum requirements are for proper CW."

An audio feed of the FCC forum can be found on the ARRL Web site <http://www.arrl.org/news/files/FCC-Forum-2009.mp3>.

==> ARRL DONORS GATHER IN DAYTON

More than 100 ARRL donors gathered to mix and mingle at the ARRL's Eighth Annual Donor Reception on Thursday, May 14, just prior to the 2009 ARRL National Convention and Dayton Hamvention. Hosted by the ARRL as a way to thank those who donated $1000 or more to the League in 2008, the reception -- held at the Meadowbrook Country Club -- featured a sumptuous buffet and a speech by new IARU President Tim Ellam, VE6SH/G4HUA <http://www.arrl.org/news/stories/2009/02/11/10645/?nc=1>.

"It is always great fun to see many of our good friends at the Annual Donor Reception," said ARRL Chief Development Officer Mary Hobart, K1MMH. "I have a chance to catch up with the wonderful group of people share our dedication to ARRL and Amateur Radio. In the eight years that we've been holding this event, its popularity grows and we get to meet new donors, and in some cases, their spouses and children. We look forward to hosting this evening and having an opportunity to thank key donors in person for all they do to support ARRL."

One of the highlights of the evening was the introduction of three new members of the ARRL's Maxim Society <http://www.arrl.org/development/maxim.html>: Frank Donovan, W3LPL, of Glenwood, Maryland; Tom Hutton, N3ZZ, of Cupertino, California, and Tom Porter, W8KYZ, of Avon Lake, Ohio. With the addition of these three amateurs, there are now 61 members of the Maxim Society. Maxim Society donors are those amateurs whose lifetime giving exceeds $10,000.

This elite group embodies the spirit of ARRL co-founder Hiram Percy Maxim, W1AW, who, in 1914, envisioned an organization dedicated to encouraging and developing Amateur Radio as a source of enjoyment for radio operators and as a public service to communities nationwide. Maxim Society donors nurture the legacy and leadership exhibited by "The Old Man" so many years ago. Their infectious enthusiasm and deep commitment to Amateur Radio and ARRL are evidence of their abiding loyalty. Their willingness to contribute generously to the work of ARRL is evidence of a remarkable dedication to the vision of Hiram Percy Maxim.

After a welcome from ARRL President Joel Harrison, W5ZN, ARRL CEO David Sumner, K1ZZ, introduced Ellam, whose remarks focused on the impact that the ARRL had on his introduction to Amateur Radio as a young man in Canada, telling the story of how the ARRL Handbook played a pivotal role in his effort to secure his first Amateur Radio license in 1976.

"One of the textbooks for the Amateur Radio class run by my local club was the 1976 version of the ARRL Handbook," Ellam told the group. "The club also paid for associate membership in the ARRL, Canadian Division, which had the benefit of allowing students to receive QST. When it came time to write my exam, I decided to be a rebel. Rather than using all of the approved schematics to memorize and draw for the exam, I made one change: I drew a simple key klix filter that I had memorized from the ARRL Handbook.

"Weeks later, my exam results came in the mail. I had failed. The Canadian government decided the ARRL version of the key klix filter would not work north of the border and gave me a zero. This meant I failed the entire test, with no possibility of retaking it for several months. My hopes of becoming an amateur were crushed. So off to the local office of the Department of Communications I marched, with my trusty ARRL Handbook under my arm. After a spirited debate, the person manning the desk at the office allowed me to speak to an examiner and review my results with him. He argued I had failed to draw a correct key klix filter. I showed him the one in the ARRL Handbook. He refused to accept it! I pushed the issue. We went to see the district director, who was an amateur. He took one look at the schematic and said, "This is from the ARRL Handbook -- it must be right!" and overruled the

inspector and passed me on the spot.

"I was so impressed by the power of the Handbook that I have maintained my ARRL membership to this day. By doing that, I of course received QST and through that, I became aware of the work of the ARRL and IARU."

Ellam said that it was "an honor to speak at the ARRL Donor Reception in front of so many supporters of ARRL and the Amateur Service. The IARU appreciates the support of the ARRL as the International Secretariat."

For more information on giving opportunities, please visit the ARRL Development Office Web site <http://www.arrl.org/development/>.

==> FRANK BAUER, KA3HDO, RECEIVES ARRL PRESIDENT'S AWARD

On Saturday, May 16 during the forum featuring Richard Garriott, W5KWQ, at the Dayton Hamvention, ARRL President Joel Harrison, W5ZN, presented former Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss/oindex.htm> International Chairman Frank Bauer, KA3HDO, with the ARRL President's Award. Bauer, who stepped down from ARISS <http://www.arrl.org/news/stories/2009/03/25/10724/> and Radio Amateur Satellite Corporation's (AMSAT) <http://www.amsat.org/> duties this past March, served as ARISS Program Leader and ARISS International Working Group Chair. Since 1991, he served as AMSAT Vice President for Human Spaceflight Programs.

The ARRL Board of Directors voted to create the President's Award in 2003. The President's Award is to go to an ARRL member or members who "have shown long-term dedication to the goals and objectives of ARRL and Amateur Radio," and who have gone the extra mile to support individual League programs and goals. Nominations for the award come from directors and are approved by the ARRL President and the Executive Committee.

Under Bauer's leadership, Amateur Radio activities have been on human spaceflight vehicles, including NASA-sponsored ham radio activities on the shuttle, Space Station Mir and the ISS. Starting in 1983, Bauer led the Goddard Amateur Radio Club team that provided around-the clock space shuttle retransmissions from the WA3NAN club station. These retransmissions provided the international ham radio community up-to-the-minute information during the flight of Owen Garriott, W5LFL, on STS-9 <http://www.nasa.gov/mission_pages/shuttle/shuttlemissions/archives/sts-9.html> and subsequent SAREX flights. In the days prior to the Internet, these real-time bulletins and frequent orbital element updates could only be obtained through Amateur Radio.

"For well over a decade, I have been fortunate to be part of a group that has been leading international teams together to focus on Amateur Radio on the ISS," Bauer told the ARRL. "As AMSAT Vice President for Human Spaceflight since 1991, I have really worked to get this international team to work as one, focusing on Amateur Radio. It is very critical to get all the space agency partners to have a vested interest in making sure we do Amateur Radio right on the ISS. We need to keep the partnership we have with our international team in good stead."

Bauer said that through the years, the AMSAT and ARISS teams have developed a substantial amount of hardware and software systems on the ISS. "We have trained astronauts and cosmonauts to use the equipment that we have on many modules," he said. "We have two systems on the Russian module with five antennas, and two L/S band antennas on Columbus <http://www.arrl.org/news/stories/2008/02/14/101/>, with new ones going up later this year -- all of this is being done by a volunteer team. Both AMSAT and ARISS have done a tremendous job promoting Amateur Radio, allowing hams to talk with astronauts and encouraging children to pursue technical careers."

Bauer said that when a new crew of astronauts comes on board at NASA, ARISS gives them a briefing, familiarizing them with the ARISS program and Amateur Radio in general. "We are very fortunate that all of the US astronauts of late have received their Amateur Radio licenses," he said. "We emphasize to them how important it is to get their license early in their training, because as their training progresses, they get caught up in everything and it is hard to find the time to study and take the exam. From an astronaut perspective, I think it's a little easier for them to pass the test, since they know most of the theory stuff, but they do need to be trained on the rules and regulations that govern the Amateur Radio Service."

ARRL President Joel Harrison, W5ZN, said he was very honored to present Bauer with his award. "I have had the pleasurable opportunity first hand to see Frank work with the international community to ensure Amateur Radio became and remained a part of manned space flight. Frank's ability to organize all parties to consensus regarding key issues was vital to the program. The amateur community owes a great deal of gratitude to Frank for his many years of dedication to service and education."

Bauer told the ARRL that he was "proud and humbled" to receive the ARRL President's Award. "It was a total surprise, I did not expect any of this. I want to thank the ARRL leadership for this very prestigious award. And thanks to the entire ARISS volunteer team for their outstanding support and diligence in inspiring our next generation of explorers through Amateur Radio contacts between school students and crew members on the ISS."

ARRL ARISS Program Manager Rosalie White, K1STO, who, together with Bauer, served as the USA delegates to ARISS, told the ARRL she was "very happy" for her colleague and friend: "Over the years, Frank continuously gave more to the ARISS project than anyone could ever expect of one person. He put his heart and soul into ARISS because he believed in its objectives: To introduce teachers and youth to Amateur Radio and the foundation of radio science, plus provide students with a way via radio to get involved in science, technology, engineering and math."

Bauer is currently the Chief Engineer for the Exploration Systems Mission Directorate at NASA. This directorate is developing the next generation human spaceflight vehicles that will take NASA to the International Space Station (ISS) and then to the Moon, Mars and beyond. He is also providing some backup support to the Space Operations Chief Engineer who supports the space shuttle and ISS programs.

==> ARRL FIELD DAY TIPS AND TECHNIQUES THAT EVERYONE CAN USE

Many amateurs treat ARRL Field Day (June 27-28) as a contest, even though it isn't one <http://www.arrl.org/fieldday>. But if your idea of Field Day fun is to go for the highest score possible, ARRL Contest Branch Manager Sean Kutzko, KX9X, offered the following suggestions at the ARRL Field Day Forum at the 2009 Dayton Hamvention.

1) You will get many more stations in your log by calling CQ than by tuning the dial and answering CQs; however, if you're calling CQ and not getting any replies, keep calling. Most major contesters call CQ for several minutes at a time before giving up. Giving up after three or four CQs is giving up too soon.

2) Keep your CQs short and to the point: "CQ Field Day, CQ Field Day, Whiskey-One-Alfa-Whiskey, Field Day." Wait about 5 seconds between CQs -- this gives stations enough time to answer you.

3) Use standard phonetics. "Cute" phonetics don't always get through and they can confuse newer operators.

4) When working a station, you should give your exchange information only once and keep it simple. "Whiskey-One-Alfa-Whiskey, copy three Foxtrot Connecticut, QSL?" If they didn't get all of the exchange, they will ask for a repeat.

5) If you are running a pileup: Once you have pulled a call out of the pileup, give your exchange information first. Here's an example: "Whiskey-One-Alfa-Whiskey, copy 3F Connecticut, QSL?" Don't ask for the calling station's information first -- this will reduce any sense of rhythm and timing in the pileup.

6) If you get a pileup of stations and can't make out an entire call, listen for one letter and ask for it specifically: "The station with Delta only, go ahead."

7) When you get the other station's information, keep your acknowledgment simple. "QSL, thanks, QRZ Field Day from Whiskey-One-Alfa-Whiskey."

8) Find a comfortable pace for you and maintain that pace. You will tire quickly if you are screaming into the microphone or trying to work stations too quickly. This leads to inefficiency.

9) Use a headset with a boom microphone and a foot switch -- this frees up your hands to log QSOs. Writing or typing with a mike in your hand slows you down.

10) Go for as many bonus points as you possibly can. Numerous opportunities exist, from copying the Field Day message to sending traffic to using natural power for QSOs.

These tips should help maximize your score on Field Day. Remember: No matter how you choose to enjoy Field Day, maximize your fun, however you define it.

==> THE ARRL TRIPLE PLAY AWARD: A WORLDWIDE EVENT!

The ARRL Triple Play Award (TPA) -- introduced January 1, 2009 <http://www.arrl.org/news/stories/2008/12/05/10490/> -- is available to all amateurs worldwide who confirm QSOs with each of the 50 states on voice, CW and digital modes via Logbook of the World (LoTW) <http://www.arrl.org/lotw>. Not even six months since its inception, the Triple Play Award has been awarded to 269 hams around the world.

The first recipient was Dave Strout, W2YC, of Williamstown, New Jersey. Strout achieved this milestone on January 15. The very next day, Jeff Wheeler, W7JW, of Plymouth, Michigan, received TPA #2.

But the TPA is not limited to US hams. On February 11, Scotland's Cris Henderson, GM4FAM, was the first ham outside the US to receive the TPA award, #158. Jose Vicente Pinto, YV6BTF, of Venezuela, received TPA #163, making him the first South American amateur to achieve the award. Hams in many countries, such as Brazil, France, Belgium, Spain, Germany, Poland, Colombia and Mexico, have claimed the Triple Play Award.

"An side effect of the Triple Play Award has been the increased issuance of basic Worked All States (WAS) <http://www.arrl.org/awards/was/> awards for Phone, CW, Digital and Basic modes," said ARRL Awards Manager Bill Moore, NC1L. "Comments on the Triple Play Award have been very positive, reflecting a renewed interest in the challenge -- and of course, the fun! -- that ARRL awards continue to provide. The Triple Play Award is the first of what we hope to be many more LoTW-only awards in the future."

The Triple Play Award is a one-time award -- once you have made the required 150 confirmed contacts via LoTW, you're done. "Even so," ARRL Chief Executive Officer David Sumner, K1ZZ, said, "there are many possible variations on the theme. You can try to be the first (or at least the first on your block) or you can set your own pace. Think it's too easy? Limit yourself to QRP while operating your favorite mode (or all three). Maybe you prefer to be the quarry; it will quickly emerge which states are the most difficult to find, offering opportunities to earn the gratitude of your mates by activating the ones you can get to with your portable or mobile rig."

If you haven't yet begun trying for the Triple Play Award, why not start? There are still quite a few State QSO Parties this year, and the DX contest season starts in a few months. According to Sumner, contesters are among the most loyal devotees of LoTW. Once you begin, you might find that the pursuit can be terribly addictive.

The rules for the Triple Play Award state that two-way communication must be established on the amateur bands with each state on each mode (the District of Columbia may be counted for Maryland). There is no minimum signal report required. Contacts must be made from the same location, or from locations no two of which are more than 50 miles apart. Club station applicants must include their club name and call sign of the club station or trustee on their application. The Triple Play Award will be issued on sequentially numbered certificates, starting with #1, as determined by the time stamp of the electronic application as submitted via LoTW. There are no endorsements for this award.

Contacts made through repeater devices or any other power relay method may not be used for WAS confirmation (a separate WAS award is available for satellite contacts). All stations contacted must be land stations; contacts with ships, anchored or otherwise, and aircraft, cannot be counted. The only exception to this rule is permanently docked exhibition ships (such as the Queen Mary) and other historic ships will be considered land based.

Triple Play Award applicants who reside in the US must be ARRL members to be eligible to receive the award. DX stations do not need to be ARRL members. All bands -- with the exception of 60 meters -- may be used in pursuit of the Triple Play Award.

==> HAM RADIO DIY AT MAKER FAIRE

Ham radio demonstrations and displays are in the works for Maker Faire, May 30-31, the world's largest do-it-yourself (DIY) festival <http://www.makerfaire.com/>. This year, the festival will take place at the San Mateo County Expo Center in California. According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R -- who is attending the fair along with dozens of San Francisco Bay Area hams -- this annual event showcases the country's best innovations in science and technology, engineering, arts and crafts, food and music. "It's no surprise that such an event has captured the attention of the ham radio community. Do-it-yourself, or DIY, has always been a signature of the Amateur Radio Service," he said.

Inderbitzen said that this year's Maker Faire theme -- ReMake America: Building a Sustainable Future -- is based on President Obama's call to action to participate in a new era of DIY. "The Amateur Radio community fits this mold perfectly," Inderbitzen said. "Hams represent the very best of service-to-country and community. We're both doers and makers of things."

A large exhibit area at Maker Faire is planned to help spotlight ham radio. The Foothills Amateur Radio Society is the primary sponsor of the Amateur Radio exhibit, but volunteers from many participating ham radio clubs and other related groups -- including the Silicon Valley Amateur Television Group, the Palo Alto Amateur Radio Association, the Mad Scientist Amateur Radio Club, the Kings Mountain Amateur Radio Club, the Burlingame Red Cross, BAERS Ham Cram and Ham Radio Outlet are going to be there, as well. The coordinating effort is being lead by ARRL Santa Clara Valley Assistant Section Manager Michael Pechner, KI6QNZ, of Palo Alto.

Inderbitzen said that the exhibit will include equipment demonstrations, a basic radio station setup intended for beginners, home brew project displays, an emergency communications van, live amateur television demonstrations and ham radio and radio control planes, as well as a demonstration pairing APRS <http://www.aprs.net/> and model rocketry. Club representatives will be on hand to discuss public service opportunities and to assist newcomers with information for getting started in Amateur Radio. Teachers and students who attend the Maker Faire on May 29 will get to see ham radio educational demonstrations on the day before the official Faire opening.

Started in California in 2006, Maker Faire is held annually in San Mateo, California and Austin, Texas. Maker Faire is supported by Make Magazine,

craftzine.com and O'Reilly Media. Additional details about ham radio at Maker Faire, including special event operating frequencies, are posted on the Foothills Amateur Radio Society's Web site <http://www.fars.k6ya.org/>.

For more information on the 2008 Maker Faire in Austin, Texas, check out this article by ARRL Contributing Editor H. Ward Silver, N0AX <http://www.arrl.org/news/features/2008/06/21/10175/>.

==>SOLAR UPDATE

Tad "The marvel of Earth and Sun" Cook, K7RA, this week reports: Sunspot numbers for May 21 through 27 were 0, 0, 13, 0, 0, 0 and 0, with a mean of 1.9. The 10.7 cm flux was 71.8, 72.1, 70.4, 69.2, 68.9, 68.1 and 66.7, with a mean of 69.6. The estimated planetary A indices were 5, 5, 4, 4, 3, 4 and 3 with a mean of 4. The estimated mid-latitude A indices were 2, 4, 3, 4, 1, 2 and 2 with a mean of 2.6. Conditions have been quiet, with many days showing zeros for the planetary K index. The US Air Force and NOAA predict a planetary A index of 5 until June 3-5 when it goes to 12, then 8 for the following two days. Solar flux is predicted at 68 until June 5, when it goes to 70, then 71 June 6, and 72 for June 7-14. Perhaps we will see sunspots return during this period. Geophysical Institute Prague has a slightly different view for geomagnetic activity, predicting quiet conditions for May 29 to June 1, quiet to unsettled June 2-3 and active on June 4. For more information concerni
ng radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Ernest Henley's "Between the Dusk of a Summer Night" <http://www.poemhunter.com/poem/between-the-dusk-of-a-summer-night/>.

==>IN BRIEF:

* This Week on the Radio: This week, the CQ WW WPX Contest (CW) and Kids Roundup are May 30-31. Look for the ARCI Hootowl Sprint on May 31 (local time). Next week, the SEANET Contest, IARU Region 1 Field Day and the Alabama QSO Party are all June 6-7. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 7, 2009 for these online course sessions that begin on Friday, June 19, 2009: Antenna Modeling and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day

during the course period, completing lessons and activities at times
convenient for their personal schedule. Mentors assist students by answering
questions, reviewing assignments and activities, as well as providing helpful
feedback. Interaction with mentors is conducted through e-mail; there is no
appointed time the student must be present -- allowing complete flexibility
for the student
to work when and where it is convenient. To learn more, visit the CCE Course Listing page
<http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator
<cce@arrl.org>.

* 2009 ARRL Photo Contest Ends Soon: There's still time -- but not much -- to
enter your high-resolution digital image in the 2009 ARRL Photo Contest.
Entries must be received by May 31 via e-mail <upfront@arrl.org> (subject
line: 2009 Photo Contest). Details appear on page 20 of the April 2009 issue
of QST.

* ARRL DXCC Desk Approves Saudi Operation: ARRL DXCC Manager Bill Moore,
NC1L, reports that the current 7Z1CQ operation in Saudi Arabia has been
approved for DXCC credit. "If you had cards that were recently rejected for
this operation, please send an e-mail <dxcc@arrl.org> to the ARRL DXCC Desk
and you will be placed on the list for update," Moore said. ï¿½

==========
The ARRL Letter is published Fridays, 50 times each year, by the American
Radio Relay League: ARRL--the national association for Amateur Radio, 225
Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259;
<http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news
of interest to active radio amateurs. Visit the ARRL Web site
<http://www.arrl.org> for the latest Amateur Radio news and news updates. The
ARRL Web site <http://www.arrl.org/> also offers informative features and
columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly
"ham radio newscast" compiled and edited from The ARRL Letter. It's also
available as a podcast from our Web site.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from
ARRL HQ. To subscribe, unsubscribe or change your address for e-mail
delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW

bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Hello Hans,

Yes, it has become a digital world indeed. One cannot help but marvel at

PSK, with a bandwidth of not much more than 30 Hertz, and its' ability to

pull solid copy out of what is almost entirely noise.

Sigh ...

Best regards from Rochester, NY
Jim AA2QA

The whole point of radiosport is a competition between skilled radiomen.
Sort of loses its appeal when the competition gets down to "my computer c
an
beat your computer".

True, which is why contests that are intended to test human skill vs. human skill are usually very carefully structured as to the rules, and/or have both "assisted" and "non-assisted" categories. Which is why you will not see motorcycles competing in the Tour de France, for example. There are also very specific rules as to the makeup of a bicycle in professional racing (e.g., tubular frame in a "double-diamond" shape with no aero monocoque or "foil" designs, spoked wheels of equal sizes with no solid disc wheels, must be over a certain weight to avoid the temptation to engineer dangerous "stupid-light" designs, etc.) so that everyone is completing on an equal footing, and the race is arguably a contest of comparative human skill only.

However, contests that allow human vs. machine are still interesting as a counterpoint against those who would argue that, "a machine will never beat a human at X." Those that assert such things will find their arguments resting on shifting sands as technology can and often will catch up. Not too long ago, there were those that would argue that machines could not reliably copy Morse Code. A friend of mine in computers who is an officer of a long-standing local computer club to which we both belong was in the Coast Guard circa early 70's. One of his friends, a radio technician, was working in his spare time on

digital circuitry (flip/flops, etc.) to try and machine copy Morse code. He got it to the point where the circuitry could reliably copy some letters, but not others, and changes to the circuitry to copy those other letters undid the ability to copy the previous ones. He eventually gave up on it. My friend, circa-2000, asked me a serious question if technology had caught up to the point that Morse Code could be reliably machine copied. I told him that it had, with the earliest example that I was aware of being the Kantronics Kam, which came out back in about 1987. The 1987 rebuttal would be, "Sure, but let's see it copy in noise or a contest pileup." The argument would be reasonable, but would now be overcome by events here in 2009 with Skimmer.

Looking at the contest results shows the Skimmer rapidly moving up the rankings in the two years in which it competed (2008 and 2009), doubling its performance between those two years.

There is a persistent and growing "noise level" of sentiment in Radiosport circles which insists that assistance like packet clusters, Skimmer, etc., are now so commonplace that the baseline station should be free to compete using those technologies.

It is becoming more and more difficult to retain a contesting category which pits unassisted "radioman against radioman". When that playing space goes away, then the ethos of "a boy and his radio" is forever lost.

Like everything else, it will probably go in cycles. At some point, there will develop a group who will specialize in the "old way" just like there are still sailboat races.

There's a song about all this - "John Henry".

In almost everything that humans do, it will eventually be possible to build a machine that does it better/faster. If it hasn't been done already, it's probably possible to build a chess-playing computer that no human can defeat. There are already aircraft which no human pilot can fly directly. IBM is supposedly working on a computer to play "Jeopardy".

None of this is new. There was a fiction story in QST called "The Man Who Broke The Bank" about a ham who built a totally automated Sweepstakes station, which proceeded to make an unbeatable score. It appeared in the issue for May, 1953.

This afternoon I briefly watched some Indy-car and NASCAR racing. It occurred to me that it's probably possible to build cars that would beat anything now racing, if the current rules of those sports were changed. But because such cars would fundamentally change the sport, (and probably be even more dangerous), the rules limit things like engine displacement, fuel tank size, etc.

Well, that's just wrong, IMHO. Some of those technologies essentially turn a station into a multiop entry.

That doesn't mean they shouldn't be allowed, just that they belong in a different category.

> It is becoming more and more difficult to retain
> a contesting category which

I agree 100%. The problem is, where should the line be drawn?

Since I became a ham I've seen many new technologies gain acceptance in radiosport. The first was the use of transceivers, which was already underway back in the 1960s. Then came no-tuneup rigs, almost totally

automated CW sending, computer logging/duping, multiple frequency memories, instant bandchanging, packet clusters, bandscopes and much more.

Not only have such things appeared, but their cost and complexity have been reduced to the point that they became the rule rather than the exception.

Perhaps we need a new category - call it "Ironman" for lack of a better term.

The requirements would be simple:

- No automated sending or receiving; iambic paddles are the limit. - No assistance from spotting nets, packet clusters, database lookups, etc. - No computer logging or duping, paper logs only. - One rig at a time, no more than 2 VFOs. No memories.

Why not?

Depends on what you want to measure.

Your ironman idea measures specific skills -- receiving cw by ear,
sending using a keyer, using a paper dupe sheet.

An open category measures the competitor's skill in using whatever is
the current "state of the art" in terms of technology. At some point it
may measure nothing at all, when it's possible to crank up a computer
program and just let it work the contest while you snooze in an
airchair. But right now it measures skills -- just a different set of
skills.

Both of these are reasonable things to measure, but as you pointed out,
it doesn't make much sense to combine them into one category. Sort of
like apples and oranges -- they're both good, but different.

I'm the op who came in 3rd place. (behind Skimmer and Yuri VE3DZ)

It should be noted Skimmer is designed to copy a *subset* of Morse --
specifically, callsigns. If I were to send the contents of this post to
Skimmer, all that would come out is "W9WI" and "VE3DZ".

That design goal dovetails nicely with the KCDX Pileup Contest. Not so
much so if you were trying to actually copy messages.

That said, I'm sure the day is not far away when Skimmer or something
similar is able to do a similar job at copying general Morse.

==========

I'm surprised contesters are as up in arms about Skimmer as they are.
Personally I think Skimmer should be perfectly permissible for all
categories as long as all Skimmer equipment (RF, PC, etc.) meets the
500m-circle (or similar) rule. At least you're getting callsigns
through the use of your own equipment.

Which is more than I can say for Super Check Partial with databases
downloaded from the Internet.

Congratulations. That is very impressive.

As an aside, you might want to check your Thunderbird configuration for reading news. It doesn't seem to be putting a From: header in your articles, thus the odd attribution above.

> It should be noted Skimmer is designed to copy a *subset* of Morse --
> specifically, callsigns. If I were to send the contents of this post to
> Skimmer, all that would come out is "W9WI" and "VE3DZ".

It seems to me that it's not possible to copy a subset of Morse. Before you can decide that a specific characters string is a callsign, you have to decode it. I suppose that it could look for numbers and then decode the rest of the "word", but even then it still has to examine each character to discover that it's not a number.

> That design goal dovetails nicely with the KCDX Pileup Contest. Not so
> much so if you were trying to actually copy messages.

Yes, there is rather a large gap between picking callsigns out of a pileup and actually being able to complete a contest QSO. The biggest challenge would be identifying that same station again in the pileup to copy the contest exchange.

> That said, I'm sure the day is not far away when Skimmer or something
> similar is able to do a similar job at copying general Morse.

Even in its current state, Skimmer seems to be a useful adjunct for contest operating. It is, however, just an adjunct, sort of like a narrow filter, and requires operator skill to use.

I do wonder how far we are from a computer program that can operate the contest by itself. Much closer than ever before, but still quite a ways away. One of the issues is the motivation to create such a program. There's PR value in building a program to beat chess experts . . . not so much for one to operate ham radio contests.

I see your point, but I see it in the same way as categories based on power output or other such factors. Trying to create something approximating a level playing field is getting much more complex.

> Which is more than I can say for Super Check Partial with databases
> downloaded from the Internet.

Sorry, but I don't see any real difference. In both cases it's computer cycles taking the place of human brain power.

I'm not opposed to Skimmer in competition with other Skimmer equipped competitors. I think it's a great demonstration of Amateur innovation, and represents the kind of thing we ought to encourage in order to showcase our hobby and it's potential to "contribute to the state of the art".

My opposition derives from my strongly held view that there always ought to remain one playing space in contesting where the radioman skills of discovering and copying the exchange are the key to winning.

That my contesting heroes like VE3DZ, W9WI, N2NC, KL9A, VE3XB, K1VR, N9RV, KE3Q, K1DG, etc were all defeated by Skimmer validates my position that it is out of place in the "radioman vs radioman" playing space.

For "phone" and "morse" competitions, my line for the "Basic Radioman"
category would be drawn to require all "exchange information" (ie, call
sign, serial, zone, or whatever other data is required to score a valid
exchange) be discovered and copied off the air aurally by the operator.

This would allow a competitor to engineer and build their station using
whatever RF transmitting/receiving suite they could purchase or invent. (I
hold that radiosport contesting is one of the predominate "technology
drivers" in Amateur Radio, and that station/equipment/antenna engineering
benefits greatly from this sub-hobby.)

It would allow them to use whatever labor saving devices appropriate to keep
their logs (ie., computer logkeeping).

It would not allow "discovery" technologies like spotting networks or
Skimmer.

It would not allow software that "auto-populates" any portion of the
required exchange. (ie., deduce from the call sign and automatically
populate the zone in CQWW)

It would not allow pre-built database lookups, like "super-check-partial" to
validate or "fill" callsigns copied off the air.

You're correct in that Skimmer needs to "know" all the alphabetic characters. And even in it's most elementary mode it has some rules which it uses to determine "this is a call sign" (ie., follows "de" or "CQ CQ" and corresponds to known callsign formats.)

In it's most "picky" mode, ("paranoid mode"), it compares what it copies against a database of known-good contester call signs (the infamous "super check partial" database), thus advantaging itself against all except an autistic savant human.

In the KCDXC competition it was further advantaged (as were the humans) to know that EVERTHING it hears is a call sign.

To our valued listeners,

I response to a number of requests we have uploaded the entire 71 minute Dayton Hamvention FCC Forum hosted by Bill Cross, W3TN and Laura Smith as an MP3 audio file to our Amateur Radio Newsline website front page.

You can download it by going to http://www.arnewsline.org, then scroll down to "Click HERE to download the entire 70 minute Dayton Hamvention FCC Forum" and follow your normal download and save procedure for your web browser.

This recording was made using a Senheisser microphone at the speakers podium connected to an M-Audio Microtrack II professional digital audio recorder. Audio processing and conversion to MP3 was accomplished using Goldwave Editor Ver 5.52. We believe you will find the audio quality superior to various other recordings of this important forum available at various websites across cyberspace.

We hope that you will find it of value.

Bill Pasternak, WA6ITF Producer ARNewsline, Inc.

Most of these computer-vs.-human exhibitions have involved a playing field almost laughingly tilted toward the computer, followed by pronouncements by the computer's inventor that it is only a matter of time before these machines surpass humans in a particular task, not unlike those we've read in this thread.

For example, take the 1997 case of IBM's Deep Blue vs. Garry Kasparov, the famous chess match "won" by Deep Blue. In that exhibition, the human, Kasparov, entered the scene with absolutely no advance knowledge of the computer's thought processes, strengths, weaknesses, tendencies, or anything else that might have simulated the normal preparation that Kasparov was used to prior to a chess match with a human. In fact, when Kasparov explicitly requested that he be allowed to study games that Deep Blue had played, IBM refused.

Deep Blue, on the other hand, was fed every game every played by Kasparov (and 700,000 other games) and took a few months to digest the information and learn everything possible (possible for Deep Blue, that is) about its opponent.

In addition, IBM modified Deep Blue's computer program between games to fix weaknesses that Kasparov had exposed during the match. These were not merely bug fixes but changes to the fundamental logic.

I wouldn't call this exactly fair, but anyway the match was played and we all know the result, including the triumphal pronouncements that followed on the part of the IBM team.

We may still see a computer surpass the best amateur radio contesters in our lifetimes, but for the moment, the "victories" claimed by these machines

have been under conditions too narrowly defined to threaten the experts among us. Only a little more work before they become useful tools, but replacing the operator altogether and competing at the world-class level? Still a long way away.

How do you go about enforcing that?

There has always been a certain element in our ranks that
feel "Win at any cost" is appropriate.

All of the above are valid techniques for working a contest.
That some people don't have access or the skill to use them
shouldn't mean the contest has to be designed for the lowest
common denominator.

It would be nice if that question didn't need to be asked.

> There has always been a certain element in our ranks that
> feel "Win at any cost" is appropriate.

That doesn't mean that we should throw up our hands and abandon rules. People cheat, not just in ham radio, but elsewhere. Sometimes they get caught; sometimes they just have to live with themselves.

> All of the above are valid techniques for working a contest.
> That some people don't have access or the skill to use them
> shouldn't mean the contest has to be designed for the lowest
> common denominator.

For some people, it's not "access to" or "skill to use", but instead a simple desire to see how well they can do on their own. After all, if all that we wanted to do was use the latest technology, we wouldn't be fiddling around with ham radio at all; we would just pick up our cell phones.

What's being suggested is establishing different categories to level the playing field a bit. You're absolutely right that many of the techniques under discussion are standard operating procedure these days, and it would be silly to refuse to acknowledge them as a part of the toolkit of today's operator. But if someone wants to pit their standalone wetware against other folks' wetware, that's just as reasonable as someone who wants to pit their skill at using every bit of technology available against other folks' similar skill.

Different strokes for different folks. Sure it takes skill to use computer-assisted operating techniques, but it takes skill to NOT use

them too. Both camps should be able to compare their respective skills in a contest.

I haven't heard anyone seriously suggesting that we ban any of those
technologies from contesting, nor that we design "the contest" for the
lowest common denominator.

What some of us ARE suggesting (more like demanding, I suppose!) is that the
major contests (CQWW, SS, ARRL DX, etc.) continue to have one category which
emphasizes what, for lack of a better term, I call "radioman skills".

Hi all,

I have a couple of Icom 2m & 70cm transceivers (IC-V82 & U82) that I've had for two or three years, which came with NiCd battery packs. While these are still usable, they don't last long and so I've recently replaced them with Li-Ion batteries which are much higher capacity and don't require cycling as NiCd packs do.

What my memory fails me on is what is the best way to store NiCd batteries so that I can use them as spares if need be..? Do they like to be stored in a fully charged or discharged state or somewhere in between..?

Nickel Metal Hydride cells are more direct replacements. Li-Ion are very
different.

NiCads should be kept charged up with a light trickle charge in a cool
place. They will probably self-discharge and go to waste.

Hi Jim,

Thanks for your reply in this thread. I assume that you are referring
to Hans Brakob, K0HB, as the Master Chief. Yes, many of us in amateur
radio and on the newsgroups honor his service, both to his country and
to the ARRL, and also value his contributions to these forums. But we
also enjoy rebutting and elaborating on his ideas, too, and hope that he
will take it in the spirit that it is intended. This thread has been
very interesting and relevant.

I agree with Hans that contests need to be carefully structured with
regard to which types of assistance are appropriate in order to still
measure human performance and skill. Otherwise, they wind up being just
machine pitted against machine. As an aside, I noted that machine
vs. human or machine vs. machine can be useful to know where the
state-of-the-art is, and what is still in the realm of human skill.
Whether all human skills can be eventually emulated by machine, or only
some and in very specialized contexts, remains to be seen, and is an
interesting field of research, called Artificial Intelligence (AI). AI
has certainly had an interesting history of glittering promises and
ambitious implementation schedules that turned out be a little more
nuanced and stretched out than first imagined. But there have also been
advances in solving challenges that some would insist a machine would
never overcome.

I'm pretty sure that Hans would agree that some assistive technologies
are appropriate, some are not, and there is still room in amateur radio
contesting for some challenges that are mostly about human performance
and skill.

Amateur radio contests are generally structured as "trust, but verify."
Sanity checks on contest entries, as well as for operating awards,
include checking submitted logs against one another (computer automation
helps with this) and verifying logs for internal consistency. For
example, if you claim 1 transmitter, how were you able to make 2, or 3,
simultaneous QSO's? In the case of 160 meters, I understand that the
ARRL runs a propagation path modeling program to confirm that each of
the contacts were possible. Some things are a little harder to enforce,
like proving that someone made a contact as a result of a spotter
network, or just happened upon the pileup from tuning around. As you
note, sometimes they get caught, either from cross-checking, or just
that "people talk." And unless one is a complete sociopath, cheating
can be very unsatisfying in the end.

This competition was not "tilted" to favor the robot. The competition has
been staged in pretty much the same format for many years (since 1981) at
Dayton, and only in the past two sessions was the Skimmer robot a player.
Last year it came in 67th place. This year it won.

Amateur Radio Newsline(tm) Report 1660 - June 5 2009

Ladies and gentlemen, with some thank you's to folks who kept Newsline in operation last sumer, hers our support fund administrator Andy Jarema, N6TCQ:

--

In June we heard from the Raleigh, NC Amateur Radio Society; The Muncie, IN Area ARC, WB9HXG; Regular contributors Joseph Bartzi, Jr., KC8DKF of Columbus, OH William Walters, WA2IBM in San Jose ; Stephen Perluss and the South Orange Amateur Radio Association in Mission Viejo.

Via PayPal there was Jim Keller, Peter Grace and Oscar Alonso of Robert Holton- Holland, MI, Martek Mississippi amd Biloxi, MS.

Samuel Woodham- Gulfport; Mark Joseph- KC9DUU in Champaign, IL ; Jarno de Haan- PA3DMI in the Neatherlands.

In the month of July including our regular contributors, we heard from the Catalina Amateur Repeater Association, AA6DP.

Via PayPal there was Taylor Valuations- Desta, FL; Adalberto Castelo- Newark, DE; Jack Haas- KB6ZBS, right here in nearby Glendora.

Many of you have written us notes or emails saying how valuable you think our service is: bringing you amateur radio news as it happens, instead of several months later in print. Just DX-peditions alone are often last-minute. You get it here, and you get it weekly.

You need to help keep these broadcasts on the air. Please write to us at our Newsline Support Fund address in Arcadia, CA, given at the end of this broadcast, or use our easy and secure PayPal donation link on our website: arnewsline.org.

I'm Andy Jarema, N6TCQ, and thank you.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1660 with a release date of Friday, June 5th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Brazil calls on its hams to help find a missing airliner, India sends hams to provide communications after a cyclone hits, an all clear on 40 meters following an Earthquake in Honduras and Ireland tells its hams that their licenses will last a

lifetime. Find out the details on Amateur Radio Newsline(tm) report number 1660 coming your way right now.

RESCUE RADIO: BRAZILLIAN HAMS HELP IN SEARCH FOR MISSNG ARLINER

Brazilian amateur radio operators were part of the search effort after Air France fight 447 disappeared enroute from Rio de Janeiro to Paris on June 1st. The Airbus A-330 passenger jet was over the Atlantic when automated systems radioed a series of technical difficulties with the aircraft before all contact with it was lost. Bill Pasternak, WA6ITF, is on our Newsroom with the latest:

--

Air France Flight 447 carried 216 passengers and a crew of 12. An airline spokesman said that shortly before the A-330 disappeared the plane sent several automatic messages reporting electrical and pressurization problems.

Andrew Sampaio, PY0FF, is one of the hams called to take part in the search. He says that shortly after contact with the plane was lost, messages were sent via amateur radio to vessels sailing the region of its last known position. These exchanges asked for any information on the disappearance of the aircraft. They also requested that ships be on the lookout for any sign of the plane.

On Tuesday, June 2nd Brazilian military reconnaissance aircraft found a 3 mile path of wreckage in the Atlantic Ocean some 400 miles from the Brazilian archipelago of Fernando de Noronha. This, the airline says confirms that Flight 447 had crashed in the sea. Ham Radio assistance in the search for Air France 447 has reportedly now been discontinued.

That's all we know right now. For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, following this story from Los Angeles.

--

At airtime its not known how many Brazilian hams were mobilized to assist in the search for the ill-fated Air France flight. (PS8RF, Southgate, other news sources)

**

RESCUE RADIO: INDIA'S NIAR SENDS RESCUE RADIO OPRATORS TO CYCLONE DEVISTATED REGION

A three-member team of communicators from India's National Institute of Amateur Radio has been dispatched to assist in disaster relief efforts in the city of Kolkata. This, following a government request for two way communications in the wake of Cyclone Aila..

The team of emergency trained hams arrived in the city with radio equipment on June 1st to help the state government in relief work. They were quickly requested to set up radio communications in the flood affected areas of the north and south Parganas area.

Ram Mohan, VU2MYH,is a National Institute of Amateur Radio director. He says that his organization had received a letter from the north Parganas district magistrate's office. It asked that hams and two-way radio equipment be sent to the flood-affected areas of the district to help them in conducting relief and rescue work.

VU2MYH added thatalthough more than a week has passed since the storm Aila hit, there was still speculation as to the extent of the damage that the storm and flooding had caused. As such, damage assessment in the Parganas area is needed very quickly. How long the team from the National Institute of Amateur Radio will be on site is at this moment not known. (Times of India)

RESCUE RADIO: AN ALL CLEAR ON 7.090

If you were staying away from 7 point 090 MHz to avoid interfering with Earthquake related emergency communications to Honduras, word that the frequency is now clear. Dr. Cesar Pio Santos, HR2P, is the IARU Region 2 Emergency Communications Coordinator. He says that 7 point 090 is no longer likely to be used for emergency communications in connection with the quakes aftermath. Dr. Santos also thanked all amateurs who refrained from using the frequency for their cooperation. (Southgate)

**

RESTRUCTURING: 40 METER EXPANSION IN SOUTH AFRICA COMES CLOSER

Expansion of the 40 meter band in South Africa band has come another step closer. This, after the board of the Independent Communications Authority of South Africa approves the revised radio regulations for publication in the Government Gazette.

A spokesperson for the telecommunications regulator says that he expects that the revised regulations will be published this week or next. According to the South Africa Radio League a special Boland Amateur Radio Club contest which will be held on the first Sunday after the new regulations have been published to celebrate. (SARL)

**

RESTRUCTURING: IRELAND GOES LIFETIME LICENSING

Ireland is issuing its hams lifetime licenses. Most licensees in Ireland by now have received letters from the regulator ComReg informing them that the lifetime licenses which will begin to be issued this month with an effective date of June 1st.

These letters reportedly came as a surprise to all as the documentation published by ComReg about the lifetime license was in the context of Experimenter Licenses. There was no discussion between ComReg and the Irish Radio Transmitters Society on this matter nor was there any indication of an intention to change to Amateur Licenses despite a meeting between the two back on February 12th at which time the possibility of a future lifetime license was discussed.

According to the Irish Radio Transmitters Society, a meeting on May 16th showed that of the nations major ham radio clubs only two were totally opposed to the idea. The others agreed that on balance the change was at worst neutral and at best beneficial.

At the conclusion of the discussion the consensus was that a letter should be sent to ComReg expressing disappointment at the lack of consultation or even notification of the change. It should also point out that all of the frequency bands in the European Common Allocations Table and ComReg's Radio Frequency Plan for Ireland which are allocated to the Amateur Service should be automatically made available under the new Amateur Radio lifetime licenses. This would result in considerable extra spectrum in the microwave region. The letter would also request ComReg to publish on its website the definition of Amateur Radio as contained in the ITU Radio Regulations. This is because that terminology highlights the self training and technical investigations aspects of amateur radio. (IRTS)

RESCUE RADIO: ALABAMA TO HOLD ARES FM SIMPLEX TEST

The Alabama Amateur Radio Emergency Service will once again conduct an FM Simplex Exercise. One designed to encourage members to forget repeaters for an afternoon and test their range on FM simplex.

This will be a two-hour exercise on Saturday, June 13th starting at 4:00 PM and running until 6:00 PM Central time and held during the ARRL June VHF QSO Contest. This to allow ARES volunteers the opportunity to contact more distant VHF contest stations, many of whom run high power and gain antennas.

During the event, stations will exchange call signs and grid squares. Last year's event, some ARES volunteers were able to make contacts over 200 miles away.

The frequencies that will be used are 52.525 MHz on 6 meters, 146.55, 146.58 and 147.555 MHz on 2. Also being used will be 223.5 MHz on 1 and 1/4 meters and 446.0 MHz on 70 Centimeters.

Other regions might want to consider such tests. This, so as to be prepared in case a disaster takes all the local repeaters QRT. (VHF Reflector)

**

RADIO LAW: CANADIAN TOWN VOTES AGAINST HAM RADIO ANTENNA

Residents of the town of Gordon Head, Saanich, Canada have won round one in their fight to keep a local ham from re-installing a tower that his father had on the same property for many years. This, as the Saanich councilors voted to oppose the ham-radio installation even after Mayor Frank Leonard told them that radio communications is the responsibility of the Canadian federal government.

Ken Jones, VE7BLN, who wants to rebuild the tower is a volunteer with the Saanich Emergency Program. This is an organization dedicated to maintaining communications during a catastrophic event like an earthquake. Jones says that all he is trying to rebuild a tower used by his father until about 1984.

But his decision has lead to outrage among some of his neighbors who call the tower an ugly structure that they do not want next door or where they can see it from their own yards. They took their case before the council that voted to back them and deny the tower a permit.

But the battle is far from over. This is because that nations telecommunications agency Industry Canada has the final say on the 15-metre high antenna support structure. Jim Laursen, who is the Manager of Spectrum Operations for Industry Canada, told the city councilors that Jones's tower height falls within national standards. Laursen explained that this is a nationwide compromise reached after much consultation and study.

Laursen added this note that may be ringing in the ears of the Saanrich Councelors. He said -- and we quote: "It is something that people are going to have to put up with coast to coast."

Translated into simple English it means that Industry Canada really has the final word on whether or not Jones tower can go up. Depending on whether or not Industry Canada overrides the town council this hearing could be just the first step in what could turn out to be a long and drawn out legal battle in the Canadian courts. (ARNewsline(tm) adapted from Canada.com, Canada Times Colonist, eHam.net)

ENFORCEMENT: YOU CAN'T OPERATE THERE

The FCC has sent a Warning Notice to . George Fuhrer, Jr., KC6JXM, of Torrance, California telling him that he cannot operate on 3 point 875

MHz with a Technician class license.

According to an April 29th letter from FCC rules enforcer Laura Smith, Fuhrer was allegedly heard on that frequency back on March 29th. Smith's letter to KC6JXM notes that under the terms of his Technician Class license, that he is not authorized to use that frequency.

Smith then warns Fuhrer that that this unauthorized operation of his station must cease immediately. She tells him that continued operation could lead to enforcement action hat could include a fine, suspension of his operator privileges, or his license being revoked. Smith also notes that it could jeopardize any attempts for him to obtain an upgraded amateur radio license. (FCC)

**

ENFORCEMMENT: YOU NEED A HAM LICENSE TO OPERATE 2 METERS

Also receiving a Warning Letter from Smith is Andrew Macrae of Bozeman, Montana. In it, Smith notes that at multiple times in the last several months he has made radio transmissions in the 2 meter amateur band, even though he does not hold an Amateur service license.

Smith tells Macrae that operation of radio transmitting equipment without a valid FCC authorization is a violation of the Communications Act As such that it could bring with it some severe penalties. These include a substantial fine of up to $10,000 and seizure of the radio equipment being used. It could also lead to criminal sanctions including imprisonment.

Smith gave Macrae 10 days from the April 30th date of her letter to him to respond to her office. That date is now past. (FCC)

**

ENFORCEMENT: PROPOSED $7000 FINE FOR SELLING NON CERTIFIED 24 GHZ GEER

The FCC has issued a Issued a $7000 monetary forfeiture to Orvac Electronics, Inc., Fullerton, California. This, for marketing non-certified 2.4 GHz wireless video transmitters and wireless cameras that the agency considers to be intentional radiators.

The proposed fine is the result of a November 22, 2006, inspection of Orvac's retail store. That's where an FCC agent claims to have observed several models of uncertified wireless cameras and stand alone video transmitters on display and for sale.

Wireless video cameras and other short range 2.4 GHz video transmitters are classified as intentional radiators under the Commission's rules. As such they must be certified and labeled with an FCC I.D. number pursuant to the Commission's Rules before being offered for sale within the United States and its possessions. (CGC, FCC)

**

RADIO RECORDS: SA HAMS CLAIM 4 METER SSB METEOR SCATTER RECORD

A pair of South African hams are claiming the first ever SSB phone meteor scatter record for the 4 meter band. Andre Botes, ZS2ACP, of Port Elizabeth and Paul Smit, ZS6NK, in Polokwane say that they made the contact on May 6th at about 06:00 local lime on 70.200 MHz.

According to Smit, it took about 25 minutes to complete the phone contact with 5 by 5 signal reports both ways. He says that they were first listening on F-S-K 441 when they noticed some massive bursts of up to 8 seconds. This says Smit prompted them to try a contact on phone which occurred during the radio peak of the Eta-Aquarids meteor shower.

The 4 meter band which used to be exclusive to the United Kingdom is fast gaining favor across Europe and in some nations in the Southern hemisphere. Unfortunately for hams in most of I-T-U Region 2, those frequencies at 70 MHz are assigned to other services and will not likely be available to amateur radio anytime in the foreseeable future. Hams in the United States and Canada have long attempted crossband contacts with Europe by transmitting in the 6 meter band and listening on 4 meters and have met with some success. (SARL, ARNewsline(tm))

THE CHANGING OF THE GUARD: MOHAMMED BALBISI JY4MB - SK

If you visited the Dayton Hamvention during the 1980's and early 1990's you might remember a rather friendly ham from Jordan with the callsign JY4MB. His name was Mohammed Balbisi and he came to Dayton fairly regularly to represent the Royal Jordanian Amateur Radio Society and His Majesty, the late King Hussein, JY1.

Now, we are saddened to report that JY4MB, became a Silent Key late last year. His passing was first mentioned in an article in the June issue of CQ Magazine by Stewart Gillmor, W1FK. We contacted Stew and he told us that he learned of the death of JY4MB in late 2008 on a trip to Jordan. He pegs the date as early December as he was there from the 20th to the 25th and had been told that Mohammed had become a Silent Key about three weeks earlier.

JY4MB was one of the true unsung heroes of amateur radio and the hobby never had a greater champion. As those who knew him will tell you, he lived the ham radio and shared his love of it with everyone he met. His broad smile and gentle demeanor made him a favorite among DX'ers and non-DX'ers alike. Because of this he will be missed by his many friends worldwide. (Info from W1FK)

**

HAM RADIO IN SPACE: AO-7 EXPERIENCING ECLIPSES

Turning to ham radio news from space, word that the AO-7 ham radio bird is once again experiencing short eclipses each orbit. This is preventing the 24 hour timer from switching modes. AO-7 has seems to favor Mode U/V almost exclusively during these periods. (AMSAT)

**

HAM RADIO IN SPACE: AO-51 TO BE DUAL FIELD DAY REPEATER

AMSAT says that the Oscar 51 ham radio satellite will be configured for Field Day. The bird will have dual FM repeaters with one operating on 1268.700 and 435.150 with the other on 145.920 and 435.300 MHz. No PL tone is required.

Please note that the 435.150 downlink is left hand circular polarized, and the 435.300 transmitter is right hand circular polarized. This configuration will be available for the week preceding Field Day, through the Field Day weekend. That's June 22nd to the 28th. (ANS)

**

EMERGING TECHNOLOGY: BEER WASTEWATER CONVERTED TO ELECTRICITY

>From the Newsline science page word than an innovative joint project between Australia's University of Queensland and Foster's Brewing to turn beer wastewater into electricity has won a $140,000 grant. This, from the Queensland Government's Sustainable Energy Innovation Fund.

A research fellow explained that the new technology worked by creating a microbial fuel cell, which feeds continuously on the organic materials found in the brewery wastewater, turning it into electrical power. The process also produces clean water and renewable non-polluting carbon dioxide.

The team from the University of Queensland Advanced Wastewater Management Center was one of six presented with the funding by Lindy Nelson-Carr who is the Minister for Environment. The presentation took place at Foster's Yatala brewery.

One last thought. If successful. this project may eventually bring new meaning to the words going out for an 807. (Science Daily)

WORLDBEAT: RADIO AND TV MARTI SEE SHARP CUTS

Since its inception many years ago, we have reported on the ups and downs of broadcast services Radio and TV Martï¿½. That's the U-S based propaganda sstations that beam broadcasts to Cuba which are routinely jammed by the Cuban government.

Now, according to news reports, Radio and Television Marti will lay off 20 percent of their workforce in a shake-up aimed at retooling the struggling stations. Thjis, in the face of a steep federal budget cuts that provide $2 point 4 million dollars less than last year..

The U.S.-funded broadcasts, aimed at breaking the information blockade on the island, will change formats in response to the proposed budget cut. Radio Martï¿½ will go to an all news format, and TV Martï¿½ will have a five-minute news update every half hour, with other programming filling the time between them.

The final goal is to eliminate 35 jobs at the combined Marti broadcasting facility while at the same time producing a faster and

more pointed newscast. (RW)

**

ON THE AIR: CELEBRATING 50 YEARS OF TV IN BULGARIA

On the bands, listen out for special event station LZ50BNT to be active through December 31st. This in celebration of 50th anniversary of Bulgarian National Television. Operations will be on all bands and modes. A special QSL card will be sent to all stations who send their QSL via LZ1HA, either direct or by the Bureau. (OPDX)

**

ON THE AIR: SPECIAL EGYPTIAN LIGHTHOUSE OPERATION

SU1SK, and several other Egyptian operators will be active as SU8LH. This as the first Egyptian Lighthouse DXpedition on Ras El-Bar Island from August 1st to the 9th. Look for SU8LH to participate in the special International Lighthouse-Lightship Week event during this operation with activity on the High Frequency bands, as well as 6 meters using SSB and CW. QSL via SU1SK. (Southgate)

**

DX

In D-X, word that 9M6DXX and 9M6EVA, are celebrating their 25th Silver Wedding anniversary with a trip to the South Pacific. 9M6DXX will be active in SSB on 40, 20 and 17 meters with some operation possible on 15 as well. QSLs via M0URX, direct, via bureau or Logbook to the World.

KP2YL and KP2HC will be back on St. Croix through June 30th. Listen for them using CW and SSB on 160 through 6 meters. June is 6 meter DX season in the Caribbean, and Brian will be monitoring that band. QSL direct only via the addressees on QRZ.com.

And don't send QSL's for OD5GR to K5FI for two reasons. First, K5FI says hes not a QSL manager for any station, anywhere. More important, its looks as if OD5GR is actually an unlicensed station, so don't hold your breath waiting to get a confirmation from him.

Keep watch for HB9OAB satellite DXpedition to Morocco as CN2AB between June 27 and July 20. Franco says he favors operation via VO-52. QSL using e-QSL or via the bureau to HB9OAB.

Lastly, F5MCC ,and possibly TK5XN have been reported as active from Corsica. QSL's for F5MCC portable TK go via his home call and TK5XN via F2YT either direct or through the bureau.

(From various DX news sources)

**

THAT FINAL ITEM: DIGITAL DELIVERY TO REPLACE FILM

And finally this week, get ready for a new communications experience. That of three dimensional digital movies coming to a big screen near you. Amateur Radio Newsline's Fred Vobbe, W8HDU, has the details:

--

Five Hollywood studios have agreed to help pay for a part of the estimated $1 billion cost to introduce digital theater projection technology on about 20,000 movie screens in North America. The rollout across the United States and Canada, covering about half of all screens in the two nations will cost of about $70,0000 per theater screen.

Adding digital equipment is the critical first step in the technological upgrade to being able to show 3-D movies. According to The Walt Disney Company, more than twenty 3-D films are set to hit theaters through 2010, but only 873 locations in the U.S. and Canada, with a total 1,264 3three dimensional projection systems, are currently available to show them.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU.

--

Movies in 3-D were a novelty in the 1950's when audiences had to endure poor quality red and blue lens glasses to see them. Now with modern digital technology they may become commonplace and expected when you venture out to see something on the silver screen. (FutureTech)

==> HIGH SPEED TELEGRAPHY ON THE WORLD STAGE

The October 1936 issue of QST reported on the first official "Amateur
Code Speed Contest" ever held. Eugene A. Hubbell, W9ERU, took home the
silver trophy with his wining speed of 52.2 words per minute. Held at
the ARRL Central Division Convention that year, the contest required
operators to decipher plain language text for two minute intervals that
ranged in speed from 25 to 52.7 words per minute. "Only bona-fide
amateurs, holding at least an amateur operator's license, were eligible"
to compete in the contest, the article stated
<http://p1k.arrl.org/cgi-bin/topdf.cgi?id=18072&pub=qst>.
```

Fast forward to 1995. Competitors from 15 countries on three continents traveled to Siofok, Hungary to show off their CW operating skills in the first IARU High Speed Telegraphy (HST) World Championship. According to Barry Kutner, W2UP, HST has long been considered a sport in Europe, especially Eastern Europe, similar to chess or an Olympic sport. Kutner was the sole US representative at the 2005 HST World Championship in Macedonia. In 2009, he is leading a team of seven this September to Obzor, Bulgaria for the Ninth High Speed Telegraphy IARU World Championship <http://www.hst2009.eu/>.

Kutner said that most of the participating IARU Member-Societies hold a national competition in their country, seeking members to field and sponsor a team to the World Championship. "In some of the eastern European countries, where they take this very seriously, there are team and/or individual coaches, too," he said. Competitors must be licensed Amateur Radio operators, except entrants in the younger categories may be SWLs. The IARU HST World Championships follow rules set forth by the IARU Region 1 High Speed Telegraphy Working Group <http://www.darc.de/referate/dx/archives/hstrules.pdf>.

In the US, Kutner said those who wish to participate in the World Championship do so at their own expense. "In past years, there has either been one -- myself in 2005 and Ilya Kleyman in 2007 -- or no US participants," he told the ARRL. "This year, we have a team!"

The US team consists of shortwave listener Brana Kleyman (category A, women 16 and younger); Kody Low, KB3RUP, and Cal Darula, K0DXC (category B, men 16 and younger); Ilya Kleyman, KE7OPG, and Ken Low, NV1P (category H, men age 40-49), and Gary Schmidt, W5ZL, and Kutner (Category I, men 50 and older). "The 2 OM categories are full," Kutner said. "But we are always looking for younger hams, especially young ladies!" There are nine categories, and each country can only send two competitors per category, for a maximum of 18 competitors.

There are three main competitive events at HST meets: Transmitting, receiving and receiving Amateur Radio call signs via RUFZxp <http://www.rufzxp.net/>; the sending and receiving portions of the competition are referred to as the Radioamateur Practicing Tests (RPT). There is also a pileup competition.

In the RPT, random letters and numbers are sent via Morse code -- five characters at a time -- at a high speed. Separate competitions are held for the reception of only the 26 letters of the Latin alphabet, only the 10 Arabic numerals or a mixed content of letters, numbers and some punctuation symbols. Competitors may choose to record the text by hand on paper or by typing on a computer keyboard. The competition starts with one minute of transmission sent at an initial speed defined for the entry category (usually 50 letters per minute for juniors and 80 letters per minute for the other age categories). After each test, the competitors' copy is judged for errors. Subsequent tests are each conducted at an increased speed until no competitor remains who can copy the text without excessive error.

The transmission tests require competitors to send five character groups in Morse code as fast as possible. Competitors send a printed message of five character groups at a specific speed that is judged for its accuracy by a panel of referees. Like the receiving tests, there are separate competitions for sending five character groups of only letters, only numbers or a mixed content of letters, numbers and some punctuation symbols.

Kutner noted that 100 letters per minute is equivalent to 25 words per minute and 100 numbers per minute is equal to 36 words per minute. The mixed category of 100 letters, numbers and punctuation is equal to 29 words per minute.

The Amateur Radio Call Sign Receiving Test uses a software program called RufzXP that generates a score for each competitor. Rufz is the abbreviation of the German word Rufzeichen-Horen that means "listening of call signs." In RufzXP, competitors listen to an Amateur Radio call sign sent in Morse code and must enter that call sign with the computer keyboard. If the competitor types in the call sign correctly, their score improves, and the speed at which the program sends subsequent call signs increases. If the competitor types in the call sign incorrectly, the score is penalized and the speed decreases. Only one call sign is sent at a time and the event continues for a fixed number of call signs (usually 50). Competitors can choose the initial speed at which the program sends the Morse code and the winner is the competitor with the highest generated score.

There is also a Pileup Trainer Test that simulates a pileup situation on the air -- numerous stations attempt to establish two-way contact with one particular station at the same time. This competition uses a software program called MorseRunner <http://www.dxatlas.com/MorseRunner/>. In this test, more than one amateur radio call sign is sent at a time via Morse code that is generated at different audio frequencies and speeds, timed to overlap each other. Competitors must record as many of the call signs as they can during a fixed period of time. They may choose to do this either by recording the call signs by hand on paper or by typing them in with a computer keyboard. The winner is the competitor with the most correctly recorded call signs.

Kutner said that each US team member practices on an individual basis, using both on-the-air and computer generated CW. As the team gears up for Bulgaria, "we are in frequent contact via e-mail, exchanging tips and ideas," he said.

HST has definitely come a long way since 1936 when Hubbell dazzled the crowds with 52.2 words per minute; competitors at the IARU HST World Championships consistently have speeds of more than 500 characters per minute -- 100 words per minute. While it's too late to join the 2009 US team, it's not too early to think about upcoming events. If you are able to copy and/or send CW at dizzying speeds, why not think about attending the next IARU HST World Championship? For more information on HST events, contact Kutner via e-mail <w2up@arrl.net>.

==> CHANGES TO ARRL VHF/UHF CONTEST RULES NOW IN PLACE

The League's Programs and Services Committee has approved recommendations made by the ARRL's VHF-UHF Advisory Committee (VUAC) <http://www.arrl.org/contests/vuac.html> to change two rules in the ARRL's VHF/UHF contest program. These changes are in effect immediately, and include the 2009 June VHF QSO Party, scheduled for June 13-15 <http://www.arrl.org/contests/rules/2009/june-vhf.html>.

The first change concerns the Limited Rover category. The ARRL Programs and Services Committee accepted the VUAC's proposal that Limited Rovers may now compete on only the four lowest frequency bands available for any given contest. For the January, June and September VHF Contests, this means 6 and 2 meters, as well as 222 and 432 MHz. For the August UHF Contest, this means 222, 432 and 902 MHz and 1.2 GHz. QSOs on other bands can be made by Limited Rovers, but they will not count toward the Limited Rover's score and will be considered a checklog. "We have already applied changes to the log-checking software that will adjust the Limited Rover's QSOs above the lowest four bands to zero-point QSOs," said ARRL Contest Branch Manager Sean Kutzko, KX9X.

The second change concerns the ARRL UHF Contest <http://www.arrl.org/contests/rules/2009/uhf.html>. For the first time, Kutzko said, the ARRL Awards Committee voted to add Club Competition to the UHF Contest, beginning in 2009. "This is something that the VHF/UHF community has been asking for for quite some time," he explained. "The VUAC made their recommendations and the Awards Committee agreed. We hope to see VHF/UHF clubs across the country help increase participation and get involved with this fun contest."

According to Kutzko, these changes come on the heels of the redesign of the June VHF QSO Party Plaque Program. "In the past," he said, "plaques in the June VHF QSO Party have been awarded for first through tenth place in any category, regardless of location. As any VHFer will tell you, there are radical differences in propagation from one part of the country to another. We decided the plaque program needed to be based on Division, just like every other plaque program that the ARRL offers, not position in the standings."

Kutzko explained that the Programs and Services Committee agreed with this recommendation and voted in favor of it: "This change in structure recognizes the Division-level competition that takes place in the June VHF QSO Party, sometimes under conditions of little to no propagation."

June VHF QSO Party plaque sponsorships are available for all entry categories in all 15 ARRL Divisions, Canada, Mexico and DX. If you or your club is interested in sponsoring a plaque ($75, including shipping charges), contact ARRL Contest Branch Manager Sean Kutzko, KX9X, via e-mail <kx9x@arrl.org> and he will help you find a plaque that's right for you or your club to sponsor.

==> JEFF BEALS, WA4AW, APPOINTED SOUTHEASTERN DIVISION VICE DIRECTOR

With the approval of the ARRL Ethics and Elections Committee, ARRL President Joel Harrison, W5ZN, appointed Southern Florida Assistant Section Manager Jeff Beals, WA4AW, as Vice Director in the Southeastern Division, effective June 1. Beals replaces Sandy Donohue, W4RU, who passed away last month <http://www.arrl.org/news/stories/2009/05/05/10805/?nc=1>.

An Extra class licensee, Beals was first licensed in the early 1960s as WN2OUK. Beals -- who splits his time between Royal Palm Beach, Florida and Dothan, Alabama -- has served as Southern Florida Assistant Section Manager since 2002. Beals has also held appointments as Section Emergency Coordinator, Affiliated Club Coordinator, Technical Coordinator, Technical Specialist and District Emergency Coordinator.

"I am deeply honored to be chosen by President Harrison to serve as Vice Director of the Southeastern Division," Beals told the ARRL. "I am looking forward to working with Division Director Greg Sarratt, W4OZK, to provide quality service and representation to the members of the Southeastern Division. I feel that my years of service in the ARRL Field Organization provide me with a unique outlook on what our members expect of our League. My ability to listen and learn from them will assist Greg and myself to provide the representation they have come to expect from the Southeastern Division."

Sarratt said that was "proud" that Beals was chosen to be the new Southeastern Division Vice-Director: "Jeff has a heart for Amateur Radio. He and I have worked together at many hamfests in the Southeastern Division and I look forward to many more. Please join me in welcoming Jeff as Southeastern Division Vice Director."

Beals said he would be "remiss if I didn't mention the many years of friendship and tutelage given to me by former Southeastern Director Frank Butler, W4RH, and Vice Director Sandy Donahue, W4RU (SK). Their years of service to the League and to Amateur Radio are much appreciated by me and the many members of the Division with whom they came in contact."

Beals was a long-time friend of Donahue's. "I knew Sandy for more than 25 years," he told the ARRL upon Donahue's passing. "He was very, very devoted to Amateur Radio, especially the public service side: Emergency Communications, traffic handling and helping out wherever and whenever he could. We had a lot in common."

Beals counts emergency communications support, liaison with served agencies, radio club liaison and support, classic Amateur Radio operation and restoration, and training of Section volunteers as just some of his Amateur Radio activities. "I am always promoting Amateur Radio and the ARRL at community events, and I attend many club meetings, functions and hamfests throughout the Division," he said. "I am a participant in a pilot project to provide membership support to members of the ARRL Southern Florida Section; this project has since grown to encompass the entire Southeastern Division." He also holds commendations from the State of Florida for his communications support during

Hurricanes Andrew, Frances, Jean and Katrina.

"During my tenure as the Southern Florida Section SEC, President Harrison appointed me to serve on the National Emergency Response Planning Committee. One of the challenges facing many of our SFL Section members -- as well as the rest of our nation -- is the ability to construct an effective antenna system in communities governed by covenants, conditions and restrictions (CC&Rs) <http://www.arrl.org/FandES/field/regulations/local/ccr.html>," Beals explained. "I am -- and always have been -- a staunch supporter of any bill in Congress, such as HR 2160 <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1>, to effect such change in these most restrictive regulations that prevent hams from providing needed public service communications, as well as their enjoyment of Amateur Radio.

Beals is a Life Member of the ARRL, Quarter Century Wireless Association and the Antique Wireless Association; he is a Senior Grade member of the Radio Club of America and the ARRL A-1 Operator Club <http://www.arrl.org/awards/a1-op/>. He is Past President of the Fort Myers and West Palm Beach Amateur Radio Clubs and current member of the Palms West ARC, North Florida ARS, Wiregrass ARC, OOTC, the Florida and Alabama Contest Groups and the Florida East Coast DX Club.

==> FIRST 2009 ARRL TEACHERS INSTITUTE IN THE BOOKS

The week of May 25 saw the completion of the first 2009 Teachers Institute on Wireless Technology <http://www.arrl.org/FandES/tbp/ti.html>. According to Education and Technology Program Coordinator Mark Spencer, WA8SME, about half of the participants came from the host institution, the New Mexico Military Institute (NMMI) in Roswell <http://www.nmmi.edu>. "The NMMI was an exceptional venue for the Teachers Institute and the school's chaplain, Major Dan Musgrave, WD8RMG, proved to be a gracious host, as well as one of the NMMI faculty participants," Spencer recounted.

Spencer said that the Teachers Institute curriculum -- four days of intensive in-service training in basic electronics, the science of radio, bringing space technology into the classroom, microcontroller programming and basic robotics -- continues to be refined. "One participant, a Colonel, commented that the Teachers Institute far exceeded her expectations, and that she could not even imagine the amount of material that was covered during the course," Spencer said. Another participant -- a Lieutenant Colonel who is the NMMI choir and band director -- quickly made connections between the operation of the musical instruments he instructs (and his cadet students use) and the five building blocks of radio that are presented in the Science of Radio unit.

"This connection between content areas -- in this case music and electronics -- is an example of what the program and the Teachers Institutes are all about," Spencer said. "This instructor will now be in

a better position to help his students to make their own connections between the subjects they are studying in school. These connections make learning relevant."

The next two Teachers Institutes -- in Rocklin, California and in Tucson, Arizona -- are scheduled for this coming week, marking the first time that two Teachers Institutes have been held at the same time. Spencer and Teachers Institute Instructor Miguel Enriquez, KD7RPP, plan to connect the two sessions by making a satellite contact using AO27. "This will demonstrate to participants how amateurs connect with each other via satellites," Spencer explained, "making a practical demonstration of the Space in the Classroom unit."

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members. This installment covers the month of May.

The ARRL solicited support for HR 2160, the Amateur Radio Emergency Communications Enhancement Act of 2009 <http://www.arrl.org/news/stories/2009/05/12/10818>.

An ARRL Freedom of Information Act request forced the FCC to release the redacted portions of the studies on which they relied with regard to their Broadband over Powerline (BPL) rulemaking in 2004 <http://www.arrl.org/news/stories/2009/05/08/10811/?nc=1>.

The ARRL hosted their 2009 National Convention at the Dayton Hamvention on May 15-17 <http://www.arrl.org/news/stories/2009/05/16/10823/?nc=1>.

The ARRL honored those who donated more than $1000 to the League in 2008 with a reception just prior to the 2009 ARRL National Convention and Dayton Hamvention. Three new members of the ARRL's Maxim Society <http://www.arrl.org/development/maxim.html> were introduced at the reception <http://www.arrl.org/news/stories/2009/05/27/10839/?nc=1>.

The ARRL's Programs and Services Committee approved two changes to ARRL VHF and UHF contests <http://www.arrl.org/news/stories/2009/05/29/10847/?nc=1>.

The first of seven ARRL Teachers Institute on Wireless Technology took place in Roswell, New Mexico <http://www.arrl.org/news/stories/2009/06/02/10852/ >.

The ARRL Public Relations Committee honored three Public Information Officers for going above and beyond in ensuring that the role of Amateur Radio is explained to media and the public, especially in unanticipated situations in the field <http://www.arrl.org/news/stories/2009/05/14/10813/?nc=1>. The Committee also introduced the new PR-101 course <http://www.arrl.org/catalog/?item=0133> at the 2009 ARRL National Convention at the Dayton Hamvention

<http://www.arrl.org/news/stories/2009/05/15/10817/?nc=1>.

ARRL President Joel Harrison, W5ZN, presented former ARISS International Chairman Frank Bauer, KA3HDO, with the ARRL President's Award at Dayton <http://www.arrl.org/news/stories/2009/05/27/10838/?nc=1>.

W1AW and W1HQ received some new antennas during their semi-annual tower inspection <http://www.arrl.org/news/stories/2009/05/20/10827/?nc=1>.

At month's end, the ARRL had awarded 269 Triple Play Awards <http://www.arrl.org/awards/#tripleplay> since the award's inception January 1, 2009
<http://www.arrl.org/news/stories/2009/05/28/10843/?nc=1>.

The ARRL participated in the 2009 Maker's Faire in San Mateo, California <http://www.arrl.org/news/stories/2009/05/26/10835/?nc=1>.

Mel Parkes, NM7P, of Layton, was re-elected as the Utah Section Manager. Dan Pruitt, AE6SX, is the new Section Manager in the San Joaquin Valley Section. The Rhode Island, Maryland-DC, West Texas, Nevada, Northern New Jersey and New Hampshire Sections will keep their incumbent Section Managers <http://www.arrl.org/news/stories/2009/05/21/10829/?nc=1>.

The current 7Z1CQ operation in Saudi Arabia has been approved for DXCC credit <http://www.arrl.org/?artid=8964>.

==> PRESIDENT OBAMA TO RENOMINATE FCC COMMISSIONER ROBERT MCDOWELL FOR NEW TERM

On Tuesday, June 2, President Barack Obama announced that he will renominate current FCC Commissioner Robert McDowell for another term <http://www.whitehouse.gov/the_press_office/President-Obama-Announces-His-Intent-to-Nominate-Robert-McDowell-for-Another-Term-at-the-FCC/>. McDowell, a Republican, was first nominated by President George W. Bush and sworn into office in June 2006, filling the unexpired term of Republican Kathleen Q. Abernathy. McDowell, whose present term expires June 30, 2009, would need to be confirmed by the Senate. Commissioners' terms are five years long.

According to the White House, McDowell has collaborated with his fellow Commissioners to develop and establish American communications policy covering the wireless, media and Internet industries, as well as international policy matters. He has worked to create rules governing wireless auctions, establish a framework for unlicensed use of TV "white spaces" spectrum, develop incentives to encourage the development of new broadband technologies, review public interest benefits as part of the approval process of proposed corporate mergers and adjudicate enforcement proceedings.

McDowell brings to the FCC approximately 16 years of private sector experience in the communications industry. Immediately prior to joining the Commission, McDowell was a senior executive for a trade association representing competitive facilities-based telecommunications service

providers. He has served on the North American Numbering Council (NANC) <http://www.fcc.gov/wcb/cpd/Nanc/> and on the Board of Directors of North American Numbering Plan Billing and Collection (NBANC) <http://www.fcc.gov/wcb/cpd/numbering/nbc.html>.

Acting Chairman Michael Copps congratulated McDowell on his renomination, saying he was "truly delighted that he will continue on as a fellow Commissioner. Since becoming Acting Chairman several months ago, I appreciate more than ever Rob's collegiality, his openness, his creative intellect, and the deep sense of purpose he brings to his work. I especially want to thank him for all the talent and energy he has brought to our work on next week's DTV transition. He has traveled near and far to help consumers prepare and he has done an outstanding job in helping us deploy an extensive DTV Call Center operation. I look forward to our continuing work together as we tackle the many tough communications issues confronting the Commission and the country."

McDowell was graduated cum laude from Duke University in 1985. After serving as chief legislative aide to a member of the Virginia House of Delegates, he attended the Marshall-Wythe School of Law at the College of William and Mary. Upon his graduation from law school, McDowell joined the Washington, DC office of Arter & Hadden, a national law firm, now closed, that was based in Cleveland. McDowell is admitted to practice law before the courts of the Commonwealth of Virginia, the US District Court for the Eastern District of Virginia and the US Courts of Appeals for the District of Columbia, First, Fourth and Fifth Circuits, as well as the US Supreme Court. He lives in Fairfax County, Virginia on his family's farm with his wife Jennifer and their three children.

==> NASA, NOAA RELEASES NEW PREDICTIONS FOR SOLAR CYCLE 24

An international panel of experts -- led by the National Oceanic and Atmospheric Administration (NOAA) and sponsored by NASA -- has released a new prediction for the next solar cycle: Solar Cycle 24 will peak in May 2013 with a below-average number of sunspots <http://science.nasa.gov/headlines/y2009/29may_noaaprediction.htm?list1300638>. "If our prediction is correct, Solar Cycle 24 will have a peak sunspot number of 90, the lowest of any cycle since 1928 when Solar Cycle 16 peaked at 78," said panel chairman Doug Biesecker of NOAA's Space Weather Prediction Center. This report clarifies a NOAA report from May 2009 that stated that Solar Cycle 24 would bring "90 sunspots per day on average" <http://www.noaanews.noaa.gov/stories2009/20090508_solarstorm.html>.

The latest forecast revises a prediction issued in 2007 <http://www.arrl.org/news/stories/2008/01/07/100/>. At that time, a sharply divided panel believed solar minimum would come in March 2008 followed by either a strong solar maximum in 2011, or a weak solar maximum in 2012. "It turns out that none of our models were totally correct," said Dean Pesnell of the Goddard Space Flight Center and NASA's lead representative on the panel. "The Sun is behaving in an unexpected and very interesting way."

In 2007, experts varied in their predictions on when the solar cycle would peak and how strong it would be. In April of that year, NOAA, in coordination with an international panel of solar experts, predicted that the next 11-year cycle of solar storms "would start in March 2008, plus or minus six months, and peak in late 2011 or mid-2012" <http://www.swpc.noaa.gov/SolarCycle/>. In the cycle forecast issued in April 2007, half of the panel predicted a "moderately strong cycle of 140 sunspots, plus or minus 20, expected to peak in October 2011. The other half predicted a moderately weak cycle of 90 sunspots, plus or minus 10, peaking in August 2012. An average solar cycle ranges from 75 to 155 sunspots. The late decline of Cycle 23 has helped shift the panel away from its earlier leaning toward a strong Cycle 24. The group is evenly split between a strong and a weak cycle."

At a meeting of the American Geophysical Union in San Francisco in December 2007, David Hathaway of NASA's Marshall Space Flight Center, along with colleague Robert Wilson, said that Solar Cycle 24 "looks like it's going to be one of the most intense cycles since record-keeping began almost 400 years ago." They said they believe the next solar maximum should peak around 2010 with a sunspot number of 160, plus or minus 25. "This would make it one of the strongest solar cycles of the past 50 years -- which is to say, one of the strongest in recorded history." Four of the five biggest cycles on record have come in the past 50 years. "Cycle 24 should fit right into that pattern," Hathaway said.

Right now -- June 2009 -- the solar cycle is in a valley, the deepest of the past century. In 2008 and 2009, the Sun showed some of the lowest sunspot counts on record, as well as weak solar winds and a low solar irradiance, going more than two years without a significant solar flare. "In our professional careers, we've never seen anything quite like it," Pesnell said. "Solar minimum has lasted far beyond the date we predicted in 2007."

In recent months, however, Pesnell said that the Sun has begun to show some small signs of life: Small sunspots and "proto-sunspots" are popping up with increasing frequency. Enormous currents of plasma on the Sun's surface are gaining strength and slowly drifting toward its equator. Radio astronomers have detected a tiny but significant uptick in solar radio emissions. All these things are precursors of an awakening Solar Cycle 24 and form the basis for the panel's new, almost unanimous forecast.

Pesnell cautioned optimism, telling the ARRL that there is an "error bar of +/- 20." This means Solar Cycle 24's sunspot number could be as high as 110, or as low as 70. "Based upon my own personal research, I don't think we'll see 90 [sunspots in Solar Cycle 24]," he said.

When asked if such a low number foretold the beginnings of a Maunder Minimum <http://en.wikipedia.org/wiki/Maunder_minimum>, Pesnell said that a Maunder Minimum takes several cycles to appear: "Sunspots [in solar cycles] leading up to the Maunder Minimum took several cycles to disappear. I really can't predict what will happen in Solar Cycle 25.

What we're seeing now is something that looks like a sunspot, but it looks as if someone has come along and 'stomped' on it, creating a multitude of little things. We don't have a name for this and we've never seen anything like it before."

There could be more surprises, panelists acknowledge -- and more revisions to the forecast. "Go ahead and mark your calendar for May 2013," Pesnell said. "But use a pencil." -- Some information from NASA

==>SOLAR UPDATE

Tad "In the Sun he sang with cheerful heart" Cook, K7RA, this week reports: It is so great to see some real Solar Cycle 24 sunspot activity this week. Instead of a phantom that pops into view one day and is gone the next, we have sunspot 1019, which has persisted for five days so far. Emerging on Sunday, May 31, the resulting daily sunspot numbers through June 4 are 15, 23, 19, 17 and 17. This is a Solar Cycle 24 spot, and at high latitude too -- an indication of a new cycle spot. Meanwhile, the low solar wind and quiet geomagnetic conditions continue. Currently, spot 1019 is about to fade, although it is still a few days away from crossing the eastern limb to the far side. NOAA and the US Air Force expect geomagnetic conditions to continue to be quiet, and a planetary A index around 5 is predicted until June 29. Predicted solar flux values are 72 for June 5-6, then 74 on June 7-13. Geophysical Institute Prague predicts quiet geomagnetic conditions June 5-8, quiet to unsettled June 9-10 and quiet again June 11. Sunspot numbers for May 28-June 3 were 0, 0, 0, 15, 23, 19 and 17 with a mean of 10.6. The 10.7 cm flux was 67.7, 68.2, 68.5, 68.5, 72.5, 71.9 and 72.5 with a mean of 70. The estimated planetary A indices were 7, 5, 3, 3, 3, 2 and 4 with a mean of 3.9. The estimated mid-latitude A indices were 5, 4, 2, 3, 2, 2 and 4 with a mean of 3.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Allingham's "A Singer" <http://www.sonnets.org/allinghm.htm#005>.

==>IN BRIEF:

* This Week on the Radio: This week, the SEANET Contest, IARU Region 1 Field Day and the Alabama QSO Party are all June 6-7. Next week is the ARRL June VHF QSO Party on June 13-15. The Asia-Pacific Sprint is June 13. The GACW WWSA CW DX Contest and the ANARTS WW RTTY Contest are June 13-14. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 28, 2009, for these online course sessions beginning on Friday, July 10, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Mal Eiselman, NC4L, Wins May QST Cover Plaque Award: The winner of the QST Cover Plaque Award for May is Mal Eiselman, NC4L, for his article "Troubleshooting Radios." Congratulations, Mal! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the June issue by Tuesday, June 30.

* Operation Approved for DXCC Credit: ARRL DXCC Manager Bill Moore, NC1L, reports that the HZ1EA operation in Saudi Arabia has been approved for DXCC credit. "If you had cards that were recently rejected for this operation, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org > and you will be placed on the list for update," Moore said. "Once completed, if you have an account in Logbook of the World (LoTW), the update will be posted to your account" <http://www.arrl.org/lotw >.

* More 2009 Field Day T Shirts on the Way: The 2009 ARRL Field Day T shirts are a huge hit <http://www.arrl.org/catalog/?item=NO-0515 >, topping demand from previous years. "While the current supply of Field Day shirts has stocked out, we expect to be re-supplied before the end of next week -- in time to fulfill all orders to clubs and individuals," said ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R. "We appreciate everyone's patience and apologize for shipping delays." This year's logo captures the spirit of Field Day in camp-like fashion. The artwork depicts a woodland outdoor scene on a green-colored shirt. The logo was designed by ARRL Graphic Arts Supervisor Sue Fagan, KB1OKW, and Senior Technical Illustrator David Pingree, N1NAS. "We've received some really nice compliments about the design -- and a couple of funny remarks asking why we left out the grizzly bear," Inderbitzen said. 2009 ARRL Field Day is June 27-28 <http://www.arrl.org/fieldday >.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL

cannot assist subscribers who receive The ARRL Letter via this
listserver.)

I agree 100%. That prohibits things like code readers, database lookups, etc.

> (I
> hold that radiosport contesting is

I think that's very true, particularly in the areas of performance improvement in areas such as receiver dynamic range.

> It would allow them to use whatever labor
> saving devices appropriate to keep

However, it would place certain limitations on those devices. (See below)

Agreed - in fact, it would disallow code readers and voice recognition of any sort, right?

> It would not allow software that "auto-populates" any portion of the
> required exchange. (ie., deduce from the call sign and
> automatically populate the zone in CQWW)

I know of at least one computer logger where, if you work a station on one band/mode, the exchange received on that band/mode is automatically

entered in the appropriate places if you work the same station again on another band/mode. You can override it, but it saves having to copy the exchange more than once from a given station.

> It would not allow pre-built database
> lookups, like "super-check-partial" to

>
What about databases built from the log, in the same fashion as above? My guess is that would be disallowed too.

IOW, the basic concept would be:

YOU find 'em YOU work 'em YOU log 'em

Now for a devil's advocate question....

It seems from the above that the idea is to protect the radioman skill of receiving by not allowing it to be automated (code reader/voice recognition) nor circumvented (database).

But isn't transmitting as much a radioman skill as receiving? If so, shouldn't automated sending devices (code message generators, voice 'keyers', etc.) be prohibited too?

I realize that many CW contesters can go for many QSOs without ever touching a key by means of stored messages in the computer logger that auto-generate CQs, the exchange, etc. But I suspect that some folks would ask why the line is drawn so that automated transmitting is OK but not automated receiving.

> would ask why the line is drawn so that automated transmitting is OK
> but not automated receiving.

Logically, if you demand no automation, then the restriction should extend to sending. But if you take this to its logical conclusion, you would need to require a hand key.

I actually do not agree that transmitting is as much a radioman skill as receiving, or at least not as difficult to master, and for this reason it does not particularly bother me to allow assistance in that portion of the contest. A contributing factor is that the amount of technology required is much less to handle the sending part -- a fancy memory keyer is less formidable than a high-speed computer with a complex program to decode cw out of a pileup. Perhaps it's because we've been using keyers for decades, but effective computer decoding of cw is relatively recent.

It's not about eliminating automation as much as about requiring skills
specific to radio operating.

IMHO, a straight key, sideswiper, bug, or paddles would be OK because
you still need Morse Code sending skills to use any of them. But a
keyboard or message generator would be disallowed because they do not
require knowing how to send Morse Code.

> I actually do not agree that transmitting is as

> of the contest.

But it's not just about how difficult something is. Rather it's about
whether something is a "radioman skill" or not.

Of course in the end any such rules will have an arbitrary element to
them. My point is simply that there are bound to be disagreements as to
what actually constitutes a "radioman skill" and what doesn't.

I would really like to see such a category added to the major contests.
Would be interesting to see how many would enter it, and how well

they'd do.

Thus my preferenceth for the simplicity of the dipole. It is something I can affordeth and is far more cost effectiveth than a Babeling tower.

Amateur Radio Newsline(tm) Report 1661 - June 12 2009

Amateur Radio Newsline report number 1661 with a release date of
Friday, June 12th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Navy MARS asks permission to close
operation. Will the government say yes? Also, President Obama says
that part of being prepared is having a weatherproof radio at hand,
WB4APR proposes a new 29 to 24 MHz high frequency satellite, the FCC
T-hunts down an alleged shopping mall jammer, Australia tests its first
digital Amateur Television repeater and Toshiba brings the Morse code
to texting. Find out the details on Amateur Radio Newsline(tm) report
number 1661 coming your way right now.

RESTRUCTURING: NAVY-USMC MARS LIKELY TO GO QRT

The days of Navy and Marine Corps MARS may be fast coming to an end.
This, according to a directive released by the commander of the Naval
Network Welfare Command. One that says that this branch of the
Military Affiliate Radio Services will terminate all operations at the
end of this summer. Amateur Radio Newsline's Bruce Tennant, K6PZW, has
the details:

--

According to the May 16th directive, the commander of the Naval Network
Welfare Command has decided to sunset the Navy's MARS mission effective
September 30th. Sunset in this case means to terminate and disband.
As a result, the Naval Network Welfare Command has requested that all
military and civilian positions be deleted and left un-funded after
that date.

Navy and Marine MARS is a joint operation. One of the consequence of
this decision is that all Navy MARS Area Directors have been ordered to
close their offices no later than the September 30th deadline. The
directive also says that none of the equipment located at Area Director
Stations can be transferred to Navy MARS members. It can however be
given over to other official Navy organizations to help start or equip
military recreation stations. However, approval for this will be on a
case by case basis.

And what about all the radio gear out there in the hands of MARS members? Also, the equipment that may have been disposed of over the years by the families of Silent Key Navy MARS operators? Will the Navy be seeking its return? As we go to air, nobody we have contacted seems to have any answers to these and other questions related to the imminent termination of U-S Navy MARS.

There is one caveat. As you are likely aware, all three MARS services operate under the mandate of the Department of Defense and that mandate is still valid. While the Army and Air Force have stated their desire to continue their respective MARS programs, only the Navy has requested to opt out. For that to happen requires approval up the Department of Defense chain of command. If that permission is not given the Navy says that its MARS program will continue, but without any Area Directors.

More on this as we get it. For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

According to Wikipedia dot com, the organization that led to the Military Affiliate Radio System was first called the Army Amateur Radio System or A-A-R-S. It was created in November 1925 by a few dedicated pioneers in the United States Army Signal Corps led by Captain Thomas C. Rives. His original intent was to enlist the talents of volunteer amateur radio operators as a ready source who could train soldiers in the then new technology of radio, as well as pursuing radio research and development to improve radio equipment within the Army. This support would be particularly useful during the mobilization of forces by providing a pool of already trained radio operators. Their efforts were very successful, and the present-day MARS program is the direct descendant of the work of those early pioneers. (K1AA, KZ1Z, others)

RESCUE RADIO: PRESIDENT OBAMA SAYS TO BE PREPARED

United States President Barack Obama has urged residents of hurricane inclined areas to take responsibility for their own safety and start planning now.

Following a recent disaster preparedness briefing at the Federal Emergency Management Agency the president said that individuals should be ready with a supply of nonperishable food, water and first aid kits. This, to wait out any emergency that might hit their area. The leader of the free world added that it is also essential to have at least one waterproof radio that will work in the rain.

At his press briefing the president noted that it is state governments have the primary responsibility for preparing for and responding to disasters. But he added that all the resources of the federal government are there to back them up. (Published news reports)

HAM RADIO IN SPACE: 28 TO 24 MHz HAMSAT PROPOSED

A satellite with a 29 to 24 MHz linear transponder is being proposed by the ham who brought the world A-P-R-S. Bob Bruninga, WB4APR,, who helped in the development of a number of successful amateur radio satellites has floated a proposal for a satellite with the odd combination of frequencies for the on-orbit linear transponder.

In an e-mail to the AMSAT Bulletin Board WB4APR says that consideration is being given to a an HF transponder for the next long range CUBESAT mission planning. It can have three modes, These are APRS at 1200 baud for command and control and APRS on 145.825; a PSK-31 multi-user SSB uplink on 29 MHz and FM down link on 145.825 and lastly the already mentioned 29 MHz uplink and 24 MHz downlink SSB transponder

Bruninga adds that they are looking for someone in the AMSAT community that wants to contribute to the HF transponder design. (WB4APR)

**

HAM RADIO IN SPACE: CIRQUE DU SOLEIL FOUNDER TO VISIT ISS

The British Broadcasting Company reports that the founder of the performance group Cirque du Soleil will visit the International Space Station in September. According to the news service, 49 year old Guy Laliberte will travel to the International Space Station on a Russian Soyuz transport vehicle.

Laliberte trip to the International Space Station is estimated to cost at least $25 million dollars. The Quebec-based billionaire will become the seventh private citizen to visit the orbital outpost since April 2001. No word yet if he plans to obtain an amateur licensee and operate from space as all past space adventurers have.

And for those of you who do not know that Cirque du Soleil means, its French for Circus of the Sun. You can read the full BBC news story at http://news.bbc.co.uk/1/hi/sci/tech/8083336.stm) (Southgate)

**

EMERGING TECHNOLOGY: THE ANSWER IS BLOWEN IN THE WIND

The UK telecommunications regulator Ofcom has published a report dealing with the effects of interference caused by power generating Wind Farms turbines. This, to Ultra High Frequency and Super High Frequency communications.

The report was prepared by ERA Technology Ltd and Aegis Systems Ltd. It describes a technical study in which a series of measurements were carried out with regard to the presence of wind turbines near to wireless services.

Some of their findings include the fact that a single turbine can produce measured fades as large as 3 dB for UHF scanning telemetry

links and 2 dB for fixed links operating between 1.5 and 18 GHz. This, when the turbine is lying on the transmitter-receiver path. Also established is that a wind farm with seventeen turbines can produce measured fades as large as 10 to 15 dB for 1% of the time when the wind farm is lying on the transmitter-receiver path.

The purpose of the study was to enhance understanding of the effects of wind turbines near to wireless Services. The full text of this propagation study and report in PDF Format is available at http://www.ofcom.org.uk/radiocomms/ifi/licensing/classes/fixed/Windfarms/rf_ measurement/windfarm_report.pdf (ANS)

ENFORCEMENT: FCC T-HUNTS DOWN SHOPPING MALL RADIO SYSTEM JAMMER

Every once in a while, the FCC hits a home run with outstanding direction finding work leading to an important find. The case of Kevin Bondy, the licensee of station WQGX752 who now faces a $24,000 fine is one of those. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the rest of the story:

--

According to the CGC communicator, the case involves a dedicated and industrious jammer causing willful and repeated interference to the radio channels licensed to The Oaks Shopping Center in Thousand Oaks, California . Its also the story of an even more dedicated FCC agent determined to get his man and the FCC release has the full story.

Thousand Oaks is an affluent suburb about 45 miles West of downtown Los Angeles. And it was there the FCC alleges that Kevin Bondy tried to force a local shopping center off of its two-way radio channels for reasons not yet fully understood.

The story goes back to this past February 25th. That's when the Los Angeles FCC Office received a complaint from the security manager for The Oaks Shopping Center. He told the FCC that the malls communications systems 461.375, 462.525, 467.525 and 466.375 MHz were being jammed.

The next day an agent from the Enforcement Bureau's Los Angeles Office contacted the security manager. The security manager also told the agent that the rather brazen jammer had told shopping center to stop

using 461.375MHz which is the security repeater input frequency.

On March 5th the Los Angeles agent T-hunted down the source of pulsating signals on the 461.375 and 466.375 MHz channel pair. It was found to be a repeater located within a secured radio communications facility on Oat Mountain. That's a 3000 foot hilltop in the Santa Susana Mountains that 's very popular with two-way radio users.

While atop Oat Mountain the agent observed radio equipment which he found was the source of the pulsating signals and a beam antenna connected to it pointed in the direction of Thousand Oaks. There seemed no doubt that this set-up was intended to interfere with normal transmissions on the shopping centers frequencies,.

Fast forward to March 6th. The FCC agent was monitoring the 461.375 and 466.375 MHz channel pair in the vicinity of shopping center and again observed pulsating signals. Later that day, in consultation with personnel from The Oaks and the Ventura County Sheriff's Department, the Los Angeles agent came up with a plan to locate the person who source of the transmissions.

Personnel from the shopping center engaged unknown operator into a QSO. The FCC agent had instructed shopping center personnel to keep the subject talking for as long as possible so that he could a fix of the transmissions. They did, and it was during that contact that the jammer told the shopping center personnel that they had "plenty of warning" to vacate the frequencies as he demanded. The jammer then effectively shut down all operations on The Oaks radio systems by transmitting NOAA weather radio over every channel. The jamming station then reportedly said that he would gave The Oaks three weeks to vacate the frequencies. If the center refused, he told them that there would be more jamming to come. He also told the centers personnel that the reason for the jamming was -- and we quote: "we need the channel."

Meantime, the agent was hard at work T-Hunting and at approximately 7:30 p.m., he hit pay-dirt. This, when he found the originating source of the transmissions to be a vehicle located in the National Park Service parking structure across the street from the shopping center.

At this point the Ventura County Sheriff's Department secured the area and identified the subject as Kevin W. Bondy. The Los Angeles FCC agent identified himself to Bondy and asked to inspect the radio equipment in his vehicle. Bondy first refused, then agreed and then refused again. The agent explained that a refusal to allow an inspection could result in a fine. Bondy's refusal was witnessed by Ventura County Sheriff's Department deputies.

On March 9, 2009, the FCC agent revisited the radio communications facility on Oat Mountain. At that time he observed that the beam antenna had been removed and the interference to The Oaks radio systems

had ceased.

And now it has literally become time for Bondy to pay the proverbial piper. In its May 14th Notice of Apparent Liability issued to Bondy, the FCC says that his violations of the Communications Act warrant his being fined $24,000.

Bondy was given the usual 30 days to pay up or to file an appeal. Meantime, the Oaks shopping Center has been interference free thanks to the work of an unknown but very dedicated FCC agent.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

The penalties faced by Bondy might not end with just a proposed fine. The FCC can challenge the renewal of his licensee of station WQGX752 or any other FCC issued license he might hold. It could even order a license revocation hearing at an earlier date. The full FCC document is on-line at http://www.fcc.gov/eb/FieldNotices/2003/DOC-290813A1.html) (CGC, FCC)

**

RESCUE RADIO: HELPING THOSE WHO REALLY NEED IT

"Helping Those Who Really Need It" is the title of an interesting article in the June issue of CQ Magazine dealing with the changing landscape of amateur radio emergency communications. Authored by former police and fire chief Jerry Boyd. N7WR, the article explains the way in which non government organizations such as hospitals, bus systems, schools and independent municipal agencies may be the new clients that will be looking to ham radio for assistance in coming days. Boyd points to the California-based Hospital Disaster Support Communications Service as an excellent example of a ham radio support group that serves a specific need. You can read the entire article beginning on page 52 of the June issue of CQ Magazine. Its on newsstands right now. (ARNewsline(tm))

**

HAM HOLIDAYS: KIDS DAY 2009 - JUNE 20

The second Kids Day operating event of 2009 takes place on Saturday, June 20th. This, from 1800 to 2400 UTC.

According to the ARRL, Kids Day is an on-air event to encourage young people who may or may not yet be licensed to have fun with Amateur Radio. For those who do not hold a set of call letters, it's a chance to give them a bit of on-the-air experience and hopefully foster interest in getting a license of their own.

Kids Day also has an important adult purpose as well. For them, it's a chance for older hams to share their station and love for Amateur Radio with children in their area.

During Kids Day you simply open your heart and your ham station to the kids in your neighborhood and operate as much or as little as you like. All participants are eligible to receive a colorful certificate. More info can be found at http://lists.contesting.com/mailman/listinfo/kids (ARRL, others)

**

YHOTY 2009: THE JUDGING IS TAKING PLACE

And speaking about youngsters, there will be an Amateur Radio Newsline Young Ham of the Year Award presented this year after all. At the last minute a spurt of valid nominations was received and as we go to air the judging committee is beginning its deliberation process.

If things go as they usually do, we should know who this years honoree will be in or around mid-July. In the meantime, please do not contact Newsline asking who the person selected is. The committee work is independent of the editorial office and we find out who the person is only an hour or two before the winner is informed.

And what is and what isn't valid nomination you ask? Well those that said something like "-my 7 year old just got his Tech ticket so give him a radio." Those got tossed in the circular file. (YHOTY)

**

RADIO BUSINESS: OEM SUPPLIERS FEELING ECONOMIC PINCH

A shake-out is brewing among the world's top original equipment manufacturers. These are the folks known as O-E-M's that anonymously to make the latest cellphones, MP-3 players and even many two-way radios for big names such as Nokia, Sony, Dell, Apple and many others.

Sub-contract manufacturers produce much of the world's electronics, with collective revenue of $306 billion in 2008. But as growth dips into single-digits this year due to the worlds economic recession, and companies such as Celestica, Sanmina and Elcoteq are seeing their revenues drop as consumer stop buying and the companies they supply cutback on orders for new merchandise. This in turn can lead to consolidation among some of the top of these OEM manufacturers as the economy worsens and the publics desire for new electronic products continues to erode. (OEM Electronics News)

**

RETRO RADIO: WE5I ON THE AIR ON 6 METER AM

If you have an old 6 meter Gonset Communicator, Clegg 99'er or any other ancient 6 meter AM transceiver and a crystal for 50 point 4 Megacycles -- er -- Megahertz, then you might want to dust it off and

fire it up. This is because Graham Welch, WE5I, wants to talk to you using good old fashioned full carrier A.M..

With the summer 6 meter DX season fast approaching, Graham, who lives in Oklahoma City, Oklahoma, is on 50 point 4 daily from grid square E-M-15. He is listening for callers from anyone who wants to take the time to talk with middle-America on the Magic Band using A-M. He is also posting his operating schedule on the W6YX VHF Reflector and says that even if you do not hear him first to call him anyway. He just may be listening and waiting to hear your call. (VHF Reflector)

**

BREAK 2

**

EMERGING TECHNOLOGY: AUSTRALIAN DIGITAL ATV FOLLOW-UP

A follow-up to our recent story about the Australian Amateur Television repeater that's converting to digital operation. Late word is that a June 7th test transmission made by the VE3RTV machine from a hilltop east of Melbourne went exceedingly well.

Reportedly, more than a half dozen V-K hams in and around the Melbourne area received the repeater signal totally noise free. The test transmitter used commercial quality DVT-B standard digital television boards made in Germany. Receivers were commonly used domestic Australian DTV-B converter boxes that were re-tuned to 446.5 MHz A-T-V frequency.

More on this story can be read in the news section of the Amateur Radio Victoria website www.amateurradio.com.au (AR Victoria)

**

THE SOCIAL SCENE: ATLANTA HAMFEST AT 80

The Atlanta Hamfest will celebrate it's 80th anniversary on June 6th. This, with more than 20 exhibitors, a special event station, ham radio training and testing all crammed into one great day at Jim R. Miller Park in Marietta. Doors open at 8:00 a.m. local time. Enhancing the hamfest will be special event station W4DOC operating both voice and digital modes throughout the event. For more information and directions visit www dot atlantahamfest dot com on the World Wide Web. (N4BFR)

**

THE SOCIAL SCENE: PAPERS SOUGHT FOR AMSAT SPACE SYMPOSIUM

And a call for has gone out for papers to be presented at the 2009 AMSAT Annual Meeting and Space Symposium. Proposals for papers, symposium presentations and poster presentations are invited on any topic of interest to the amateur satellite community. A tentative title of your presentation is required as soon as possible with final copy submitted by September 1st. This, for inclusion in the printed proceedings.

The dates of the symposium are October 9th to the 11th. The venue is the Four Points Sheraton Hotel at the Baltimore Washington Airport.

Abstracts and papers should be sent via e-mail to Dan Schultz, N8FGV. His e-mail is n8fgv (at) amsat (dot) org. (ANS)

**

NAMES IN THE NEWS: W4LAA TO RETIRE FROM NIGHTLY BUSINESS REPORT

Some names in the news. First is Paul Kangas, W4LAA, the co-anchor of "Nightly Business Report" on PBS. He has announced that he will step down at the end of the year, ending a 30-year tenure on the nation's most-watched business newscast.

Kangas told Radio World that he was leaving the anchor chair in part to reduce the pressure of the daily deadlines that come with a TV program. Now 72, he was hired to be a stock market commentator when the "Nightly Business Report" had its premiere in 1979. He became an anchor on the show in 1990. (RW)

**

NAMES IN THE NEWS: WA4AW NAMED NEW SOUTHEASTERN VICE DIRECTOR

Southern Florida Assistant Section Manager Jeff Beals, WA4AW, has been appointed Vice Director in the ARRL's Southeastern Division, effective June 1st.

Beals holds an Extra class licensee, and was first licensed in the early 1960s as WN2OUK. He splits his time between Royal Palm Beach, Florida and Dolthan, Alabama.

WA4AW has served as Southern Florida Assistant Section Manager since 2002. He has also held appointments as Section Emergency Coordinator, Affiliated Club Coordinator, Technical Coordinator, Technical Specialist and District Emergency Coordinator.

Beals replaces his longtime friend and Dolthan resident Sandy Donohue, W4RU, who passed away last month. (ARRL)

**

NAMES IN THE NEWS: W8GSM AND W2GPS TO STEP DOWN FROM AMSAT-NA BOD

Gunther Meisse, W8GSM, and Rick Hambly, W2GPS, have said that neither plans to seek re-election to the AMSAT North America Board of Directors. This leaves only Barry Baines, WD4ASW and Drew Glasbrenner, KO4MA trying for another term.

In addition to Baines and Glasbrenner, others seeking positions on the AMSAT board thus far are Anthony Monteiro, AA2TX, Bill Ress, N6GHZ and Alan Biddle, WA4SCA.

Valid nominations for the 2009 AMSAT Board of Directors elections must be received at the AMSAT office is no later than June 15th. An AMSAT North America director serves a 2 year term. (ANS)

**

NAMES IN THE NEWS: M0OBW ELECTED NEW RSGB PRES

And the UK's David Wilson, M0OBW, has been elected as the new president of the Radio Society of Great Britain. This, to serve for the 2010 to 2011 term.

Wilson currently holds positions of Emerging Technologies and RSGB Convention on the society's board . He is also very active in the RSGB-sponsored Train the Trainer program. (GB2RS)

**

ON THE AIR: CANADIAN GROUP CELEBRATES ASTRONOMY

On the air, word that Canada's Westcoast Amateur Radio Association will be QRV as VE7IYOA during the month of June. Their QTH is Victoria, British Columbia and they are operating to mark the International Year of Astronomy. Their main operating times will be on weekends ands and during the upcoming ARRL Field Day. QSL to VE7DAO. (WARA)

**

ON THE AIR: CELEBRATING THE ORIGINAL 13 US COLONIES

A special event to celebrate the 13 original colonies that be came the United States will be on the air from July 1st at 1300 U-T-C to July 5th at 04:00 U-T-C. According to KU2US. a full color certificate with a map with state flags of all the 1776 colony states will be available to each station who works one or more of the special event stations. Full details are at http://home.comcast.net/~dzabawa/ThirteenColonies.htm (via E-mail)

**

ON THE AIR: CELEBRATING WORLD ENVIRONMENT DAY

The Vienna International Center Amateur Radio Club was on the air as 4U1WED on "World Environment Day. This year the center also celebrates its 30th anniversary and thus and outside Environment Day will use the call 4U30VIC from July until December. QSL cards for both calls should be sent via the bureau to 4U1VIC. (QRZ-DX)

**

DX

In D-X, F5JNE will be active from Belle-Ile-en-Mer between 16 and 24 June. Operation will be CW only on 40 and 20 meters, mainly in the evenings. QSL via F5JNE, direct or by the French REF Bureau.

K7BV will return to San Andres as 5J0BV between June 18th to the 29th. He will concentrate on 6 meter Sporadic E contacts but will also activate the high frequency bands as well QSL direct to K7BV via his QRZ.com address.

F6ITD, will be also be active from the same location between the 20th and 28th of June. Activity will be on many of the HF bands on SSB only. QSL via F6ITD.

G4KIU, has moved to Rarotonga and is operating as E51SC using SSB, RTTY, PSK31 and some CW on 80 through 10m. QSLs via bureau to G4KIU or direct to Nigel Peacock, PO Box 880, Rarotonga, Cook Islands via New Zealand. He is also uploading his log data to the Logbook to the World, but once a week.

8N5I will be on the air from Shikoku Island until June 15th. QSL via the JARL bureau.

W5YDX operating portable VP9 will be on Bermuda through June 24th. He plans to operate holiday style focussing on 20 and 17 meters using 100 watts and dipoles. QSL via W5YDX.

KJ4GNB is on Ascension Island and has been heard as ZD8DC in SSB on 20 meters. The length of his stay is not known. QSL cards should be sent via bureau to KJ4GNB.

Lastly, PF4T will be active as 8Q7TB from Embudu Island through June 25th. He's reportedly operating only SSB on 40 and 20 meters using an FT-897 and a G5RV antenna. QSLs direct or via bureau to PA0LEY.

(Above from various DX news sources)

THAT FINAL ITEM: CLIQUE TO TEXTING USING MORSE

And finally this week, texting addicts will soon have a new plaything, but will need to learn C-W to use it. This, as Toshiba teams up with microprocessor manufacturer Intel to produce Clique. This is described as a handheld, thumb-operated communications device that uses only three keys produce Morse code for sending text messages.

A Toshiba spokesperson says that Morse was chosen as the communications medium because it is an easily learned and is ideally suited to the single-digit platform. She explained that the Morse code has been in use for more than 160 years which longer than any other electronic encoding system.

Earlier attempts to create a Morse-based texting device were stymied by the variable length of the Morse characters which made it hard to adapt to automated text conversion circuits. Toshiba's solution is the three keys. One is used for dots, another for dashes and the third that acts as a space-bar between letters. One tap separates letters while two taps go between words.

First released in Japan at the 2008 Microprocessor Forum, the Clique is the size and shape of a lollipop with the handle acting as a miniature joystick. Its reception in Japan has been described as fast and furious as early adopters added ï¿½Clique' to their armory of hand-held communications devices.

The Clique is not yet available in the United States but more about it is on-line at http://mhpbooks.com/mobylives/?pe35 (KZ1Z)

255. NAVY-USMC MARS LIKELY TO GO QRT

Newsgroup: rec.radio.amateur.moderated
Date: 2009-06-12 18:40:02 UTC
From: Bill Horne <bill@horneQRM.net>
Message-ID: <2fOdnamrVqadA6_XnZ2dnUVZ_qmdnZ2d@speakeasy.net>
Source record: 1965

According to the Amateur Radio Newsline report #1661:

> RESTRUCTURING: NAVY-USMC MARS LIKELY TO GO QRT
>
> The days of Navy and Marine Corps MARS may be fast coming to an end.
> This, according to a directive released by the commander of the Naval
> Network Welfare Command. One that says that this branch of the
> Military Affiliate Radio Services will terminate all operations at the
> end of this summer.

Although the Defense Department has the authority to cancel the "sunset"
for Navy/Marine Corps MARS, it's very unlikely, so we say "Farewell" to
a long chapter of Amateur Radio history.

That will be a sad day, not only for me, but for hundreds, or perhaps
thousands, of military and amateur operators. Those operators did an
important job for the Navy and the Marine Corps: MARS gave sailors and
Marines the chance to connect with their families from lonely overseas
posts, and brought laughter, hometown news, and peace-of-mind to
generations of servicemen.

I had the honor of being one of those operators. Although I was in the
Army, I ran the Navy-Marine Corts MARS station at Danang in 1971 and
1972, and I handled hundreds of phone patch calls for all comers, using
a KWM-2A, a 30L-1, and a Millen transmatch feeding a Log Periodic at
forty feet high. It was a labor of love for me: I had my regular duties
to perform during daylight, and then I'd crank up the Collins gear at night.

They says that the only constant is change. I wish it weren't so.

Yup. The end of an era.
Our far-flung armed forces now have access to email and satellite
phones, so there is no need for hams to link them up with their
families.

Apparently, the Army MARS will survive. The MARS mission also has
changed, charged with relaying emergency messages via digital HF,
using PACTOR.

==> FUN, FRESH AIR, FRIENDS AND FOOD: IT MUST BE TIME FOR ARRL FIELD DAY!

The 2009 ARRL Field Day will be here before you know it, so now is the time
to grab your rig, grab your friends, grab some grub and get ready to get
outside June 27-28 <http://www.arrl.org/fieldday>. If you haven't yet started
planning for this year's Field Day, it's not too late -- Field Day packets
are available for download from the ARRL Web site
<http://www.arrl.org/contests/forms/fd-2009-packet.pdf>.

ARRL Field Day Manager Dan Henderson, N1ND, reminds clubs and groups that the
deadline to order exhibit kits and ham radio recruitment handouts is drawing
```

near. "We need to have all orders for kits and brochures no later than Wednesday, June 17. If we have your order by then, we will be able to package your order and get it to you in time for Field Day. Any orders received after June 17 will be fulfilled and they might make it to recipients before Field Day," he explained. Exhibit kits can be ordered online at no cost; there is a small shipping and handling fee <http://www.arrl.org/brochures/>.

If you are looking for a Field Day site to attend, or are looking to publicize your Field Day site, be sure to check out the Field Day Site Locator <http://www.arrl.org/contests/announcements/fd/locator.php>. For more information on this service, please check out the Locator Site Frequently Asked Questions (FAQ) <http://www.arrl.org/news/stories/2008/06/03/10021/?nc=1>. "More than 1000 Field Day sites have been registered on the Locator, with more being added every day," Henderson said.

ARRL Field Day is the most popular on-the-air operating event in Amateur Radio. On the fourth full weekend in June, tens of thousands of Amateur Radio operators gather for a demonstration of our service. Field Day is part educational event, part operating event, part public relations event -- and all about fun!
"We all became hams for our own reasons," Henderson said. "Some of us were interested in public service and helping others in times of need. Many discovered the hobby as an outlet to their curiosity about electronics and communications. Still others joined our ranks because of the quest to meet new people and expand their own personal bank of knowledge. Whatever the reason you became an amateur, there is one compelling thread that brought us all together. It is as simple as can be: We became hams for the fun of the hobby!"

Henderson said that while Field Day serves a wide array of interests and purposes, "there is no greater 'fun-damental' goal for Field Day than to have fun! While it encompasses a broad range of Amateur Radio interests -- CW, Phone, Digital, emergency preparedness, public service, satellites, recruitment, antennas, new and vintage equipment and so many more -- Field Day is, above all else, a chance for us to have some fun with our hobby."

Henderson reminded hams that fun is where you find it: "Some will discover the fun by operating overnight, building up their club's total number of QSOs. Others will never make a single Field Day contact, but will derive their fun by helping set up antennas and generators. The joy of sharing your radio knowledge with a newcomer will be fun for many old-timers, while other old-timers will experience the 'Field Day high' when they make their very first QSO using a new digital mode or via one of the Amateur Radio satellites. The camaraderie of the annual club Field Day picnic or covered dish supper will be a fun highlight for many, while still others will find the joy in the hobby by simply being able to spend a couple of hours from home on an otherwise busy weekend, tuning the bands and making a few contacts."

If you want to be one of the best-dressed hams at your Field Day event, be sure to pick up the 2009 ARRL Field Day T shirt, hat and pin

<http://www.arrl.org/catalog/?category=&words=field+day&SearchWords.x=0&SearchWords.y=0>. Featuring a woodsy, outdoor scene, these items are a great way to recognize your involvement in the excitement and fun of this annual operating event. ARRL is also offering Get On The Air (GOTA) pins <http://www.arrl.org/catalog/?item=8911>. It's a great idea to have your GOTA station operators wear these attractive pins. Pins from previous Field Days are also available -- make your collection complete with this year's pin. According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, a new shipment of 2009 Field Day T shirts has just arrived, so be sure to order yours today.

==> CHANGES COMING FOR ARRL NOVEMBER SWEEPSTAKES CONTEST LOG SUBMISSIONS

ARRL Sweepstakes Contest Manager Ken Adams, K5KA, said he and the ARRL Contest Branch intend to "dramatically reduce the timeframe for producing results that are available to all ARRL Sweepstakes participants." According to Adams, the contesting community has requested that results be made available more quickly. Currently, Sweepstakes results are published six months after the contest has taken place.

"To facilitate this request, we would like to make the 2009 ARRL Sweepstakes final results available on the Web in 60 days in the form of a PDF file," he said. "If this effort proves successful, we plan to shorten this window to 30 days in 2010. This PDF would simply be the scores in each category -- full write-ups and detailed analysis of the Sweepstakes contest would still appear in QST and on the Web at a later time."

To meet this aggressive schedule, Adams said that the log submission deadline will be reduced from 30 days to 15 days. For the 2009 Sweepstakes, the deadline for CW Sweepstakes logs will be 0300 UTC on Monday, November 23, 2009. The deadline for the Phone Sweepstakes will be 0300 UTC on Monday, December 7, 2009.

"The number of non-Cabrillo logs received at ARRL HQ must be reduced," Adams explained. "By receiving logs 15 days earlier, we can begin the log checking process that much faster, but we will we need your help on the paper log issue. In 2008, the ARRL Contest Branch received more than 300 paper logs for the Sweepstakes contests. These paper logs were converted to Cabrillo format by a dedicated, yet small, group of volunteers. This took several hundred person-hours of time."

Adams said that there are plans to contact as many paper log submitters as possible and point out resources they can use to generate Cabrillo logs: "I am asking that every club have a special project and meeting this year to insure that 100 percent of their members submit Cabrillo logs for Sweepstakes. If you have club members who don't have computers, please form your own volunteer teams to convert their logs after the contest. This would be a great excuse for a big post-Sweepstakes club pizza party, combining data entry with club camaraderie."

While the ARRL will never turn away a paper log, Adams said that the advantages of electronic log submission are critical to the success of the

accelerated presentation of the Sweepstakes results. "Numerous software contest loggers exist for Windows and DOS, including the free packages CT <http://www.k1ea.com/> and N1MM <http://pages.cthome.net/n1mm/>," he said. Entrants are also able to manually convert their own paper logs to a Cabrillo log at the WA7BNM Cabrillo Web site" <http://www.b4h.net/cabforms/arrlsscw_cab.php>.

"You, the members of the contesting community, have requested faster turnaround of contest results for some time," Adams said. "With every contester's help, we can achieve this goal of dramatically reducing the time between contest and results. We have identified several other areas we hope to improve in the future, such as simplified Web access for Sweepstakes information, historical log search capability, easy access to FAQs, records and the like. We will continue to work on those goals. Thank you for your continued participation and help with the ARRL November Sweepstakes, the greatest domestic contest out there."

==> ALABAMA HAMS ASSIST DURING STATEWIDE EMERGENCY DRILL

During the week of May 4-8, emergency responders and support personnel gathered in Robertsdale, Alabama for a communications interoperability training and full-scale exercise, sponsored by the Alabama Department of Homeland Security (ADHS) <http://www.homelandsecurity.alabama.gov/>. Gathering in a field near the Baldwin County Emergency Operations Center, responders came together to test the quality and effectiveness of communications between various State agencies and support personnel. The exercise simulated a Category 5 hurricane that entered Mobile Bay, causing damage throughout the state.

According to ARRL Alabama Section Manager Jay Isbell, KA4KUN, the Alabama DHS has come to recognize the role that Amateur Radio operators play in emergencies and natural disasters; based on this, the Alabama DHS chose to include Amateur Radio in the exercise. "During Hurricane Katrina, Amateur Radio volunteers played a key part in making sure that communications between agency personnel continued uninterrupted and the public received the help and the timely response needed in this type of catastrophic event," Isbell explained. ARRL Amateur Radio Emergency Service (ARES) operators from SEMA Region 1 and other regions throughout Alabama were on site to support communications.

The Alabama Emergency Management Agency, the Alabama National Guard, the Alabama Department of Public Safety, Region IV of the Federal Emergency Management Agency (FEMA) <http://www.fema.org/>, Alabama Alcoholic Beverage Control Board, Virtual Alabama, Alabama Civil Air Patrol, local sheriffs' office, as well as eight Alabama Regional Communication vehicles also participated in the exercise.

ARRL Southeastern Division Director Greg Sarratt, W4OZK, together with Alabama Region 1 District Emergency Coordinator Patti Link, KI4JEO, worked diligently with both amateur volunteers and professional partner agencies to coordinate and facilitate the role of Amateur Radio during the exercise. According to Isbell, Sarratt was the liaison at the Incident Command Point,

while Link -- working in the Baldwin County EOC -- coordinated amateurs throughout the area, dispatching them with Alabama DHS Regional Communication vehicles and to other locations in the nine-county affected area. Isbell was dispatched to a mock reception center site 60 miles north of the incident, and Section Emergency Coordinator Les Rayburn, N1LF, manned the radio at the State Emergency Operations Center.

"Since the major hurricanes of recent years, the State of Alabama and the Southeast Region of FEMA have really accepted Amateur Radio as a prime player in any major disaster," Isbell told the ARRL. "SEC Les Rayburn has grown Alabama ARES from several independent groups into a well-organized first responder team. Amateur Radio is being accepted as a critical tool during times that the daily manpower and technical resources are stretched beyond their design."

Sarratt said that the Amateur Radio participants learned a lot during the week-long exercise: "This was a good test of the ARES processes and improvements in a full-scale exercise with other agencies since Katrina. Everyone shared and learned about each other's communications capabilities. The relationships built and lessons learned here are invaluable to the Amateur Radio Service."

==> LOOK FOR THE JULY ISSUE OF QST IN YOUR MAILBOX

The July issue of QST is jam-packed with the news and information today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Al Yerger, WA2EHI, shows you how to take advantage of the multiple leads on a parallel port to control all of your remote operations in his article "A Parallel Port Interface for Your Shack." Follow Richard Kriss, AA6VU, as he solves a pesky TVI problem at his home in Texas. ARRL News Editor S. Khrystyne Keane, K1SFA, along with QST Technical Editor Joel Hallas, W1ZR, give their take on the sights, sounds and smells -- as well as the new radio gear -- of the 2009 Dayton Hamvention in "Dayton DREAM Believer: The 2009 ARRL National Convention and Dayton Hamvention."

ARRL Technical Relations Manager Brennan Price, N4QX, reviews Yaesu's VX-8R handheld transceiver. According to Price, "Yaesu incorporates GPS and APRS capabilities into its new top-of-the-line, feature-packed handheld." ARRL Chief Executive Officer David Sumner, K1ZZ, reviews Array Solution's QSK-MASTER external QSK TR switch for HF amplifiers. Sumner said that the QSK-MASTER "offers owners of older RF power amplifiers a way to add flawless full break-in (QSK) operation without equipment modification."

If it's July, it must be time for the IARU HF World Championships <http://www.arrl.org/contests/rules/2009/iaru.html>. This is a great opportunity to contact many stations all over the world, especially the headquarters station of IARU Member Societies, including W1AW. ARRL Contest Branch Manager Sean Kutzko, KX9X, takes a look multipliers -- what are they, why are they important and how do they work -- in "This Month in Contesting." The results of the 2008 ARRL 10 Meter Contest, the 2009 ARRL RTTY Roundup and

the 2009 ARRL January VHF Sweepstakes are in. Did you top your score from last year? How did your closest rival do? Also, find out about upcoming contests in Contest Corral.

Of course, there are the usual columns you know and expect in July QST: Hints & Kinks, The Doctor Is IN, How's DX, Vintage Radio, Field Organization Reports, Hamspeak and more. Look for your July issue in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> JOIN THE FUN IN THE ARRL VHF QSO PARTY THIS WEEKEND

VHF enthusiasts will be generating lots of RF on 6 meters and up this weekend (June 13-15 UTC) during the 2009 ARRL VHF QSO Party <http://www.arrl.org/contests/rules/2009/june-vhf.html>. While many amateurs think of the VHF+ bands as a "local" band used primarily for public service, emergency communications or fun on FM repeaters, weak-signal VHF+ enthusiasts know better. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, even hams who have a modest station can work hundreds -- or even thousands -- of miles on the VHF bands during a good opening.

Kutzko is a big VHF enthusiast: "In my more than 25 years of Amateur Radio, weak-signal work on 6 and 2 meters remains the most fun and intriguing activity I do. There is nothing like a good VHF opening; with interesting propagation characteristics like sporadic-E, tropospheric ducting, aurora and even meteor scatter and moonbounce, VHF offers QSO opportunities that HF can never satisfy."

Kutzko said this weekend is a great time to try 6 or 2 meters. "The June VHF QSO Party occurs at the beginning of the summer sporadic-E season, and can produce strong openings on 6 meters and in some cases up to 2 meters," he said. There have been moderate openings on 6 meters in some part of the United States almost nightly for the last two weeks, and southern California enjoyed a brief sporadic-E opening on 2 meters into Texas this past Tuesday evening, over an average path of 1100 miles. "That's fun any way you slice it," Kutzko said. "Because of the contest, many stations will be on. This, coupled with the interesting propagation possibilities, makes for a great weekend."

Getting on the VHF bands is easy, he said. While there will be some contest activity on FM simplex (especially near large population centers), most long-distance VHF+ QSOs are conducted on CW or SSB; that means horizontally polarized antennas. You will also need a radio that can transmit in those modes. Most of the newer HF transceivers have 6 meters built in, and several come with 2 meters and 70 cm, too. "A dipole on 6 meters will work quite well during a decent opening," Kutzko said. "They're easy to make and less than 10 feet long. Throw it up in a tree as high as you can and you'll be in business. For 2 meters and 70 cm, a horizontal loop will work nicely for SSB and CW contacts." You can find plans for simple VHF antennas at the Technical Information Service area of the ARRL Web site <http://www.arrl.org/tis/info/other-v.html>, in the Antennas chapter of the

ARRL Handbook, or in the VHF and UHF Antenna Systems chapter of the ARRL Antenna Book.

Because VHF antennas are generally smaller than their HF counterparts, portable operation is easy. "You can operate from your favorite hilltop, camp site or any location with high terrain and make many QSOs," Kutzko said. All you need to know is the Maidenhead grid square of your operating location; this is the contest exchange. Find your Maidenhead grid square here <http://www.arrl.org/tis/info/grid.html>.

For SSB QSOs on 6 meters, tune between 50.100-50.200 MHz; 50.125 is the W/VE calling frequency, so listen there for band openings. If the band starts to open up, move off the calling frequency and start working folks! Keep in mind that 50.100-50.125 is reserved for intercontinental QSOs, so don't transmit there unless you are trying to work DX. For the CW operators, you will find CW between 50.080-50.100 MHz. Activity on 2 meters will center around the calling frequency of 144.200. Again, monitor the calling frequency for band openings, but move off when activity starts to pick up. Kutzko advises that most activity on 2 meter SSB/CW will be found between 144.170-144.230 MHz, while 70 cm activity will center around 432.100 MHz.

"This weekend promises to be a tremendous amount of fun on the VHF and UHF bands so don't miss out!" Kutzko said. "All amateurs -- from Technicians to Extras, experienced VHF operators to the first-time VHF dabblers -- are welcome to participate." The ARRL June VHF QSO Party runs this weekend from 1800 UTC Saturday until 0300 UTC Monday (Saturday afternoon to Sunday evening for most of the US and Canada). Complete rules and entry forms may be found here. All logs must be e-mailed <JuneVHF@arrl.org> or postmarked no later than 0300 UTC Wednesday, July 15. If you have any questions about the ARRL June VHF QSO Party or any other ARRL contest, please contact the Contest Branch via e-mail <contest@arrl.org>.

==> NATIONAL HURRICANE CENTER PREDICTS "NEAR-NORMAL" HURRICANE SEASON

Forecasters with the National Hurricane Center (NHC) are calling for a "near-normal" Atlantic hurricane season this year. In its initial outlook for the 2009 Atlantic hurricane season -- which runs from June 1-November 30 -- the National Weather Service's Climate Prediction Center (CPC) <http://www.cpc.ncep.noaa.gov/> is calling for a 50 percent probability of a near-normal season, a 25 percent probability of an above-normal season and a 25 percent probability of a below-normal season. According to the CPC, global weather patterns are imposing a greater uncertainty in the 2009 hurricane season outlook than in recent years.
